The presence of granules with cracks or irregularities on the edge is exceptional.

IDENTIFICATION

A. Examined under a microscope, using not less than 20 × magnification and using equal volumes of *glycerol R* and *water R,* it appears as either angular polyhedral granules of irregular sizes with diameters ranging from about 2 µm to about 23 µm or as rounded or spheroidal granules of irregular sizes with diameters ranging from about 25 µm to about 35 µm. The central hilum consists of a distinct cavity or two-to five-rayed cleft and there are no concentric striations. Between crossed nicol prisms, the starch granules show a distinct black cross intersecting at the hilum.

B. Suspend 1 g in 50 ml of *water R,* boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 ml of the mucilage obtained in identification test B add 0.05 ml of *iodine solution R1*

. An orange-red to dark blue colour is produced which disappears on heating.

TESTS

pH ***(2.2.3)***

4.0 to 7.0.

Shake 5.0 g with 25.0 ml of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

Foreign matter

Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.

Oxidising substances ***(2.5.30)***

Maximum 20 ppm, calculated as H_2O_2.

Sulphur dioxide ***(2.5.29)***

Maximum 50 ppm.

Iron ***(2.4.9)***

Maximum 10 ppm.

Shake 1.5 g with 15 ml of *dilute hydrochloric acid R*. Filter. The filtrate complies with the limit test for iron.

Loss on drying ***(2.2.32)***

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulphated ash ***(2.4.14)***

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 103 bacteria and 10^2 fungi per gram, determined by plate count. It complies with the test for Escherichia coli *(2.6.13)*.

Ph Eur

Partially Dehydrated Liquid Sorbitol

General Notices

(Sorbitol, Liquid, Partially Dehydrated, Ph Eur monograph 2048)

Action and use

Excipient.

Ph Eur

DEFINITION

Liquid sorbitol, partially dehydrated is obtained by acid-catalysed partial internal dehydration of liquid sorbitol. It contains not less than 68.0 per cent *m/m* and not more than 85.0 per cent *m/m* of anhydrous substances, composed of a mixture of mainly D-sorbitol and 1,4-sorbitan with mannitol, hydrogenated oligo- and disaccharides, and sorbitans.

Content (nominal value)

— 1,4-sorbitan ($C_6H_{12}O_5$): minimum 15.0 per cent (anhydrous substance),

— D-sorbitol ($C_6H_{14}O_6$): minimum 25.0 per cent (anhydrous substance).

The contents of 1,4-sorbitan and D-sorbitol are within 95.0 per cent to 105.0 per cent of the nominal values.

CHARACTERS

Appearance

Clear, colourless, syrupy liquid.

Solubility

Miscible with water, practically insoluble in mineral oils and vegetable oils.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the peaks in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dilute the substance to be examined with *carbon dioxide-free water R* prepared from *distilled water R* to obtain a solution containing 50.0 per cent *m/m* of anhydrous substance.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Conductivity ***(2.2.38)***

Maximum 20 µS·cm^{-1}.

Measure the conductivity of solution S, while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.3 per cent, calculated as glucose (anhydrous substance).

To an amount of the substance to be examined equivalent to 3.3 g of anhydrous substance, add 3 ml of *water R*, 20.0 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min. Maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 ml of *hydrochloric acid R* and 94 ml of *water R*. When the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 2 ml of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required.

Nickel ***(2.4.15)***

Maximum 1 ppm (anhydrous substance).

Water ***(2.5.12)***

15.0 per cent to 32.0 per cent, determined on 0.10 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram and not more than 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

ASSAY

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.400 g of the substance to be examined in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (a) Dissolve 50.0 mg of *sorbitol CRS* and 20.0 mg of *1,4-sorbitan CRS* in *water R* and dilute to 5.0 ml with the same solvent.

Reference solution (b) Dissolve 0.100 g of *mannitol R* and 0.100 g of *sorbitol R* in *water R* and dilute to 10.0 ml with the same solvent.

Column:

- — *size*: *l* = 0.3 m, Ø = 7.8 mm,
- — *stationary phase*: *strong cation exchange resin (calcium form) R* (9 µm),
- — *temperature*: 80 ± 5 °C.

Mobile phase Degassed *water R* .

Flow rate 0.5 ml/min.

Detection Refractometer maintained at a constant temperature of about 30-35 °C.

Injection 40 µl.

Relative retention with reference to D-sorbitol (retention time = about 25 min): 1,4-sorbitan = about 0.5; mannitol = about 0.8.

System suitability Reference solution (b):

- — *resolution*: minimum 2.0 between the peaks due to mannitol and D-sorbitol.

Calculate the percentage contents of 1,4-sorbitan and D-sorbitol using the chromatogram obtained with reference solution (a) and the declared contents of *1,4-sorbitan CRS* and of *sorbitol CRS* .

LABELLING

The label states the content of D-sorbitol and the content of 1,4-sorbitan (= nominal values).

Ph Eur

Potato Starch

General Notices

(Ph Eur monograph 0355)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Potato starch is obtained from the tuber of *Solanum tuberosum* L.

CHARACTERS

Appearance

Very fine, white or almost white powder which creaks when pressed between the fingers.

Solubility

Practically insoluble in cold water and in alcohol.

Potato starch does not contain starch grains of any other origin. It may contain a minute quantity, if any, of tissue fragments of the original plant.

IDENTIFICATION

A. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R* , it presents granules, either irregularly shaped, ovoid or pear-shaped, usually 30 µm to 100 µm in size but occasionally exceeding 100 µm, or rounded, 10 µm to 35 µm in size. There are occasional compound granules having 2 to 4 components. The ovoid and pear-shaped granules have an eccentric hilum and the rounded granules acentric or slightly eccentric hilum. All granules show clearly visible concentric striations. Between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum.

B. Suspend 1 g in 50 ml of *water R* , boil for 1 min and cool. A thick, opalescent mucilage is formed.

C. To 1 ml of the mucilage obtained in identification test B, add 0.05 ml of *iodine solution*

R1 . An orange-red to dark blue colour is produced which disappears on heating.

TESTS

pH *(2.2.3)*

5.0 to 8.0.

Shake 5.0 g with 25.0 ml of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

Foreign matter

Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R* , not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.

Oxidising substances *(2.5.30)*

Maximum 20 ppm, calculated as H_2O_2.

Sulphur dioxide *(2.5.29)*

Maximum 50 ppm.

Iron *(2.4.9)*

Maximum 10 ppm.

Shake 1.5 g with 15 ml of *dilute hydrochloric acid R.* Filter. The filtrate complies with the limit test for iron.

Loss on drying *(2.2.32)*

Maximum 20.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulphated ash *(2.4.14)*

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and not more than 10^2 fungi per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)* .

Ph Eur

Pregelatinised Starch

General Notices

Pregelatinised Maize Starch
(Ph Eur monograph 1267)

When Pregelatinised Starch is prepared from *Zea mays*, the title Pregelatinised Maize Starch may be used.

Ph Eur

DEFINITION

Pregelatinised starch is prepared from *Maize starch* (*0344*), *Potato starch* (*0355*) or *Rice starch* (*0349*) by mechanical processing in the presence of water, with or without heat, to rupture all or part of the starch granules and subsequent drying. It contains no added substances but it may be modified to render it compressible and to improve its flow characteristics.

CHARACTERS

Appearance

White or yellowish-white powder.

It swells in cold water.

IDENTIFICATION

A. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R* it presents irregular, translucent, white or yellowish-white flakes or pieces with an uneven surface. Under polarised light (between crossed nicol prisms), starch granules with a distinct black cross intersecting at the hilum may be seen.

B. Disperse 0.5 g in 2 ml of *water R* without heating and add 0.05 ml of *iodine solution R1* . A reddish-violet to blue colour is produced.

TESTS

pH *(2.2.3)*

4.5 to 7.0.

Progressively add 3.0 g to 100.0 ml of *carbon dioxide-free water R* , stirring continuously. Determine the pH when a homogeneous solution is obtained.

Oxidising substances ***(2.5.30)***

It complies with the test for oxidising substances. Use a mixture of equal volumes of *water R* and *methanol R* as solvent.

Sulphur dioxide ***(2.5.29)***

Maximum 50 ppm.

Iron ***(2.4.9)***

Maximum 20 ppm.

Dissolve the residue obtained in the test for sulphated ash in 20 ml of *dilute hydrochloric acid R*. Filter. 10 ml of the filtrate complies with the limit test for iron

Foreign matter

Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present.

Loss on drying ***(2.2.32)***

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulphated ash ***(2.4.14)***

Maximum 0.6 per cent, determined on 1.0 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and not more than 10^2 fungi per gram, determined by plate-count. It complies with the test for *Escherichia coli (2.6.13)*.

LABELLING

The type of starch used as starting material is stated.

Ph Eur

Products with Risk of Transmitting Agents of Animal Spongiform Encephalopathies

General Notices

(Ph Eur monograph 1483)

Ph Eur

DEFINITION

Products with risk of transmitting agents of animal spongiform encephalopathies are those derived from tissues or secretions of animals susceptible to transmissible spongiform encephalopathies other than by experimental challenge. This monograph applies to all substances or preparations obtained from such animals and to all substances or preparations where products obtained from such animals are included as active substances or excipients or have been used during production, for example as raw or source materials, starting materials or reagents.

PRODUCTION

Production complies with chapter *Minimising the risk of transmitting animal spongiform encephalophathy agents via human and veterinary medicinal products (5.2.8)*.

Ph Eur

Refined Safflower Oil

General Notices

(Ph Eur monograph 2088)

Ph Eur

DEFINITION

Fatty oil obtained from seeds of *Carthamus tinctorius* L. (type I) or from seeds of hybrids of *Carthamus tinctorius* L. (type II), by expression and/or extraction followed by refining. Type II refined safflower oil is rich in oleic (*cis*-9-octadecenoic) acid.

It may contain a suitable antioxidant.

CHARACTERS

Appearance

Clear, viscous, yellow to pale yellow liquid.

Solubility

Miscible with light petroleum (bp: 40-60 °C), practically insoluble in alcohol.

	Refined safflower oil (type I)	Refined safflower oil (type II)
Relative density	about 0.922	about 0.914
Refractive index	about 1.476	about 1.472

IDENTIFICATION

First identification *B.*

Second identification *A.*

A. Carry out the identification of fatty oils by thin-layer chromatography *(2.3.2)*. The chromatogram obtained is comparable with the type chromatogram for type I or type II refined safflower oil.

B. It complies with the test for composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 0.5.

Peroxide value ***(2.5.5)***

Maximum 10.0. Maximum 5.0, if intended for the manufacture of parenteral dosage forms.

Unsaponifiable matter ***(2.5.7)***

Maximum 1.5 per cent, determined on 5.0 g.

Alkaline impurities ***(2.4.19)***

It complies with the test for alkaline impurities in fatty oils.

Composition of fatty acids ***(2.4.22, Method A)***

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty acid fraction of type I refined safflower oil:

— *saturated fatty acids of chain length less than C_{14}*: maximum 0.2 per cent;

— *myristic acid*: maximum 0.2 per cent;

— *palmitic acid*: 4.0 per cent to 10.0 per cent;

— *stearic acid*: 1.0 per cent to 5.0 per cent;

— *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 8.0 per cent to 21.0 per cent;

— *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 68.0 per cent to 83.0 per cent;

— *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.5 per cent;

— *arachidic acid*: maximum 0.5 per cent;

— *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): maximum 0.5 per cent;

— *behenic acid*: maximum 1.0 per cent.

Composition of the fatty acid fraction of type II refined safflower oil:

— *saturated fatty acids of chain length less than C_{14}*: maximum 0.2 per cent;

— *myristic acid*: maximum 0.2 per cent;

— *palmitic acid*: 3.6 per cent to 6.0 per cent;

— *stearic acid*: 1.0 per cent to 5.0 per cent;

— *oleic acid* (equivalent chain length on polyethyleneglycol adipate 18.3): 70.0 per cent to 84.0 per cent;

— *linoleic acid* (equivalent chain length on polyethyleneglycol adipate 18.9): 7.0 per cent to 23.0 per cent;

— *linolenic acid* (equivalent chain length on polyethyleneglycol adipate 19.7): maximum 0.5 per cent;

— *arachidic acid*: maximum 1.0 per cent;

— *eicosenoic acid* (equivalent chain length on polyethyleneglycol adipate 20.3): maximum 1.0 per cent;

- *behenic acid*: maximum 1.2 per cent.

Brassicasterol ***(2.4.23)***

Maximum 0.3 per cent of brassicasterol in the sterol fraction of the oil.

Water ***(2.5.32)***

Maximum 0.1 per cent, determined on 5.00 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In a well-filled, airtight container, protected from light.

LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms;
- the type of oil (type I or type II).

Ph Eur

Refined Sesame Oil

General Notices

Sesame Oil

(Ph Eur monograph 0433)

Ph Eur

DEFINITION

Fatty oil obtained from the ripe seeds of *Sesamum indicum* L. by expression or extraction. It is then refined. Improved colour and odour may be obtained by further refining. It may contain a suitable antioxidant.

CHARACTERS

Appearance

Clear, light yellow liquid, almost colourless.

Solubility

Practically insoluble in ethanol (96 per cent), miscible with light petroleum.

Relative density

About 0.919.

Refractive index

About 1.473.

It solidifies to a butter-like mass at about - 4 °C.

IDENTIFICATION

First identification A.

Second identification B.

A. Composition of triglycerides (see Tests).

B. Carry out the identification of fatty oils by thin-layer chromatography *(2.3.2)*. The chromatogram obtained is similar to the typical chromatogram for sesame oil.

TESTS

Acid value *(2.5.1)*

Maximum 0.5, determined on 10.0 g; maximum 0.3 if intended for use in the manufacture of parenteral dosage forms.

Peroxide value *(2.5.5)*

Maximum 10.0; maximum 5.0 if intended for use in the manufacture of parenteral dosage forms.

Unsaponifiable matter *(2.5.7)*

Maximum 2.0 per cent, determined on 5.0 g.

Alkaline impurities *(2.4.19)*

It complies with the test for alkaline impurities in fatty oils.

Cottonseed oil

Mix 5 ml in a test-tube with 5 ml of a mixture of equal volumes of *pentanol R* and a 10 g/l solution of *sulphur R* in *carbon disulphide R*. Warm the mixture carefully until the carbon disulphide is expelled, and immerse the tube to 1/3 of its depth in boiling *saturated sodium chloride solution R*. No reddish colour develops within 15 min.

Composition of triglycerides

Liquid chromatography *(2.2.29)*.

15. PSL
16. PPO
17. SOO
18. PSO
19. SSL
20. PPS
21. SSO

Figure 0433.-1. – ***Typical chromatogram for the composition of triglycerides in refined sesame oil***

Test solution Dilute 50.0 mg of the substance to be examined to 10.0 ml with a mixture of equal volumes of *acetone R* and *methylene chloride R*.

Reference solutions Dissolve 80.0 mg of *triolein R* in a mixture of equal volumes of *acetone R* and *methylene chloride R* and dilute to 50.0 ml with the same mixture of solvents. Prepare 5 reference solutions by dilution of this solution so as to cover concentrations ranging from the disregard limit (0.5 per cent) to the upper limit for OLL (30.0 per cent).

Plot the logarithm of the area of the peak due to triolein against the logarithm of the mass of triolein in the reference solution, in milligrams.

Column 2 columns coupled in series:

— *size of each column*: *l* = 0.25 m, Ø = 4 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm).

Mobile phase:
— *mobile phase A*: *acetone R, methylene chloride R, acetonitrile R* (5:15:80 *V/V/V*);

— *mobile phase B*: *acetone R, acetonitrile R, methylene chloride R* (20:20:60 *V/V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100 → 75	0 → 25
15 - 25	75	25
25 - 70	75 → 0	25 → 100
70 - 75	0 → 100	100 → 0
75 - 80	100	0

Flow rate 1.0 ml/min.

Detection Evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

— *carrier gas*: *nitrogen R*;

— *flow rate*: 0.7 l/min;

— *evaporator temperature*: 85 °C;

— *nebuliser temperature*: 45 °C.

Injection 20 µl.

Identification of peaks Use the chromatograms obtained with the reference solutions to identify the peak due to triolein; identify the other peaks using the chromatogram shown in Figure 0433.-1. The fatty acids are designated as linolenic (Ln), linoleic (L), oleic (O), palmitic (P) and stearic (S).

System suitability Test solution:

— *resolution*: minimum 1.5 between the peaks due to OOO (triolein) and SOL.

Using the calibration curve obtained with the reference solutions, determine the percentage content of each peak with an area greater than that of the peak corresponding to the disregard limit (0.5 per cent). Assuming that the sum of these peak areas is 100 per cent, normalise the percentage content of each of the 8 triglycerides specified below.

Composition of triglycerides:
— *LLL*: 7.0 per cent to 19.0 per cent;

— *OLL*: 13.0 per cent to 30.0 per cent;

— *PLL*: 5.0 per cent to 9.0 per cent;

— *OOL*: 12.0 per cent to 23.0 per cent;

— *POL*: 6.0 per cent to 14.0 per cent;

— *OOO*: 5.0 per cent to 14.0 per cent;

- *SOL*: 2.0 per cent to 8.0 per cent;
- *POO*: 2.0 per cent to 10.0 per cent.

Water ***(2.5.12)***

Maximum 0.05 per cent, determined on 5.0 g, if intended for use in the manufacture of parenteral dosage forms.

STORAGE

In an airtight, well-filled container, protected from light; if intended for use in the manufacture of parenteral dosage forms store under an inert gas in an airtight container.

When the container has been opened, its contents are to be used as soon as possible. Any part of the contents not used at once is protected by an atmosphere of an inert gas.

LABELLING

The label states:

- whether the oil is obtained by expression or extraction;
- where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms;
- where applicable, the name of the inert gas used.

Ph Eur

Refined Soya Oil

General Notices

Refined Soyabean Oil

(Refined Soya-bean Oil, Ph Eur monograph 1473)

Action and use

Excipient.

When Soya Oil, Soyabean Oil or Soya-bean Oil is demanded, Refined Soya Oil shall be supplied.

When intended for use in the manufacture of a parenteral dosage form, Refined Soya Oil complying with the requirement for Water below should be used.

Ph Eur

DEFINITION

Fatty oil obtained from seeds of *Glycine soja* Siebold et Zucc. and *Glycine max* (L.) Merr. (*Glycine hispida* (Moench) Maxim.) by extraction and subsequent refining. It may contain a suitable antioxidant.

CHARACTERS

Appearance

Clear, pale yellow liquid.

Solubility

Miscible with light petroleum (50-70 °C), practically insoluble in ethanol (96 per cent).

Relative density

About 0.922.

Refractive index

About 1.475.

IDENTIFICATION

Identification of fatty oils by thin-layer chromatography *(2.3.2)* .

Results The chromatogram obtained is similar to the typical chromatogram for soya-bean oil.

TESTS

Acid value *(2.5.1)*

Maximum 0.5, determined on 10.0 g.

Peroxide value *(2.5.5, Method A)*

Maximum 10.0, and maximum 5.0 if intended for use in the manufacture of parenteral preparations.

Unsaponifiable matter *(2.5.7)*

Maximum 1.5 per cent, determined on 5.0 g.

Alkaline impurities *(2.4.19)*

It complies with the test.

Composition of fatty acids *(2.4.22, Method A)*

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

— *saturated fatty acids of chain length less than* C_{14} : maximum 0.1 per cent;

— *myristic acid* : maximum 0.2 per cent;

— *palmitic acid* : 9.0 per cent to 13.0 per cent;

— *palmitoleic acid* : maximum 0.3 per cent;

— *stearic acid* : 2.5 per cent to 5.0 per cent;

— *oleic acid* : 17.0 per cent to 30.0 per cent;

— *linoleic acid* : 48.0 per cent to 58.0 per cent;

— *linolenic acid* : 5.0 per cent to 11.0 per cent;

— *arachidic acid*: maximum 1.0 per cent;

— *eicosenoic acid*: maximum 1.0 per cent;

— *behenic acid*: maximum 1.0 per cent.

Brassicasterol *(2.4.23)*

Maximum 0.3 per cent in the sterol fraction of the oil.

Water *(2.5.32)*

Maximum 0.1 per cent, determined on 1.00 g, if intended for use in the manufacture of parenteral preparations. Use a mixture of equal volumes of *decanol R* and *anhydrous methanol R* as the solvent.

STORAGE

In a well-filled container, protected from light, at a temperature not exceeding 25 °C.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of parenteral preparations.

Ph Eur

Refined Sunflower Oil

General Notices

(Ph Eur monograph 1371)

Ph Eur

DEFINITION

Fatty oil obtained from the seeds of *Helianthus annuus* L. by mechanical expression or by extraction. It is then refined. A suitable antioxidant may be added.

CHARACTERS

Appearance

Clear, light yellow liquid.

Solubility

Practically insoluble in water and in ethanol (96 per cent), miscible with light petroleum (bp: 40-60 °C).

Relative density

About 0.921.

Refractive index

About 1.474.

IDENTIFICATION

Identification of fatty oils by thin-layer chromatography *(2.3.2)* .

Results The chromatogram obtained is similar to the typical chromatogram for sunflower oil.

TESTS

Acid value *(2.5.1)*

Maximum 0.5, determined on 10.0 g.

Peroxide value *(2.5.5, Method A)*

Maximum 10.0.

Unsaponifiable matter *(2.5.7)*

Maximum 1.5 per cent, determined on 5.0 g.

Alkaline impurities *(2.4.19)*

It complies with the test.

Composition of fatty acids *(2.4.22, Method A)*

Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

- *palmitic acid* : 4.0 per cent to 9.0 per cent;
- *stearic acid* : 1.0 per cent to 7.0 per cent;
- *oleic acid* : 14.0 per cent to 40.0 per cent;
- *linoleic acid* : 48.0 per cent to 74.0 per cent.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states whether the oil is obtained by mechanical expression or by extraction.

Ph Eur

Rice Starch

General Notices

(Ph Eur monograph 0349)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Rice starch is obtained from the caryopsis of *Oryza sativa* L.

CHARACTERS

Appearance

Very fine, whiteor almost white powder, which creaks when pressed between the fingers.

Solubility

Practically insoluble in cold water and in ethanol (96 per cent).

Rice starch does not contain starch grains of any other origin. It may contain traces of, if any, fragments of the endosperm tissue of the fruit.

IDENTIFICATION

A. Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R* , it presents polyhedral, simple grains 1-10 µm, mostly 4-6 µm, in size. These simple grains often gather in ellipsoidal, compound grains 50-100 µm in diameter. The grains have a poorly visible central hilum and there are no concentric striations. Between orthogonally orientated polarising plates or prisms, the starch grains show a distinct black cross intersecting at the hilum.

B. Suspend 1 g in 50 ml of *water R* , boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 ml of the mucilage obtained in identification test B add 0.05 ml of *iodine solution R1*. An orange-red to dark blue colour is produced, which disappears on heating.

TESTS

pH *(2.2.3)*

5.0 to 8.0.

Shake 5.0 g with 25.0 ml of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

Iron *(2.4.9)*

Maximum 10 ppm for the filtrate.

Shake 1.5 g with 15 ml of *dilute hydrochloric acid R*. Filter.

Foreign matter

Examine under a microscope using a mixture of equal volumes of *glycerol R* and *water R*. Not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.00 g by drying in an oven at 130 °C for 90 min.

Sulphated ash *(2.4.14)*

Maximum 0.6 per cent, determined on 1.0 g.

Oxidising substances *(2.5.30)*

Maximum 0.002 per cent, calculated as H_2O_2.

Sulphur dioxide *(2.5.29)*

Maximum 50 ppm

Microbial contamination

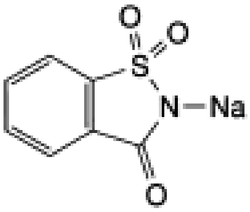
Total viable count *(2.6.12)* not more than 10^3 bacteria and 10^2 fungi per gram, determined by plate-count. It complies with the test for *Escherichia coli (2.6.13)*.

Ph Eur

Saccharin Sodium

General Notices

Soluble Saccharin
(Ph Eur monograph 0787)



$C_7H_4NNaO_3S$ 205.2 *128-44-9*

Action and use

Sweetening agent.

Ph Eur

DEFINITION

2-Sodio-1,2-benzisothiazol-3(2*H*)-one 1,1-dioxide.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

It may contain a variable quantity of water.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, efflorescent in dry air.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *B, E*.

Second identification *A, C, D, E*.

A. Melting point *(2.2.14)*: 226 °C to 230 °C.

To 5 ml of solution S (see Tests) add 3 ml of *dilute hydrochloric acid R*. A white precipitate is formed. Filter and wash with *water R*. Dry the precipitate at 100-105 °C.

B. Infrared absorption spectrophotometry (*2.2.24*).

Preparation Discs; dry the substances at 100-105 °C before use.

Comparison *Saccharin sodium CRS*.

C. Mix about 10 mg with about 10 mg of *resorcinol R*, add 0.25 ml of *sulphuric acid R* and carefully heat the mixture over a naked flame until a dark green colour is produced. Allow to cool, add 10 ml of *water R* and *dilute sodium hydroxide solution R* until an alkaline reaction is produced. An intense green fluorescence develops.

D. To 0.2 g add 1.5 ml of *dilute sodium hydroxide solution R*, evaporate to dryness and heat the residue carefully until it melts, avoiding carbonisation. Allow to cool, dissolve the mass in about 5 ml of *water R*, add *dilute hydrochloric acid R* until a weak acid reaction is produced and filter, if necessary. To the filtrate add 0.2 ml of *ferric chloride solution R2*. A violet colour develops.

E. Solution S gives reaction (a) of sodium *(2.3.1).*

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 5.0 g in 25 ml of *carbon dioxide-free water R*.

Acidity or alkalinity

To 10 ml of solution S add about 0.05 ml of a 10 g/l solution of *phenolphthalein R* in *ethanol (96 per cent) R*. The solution is not pink. Add 0.1 ml of *sodium hydroxide 0.1 M*. The solution becomes pink.

o- and p-Toluenesulphonamide

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 25 mg of *caffeine R* in *methylene chloride R* and dilute to 100 ml with the same solvent.

Test solution Dissolve 10.0 g of the substance to be examined in 50 ml of *water R*. If necessary adjust the solution to pH 7-8 by addition of *1 M sodium hydroxide* or *1 M hydrochloric acid*. Shake the solution with 4 quantities, each of 50 ml, of *methylene chloride R*. Combine the lower layers, dry over *anhydrous sodium sulphate R* and filter. Wash the filter and the sodium sulphate with 10 ml of *methylene chloride R*. Combine the solution and the washings and evaporate almost to dryness in a water-bath at a temperature not exceeding 40 °C. Using a small quantity of *methylene chloride R*, quantitatively transfer the residue into a suitable 10 ml tube, evaporate to dryness in a current of *nitrogen R* and add 1.0 ml of the internal standard solution.

Blank solution Evaporate 200 ml of *methylene chloride R* to dryness in a water-bath at a temperature not exceeding 40 °C. Dissolve the residue in 1 ml of *methylene chloride R*.

Reference solution Dissolve 20.0 mg of *o-toluenesulphonamide R* and 20.0 mg of *p-toluenesulphonamide R* in *methylene chloride R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of the solution to 50.0 ml with *methylene chloride R*. Evaporate 5.0 ml of the final solution to dryness in a current of *nitrogen R*. Take up the residue using 1.0 ml of the internal standard solution.

Column:

— *material*: fused silica;

— *size*: *l* = 10 m, Ø = 0.53 mm;

— *stationary phase*: *polymethylphenylsiloxane R* (film thickness 2 µm).

Carrier gas *Nitrogen for chromatography R*.

Flow rate 10 ml/min.

Split ratio 1:2.

Temperature:

— *column*: 180 °C;

— *injection port and detector*: 250 °C.

Detection Flame ionisation.

Injection: 1 µl.

Elution order *O*-toluenesulphonamide, *p*-toluenesulphonamide, caffeine.

System suitability:

— *Resolution*: minimum 1.5 between the peaks due to *o*-toluenesulphonamide and *p*-toluenesulphonamide in the chromatogram obtained with the reference solution;

— The chromatogram obtained with the blank solution does not show any peak with the same retention times as the internal standard, *o*-toluenesulphonamide and *p*-toluenesulphonamide.

Limits:

— *o-toluenesulphonamide*: the ratio of its area to that of the internal standard is not greater than the corresponding ratio in the chromatogram obtained with the reference solution (10 ppm);

— *p-toluenesulphonamide*: the ratio of its area to that of the internal standard is not greater than the corresponding ratio in the chromatogram obtained with the reference solution (10 ppm).

Readily carbonisable substances

Dissolve 0.20 g in 5 ml of *sulphuric acid R* and keep at 48-50 °C for 10 min. When viewed against a white background, the solution is not more intensely coloured than a solution prepared by mixing 0.1 ml of red primary solution, 0.1 ml of blue primary solution and 0.4 ml of yellow primary solution *(2.2.2)* with 4.4 ml of *water R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

Water ***(2.5.12)***

Maximum 15.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.150 g in 50 ml of *anhydrous acetic acid R*, with slight heating if necessary. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 20.52 mg of $C_7H_4NNaO_3S$.

STORAGE

In an airtight container .

DEFINITION

Bis[(1*RS*)-2-[(1,1-dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanol] sulphate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, practically insoluble or very slightly soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E.*

A. Dissolve 80.0 mg in a 10 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with a 10 g/l solution of *hydrochloric acid R*. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 276 nm. The specific absorbance at the absorption maximum is 55 to 64.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium bromide R*.

Comparison *Salbutamol sulphate CRS*.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 12 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 12 mg of *salbutamol sulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *Concentrated ammonia R, water R, ethyl acetate R, 2-propanol R, methyl isobutyl ketone R* (3:18:35:45:50 *V/V/V/V/V*).

Application 1 µl.

Development Over a path of 18 cm.

Drying In air.

Detection Spray with a 1 g/l solution of *methylbenzothiazolone hydrazone hydrochloride R* in a 90 per cent *V/V* solution of *methanol R*, followed by a 20 g/l solution of *potassium ferricyanide R* in a mixture of 1 volume of *concentrated ammonia R1* and 3 volumes of *water R*, followed by a further spraying with a 1 g/l solution of *methylbenzothiazolone hydrazone hydrochloride R* in a 90 per cent *V/V* solution of *methanol R*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 10 mg in 50 ml of a 20 g/l solution of *disodium tetraborate R*. Add 1 ml of a 30 g/l solution of *aminopyrazolone R*, 10 ml of *methylene chloride R* and 10 ml of a 20 g/l solution of *potassium ferricyanide R*. Shake and allow to separate. An orange-red colour develops in the methylene chloride layer.

E. It gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 0.250 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.10 ° to + 0.10 °, determined on solution S.

Acidity or alkalinity

To 10 ml of solution S add 0.15 ml of *methyl red solution R* and 0.2 ml of *0.01 M sodium hydroxide*. The solution is yellow. Not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to red.

Impurity J

Maximum 0.2 per cent.

Dissolve 60.0 mg in a 1 g/l solution of *hydrochloric acid R* and dilute to 25.0 ml with the same solvent. The absorbance *(2.2.25)* of the solution measured at 310 nm is not greater than 0.10.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 2.4 mg of *salbutamol sulphate CRS*, 2.0 mg of *salbutamol impurity B CRS*, 3.0 mg of *salbutamol impurity D CRS*, 3.0 mg of *salbutamol impurity F CRS* and 3.0 mg of *salbutamol impurity G CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 2.0 ml of the solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of one vial of *salbutamol impurity I CRS* with 1 ml of the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 335 m2/g, a pore size of 10 nm and a carbon loading of 11.7 per cent.

Mobile phase Mix 22 volumes of *acetonitrile R* and 78 volumes of a solution containing 2.87 g/l of *sodium heptanesulphonate R* and 2.5 g/l of *potassium dihydrogen phosphate R* previously adjusted to pH 3.65 with *dilute phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 25 times the retention time of salbutamol.

Relative retention With reference to salbutamol (retention time = about 1.9 min): impurity B = about 1.3, impurity A = about 1.7, impurity C = about 2.0, impurity D = about 2.7, impurity H = about 3.0, impurity E = about 3.1, impurity G = about 4.1, impurity F = about 6.2, impurity I = about 23.2.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity I.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to salbutamol and impurity B.

Limits:

— *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity F*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity G*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurities A, B, C, E, H, I*: for each impurity, not more than 1.5 times the area of the peak due to salbutamol in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *total*: maximum 1.0 per cent;

— *disregard limit*: 0.05 per cent.

Boron

Maximum 50 ppm.

Test solution To 50 mg of the substance to be examined add 5 ml of a solution containing 13 g/l of *anhydrous sodium carbonate R* and 17 g/l of *potassium carbonate R*. Evaporate to dryness on a water-bath and dry at 120 °C. Ignite the residue rapidly until the organic matter has been destroyed, allow to cool and add 0.5 ml of *water R* and 3.0 ml of a freshly prepared 1.25 g/l solution of *curcumin R* in *glacial acetic acid R*. Warm gently to effect solution, allow to cool and add 3.0 ml of a mixture prepared by adding 5 ml of *sulphuric acid R*, slowly and with stirring, to 5 ml of *glacial acetic acid R*. Mix and allow to stand for 30 min. Dilute to 100.0 ml with *ethanol (96 per cent) R*, filter and use the filtrate.

Reference solution Dissolve 0.572 g of *boric acid R* in 1000.0 ml of *water R*. Dilute 1.0 ml to 100.0 ml with *water R*. To 2.5 ml of the solution add 5 ml of a solution containing 13 g/l of *anhydrous sodium carbonate R* and 17 g/l of *potassium carbonate R*, and treat this mixture in the same manner as the test solution.

Measure the absorbance *(2.2.25)* of the test solution and of the reference solution at the maximum at about 555 nm. The absorbance of the test solution is not greater than that of the reference solution.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 5 ml of *anhydrous formic acid R* and add 35 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 57.67 mg of $C_{26}H_{44}N_2O_{10}S$.

STORAGE

Protected from light.

Beta$_2$-adrenoceptor agonist; bronchodilator.

Preparation

Salbutamol Pressurised Inhalation

Ph Eur

DEFINITION

(1*RS*)-2-[(1,1-Dimethylethyl)amino]-1-[4-hydroxy-3-(hydroxymethyl)phenyl]ethanol.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water, soluble in ethanol (96 per cent).

mp

About 155 °C, with decomposition.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Dissolve 80.0 mg in a 10 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same acid. Dilute 10.0 ml of the solution to 100.0 ml with a 10 g/l solution of *hydrochloric acid R*. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 276 nm. The specific absorbance at the absorption maximum is 66 to 75.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Salbutamol CRS*.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 50 ml with the same solvent.

Reference solution Dissolve 10 mg of *salbutamol CRS* in *methanol R* and dilute to 50 ml with the same solvent.

Plate *TLC silica gel plate R*.

Mobile phase *Concentrated ammonia R, water R, ethyl acetate R, 2-propanol R, methyl isobutyl ketone R* (3:18:35:45:50 *V/V/V/V/V*).

Application 5 µl.

Development Over a path of 18 cm.

Drying In air.

Detection Spray with a 1 g/l solution of *methylbenzothiazolone hydrazone hydrochloride R* in a 90 per cent *V/V* solution of *methanol R*, followed by a 20 g/l solution of *potassium ferricyanide R* in a mixture of 1 volume of *concentrated ammonia R1* and 3 volumes of *water R*, followed by a further spraying with a 1 g/l solution of *methylbenzothiazolone hydrazone hydrochloride R* in a 90 per cent *V/V* solution of *methanol R*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 10 mg in 50 ml of a 20 g/l solution of *disodium tetraborate R*. Add 1 ml of a 30 g/l solution of *aminopyrazolone R*, 10 ml of *methylene chloride R* and 10 ml of a 20 g/l solution of *potassium ferricyanide R*. Shake and allow to separate. An orange-red colour develops in the methylene chloride layer.

TESTS

Solution S

Dissolve 0.50 g in *methanol R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

- 0.10 ° to + 0.10 °, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 2.0 mg of *salbutamol CRS*, 2.0 mg of *salbutamol impurity B CRS*, 3.0 mg of *salbutamol impurity D CRS*, 3.0 mg of *salbutamol impurity F CRS* and 3.0 mg of *salbutamol impurity G CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of 1 vial of *salbutamol impurity I CRS* with 1 ml of the mobile phase.

Column:

— *size: l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 335 m2/g, a pore size of 10 nm and a carbon loading of 11.7 per cent.

Mobile phase Mix 22 volumes of *acetonitrile R* and 78 volumes of a solution containing 2.87 g/l of *sodium heptanesulphonate R* and 2.5 g/l of *potassium dihydrogen phosphate R* previously ajusted to pH 3.65 with *dilute phosphoric acid R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 25 times the retention time of salbutamol.

Relative retention With reference to salbutamol (retention time = about 1.9 min): impurity B = about 1.3; impurity A = about 1.7; impurity C = about 2.0; impurity D = about 2.7; impurity H = about 3.0; impurity E = about 3.1; impurity G = about 4.1; impurity F = about 6.2; impurity I = about 23.2.

Identification of impurities Use the chromatogram obtained with reference solution (b) to identify the peak due to impurity I.

System suitability Reference solution (a):

— *resolution*: minimum 3.0 between the peaks due to salbutamol and impurity B.

Limits:

— *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity F*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurity G*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *impurities A, B, C, E, H, I*: for each impurity, not more than 1.5 times the area of the peak due to salbutamol in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *total*: maximum 1.0 per cent;

— *disregard limit*: 0.05 per cent.

Impurity J

Maximum 0.2 per cent.

Dissolve 50.0 mg in a 1 g/l solution of *hydrochloric acid R* and dilute to 25.0 ml with the same solvent. The absorbance *(2.2.25)* of the solution measured at 310 nm is not greater than 0.10.

Boron

Maximum 50 ppm.

Test solution To 50 mg of the substance to be examined add 5 ml of a solution containing 13 g/l of *anhydrous sodium carbonate R* and 17 g/l of *potassium carbonate R*. Evaporate to dryness on a water-bath and dry at 120 °C. Ignite the residue rapidly until the organic matter has been destroyed, allow to cool and add 0.5 ml of *water R* and 3.0 ml of a freshly prepared 1.25 g/l solution of *curcumin R* in *glacial acetic acid R*. Warm gently to effect solution, allow to cool and add 3.0 ml of a mixture prepared by adding 5 ml of *sulphuric acid R*, slowly and with stirring, to 5 ml of *glacial acetic acid R*. Mix and allow to stand for 30 min. Dilute to 100.0 ml with *ethanol (96 per cent) R*, filter and use the filtrate.

Reference solution Dissolve 0.572 g of *boric acid R* in 1000.0 ml of *water R*. Dilute 1.0 ml to 100.0 ml with *water R*. To 2.5 ml of the solution add 5 ml of a solution containing 13 g/l of *anhydrous sodium carbonate R* and 17 g/l of *potassium carbonate R*, and treat this mixture in the same manner as the test solution.

Measure the absorbance *(2.2.25)* of the test solution and of the reference solution at the maximum at about 555 nm. The absorbance of the test solution is not greater than that of the reference solution.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

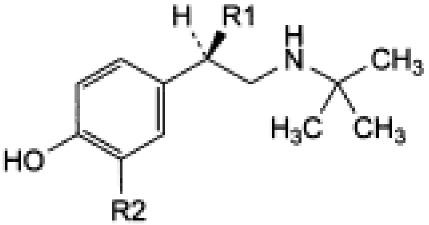
1 ml of *0.1 M perchloric acid* is equivalent to 23.93 mg of $C_{13}H_{21}NO_3$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, F, G, H, I, J.



A. R1 = OCH_3, R2 = CH_2OH: [5-[(1*RS*)-2-[(1,1-dimethylethyl)amino]-1-methoxyethyl]-2-hydroxyphenyl]methanol,

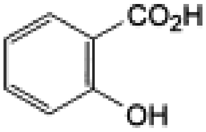
Ph Eur

Salicylic Acid

General Notices

(Ph Eur monograph 0366)



$C_7H_6O_3$ 138.1 *69-72-7*

Action and use

Keratolytic.

Preparations

Salicylic Acid Collodion

Salicylic Acid Ointment

Coal Tar and Salicylic Acid Ointment

Zinc and Salicylic Acid Paste

Ph Eur

DEFINITION

2-Hydroxybenzenecarboxylic acid.

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or white or colourless, acicular crystals.

Solubility

Slightly soluble in water, freely soluble in ethanol (96 per cent), sparingly soluble in methylene chloride.

IDENTIFICATION

First identification A, B.

Second identification A, C.

A. Melting point *(2.2.14)*: 158 °C to 161 °C.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Salicylic acid CRS*.

C. Dissolve about 30 mg in 5 ml of *0.05 M sodium hydroxide*, neutralise if necessary and dilute to 20 ml with *water R*. 1 ml of the solution gives reaction (a) of salicylates *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in 50 ml of boiling *distilled water R*, cool and filter.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1 g in 10 ml of *ethanol (96 per cent) R*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.50 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 10 mg of *phenol R* (impurity C) in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *salicylic acid impurity B CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (c) Dissolve 50 mg of *4-hydroxybenzoic acid R* (impurity A) in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (d) Dilute 1.0 ml of reference solution (a) to 10.0 ml with the mobile phase.

Reference solution (e) Dilute a mixture of 1.0 ml of each of reference solutions (a), (b) and (c) to 10.0 ml with the mobile phase.

Reference solution (f) Dilute a mixture of 0.1 ml of each of reference solutions (a), (b) and (c) to 10.0 ml with the mobile phase.

Column:

— *size:* l = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: non-deactivated *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *Glacial acetic acid R, methanol R, water R* (1:40:60 *V/V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 10 µl of the test solution and reference solutions (d), (e) and (f).

Relative retention with reference to impurity C: impurity A = about 0.70; impurity B = about 0.90.

System suitability Reference solution (e):

— the 3rd peak in the chromatogram corresponds to the peak due to phenol in the chromatogram obtained with reference solution (d);

— *resolution*: minimum 1.0 between the peaks due to impurities B and C; if necessary, adjust the quantity of acetic acid in the mobile phase.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.1 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.05 per cent);

— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.02 per cent);

— *any other impurity*: for each impurity, not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (f) (0.05 per cent);

— *total*: not more than twice the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (0.2 per cent);

— *disregard limit*: 0.01 times the area of the principal peak in the chromatogram obtained with reference solution (f).

Chlorides *(2.4.4)*

Maximum 100 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*.

Sulphates

Maximum 200 ppm.

Dissolve 1.0 g in 5 ml of *dimethylformamide R* and add 4 ml of *water R*. Mix thoroughly. Add 0.2 ml of *dilute hydrochloric acid R* and 0.5 ml of a 25 per cent *m/m* solution of *barium chloride R*. After 15 min any opalescence in the solution is not more intense than that in a standard prepared as follows: to 2 ml of *sulphate standard solution (100 ppm SO_4) R* add 0.2 ml of *dilute hydrochloric acid R*, 0.5 ml of a 25 per cent *m/m* solution of *barium chloride R*, 3 ml of *water R* and 5 ml of *dimethylformamide R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.0 g in 15 ml of *ethanol (96 per cent) R* and add 5 ml of *water R*. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) prepared by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 5 volumes of *water R* and 15 volumes of *ethanol (96 per cent) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.120 g in 30 ml of *ethanol (96 per cent) R* and add 20 ml of *water R*. Titrate with 0.1 M sodium hydroxide, using 0.1 ml of *phenol red solution R* as indicator.

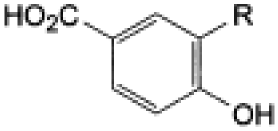
1 ml of *0.1 M sodium hydroxide* is equivalent to 13.81 mg of $C_7H_6O_3$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C.



A. R = H: 4-hydroxybenzoic acid,

B. R = CO_2H: 4-hydroxyisophthalic acid,

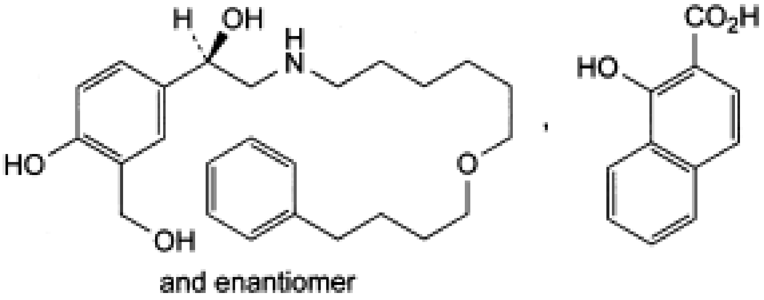
C. phenol.

Ph Eur

Salmeterol Xinafoate

General Notices

(Ph Eur monograph 1765)



$C_{36}H_{45}NO_7$ 604 *94749-08-3*

Action and use

Beta$_2$-adrenoceptor agonist; bronchodilator.

Ph Eur

DEFINITION

(1*RS*)-1-[4-Hydroxy-3-(Hydroxymethyl)phenyl]-2-[[6-(4-phenylbutoxy)hexyl]amino]ethanol 1-hydroxynaphthalene-2-carboxylate.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in methanol, slightly soluble in anhydrous ethanol.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison salmeterol xinafoate CRS.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Protect the solutions from light*.

Solvent mixture *acetonitrile R*, *water R* (50:50 *V/V*).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Dissolve 11 mg of *salmeterol xinafoate for system suitability CRS* (salmeterol containing impurities E and G) in the solvent mixture and dilute to 2 ml with the solvent mixture.

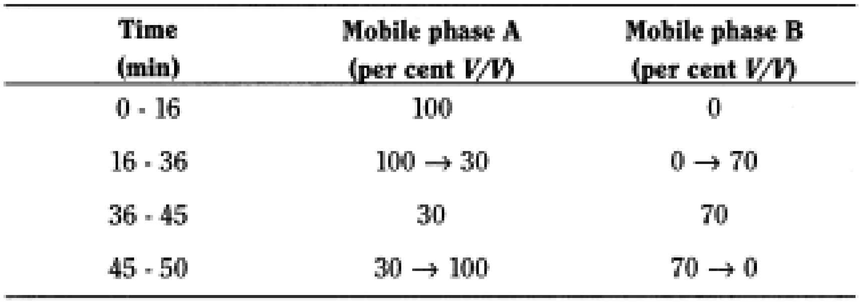
Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Column:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- stationary phase: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- *mobile phase A*: mix 24 volumes of a 7.71 g/l solution of *ammonium acetate R* with 24 volumes of a 28.84 g/l solution of *sodium dodecyl sulphate R* and adjust to pH 2.7 with *glacial acetic acid R*; mix with 52 volumes of *acetonitrile R*;
- *mobile phase B*: *acetonitrile R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 16	100	0
16 - 36	100 → 30	0 → 70
36 - 45	30	70
45 - 50	30 → 100	70 → 0

Flow rate 2 ml/min.

Detection Spectrophotometer at 278 nm.

Injection 20 µl; inject the solvent mixture as a blank solution.

Relative retention With reference to salmeterol (retention time = about 13 min): xinafoic acid = about 0.2; impurity A = about 0.3; impurity B = about 0.5; impurity C = about 0.7; impurity D = about 0.8; impurity E = about 0.9; impurity F = about 1.6; impurity G = about 2.7.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 10, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to salmeterol;
- the chromatogram obtained is similar to the chromatogram supplied with *salmeterol xinafoate for system suitability CRS*.

Limits:

- *impurity D*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurities A, F, G*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *impurities B, C, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than 9 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.9 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard the peak due to xinafoic acid and any peaks due to the blank.

Water ***(2.5.12)***

Maximum 0.5 per cent, determined on 1.000 g.

Dissolve the sample with 30 ml of *anhydrous methanol R*.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29).*

Test solution Dissolve 12.50 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 12.50 mg of *salmeterol xinafoate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (b) Dilute 1 ml of reference solution (a) described in the test for related substances to 20 ml with the mobile phase.

Column:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 24 volumes of a 7.71 g/l solution of *ammonium acetate R* with 24 volumes of a 28.84 g/l solution of *sodium dodecyl sulphate R* and adjust to pH 2.7 with *glacial acetic acid R*. Mix with 52 volumes of *acetonitrile R*.

Flow rate 2 ml/min.

Detection Spectrophotometer at 278 nm.

Injection 20 µl.

Run time Until complete elution of the peak due to salmeterol (about 16 min).

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 10, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to salmeterol.

The stationary phase may be regenerated using the gradient described under the test for related substances.

Calculate the percentage content of $C_{36}H_{45}NO_7$ using the chromatogram obtained with reference solution (a) and the declared content of $C_{36}H_{45}NO_7$ in *salmeterol xinafoate CRS*.

STORAGE

DEFINITION

N-Methyl-*N*-[(1*R*)-1-methyl-2-phenylethyl]prop-2-yn-1-amine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, slightly soluble in acetone.

mp: about 143 °C.

IDENTIFICATION

A. Specific optical rotation *(2.2.7)*: - 10.0 to - 12.0 (dried substance).

Dissolve 2.000g in *carbon dioxide-free water R* and dilute to 20.0 ml with the same solvent.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs of *potassium chloride R*.

Comparison *Selegiline hydrochloride CRS*.

C. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

pH *(2.2.3)*

3.5 to 4.5.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 20 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 50.0 mg of *selegiline hydrochloride CRS* and 10.0 mg of *butyl parahydroxybenzoate R* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Column:

- size*: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dilute 500 ml of *acetonitrile R* to 1000.0 ml with a butylammonium acetate buffer solution pH 6.5 prepared as follows: dissolve 4 ml of *butylamine R* in 900 ml of *water R*, adjust to pH 6.5 with *acetic acid R* and dilute to 1000.0 ml with *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µl.

Run time 1.7 times the retention time of selegiline.

System suitability Reference solution (a):

- *resolution*: minimum 3 between the peaks due to selegiline and butyl parahydroxybenzoate.

Limits:

- *impurities A, B, C, D*: for each impurity, not more than the area of the peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent); disregard any peak due to chlorides.

Impurity E

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 20.0 mg of the substance to be examined in a mixture of 1 ml of *2-propanol R* and 10 µl of *butylamine R* and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 8.0 mg of *(RS)-selegiline hydrochloride CRS* in a mixture of 10 µl of *butylamine R* and 1 ml of *2-propanol R* and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 0.5 ml of reference solution (a) to 20.0 ml with the mobile phase.

Column:

Action and use

Used in treatment of dandruff and seborrhoeic dermatitis of the scalp.

Preparation

Selenium Sulphide Scalp Application

Ph Eur

DEFINITION

Content

52.0 per cent to 55.5 per cent of Se.

CHARACTERS

Appearance

Bright orange or reddish-brown powder.

Solubility

Practically insoluble in water.

IDENTIFICATION

A. Gently boil about 50 mg with 5 ml of *nitric acid R* for 30 min. Dilute to 50 ml with *water R* and filter. To 5 ml of the filtrate add 10 ml of *water R* and 5 g of *urea R*. Heat to boiling, cool and add 1.5 ml of *potassium iodide solution R*. A yellow or orange colour is produced which darkens rapidly on standing. This solution is used in identification test B.

B. Allow the coloured solution obtained under identification A to stand for 10 min and filter through *kieselguhr for chromatography R*. 5 ml of the filtrate gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Soluble selenium compounds

Maximum 5 ppm, calculated as Se.

To 10 g add 100 ml of *water R*, mix well, allow to stand for 1 h with frequent shaking and filter.

To 10 ml of the filtrate add 2 ml of a 115 g/l solution of *anhydrous formic acid R*, dilute to 50 ml with *water R* and adjust to pH 2.0-3.0 with an 115 g/l solution of *anhydrous formic acid R*. Add 2 ml of a 5 g/l solution of *3,3′-diaminobenzidine tetrahydrochloride R*. Allow to stand for 45 min and then adjust to pH 6.0-7.0 with *dilute ammonia R1*. Shake the solution for 1 min with 10 ml of *toluene R* and allow the phases to separate. The absorbance *(2.2.25)* of the upper layer measured at 420 nm is not greater than that of a standard prepared at the same time and in the same manner beginning at the words "add 2 ml of an 115 g/l solution of *anhydrous formic acid R*" and using 5 ml of *selenium standard solution (1 ppm Se) R* instead of 10 ml of the filtrate.

ASSAY

To 0.100 g add 25 ml of *fuming nitric acid R* and heat on a water-bath for 1 h; a small insoluble residue may remain. Cool and dilute to 100.0 ml with *water R*. To 25.0 ml of this solution add 50 ml of *water R* and 5 g of *urea R* and heat to boiling. Cool, add 7 ml of *potassium iodide solution R* and 3 ml of *starch solution R*. Titrate immediately with *0.1 M sodium thiosulphate*. Carry out a blank titration.

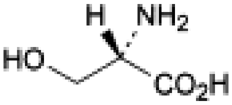
1 ml of *0.1 M sodium thiosulphate* is equivalent to 1.974 mg of Se.

Ph Eur

Serine

General Notices

(Ph Eur monograph 0788)



$C_3H_7NO_3$ 105.1 *56-45-1*

Action and use

Amino acid.

Ph Eur

DEFINITION

Serine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-amino-3-hydroxypropanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, freely soluble in water, practically insoluble in alcohol.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *serine CRS*. Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 1 ml of a 10 g/l solution of the substance to be examined in a test-tube, add 5 ml of a 20 g/l solution of *sodium periodate R*. Heat on a water-bath and collect the vapour on glass wool moistened with *water R* and inserted in the opening of the test tube. After heating for 5 min, transfer the glass wool to a test-tube containing 1 ml of a 15 g/l solution of *chromotropic acid, sodium salt R* and 3 ml of *sulphuric acid R*. Heat on a water-bath for 10 min. A violet-red colour is produced.

TESTS

Solution S

Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 2.50 g in *dilute hydrochloric acid R* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 14.0 to + 16.0, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *0.1 M hydrochloric acid* and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *serine CRS* in *0.1 M hydrochloric acid* and dilute to 50 ml with the same acid.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *methionine CRS* and 10 mg of *serine CRS* in *0.1 M hydrochloric acid* and dilute to 25 ml with the same acid.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides *(2.4.4)*

Dilute 5 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dilute 10 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0*.1 ml of naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 10.51 mg of $C_3H_7NO_3$.

STORAGE

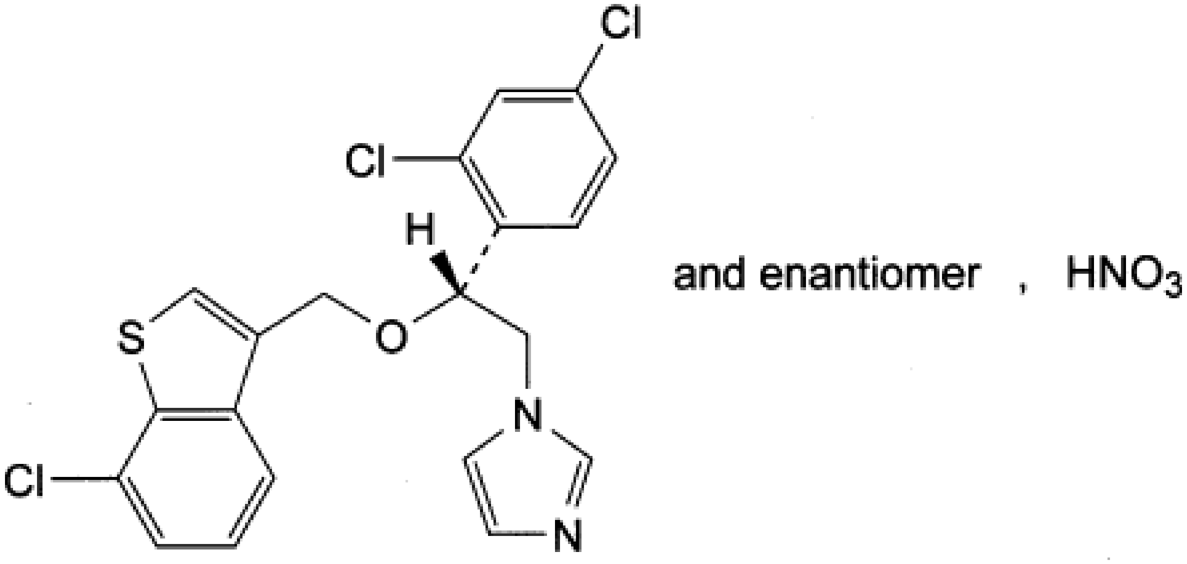
Store protected from light.

Ph Eur

Sertaconazole Nitrate

General Notices

(Ph Eur monograph 1148)



$C_{20}H_{15}Cl_3N_2OS,HNO_3$ 500.8 *99592-39-9*

Action and use

Antifungal.

Ph Eur

DEFINITION

(*RS*)-1-[2-[(7-Chloro-1-benzothiophen-3-yl)methoxy]-2-(2,4-dichlorophenyl)ethyl]-1*H*-imidazole nitrate.

Content

98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in methanol, sparingly soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D, E.*

A. Melting point *(2.2.14)*: 156 °C to 161 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 0.1 g in *methanol R* and dilute to 100 ml with the same solvent. Dilute 10 ml of this solution to 100 ml with *methanol R*.

Spectral range 240-320 nm.

Absorption maxima At 260 nm, 293 nm and 302 nm.

Absorbance ratio A_{302}/A_{293} = 1.16 to 1.28.

C. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dry the substances at 100-105 °C for 2 h and examine as discs of *potassium bromide R*.

Comparison *sertaconazole nitrate CRS.*

D. Thin-layer chromatography *(2.2.27)*.

Solvent mixture *concentrated ammonia R, methanol R* (10:90 *V/V*).

Test solution Dissolve 40 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 40 mg of *sertaconazole nitrate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (b) Dissolve 20 mg of *miconazole nitrate CRS* in reference solution (a) and dilute to 5 ml with reference solution (a).

Plate *TLC silica gel G plate R.*

Mobile phase *concentrated ammonia R, toluene R, dioxan R* (1:40:60 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In a current of air for 15 min.

Detection Expose to iodine vapour for 30 min.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

E. About 1 mg gives the reaction of nitrates *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Dissolve 0.1 g in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of s*ertaconazole nitrate CRS* and 5.0 mg of *miconazole nitrate CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: *nitrile silica gel for chromatography R1* (10 µm).

Mobile phase *acetonitrile R1, 1.5 g/l solution of sodium dihydrogen phosphate R* (37:63 *V/V*).

Flow rate 1.6 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 1.3 times the retention time of sertaconazole.

Retention time Nitrate ion = about 1 min; miconazole = about 17 min; sertaconazole = about 19 min.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to miconazole and sertaconazole.

Limits:

— *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent); disregard the peak due to the nitrate ion.

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 0.50 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 ml of a mixture of equal volumes of *anhydrous acetic acid R* and *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

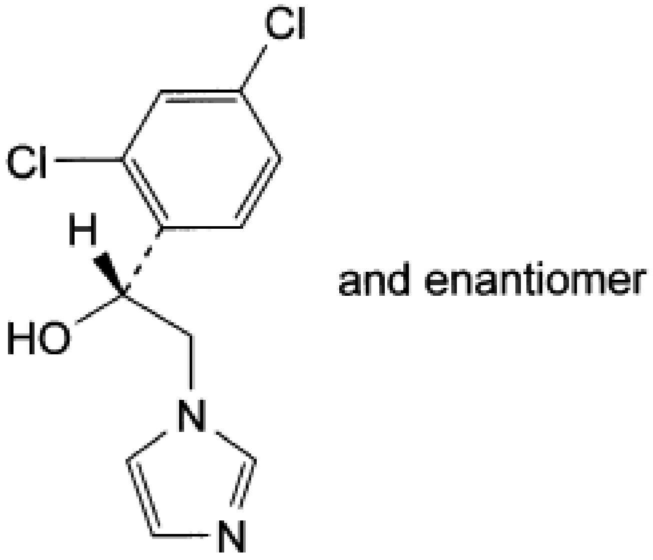
1 ml of *0.1 M perchloric acid* is equivalent to 50.08 mg of $C_{20}H_{16}Cl_3N_3O_4S$.

STORAGE

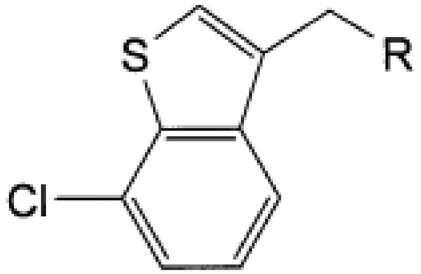
Protected from light.

IMPURITIES

Specified impurities   A, B, C.



A. (1*RS*)-1-(2,4-dichlorophenyl)-2-(1*H*-imidazol-1-yl)ethanol,



B. R = Br: 3-(bromomethyl)-7-chloro-1-benzothiophen,

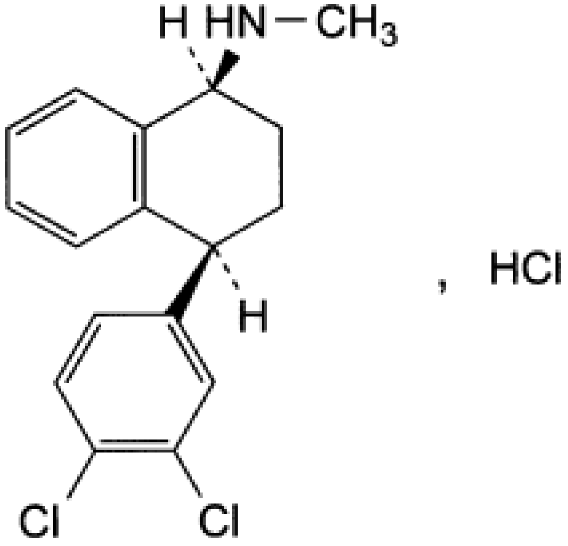
C. R = OH: (7-chloro-1-benzothiophen-3-yl)methanol.

Ph Eur

Sertraline Hydrochloride

General Notices

(Ph Eur monograph 1705)



$C_{17}H_{18}Cl_3N$ 342.7   *79559-97-0*

Action and use

Selective serotonin reuptake inhibitor; antidepressant.

Ph Eur

DEFINITION

(1*S*,4*S*)-4-(3,4-Dichlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine hydrochloride.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, freely soluble in anhydrous ethanol, slightly soluble in acetone and in isopropanol.

It shows polymorphism *(5.9)*.

IDENTIFICATION

A. Specific optical rotation *(2.2.7)*: + 38.8 to + 43.0 (anhydrous substance), measured at 25 °C.

Solvent mixture Dilute 1 volume of a 103 g/l solution of *hydrochloric acid R* to 20 volumes with *methanol R.*

Dissolve 0.250 g in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison sertraline hydrochloride CRS.

If the spectra obtained in the solid state show differences, record new spectra using 10 g/l solutions in *methylene chloride R*.

C. Dissolve 10 mg in 5 ml of *anhydrous ethanol R* and add 5 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Enantiomeric purity

Liquid chromatography *(2.2.29)*.

Solvent mixture diethylamine R, *hexane R*, *2-propanol R* (1:40:60 *V/V/V*).

Test solution Dissolve 60.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Dissolve the contents of a vial of *sertraline for system suitability CRS* (containing impurity G) in 1.0 ml of solvent mixture.

Reference solution (b) Dilute 0.5 ml of the test solution to 100.0 ml with the solvent mixture.

Column:

— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *silica gel AD for chiral separation R* (5 µm).

Mobile phase Mix 30 volumes of *hexane R* and 70 volumes of a mixture of 1 volume of *diethylamine R*, 25 volumes of *2-propanol R* and 975 volumes of *hexane R.*

Flow rate 0.4 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 20 µl.

Run time 30 min.

Elution order Sertraline, impurity G.

System suitability:

— *resolution*: minimum 1.5 between the peaks due to sertraline and impurity G in the chromatogram obtained with reference solution (a);

- *signal-to-noise ratio*: minimum 10 for the peak due to sertraline in the chromatogram obtained with reference solution (b).

Limit:

- *impurity G*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.5 per cent).

Impurity E

Thin-layer chromatography *(2.2.27)*.

Solvent mixture *methanol R*, *methylene chloride R* (50:50 *V/V*).

Test solution Dissolve 0.500 g of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Dissolve 5.0 mg of *mandelic acid R* (impurity E) in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (b) Dissolve 5 mg of *mandelic acid R* (impurity E) and 5 mg of the substance to be examined with the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *dilute ammonia R2*, *methanol R*, *methylene chloride R* (15:50:120 *V/V/V*).

Application 50 µl as bands of about 4 cm. Allow to dry.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

- the chromatogram shows 2 clearly separated spots.

Limit:

- *impurity E*: any zone due to impurity E is not more intense than the zone in the chromatogram obtained with reference solution (a) (0.2 per cent).

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Introduce 0.250 g of the substance to be examined into a 15 ml stoppered centrifuge tube, add 2.0 ml of *methanol R* and 0.20 ml of a 25 per cent solution of *potassium carbonate R* and mix in a vortex mixer for 30 s. Add 8.0 ml of *methylene chloride R*, stopper the tube and mix in a vortex mixer for 60 s. Add 1 g of *anhydrous sodium sulphate R*, mix well and then centrifuge for about 5 min.

Reference solution (a) Dissolve the contents of a vial of *sertraline for peak identification CRS* (containing impurities A, B, C and F) in 0.2 ml of *methylene chloride R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methylene chloride R*. Dilute 1.0 ml of this solution to 20.0 ml with *methylene chloride R*.

Column:

- *material*: fused silica;

— *size*: *l* = 30 m, Ø = 0.53 mm;

— *stationary phase*: *polymethylphenylsiloxane R* (film thickness 1.0 µm).

Carrier gas *helium for chromatography R.*

Flow rate 9 ml/min.

Split ratio 1:10.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	200
	1 - 31	200 → 260
	31 - 39	260
Injection port		250
Detector		280

Detection Flame ionisation.

Injection 1 µl.

Identification of impurities Use the chromatogram supplied with *sertraline for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C and F.

Relative retention With reference to sertraline (retention time = about 24 min): impurity B = about 0.5; impurities C and D = about 0.7; impurity A = about 1.05; impurity F = about 1.1.

System suitability Reference solution (a):

— *peak-to-valley ratio*: minimum 15, where H_r = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to sertraline.

Limits:

— *impurities A, B, F*: for each impurity, maximum 0.2 per cent;

— *sum of impurities C and D*: maximum 0.8 per cent;

— *unspecified impurities*: for each impurity, maximum 0.10 per cent;

— *total*: maximum 1.5 per cent;

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.0 g in *ethanol (96 per cent) R* and dilute to 20.0 ml with the same solvent. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *ethanol (96 per cent) R.*

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 2.00 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)*.

Buffer solution To 28.6 ml of *glacial acetic acid R* slowly add, while stirring and cooling, 34.8 ml of *triethylamine R*, and dilute to 100 ml with *water R*. Dilute 10 ml of this solution to 1000 ml with *water R.*

Test solution Dissolve 55.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution Dissolve 55.0 mg of *sertraline hydrochloride CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4 µm);

— *temperature*: 30 °C.

Mobile phase *methanol R*, buffer solution, *acetonitrile R* (15:40:45 *V/V/V*).

Flow rate 1.8 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Run time Twice the retention time of sertraline.

Retention time Sertraline = about 1.9 min.

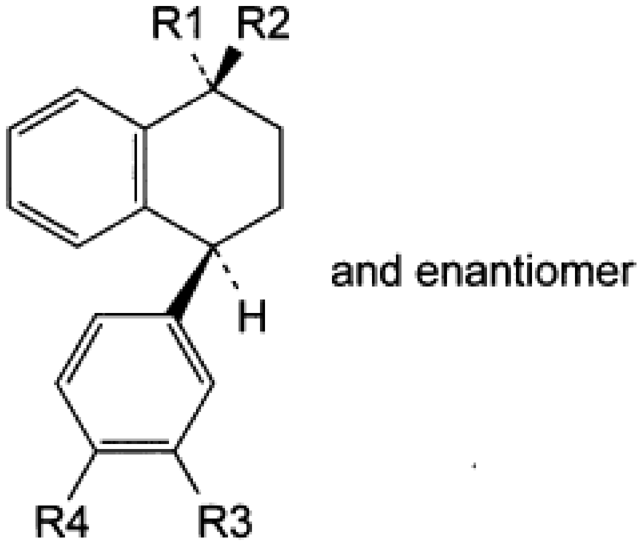
Calculate the percentage content of $C_{17}H_{18}Cl_3N$ from the declared content of *sertraline hydrochloride CRS.*

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D, E, F, G.*

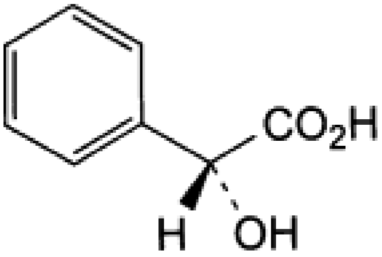


A. R1 = NH-CH_3, R2 = H, R3 = R4 = Cl: (1*RS*,4*SR*)-4-(3,4-dichlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine,

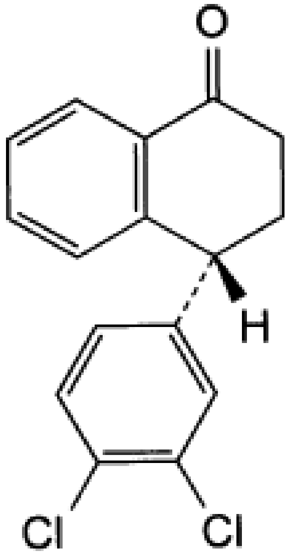
B. R1 = R3 = R4 = H, R2 = NH-CH_3: (1*RS*,4*RS*)-*N*-methyl-4-phenyl-1,2,3,4-tetrahydronaphthalen-1-amine,

C. R1 = R3 = H, R2 = NH-CH_3, R4 = Cl: (1*RS*,4*RS*)-4-(4-chlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine,

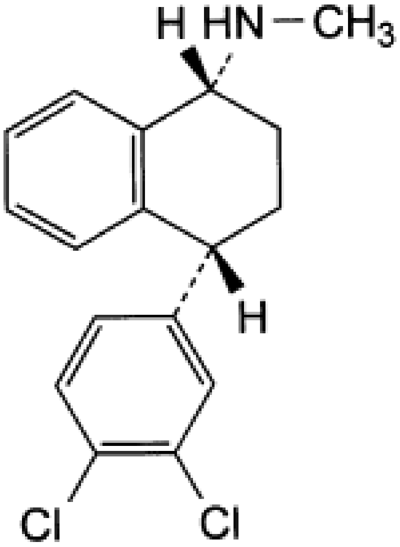
D. R1 = R4 = H, R2 = NH-CH_3, R3 = Cl: (1*RS*,4*RS*)-4-(3-chlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine,



E. (2*R*)-hydroxyphenylacetic acid ((*R*)-mandelic acid),



F. (4*R*)-4-(3,4-dichlorophenyl)-3,4-dihydronaphthalen-1(2*H*)-one,



G. (1*R*,4*R*)-4-(3,4-dichlorophenyl)-*N*-methyl-1,2,3,4-tetrahydronaphthalen-1-amine (sertraline enantiomer).

Ph Eur

Shellac

General Notices

(Ph Eur monograph 1149)

Action and use

Excipient.

Ph Eur

DEFINITION

Purified material obtained from the resinous secretion of the female insect *Kerria lacca* (Kerr) Lindinger (*Laccifer lacca* Kerr). There are 4 types of shellac depending on the nature of the treatment of crude secretion (seedlac): wax-containing shellac, bleached shellac, dewaxed shellac and bleached, dewaxed shellac.

Wax-containing shellac is obtained from seedlac: it is purified by filtration of the molten substance and/or by hot extraction using a suitable solvent.

Bleached shellac is obtained from seedlac by treatment with sodium hypochlorite after dissolution in a suitable alkaline solution, precipitation by dilute acid and drying.

Dewaxed shellac is obtained from wax-containing shellac or seedlac by treatment with a suitable solvent and removal of the insoluble wax by filtering.

Bleached, dewaxed shellac is obtained from wax-containing shellac or seedlac by treatment with sodium hypochlorite after dissolution in a suitable alkaline solution; the insoluble wax is removed by filtration. It is precipitated by dilute acid and dried.

CHARACTERS

Appearance

Brownish-orange or yellow, shining, translucent, hard or brittle, more or less thin flakes (wax-containing shellac and dewaxed shellac), or a creamy white or brownish-yellow powder (bleached shellac and bleached, dewaxed shellac).

Solubility

Practically insoluble in water, gives a more or less opalescent solution (wax containing shellac and bleached shellac) or a clear solution (dewaxed shellac and bleached, dewaxed shellac) in anhydrous ethanol. When warmed it is sparingly soluble or soluble in alkaline solutions.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Heat 0.25 g of the powdered substance (500) *(2.9.12)* on a water-bath with 2 ml of *dilute sodium hydroxide solution R* for 5 min. Cool, add 5 ml of *ethyl acetate R* and slowly, with stirring, 2 ml of *dilute acetic acid R*. Shake and filter the upper layer through *anhydrous sodium sulphate R*.

Reference solution Dissolve 6.0 mg of *aleuritic acid R* in 1.0 ml of *methanol R*, heating slightly if necessary.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *acetic acid R, methanol R, methylene chloride R, ethyl acetate R* (1:8:32:60 *V/V/V/V*).

Application 10 µl, as bands.

Development Twice over a path of 15 cm.

Drying In air.

Detection Spray with *anisaldehyde solution R*, heat at 100-105 °C for 5-10 min and examine in daylight.

Results The chromatogram obtained with the test solution shows several coloured zones, one of which is similar in position and colour to the zone in the chromatogram obtained with the reference solution. Above this zone the chromatogram obtained with the test solution shows a pink zone and below it several violet zones. Below the zone due to aleuritic acid, there is a light blue zone (shellolic acid) accompanied by zones of the same colour but of lower intensity. Other faint grey and violet zones may be visible.

B. Examine the chromatograms obtained in the test for colophony.

Results For wax-containing shellac, in the chromatogram obtained with the test solution, a more or less strong bluish-grey zone is visible, just above the zone due to thymolphthalein in the chromatogram obtained with the reference solution; for dewaxed shellac, no such zone is visible just above the zone due to thymolphthalein in the chromatogram obtained with the reference solution.

TESTS

Acid value *(2.5.1)*

65 to 95 (dried substance).

Examine 1.00 g of the coarsely ground substance. Determine the end-point potentiometrically *(2.2.20)*.

Colophony

Thin-layer chromatography *(2.2.27)* as described under identification test A with the following modifications.

Test solution Dissolve 50 mg of the powdered substance (500) *(2.9.12)*, with heating, in a mixture of 0.5 ml of *methylene chloride R* and 0.5 ml of *methanol R*.

Reference solution Dissolve 2.0 mg of *thymolphthalein R* in 1.0 ml of *methanol R*.

Detection Examine in ultraviolet light at 254 nm; mark the quenching zones in the chromatogram obtained with the test solution that have similar R_F values to that of the quenching zone due to thymolphthalein in the chromatogram obtained with the reference solution; spray with *anisaldehyde solution R*, heat at 100-105 °C for 5-10 min and examine in daylight.

Results The chromatogram obtained with the reference solution shows a principal zone with a reddish-violet colour (thymolphthalein). None of the quenching zones in the chromatogram obtained with the test solution that have an R_F value similar to the zone due to thymolphthalein in the reference solution show a more or less strong violet or brownish colour (colophony). Disregard any faint violet zone at this level that does not show quenching before spraying and heating.

Arsenic ***(2.4.2, Method A)***

Maximum 3 ppm.

Introduce 0.33 g of the substance to be examined and 5 ml of *sulphuric acid R* into a combustion flask. Carefully add a few millilitres of *strong hydrogen peroxide solution R* and heat to boiling until a clear, colourless solution is obtained. Continue heating to eliminate the water and as much sulphuric acid as possible and dilute to 25 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 2.0 per cent for unbleached shellac and maximum 6.0 per cent for bleached shellac, determined on 1.000 g of the powdered substance (500) *(2.9.12)* by drying in an oven at 40-45 °C for 24 h.

STORAGE

Protected from light. Store bleached shellac and bleached, dewaxed shellac at a temperature not exceeding 15 °C.

LABELLING

The label indicates the type of shellac.

Ph Eur

Silver Nitrate

General Notices

(Ph Eur monograph 0009)

$AgNO_3$ 169.9 *7761-88-8*

Action and use

Antiseptic.

Preparation

Sterile Silver Nitrate Solution

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or transparent, colourless crystals.

Solubility

Very soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. 10 mg gives the reaction of nitrates *(2.3.1)*.

B. 10 mg gives the reaction of silver *(2.3.1)*.

TESTS

Solution S

Dissolve 2.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 2 ml of solution S add 0.1 ml of *bromocresol green solution R*. The solution is blue. To 2 ml of solution S add 0.1 ml of *phenol red solution R*. The solution is yellow.

Foreign salts

Maximum 0.3 per cent.

To 30 ml of solution S, add 7.5 ml of *dilute hydrochloric acid R*, shake vigorously, heat for 5 min on a water-bath and filter. Evaporate 20 ml of the filtrate to dryness on a water-bath and dry at 100-105 °C. The residue weighs a maximum of 2 mg.

Aluminium, lead, copper and bismuth

Dissolve 1.0 g in a mixture of 4 ml of *concentrated ammonia R* and 6 ml of *water R*. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

ASSAY

Dissolve 0.300 g in 50 ml of *water R*, add 2 ml of *dilute nitric acid R* and 2 ml of *ferric ammonium sulphate solution R2*. Titrate with *0.1 M ammonium thiocyanate* until a reddish-yellow colour is obtained.

1 ml of *0.1 M ammonium thiocyanate* is equivalent to 16.99 mg of $AgNO_3$.

STORAGE

In a non-metallic container, protected from light.

Ph Eur

Simeticone for Oral Use

General Notices

Action and use

Silicon dioxide analogue; defoaming agent.

Preparation

Simeticone Suspension for Infants

When activated dimethicone is prescribed or demanded, Simeticone for Oral Use shall be dispensed or supplied.

DEFINITION

Simeticone for Oral Use contains not less than 4.5% and not more than 8.0% w/w of silica, SiO_2, and not less than 91.0% and not more than 97.0% w/w of Dimeticone 1000. It is prepared by the addition of finely powdered silica to Dimeticone 1000.

CHARACTERISTICS

A viscous, grey, translucent liquid.

Immiscible with *water* and with *ethanol (96%)*; almost completely soluble in *toluene*, leaving a residue of silica.

IDENTIFICATION

A. The *infrared absorption spectrum* of the supernatant liquid obtained by centrifugation, Appendix II A, is concordant with the *reference spectrum* of dimeticone *(RS 381)*.

B. Ignite; dense white fumes are evolved leaving a white residue which is insoluble in *hydrochloric acid*.

TESTS

Acidity

Dissolve 15.0 g in a mixture of 15 ml of *toluene* and 15 ml of *butan-1-ol,* previously neutralised to a 0.5% w/v solution of *bromophenol blue* in *ethanol (96%)*, and titrate with 0.1M *ethanolic potassium hydroxide VS* using the bromophenol blue solution as indicator. Not more than 0.15 ml is required to change the colour of the solution.

Refractive index

Of the supernatant liquid obtained in Identification test A, 1.4050 to 1.4080, Appendix V E.

Viscosity

Of the supernatant liquid obtained in Identification test A, 950 to 1050 $mm^2 s^{-1}$, Appendix V H, Method I, using a U-tube viscometer (size G).

Weight per ml

Of the supernatant liquid obtained in Identification test A, 0.965 to 0.980 g, Appendix V G.

Heavy metals

1.0 g complies with *limit test F for heavy metals*, Appendix VII (20 ppm). Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard.

ASSAY

For silica

To 1 g add 50 ml of *toluene*, mix well and filter through an ignited silica crucible. Wash the residue thoroughly with *toluene*, dry at 105° and ignite to constant weight at 500°.

For dimeticone

Place 40 mg in a stoppered centrifuge tube, add 20 ml of *toluene* and shake for 20 minutes. Filter and record the *infrared absorption spectrum*, Appendix II A, of a 0.5-mm layer of the filtrate over the range 1330 to 1180 cm^{-1} (7.52 to 8.47 µm). Measure the absorbance of the CH_3Si stretching band at the maximum at 1261 cm^{-1} (7.93 µm). Repeat the operation using *dimeticone EPCRS* in place of the preparation being examined.

Simeticone

General Notices

(Ph Eur monograph 1470)

Action and use

Silicon dioxide analogue; defoaming agent.

Ph Eur

DEFINITION

Simeticone is prepared by incorporation of 4 per cent to 7 per cent silica into poly (dimethylsiloxane) with a degree of polymerisation between 20 and 400.

Content

90.5 per cent to 99.0 per cent of poly(dimethylsiloxane).

PRODUCTION

Poly(dimethylsiloxane) is obtained by hydrolysis and polycondensation of dichlorodimethylsilane and chlorotrimethylsilane and the silica is modified at the surface by incorporation of methylsilyl groups.

CHARACTERS

Appearance

Viscous, greyish-white, opalescent liquid.

Solubility

Practically insoluble in water, very slightly soluble or practically insoluble in anhydrous ethanol, practically insoluble in methanol, partly miscible with ethyl acetate, with methylene chloride, with methyl ethyl ketone and with toluene.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Thin films between plates of *sodium chloride R*.

Absorption maxima At 2964 cm^{-1}, 2905 cm^{-1}, 1412 cm^{-1}, 1260 cm^{-1} and 1020 cm^{-1}.

B. Heat 0.5 g in a test-tube over a small flame until white fumes begin to appear. Invert the tube over a 2nd tube containing 1 ml of a 1 g/l solution of *chromotropic acid, sodium salt R* in *sulphuric acid R* so that the fumes reach the solution. Shake the 2nd tube for about 10 s and heat on a water-bath for 5 min. The solution is violet.

C. The residue obtained in the test for silica under Assay, gives the reaction of silicates *(2.3.1)*.

TESTS

Acidity

To 2.0 g add 25 ml of a mixture of equal volumes of *anhydrous ethanol R* and *ether R* previously neutralised to 0.2 ml of *bromothymol blue solution R1*, and shake. Not more than 3.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the solution to blue.

Defoaming activity

Foaming solution Dissolve 5.0 g of *docusate sodium R* in 1 litre of *water R*, warm to 50 °C if necessary.

Defoaming solution To 50 ml of *methyl ethyl ketone R* add 0.250 g of the substance to be examined, warm to not more than 50 °C with shaking.

Into a 250 ml cylindrical tube about 5 cm in diameter introduce 100 ml of foaming solution and 1 ml of defoaming solution. Close tightly and fix the tube on a suitable oscillating shaker that complies with the following conditions:

- 250-300 oscillations per minute;
- angle of oscillation of about 10 ;
- oscillation radius of about 10 cm.

Shake for 10 s and record the time between the end of the shaking and the instant the 1st portion of foam-free liquid surface appears.

This duration is not longer than 15 s.

Mineral oils

Place 2.0 g in a test-tube and examine in ultraviolet light at 365 nm. The fluorescence is not more intense than that of a solution containing 0.1 ppm of *quinine sulphate R* in *0.005 M sulphuric acid* examined in the same conditions.

Phenylated compounds

The corrected absorbance *(2.2.25)* is not greater than 0.2.

Test solution Dissolve 5.0 g with shaking in 10.0 ml of *cyclohexane R*.

Spectral range 200-350 nm.

Calculate the corrected absorbance using the following expression:

$$B - C$$

B = absorbance at the absorption maximum between 250 nm and 270 nm,

C = absorbance at 300 nm.

Heavy metals

Maximum 5 ppm.

Mix 1.0 g with *methylene chloride R* and dilute to 20 ml with the same solvent. Add 1.0 ml of a freshly prepared 0.02 g/l solution of *dithizone R* in *methylene chloride R*, 0.5 ml of *water R* and 0.5 ml of a mixture of 1 volume of *dilute ammonia R2* and 9 volumes of a 2 g/l solution of *hydroxylamine hydrochloride R*. At the same time, prepare the reference solution as follows: to 20 ml of *methylene chloride R* add 1.0 ml of a freshly prepared 0.02 g/l solution of *dithizone R* in *methylene chloride R*, 0.5 ml of *lead standard solution (10 ppm Pb) R* and 0.5 ml of a mixture of 1 volume of *dilute ammonia R2* and 9 volumes of a 2 g/l solution of hydroxylamine *hydrochloride R*. Immediately shake each solution vigorously for 1 min. Any red colour in the test solution is not more intense than that in the reference solution.

Volatile matter

Maximum 1.0 per cent, determined on 1.00 g by heating in an oven at 150 °C for 2 h. Carry out the test using a dish 60 mm in diameter and 10 mm deep.

ASSAY

Silica

Heat not less than 20.0 mg to 800 °C increasing the temperature by 20 °C/min under a current of *nitrogen R* at a flow rate of 200 ml/min and weigh the residue (silica).

Poly(dimethylsiloxane)

Infrared absorption spectrophotometry *(2.2.24)*.

Test solution Place about 50 mg (E) in a screw-capped 125 ml cylindrical tube, add 25.0 ml of *toluene R*, swirl manually to disperse and add 50 ml of *dilute hydrochloric acid R*, close the tube and place on a vortex mixer; shake for 5 min. Transfer the contents of the tube to a separating funnel, allow to settle and transfer 5 ml of the upper layer to a screw-capped test tube containing 0.5 g of *anhydrous sodium sulphate R*. Cap and shake vigorously manually. Centrifuge to obtain a clear solution.

Reference solution Introduce about 0.20 g of *dimeticone CRS* (poly(dimethylsiloxane)) into 100.0 ml of *toluene R*. Prepare the reference solution in the same way as for the test solution, using 25.0 ml of the dimeticone solution obtained above.

Blank solution Shake 10 ml of *toluene R* with 1 g of *anhydrous sodium sulphate R*. Centrifuge the resulting suspension.

Record the infrared absorption spectra for the test solution and the reference solution in 0.5 mm cells, from 1330 cm^{-1} to 1180 cm^{-1}. Determine the absorbance of the band at 1260 cm^{-1}.

Calculate the percentage content of poly(dimethylsiloxane) using the following expression:

$$\frac{25 \times C \times A_M \times 100}{A_E \times E}$$

A_M = absorbance of the test solution,

A_E = absorbance of the reference solution,

C = concentration of the reference solution, in milligrams per millilitre,

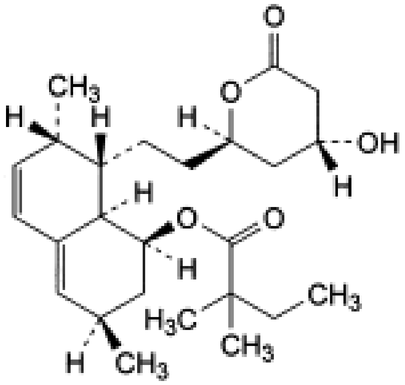
E = mass of the substance to be examined, in milligrams.

Ph Eur

Simvastatin

General Notices

(Ph Eur monograph 1563)



$C_{25}H_{38}O_5$ 418.6 *79902-63-9*

Action and use

HMG Co-A reductase inhibitor; lipid-regulating drug.

Preparation

Simvastatin Tablets

Ph Eur

DEFINITION

Simvastatin contains not less than 97.0 per cent and not more than the equivalent of 102.0 per cent of (1*S*,3*R*,7*S*,8*S*,8a*R*)-8-[2-[(2*R*,4*R*)-4-hydroxy-6-oxotetrahydro-2*H*-pyran-2-yl]ethyl]-3,7-dimethyl-1,2,3,7,8,8a-hexahydronaphthalen-1-yl 2,2-dimethylbutanoate, calculated with reference to the dried substance. A suitable antioxidant may be added.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, very soluble in methylene chloride, freely soluble in alcohol.

IDENTIFICATION

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *simvastatin CRS*. Examine the substances prepared as discs.

TESTS

Appearance of solution

Dissolve 0.200 g in *methanol R* and dilute to 20 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 0.125 g in *acetonitrile R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 285 to + 300, calculated with reference to the dried substance.

Related substances

Examine by liquid chromatography *(2.2.29)* as prescribed under Assay.

Inject 5 µl of reference solution (b). Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained is at least 20 per cent of the full scale of the recorder. Inject 5 µl of test solution (a) and continue the chromatography for five times the retention time of simvastatin. When the chromatograms are recorded under the prescribed conditions the relative retentions are: impurity A about 0.45, lovastatin (impurity E) and epilovastatin (impurity F) about 0.60, impurity G about 0.80, impurity B about 2.38, impurity C about 2.42 and impurity D about 3.80 (retention time of simvastatin: about 2.6 min). In the chromatogram obtained with test solution (a): the area of the peak due to lovastatin and epilovastatin is not greater than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent); the area of any peak apart from the principal peak and the peak due to lovastatin and epilovastatin is not greater than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent); the sum of the areas of all peaks, apart from the principal peak and the peak due to lovastatin and epilovastatin, is not greater than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent). Disregard any peak with an area less than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in a desiccator under high vacuum at 60 °C for 3 h.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Examine by liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Solvent mixture Prepare a mixture of 40 volumes of a solution of a 1.4 g/l solution of *potassium dihydrogen phosphate R*, adjusted to pH 4.0 with *phosphoric acid R*, and 60 volumes of *acetonitrile R*. Filter.

Test solution (a) Dissolve 75.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Test solution (b) Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a) Dissolve 1.0 mg of *simvastatin CRS* and 1.0 mg of *lovastatin CRS* in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (b) Dilute 0.5 ml of test solution (a) to 100.0 ml with the solvent mixture.

Reference solution (c) Dissolve 40.0 mg of *simvastatin CRS* in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

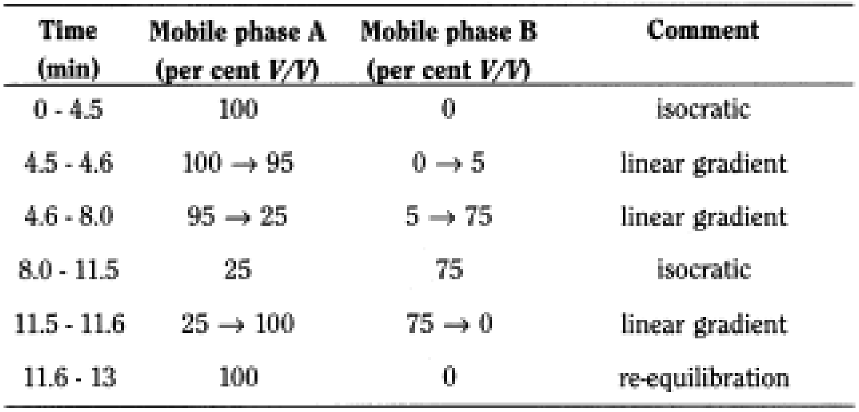
The chromatographic procedure may be carried out using:

— a stainless steel column 0.033 m long and 4.6 mm in internal diameter packed with end-*capped octadecylsilyl silica gel for chromatography R* (3 µm);

— as mobile phase at a flow rate of 3.0 ml/min:

Mobile phase A Mix 50 volumes of *acetonitrile R* and 50 volumes of a 0.1 per cent *V/V* solution of *phosphoric acid R*,

Mobile phase B A 0.1 per cent *V/V* solution of *phosphoric acid R* in *acetonitrile R*,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)	Comment
0 - 4.5	100	0	isocratic
4.5 - 4.6	100 → 95	0 → 5	linear gradient
4.6 - 8.0	95 → 25	5 → 75	linear gradient
8.0 - 11.5	25	75	isocratic
11.5 - 11.6	25 → 100	75 → 0	linear gradient
11.6 - 13	100	0	re-equilibration

— as detector a spectrophotometer set at 238 nm.

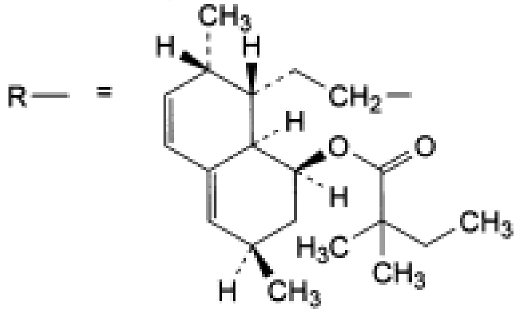
Inject 5 µl of reference solution (a). The test and the assay are not valid unless, in the chromatogram obtained, the resolution between the peak corresponding to lovastatin and epilovastatin and the peak corresponding to simvastatin is at least 5.0. When the chromatograms are recorded under the prescribed conditions the retention times are: lovastatin and epilovastatin about 1.6 min and simvastatin about 2.6 min. Inject 5 µl of reference solution (c). Adjust the sensitivity of the system so that the height of the principal peak is at least 50 per cent of the full scale of the recorder. Inject 5 µl of test solution (b).

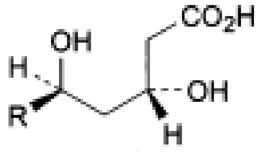
Calculate the content of simvastatin from the peak areas in the chromatograms obtained with test solution (b) and reference solution (c) and the declared content of *simvastatin CRS*.

STORAGE

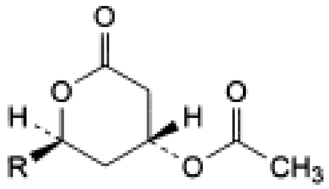
Store under nitrogen, in an airtight container, protected from light.

IMPURITIES

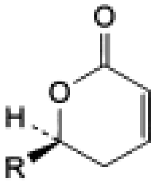




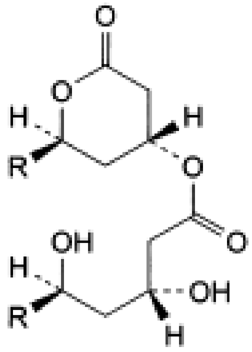
A. (3*R*,5*R*)-7-[(1*S*,2*S*,6*R*,8*S*,8a*R*)-8-[(2,2-dimethylbutanoyl)oxy]-2,6-dimethyl-1,2,6,7,8,8a-hexahydronaphthalen-1-yl]-3,5-dihydroxyheptanoic acid (hydroxy acid),



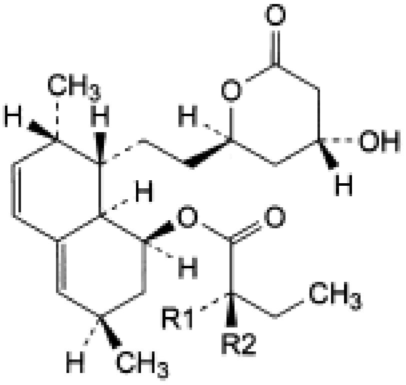
B. (1*S*,3*R*,7*S*,8*S*,8a*R*)-8-[2-[(2*R*,4*R*)-4-(acetyloxy)-6-oxotetrahydro-2*H*-pyran-2-yl]ethyl]-3,7-dimethyl-1,2,3,7,8,8a-hexahydronaphthalen-1-yl 2,2-dimethylbutanoate (acetate ester),



C. (1*S*,3*R*,7*S*,8*S*,8a*R*)-3,7-dimethyl-8-[2-[(2*R*)-6-oxo-3,6-dihydro-2*H*-pyran-2-yl]ethyl]-1,2,3,7,8,8a-hexahydronaphthalen-1-yl 2,2-dimethylbutanoate (anhydrosimvastatin),

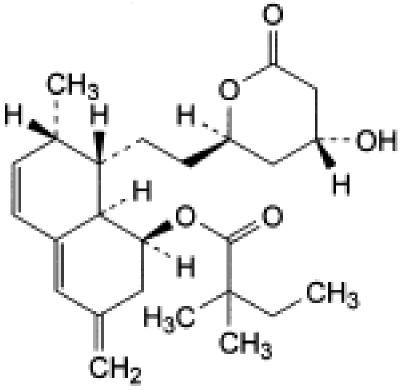


D. (2*R*,4*R*)-2-[[(1*S*,2*S*,6*R*,8*S*,8a*R*)-8-[(2,2-dimethylbutanoyl)oxy]-2,6-dimethyl-1,2,6,7,8,8a-hexahydronaphthalen-1-yl]ethyl]-6-oxotetrahydro-2*H*-pyran-4-yl (3*R*,5*R*)-7-[(1*S*,2*S*,6*R*,8*S*,8a*R*)-8-[(2,2-dimethylbutanoyl)oxy]-2,6-dimethyl-1,2,6,7,8,8a-hexahydronaphthalen-1-yl]-3,5-dihydroxyheptanoate (dimer),



E. R1 = CH$_3$, R2 = H: (1*S*,3*R*,7*S*,8*S*,8a*R*)-8-[2-[(2*R*,4*R*)-4-hydroxy-6-oxotetrahydro-2*H*-pyran-2-yl]ethyl]-3,7-dimethyl-1,2,3,7,8,8a-hexahydronaphthalen-1-yl (2*S*)-2-methylbutanoate (lovastatin),

F. R1 = H, R2 = CH$_3$: (1*S*,3*R*,7*S*,8*S*,8a*R*)-8-[2-[(2*R*,4*R*)-4-hydroxy-6-oxotetrahydro-2*H*-pyran-2-yl]ethyl]-3,7-dimethyl-1,2,3,7,8,8a-hexahydronaphthalen-1-yl (2*R*)-2-methylbutanoate (epilovastatin),



G. (1*S*,7*S*,8*S*,8a*R*)-8-[2-[(2*R*,4*R*)-4-hydroxy-6-oxotetrahydro-2*H*-pyran-2-yl]ethyl]-7-methyl-3-methylene-1,2,3,7,8,8a-hexahydronaphthalen-1-yl 2,2-dimethylbutanoate.

Ph Eur

Soda Lime

General Notices

8006-28-8

Action and use

Used to absorb carbon dioxide.

DEFINITION

Soda Lime is a mixture of sodium hydroxide, or sodium hydroxide and potassium hydroxide, with calcium hydroxide.

CHARACTERISTICS

White or greyish white granules, or it may be coloured with an indicator to show when its absorptive capacity is exhausted. It absorbs about 20% of its weight of carbon dioxide.

Partially soluble in *water*; almost completely soluble in 1M *acetic acid*.

IDENTIFICATION

A. When moistened with *hydrochloric acid* and introduced on a platinum wire into a flame, imparts a yellow colour to the flame.

B. A solution in 1M *acetic acid* yields reaction C characteristic of *calcium salts*, Appendix VI.

C. A suspension in *water* is strongly alkaline to *litmus paper*.

TESTS

Hardness of granules

Shake 200 g on a sieve no. 2000 for 3 minutes using a mechanical sieve shaker that reproduces in a uniform manner the circular and tapping motion given to sieves in manual use and has a frequency of oscillation of 282 to 288 cycles per minute. Place 50 g of the retained material in a hardness pan 20 cm in diameter having a concave brass bottom, 7.9 mm thick at the circumference, 3.2 mm thick at the centre and with an inside spherical radius of curvature of 109 cm. Add 15 steel balls, 7.9 mm in diameter, and shake on the mechanical sieve shaker for 30 minutes. Remove the steel balls, transfer the contents of the pan to a sieve no. 2000 and again shake on the mechanical sieve shaker for 3 minutes. The material retained by the sieve weighs not less than 37.5 g.

Size of granules

Shake 500 g on a perforated plate of nominal pore size 6.70 mm; not more than 5 g is retained. Then shake on a sieve no. 4750; not more than 50 g is retained. Shake the unretained material on a sieve no. 1400; not more than 20 g passes through. Shake the unretained material on a sieve no. 600; not more than 7.5 g passes through.

Loss on drying

When dried to constant weight at 105°, loses 14.0 to 21.0% of its weight. Use 1 g.

Moisture absorption

Place 10 g in an open glass dish about 50 mm in diameter and 30 mm high in a desiccator over *sulphuric acid (14%)* and allow it to remain for 24 hours. The increase in weight is not more than 7.5%.

Carbon dioxide absorption

The activity is not less than 120 minutes when determined by the following method.

Use a vertically-clamped tube of glass or other suitable transparent material about 25 cm long and 29 to 31 mm internal diameter with closely fitting rubber bungs at each end; the bungs are bored to receive polythene or glass tubing of about 8 mm external diameter, the tubing being flush with the inner ends of the bungs. With the lower bung in position, place sufficient nylon mesh support on top of the bung to produce a bed of mesh about 10 cm deep and press a closely fitting disc of stainless steel gauze of nominal mesh aperture about 500 µm on top of the nylon mesh so that its surface is at right angles to the axis of the tube. Introduce 59.8 to 60.2 g of the substance being examined onto the steel gauze in three portions, tamping lightly after the addition of each portion. Place a second disc of steel gauze on top, followed by a sufficient quantity of nylon mesh such that the soda lime is kept consolidated by slight pressure when the second bung has been inserted. The exit tube is connected to a condenser, consisting of two 50 ml separating funnels, leading to a drying tube packed with *anhydrous calcium chloride* and then to a carbon dioxide analyser sufficiently sensitive to detect 0.2% v/v of carbon dioxide. A katharometer, calibrated for carbon dioxide and preferably used in conjunction with a chart recorder, is suitable.

Using the gas analyser in accordance with the manufacturer's instructions, accurately determine the carbon dioxide content, p, as a percentage v/v, of a nominal 5% carbon dioxide mixture, the balance gas being oxygen, air or nitrogen as appropriate to the type of gas analyser being used. Suitable compressed gas mixtures are available commercially. Assemble the apparatus described above and pass the gas mixture downwards into the absorption tube at a rate of 900 cm^3 per minute until such time that the gas analyser shows the content of carbon dioxide in the effluent gas to have risen to 0.2% v/v. Steps should be taken to vent the effluent gas if an oxygen-carbon dioxide mixture is being used. Record the time taken, t, in minutes. The *activity* of the soda lime is given, in minutes, by the expression $tp/5$.

Sodium *(S)* -Lactate Solution

General Notices

(Ph Eur monograph 2033)

Ph Eur

DEFINITION

Content

Minimum 50.0 per cent *m/m* of sodium (*S*)-2-hydroxypropanoate ($C^3H^5NaO^3$; M_r 112.1); 96.0 per cent to 104.0 per cent of the content of sodium lactate stated on the label, not less than 95.0 per cent of which is the (*S*)-enantiomer.

CHARACTERS

Appearance

Clear, colourless, slightly syrupy liquid.

Solubility

Miscible with water and with alcohol.

IDENTIFICATION

A. To 0.1 ml add 10 ml of *water R*. 5 ml of the solution gives the reaction of lactates *(2.3.1)*.

B. It gives reaction (a) of sodium *(2.3.1)*.

C. It complies with the limits of the assay.

TESTS

Solution S

Dilute a quantity of the substance to be examined corresponding to 40.0 g of sodium lactate to 200 ml with *distilled water R*.

Appearance of solution

The substance to be examined is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.5 to 9.0 for the substance to be examined.

Reducing sugars and sucrose

To 5 ml of the substance to be examined add 2 ml of *dilute sodium hydroxide solution R* and 0.2 ml of *copper sulphate solution R.* The solution is clear and blue and remains so on boiling. Add to the hot solution 4 ml of *hydrochloric acid R.* Boil for 1 min. Add 6 ml of *strong sodium hydroxide solution R* and heat to boiling again. The solution is clear and blue.

Methanol

Gas chromatography *(2.4.24)*.

Limit:

— *methanol*: maximum 50 ppm, calculated with reference to sodium lactate, if intended for use in the manufacture of parenteral dosage forms, dialysis, haemodialysis or haemofiltration solutions.

Chlorides *(2.4.4)*

Maximum 50 ppm calculated with reference to sodium lactate.

Dilute 5 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides.

Oxalates and phosphates

To 1 ml of the substance to be examined add 15 ml of *alcohol R* and 2 ml of *calcium chloride solution R*. Heat at 75 °C for 5 min. Any opalescence in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 1 ml of the substance to be examined, 15 ml of *alcohol R* and 2 ml of *water R*.

Sulphates *(2.4.13)*

Maximum 100 ppm calculated with reference to sodium lactate.

To 7.5 ml of solution S, add 1.9 ml of *hydrochloric acid R1* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates without addition of 0.5 ml of *acetic acid R*. Acidify the standard solution with 0.05 ml of *hydrochloric acid R1* instead of 0.5 ml of *acetic acid R*.

Aluminium

Maximum 0.1 ppm, if intended for use in the manufacture of parenteral dosage forms, dialysis, haemodialysis or haemofiltration solutions.

Atomic absorption spectrometry *(2.2.23, Method I)*. For the preparation of the solutions, use equipment that is aluminium-free or that will not release aluminium under the conditions of use (glass, polyethylene, etc).

Modifier solution

Dissolve 100.0 g of *ammonium nitrate R* in a mixture of 50 ml of *water R* and 4 ml of *nitric acid R* and dilute to 200 ml with *water R.*

Blank solution Dilute 2.0 ml of the modifier solution to 25.0 ml with *water R*.

Test solution To 1.25 g add 2.0 ml of the modifier solution and dilute to 25.0 ml with *water R*.

Reference solutions Prepare the reference solutions immediately before use (0.010 ppm to 0.050 ppm of aluminium) using *aluminium standard solution (200 ppm Al) R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device A graphite furnace.

Carrier gas argon R.

Conditions The device is equipped with a non-specific absorption correction system. Heat the oven to 120 °C for as many seconds as there are microlitres of solution introduced into the apparatus, then heat at 1000 °C for 30 s and finally at 2700 °C for 6 s.

Barium

To 10 ml of solution S add 10 ml of *calcium sulphate solution R*. Allow to stand for 30 min. Any opalescence *(2.2.1)* in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 10 ml of solution S and 10 ml of distilled water R.

Iron *(2.4.9)*

Maximum 10 ppm calculated with reference to sodium lactate.

Dilute 5 ml of solution S to 10 ml with *water R*. The solution complies with the limit test for iron.

Heavy metals *(2.4.8)*

Maximum 10 ppm calculated with reference to sodium lactate.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R.*

Bacterial endotoxins *(2.6.14)*

Less than 5 IU/g if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 ml of *glacial acetic acid R* and 20 ml of *acetic anhydride R*. Allow to stand for 15 min. Add 1 ml of *naphtholbenzein solution R* and titrate *with 0.1 M perchloric acid*.

1 ml of *0.1 M perchloric acid* is equivalent to 11.21 mg of $C_3H_5NaO_3$.

(*S*)-enantiomer

Transfer a quantity of the substance to be examined corresponding to 2.50 g of sodium lactate into a 50 ml volumetric flask, dilute with about 30 ml of *water R* and add 5.0 g of *ammonium molybdate R*. Dissolve and dilute with *water R* to 50.0 ml. Measure the angle of optical rotation *(2.2.7)*. Calculate the percentage content of (*S*)-enantiomer using the expression:

$$50 + \left(24.04 \times \alpha \times \frac{5.0}{m} \times \frac{50}{c}\right)$$

α = angle of optical rotation (absolute value)

m = mass of the substance to be examined, in grams

c = percentage content of $C_3H_5NaO_3$ in the substance to be examined

The complex of sodium (*S*)-lactate formed under these test conditions is leavorotatory.

LABELLING

The label states:

— where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions;

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms;

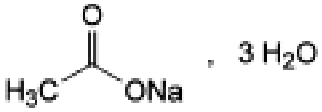
— the declared content of sodium lactate.

Ph Eur

Sodium Acetate Trihydrate

General Notices

(Ph Eur monograph 0411)



$C_2H_3NaO_2,3H_2O$ 136.1 *6131-90-4*

Action and use

Used in solutions for dialysis; excipient.

Ph Eur

DEFINITION

Sodium ethanoate trihydrate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless crystals.

Solubility

Very soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. 1 ml of solution S (see Tests) gives reaction (b) of acetates *(2.3.1)*.

B. 1 ml of solution S gives reaction (a) of sodium *(2.3.1)*.

C. Loss on drying (see Tests).

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to

100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

7.5 to 9.0.

Dilute 5 ml of solution S to 10 ml with *carbon dioxide-free water R*.

Reducing substances

Dissolve 5.0 g in 50 ml of *water R*, then add 5 ml of *dilute sulphuric acid R* and 0.5 ml of *0.002 M potassium permanganate*. The pink colour persists for at least 1 h. Prepare a blank in the same manner but without the substance to be examined.

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*.

Aluminium *(2.4.17)*

Maximum 0.2 ppm, if intended for use in the manufacture of dialysis solutions.

Prescribed solution Dissolve 20 g in 100 ml of *water R* and adjust to pH 6.0 by the addition of *1 M hydrochloric acid* (about 10 ml).

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Arsenic *(2.4.2, Method A)*

Maximum 2 ppm, determined on 0.5 g.

Calcium and magnesium

Maximum 50 ppm, calculated as Ca.

To 200 ml of *water R* add 10 ml of *ammonium chloride buffer solution pH 10.0 R*, 0.1 g of *mordant black 11 triturate R*, 2.0 ml of *0.05 M zinc chloride* and, dropwise, *0.02 M sodium edetate* until the colour changes from violet to blue. Add to the solution 10.0 g of the substance to be examined and shake to dissolve. Titrate with *0.02 M sodium edetate* until the blue colour is restored. Not more than 0.65 ml of *0.02 M sodium edetate* is required.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard*

solution (1 ppm Pb) R.

Iron (2.4.9)

Maximum 10 ppm, determined on 10 ml of solution S.

Loss on drying ***(2.2.32)***

39.0 per cent to 40.5 per cent, determined on 1.000 g by drying in an oven at 130 °C. Introduce the substance to be examined into the oven while the latter is cold.

ASSAY

Dissolve 0.250 g in 50 ml of *anhydrous acetic acid R*, add 5 ml of *acetic anhydride R*, mix and allow to stand for 30 min. Using 0.3 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until a green colour is obtained.

1 ml of *0.1 M perchloric acid* is equivalent to 8.20 mg of $C_2H_3NaO_2$.

STORAGE

In an airtight container .

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

Ph Eur

Sodium Acid Citrate

General Notices

Disodium Hydrogen Citrate

$C_6H_6Na_2O_7,1½H_2O$ 263.1 *144-33-2*

Action and use

Anticoagulant.

DEFINITION

Sodium Acid Citrate contains not less than 98.0% and not more than 104.0% of $C_6H_6Na_2O_7$, 1½ H_2O.

CHARACTERISTICS

A white powder.

Freely soluble in *water*; practically insoluble in *ethanol (96%)*.

IDENTIFICATION

Yields the reactions characteristic of *sodium salts* and of *citrates*, Appendix VI.

TESTS

Acidity

pH of a 3% w/v solution, 4.9 to 5.2, Appendix V L.

Arsenic

0.50 g dissolved in 25 ml of *water* complies with the *limit test for arsenic*, Appendix VII (2 ppm) .

Heavy metals

Dissolve 1.0 g in 20 ml of *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (20 ppm).

Chloride

Dissolve 1.0 g in 100 ml of *water*. 15 ml of the resulting solution complies with the *limit test for chlorides*, Appendix VII (330 ppm).

Oxalate

Dissolve 1.0 g in 4 ml of *water*, add 3 ml of *hydrochloric acid* and 1 g of granulated *zinc* and heat on a water bath for 1 minute. Allow to stand for 2 minutes, decant the liquid into a test tube containing 0.25 ml of a 1% w/v solution of *phenylhydrazine hydrochloride* and heat to boiling. Cool rapidly, transfer to a graduated measuring cylinder, add an equal volume of *hydrochloric acid* and 0.25 ml of *potassium hexacyanoferrate(III) solution*, shake and allow to stand for 30 minutes. Any red colour produced is not more intense than that produced by treating in the same manner 4 ml of a 0.005% w/v solution of *oxalic acid* (150 ppm, calculated as anhydrous oxalic acid).

Sulphate

Dissolve 0.50 g in 57 ml of *water* and add 3 ml of 2M *hydrochloric acid*. 15 ml of the resulting solution complies with the *limit test for sulphates*, Appendix VII (0.12%).

Readily carbonisable substances

Heat 1.0 g, in powder, with 10 ml of *sulphuric acid* for 30 minutes in a water bath protected from light. Not more than a pale brown colour is produced.

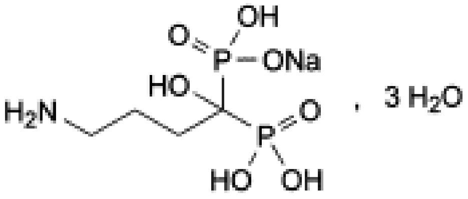
ASSAY

Heat 2 g until carbonised, cool and boil the residue with 50 ml each of *water* and 0.5M *hydrochloric acid VS*. Filter, wash the filter with *water* and titrate the excess of acid in the filtrate and washings with 0.5M *sodium hydroxide VS* using *methyl orange solution* as indicator. Each ml of 0.5M *hydrochloric acid VS* is equivalent to 65.78 mg of $C_6H_6Na_2O_7$, $1\frac{1}{2}H_2O$.

Sodium Alendronate

General Notices

(Ph Eur monograph 1564)



$C_4H_{12}NNaO_7P_2,3H_2O$ 325.1 *121268-17-5*

Action and use

Bisphosphonate; treatment of osteoporosis.

Ph Eur

DEFINITION

Sodium alendronate contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (4-amino-1-hydroxybutylidene)bisphosphonic acid monosodium salt, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, soluble in water, very slightly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sodium alendronate CRS*. Examine the substances prepared as discs.

B. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 or BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of is 4.0 to 5.0.

4-aminobutanoic acid

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution

Dissolve 0.10 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 0.10 g of *4-aminobutanoic acid R* in *water R* and dilute to 200 ml with the same solvent.

Reference solution (b) Dilute 1 ml of reference solution (a) to 10 ml with *water R*.

Apply to the plate 5 µl of the test solution and 5 µl of reference solution (b). Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *water R*, 20 volumes of *glacial acetic acid R* and 60 volumes of *butanol R*. Dry the plate in a current of warm air. Spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spots corresponding to 4-aminobutanoic acid in the chromatogram obtained with the test solution are not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Phosphate and phosphate

Examine the chromatograms obtained in the assay. In the chromatogram obtained with the test solution: the area of any peak corresponding to phosphate is not greater than that of the peak due to phosphate in the chromatogram obtained with reference solution (d) (0.5 per cent); the area of any peak corresponding to phosphite is not greater than that of the peak due to phosphite in the chromatogram obtained with reference solution (d) (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test F for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

16.1 per cent to 17.1 per cent, determined on 1.000 g by drying in an oven at 140 °C to 145 °C.

ASSAY

Examine by liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (a) Dissolve 50.0 mg of *sodium alendronate CRS* in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution (b) Dissolve 3.0 g of *phosphoric acid R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 100.0 ml with *water R*.

Reference solution (c) Dissolve 2.5 g of *phosphorous acid R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 100.0 ml with *water R*.

Reference solution (d) Mix 2.0 ml of reference solution (b) and 2.0 ml of reference solution (c) and dilute to 50.0 ml with *water R*.

The chromatographic procedure may be carried out using:

— a column 0.15 m long and 4.6 mm in internal diameter packed with *anion exchange resin R1* (7 µm);

— as mobile phase at a flow rate of 1.2 ml/min a solution of 0.2 ml of *anhydrous formic acid R* in 1000 ml of *water R*, adjusted to pH 3.5 with *2 M sodium hydroxide R*;

— as detector a refractometer;

— a 100 µl loop injector,

maintaining the temperature of the column at 35 °C.

Inject reference solution (a) six times. The assay is not valid unless the relative standard deviation of the peak area of sodium alendronate is at most 1.0 per cent. Inject the test solution, reference solution (a) and reference solution (d). The retention time of sodium alendronate is about 16 min and the relative retention times are: phosphate about 1.3 and phosphite about 1.6. Record the chromatograms for twice the retention time of the principal peak in the chromatogram obtained with the test solution.

Calculate the percentage content of $C_4H_{12}NNaO_7P_2$ from the peak areas and the declared content of *sodium alendronate CRS*.

IMPURITIES

A. 4-aminobutanoic acid,

B. phosphate,

C. phosphite.

Ph Eur

Sodium Alginate

General Notices

(Ph Eur monograph 0625)

Action and use

Excipient.

Preparations

Alginate Raft-forming Oral Suspension

Compound Alginate Antacid Oral Suspension

Ph Eur

DEFINITION

Sodium alginate consists mainly of the sodium salt of alginic acid, which is a mixture of polyuronic acids [$(C_6H_8O_6)_n$] composed of residues of D-mannuronic acid and L-guluronic acid. Sodium alginate is obtained mainly from algae belonging to the Phaeophyceae.

CHARACTERS

Appearance

White or pale yellowish-brown powder.

Solubility

Slowly soluble in water forming a viscous, colloidal solution, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 0.2 g with shaking in 20 ml of *water R*. To 5 ml of this solution add 1 ml of *calcium chloride solution R*. A voluminous gelatinous mass is formed.

B. To 10 ml of the solution prepared in identification test A add 1 ml of *dilute sulphuric acid R*. A gelatinous mass is formed.

C. To 5 mg add 5 ml of *water R*, 1 ml of a freshly prepared 10 g/l solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and 5 ml of *hydrochloric acid R*. Boil for 3 min, cool, add 5 ml of *water R*, and shake with 15 ml of *di-isopropyl ether R*. Carry out a blank test. The upper layer obtained with the substance to be examined exhibits a deeper bluish-red colour than that obtained with the blank.

D. It complies with the test for sulphated ash. The residue obtained, dissolved in 2 ml of *water R*, gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 0.10 g in *water R*, with constant stirring, dilute to 30 ml with the same solvent and allow to stand for 1 h.

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Dilute 1 ml of solution S to 10 ml with *water R*.

Chlorides

Maximum 1.0 per cent.

To 2.50 g add 50 ml of *dilute nitric acid R*, shake for 1 h and dilute to 100.0 ml with *dilute nitric acid R*. Filter. To 50.0 ml of the filtrate add 10.0 ml of *0.1 M silver nitrate* and 5 ml of *toluene R*. Titrate with *0.1 M ammonium thiocyanate*, using 2 ml of *ferric ammonium sulphate solution R2* as indicator and shaking vigorously towards the end point.

1 ml of *0.1 M silver nitrate* is equivalent to 3.545 mg of Cl.

Calcium

Maximum 1.50 per cent.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 0.10 g in 50 ml of *dilute ammonia R2*, heating on a water-bath. Allow to cool and dilute to 100.0 ml with *distilled water R* (solution (a)). Dilute 3.0 ml of solution (a) to 100.0 ml with *distilled water R*.

Reference solutions Prepare 3 reference solutions in the same manner as the test solution but add 0.75 ml, 1.0 ml and 1.5 ml respectively of *calcium standard solution (100 ppm Ca) R* to the 3.0 ml of solution (a).

Set the zero of the instrument using a mixture of 1.5 volumes of *dilute ammonia R2* and 98.5 volumes of *distilled water R*.

Source Calcium hollow-cathode lamp.

Wavelength 422.7 nm.

Atomisation device Air-acetylene flame.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 0.1000 g by drying in an oven at 105 C for 4 h.

Sulphated ash *(2.4.14)*

30.0 per cent to 36.0 per cent (dried substance), determined on 0.1000 g.

Microbial contamination

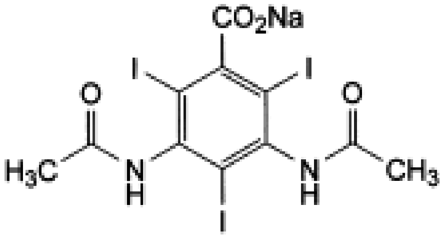
Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate-count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

Ph Eur

Sodium Amidotrizoate

General Notices

(Ph Eur monograph 1150)



$C_{11}H_8I_3N_2NaO_4$ 636 *737-31-5*

Action and use

Iodinated contrast medium.

Preparation

Sodium Amidotrizoate Injection

Ph Eur

DEFINITION

Sodium amidotrizoate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of sodium 3,5-bis(acetylamino)-2,4,6-tri-iodobenzoate, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white powder, freely soluble in water, slightly soluble in alcohol, practically insoluble in acetone.

It melts at about 261 C with decomposition.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sodium amidotrizoate CRS*. Dry both the substance to be examined and the reference substance at 100 C to 105 C for 3 h.

B. Examine the chromatograms obtained in the test for related substances. The principal

spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (b).

C. Heat 50 mg gently in a small porcelain dish over a naked flame. Violet vapour is evolved.

D. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Dilute 1 ml of solution S to 10 ml with *water R*. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 7.5 to 9.5.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel* GF_{254} *plate R*. *Prepare the solutions in subdued light and develop the chromatograms protected from light*.

Test solution (a) Dissolve 0.50 g of the substance to be examined in a 3 per cent *V/V* solution of *ammonia R* in *methanol R* and dilute to 10 ml with the same solution.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a 3 per cent *V/V* solution of *ammonia R* in *methanol R*.

Reference solution (a) Dilute 1 ml of test solution (b) to 50 ml with a 3 per cent *V/V* solution of *ammonia R* in *methanol R*.

Reference solution (b) Dissolve 50 mg of *sodium amidotrizoate CRS* in a 3 per cent *V/V* solution of *ammonia R* in *methanol R* and dilute to 10 ml with the same solution.

Apply separately to the plate 2 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *anhydrous formic acid R*, 25 volumes of *methyl ethyl ketone R* and 60 volumes of *toluene R*. Allow the plate to dry until the solvents have evaporated and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

Free aromatic amines

Maintain the solutions and reagents in iced water, protected from light. To 0.50 g in a 50 ml volumetric flask add 15 ml of *water R*. Shake and add 1 ml of *dilute sodium hydroxide solution R*. Cool in iced water, add 5 ml of a freshly prepared 5 g/l solution of *sodium nitrite R* and 12 ml of *dilute hydrochloric acid R*. Shake gently and allow to stand for exactly 2 min after adding the hydrochloric acid. Add 10 ml of a 20 g/l solution of *ammonium sulphamate R*. Allow to stand for 5 min, shaking frequently, and add 0.15 ml of a 100 g/l solution of α-*naphthol R* in *alcohol R*. Shake and allow to stand for 5 min. Add 3.5 ml of *buffer solution pH 10.9 R*, mix and dilute to 50.0 ml with *water R*. The absorbance *(2.2.25)*, measured within 20 min at 485 nm using as the compensation liquid a solution prepared at the same time and in the same manner but omitting the substance to be examined, is not greater than 0.30.

Free iodine and iodides

Not more than 50 ppm. Dissolve 1.0 g in *distilled water R* and dilute to 10 ml with the same solvent. Add dropwise *dilute nitric acid R* until the precipitation is complete, then add 3 ml of *dilute nitric acid R*. Filter and wash the precipitate with 5 ml of *water R*. Collect the filtrate and washings. Add 1 ml of *strong hydrogen peroxide solution R* and 1 ml of *methylene chloride R*. Shake. The lower layer is not more intensely coloured than a reference solution prepared simultaneously and in the same manner, using a mixture of 5 ml of *iodide standard solution (10 ppm I) R*, 3 ml of *dilute nitric acid R* and 15 ml of *water R*.

Heavy metals *(2.4.8)*

Dilute 4 ml of solution S to 20 ml with *water R*. 12 ml of this solution complies with limit test A for heavy metals (20 ppm). Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Water *(2.5.12)*

Not more than 11.0 per cent, determined on 0.400 g by the semi-micro determination of water.

ASSAY

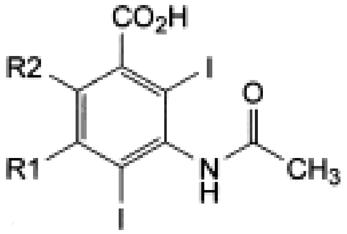
To 0.150 g in a 250 ml round-bottomed flask add 5 ml of *strong sodium hydroxide solution R*, 20 ml of *water R*, 1 g of *zinc powder R* and a few glass beads. Boil under a reflux condenser for 30 min. Allow to cool and rinse the condenser with 20 ml of *water R*, adding the rinsings to the flask. Filter through a sintered-glass filter *(2.1.2)* and wash the filter with several quantities of *water R*. Collect the filtrate and washings. Add 40 ml of *dilute sulphuric acid R* and titrate immediately with *0.1 M silver nitrate*. Determine the end-point potentiometrically *(2.2.20)*, using a suitable electrode system such as silver-mercurous sulphate.

1 ml of *0.1 M silver nitrate* is equivalent to 21.20 mg of $C_{11}H_8I_3N_2NaO_4$.

STORAGE

Store protected from light.

IMPURITIES



A. R1 = NH_2, R2 = I: 3-acetylamino-5-amino-2,4,6-tri-iodobenzoic acid,

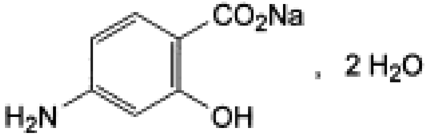
B. R1 = $NHCOCH_3$, R2 = H: 3,5-bis(acetylamino)-2,4-di-iodobenzoic acid.

Ph Eur

Sodium Aminosalicylate Dihydrate

General Notices

(Ph Eur monograph 1993)



$C_7H_6NNaO_3,2H_2O$ 211.2 *6018-19-5*

Action and use

Antituberculous.

Ph Eur

DEFINITION

Sodium 4-amino-2-hydroxybenzoate dihydrate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder or crystals, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification A, E.

Second identification B, C, D, E.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of sodium aminosalicylate dihydrate.

B. Introduce 0.3 g into a porcelain crucible. Cautiously heat on a small flame until vapour is evolved. Cover the crucible with a watch glass and collect the white sublimate. The melting point *(2.2.14)* of the sublimate is 120 C to 124 C.

C. To 0.1 ml of solution S (see Tests) add 5 ml of *water R* and 0.1 ml of *ferric chloride solution R1*. A reddish-brown colour develops.

D. 2 ml of solution S gives the reaction of primary aromatic amines *(2.3.1)*.

E. 0.5 ml of solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

The freshly prepared solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_5 (*2.2.2, Method II)*.

Dissolve 2.5 g in *water R* and dilute to 25 ml with the same solvent.

pH *(2.2.3)*

6.5 to 8.5 for solution S.

Related substances

Liquid chromatography *(2.2.29)*. *Use freshly prepared solutions and mobile phases*.

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 5.0 mg of *3-aminophenol R* in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dissolve 5.0 mg of *mesalazine CRS* in *water R* and dilute to 100.0 ml with the same solvent. To 10.0 ml of this solution add 1.0 ml of reference solution (a) and dilute to 50.0 ml with *water R*.

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: spherical *base-deactivated octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: dissolve 2.2 g of *perchloric acid R* and 1.0 g of *phosphoric acid R* in *water R* and dilute to 1000.0 ml with the same solvent;

— *mobile phase B*: dissolve 1.7 g of *perchloric acid R* and 1.0 g of *phosphoric acid R* in *acetonitrile R* and dilute to 1000.0 ml with the same solvent,

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	100	0
15 - 30	100 → 40	0 → 60
30 - 35	40 → 100	60 → 0
35 - 45	100	0

Flow rate 1.25 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl.

Relative retention With reference to 4-aminosalicylate (retention time = about 12 min): impurity A = about 0.30; impurity B = about 0.37.

System suitability: Reference solution (b):

— *resolution*: minimum 4.0 between the peaks due to impurity A and impurity B.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *any other impurity*: for each impurity, not more than 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.05 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

16.0 per cent to 17.5 per cent, determined on 1.000 g by drying in an oven at 105 C.

Pyrogens *(2.6.8)*

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogens, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass, 10 ml of a 20 mg/ml solution of the substance to be examined in *water for injections R*.

ASSAY

Dissolve 0.150 g in 20 ml of *water R*. Add 10 ml of a 500 g/l solution of *sodium bromide R* and 25 ml of *glacial acetic acid R*. Add 5 ml of *0.1 M sodium nitrite* rapidly and continue the titration with the same titrant, determining the end-point potentiometrically *(2.2.20)*.

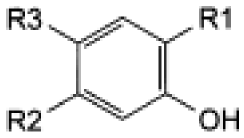
1 ml of *0.1 M sodium nitrite* is equivalent to 17.52 mg of $C_7H_6NNaO_3$.

STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

IMPURITIES

Specified impurities *A, B.*



A. R1 = R3 = H, R2 = NH_2: 3-aminophenol,

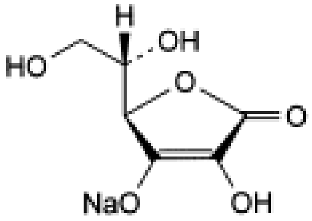
B. R1 = CO_2H, R2 = H, R3 = NH_2: 5-amino-2-hydroxybenzoic acid (mesalazine).

Ph Eur

Sodium Ascorbate

General Notices

(Ph Eur monograph 1791)



$C_6H_7NaO_6$ 198.1 *134-03-2*

Action and use

Excipient.

Ph Eur

DEFINITION

Sodium (2*R*)-2-[(1*S*)-1,2-dihydroxyethyl]-4-hydroxy-5-oxo-2,5-dihydrofuran-3-olate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish, crystalline powder or crystals.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification: B, D.

Second identification: A, C, D.

A. Specific optical rotation *(2.2.7)* (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *Sodium ascorbate CRS*.

C. To 1 ml of solution S (see Tests) add 0.2 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. A grey precipitate is formed.

D. 1 ml of solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 or BY_6 *(2.2.2, Method II)*. Examine the colour immediately after preparation of the solution.

pH *(2.2.3)*

7.0 to 8.0 for solution S.

Specific optical rotation *(2.2.7)*

+ 103 to + 108 (dried substance), determined on freshly prepared solution S.

Oxalic acid

Maximum 0.3 per cent.

Test solution Dissolve 0.25 g in 5 ml of *water R*. Add 1 ml of *dilute acetic acid R* and 0.5 ml of *calcium chloride solution R*.

Reference solution Dissolve 70 mg of *oxalic acid R* in *water R* and dilute to 500 ml with the same solvent; to 5 ml of the solution add 1 ml of *dilute acetic acid R* and 0.5 ml of *calcium chloride solution R*.

Allow the solutions to stand for 1 h. Any opalescence in the test solution is not more intense than that in the reference solution.

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Benzene *(2.4.24, System A)*

Maximum 2 ppm.

Sulphates *(2.4.13)*

Maximum 150 ppm.

To 10 ml of solution S add 2 ml of *hydrochloric acid R1* and dilute to 15 ml with *distilled water R*.

Copper

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 2.0 g in *0.1 M nitric acid* and dilute to 25.0 ml with the same solvent.

Reference solutions Prepare reference solutions (0.2 ppm, 0.4 ppm and 0.6 ppm) by diluting *copper standard solution (10 ppm Cu) R* with *0.1 M nitric acid*.

Source Copper hollow-cathode lamp.

Wavelength 324.8 nm.

Atomisation device Air-acetylene flame.

Iron

Maximum 2.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 5.0 g in *0.1 M nitric acid* and dilute to 25.0 ml with the same solvent.

Reference solutions Prepare reference solutions (0.2 ppm, 0.4 ppm and 0.6 ppm) by diluting *iron standard solution (20 ppm Fe) R* with *0.1 M nitric acid*.

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Nickel

Maximum 1.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 10.0 g in *0.1 M nitric acid* and dilute to 25.0 ml with the same solvent.

Reference solutions Prepare reference solutions (0.2 ppm, 0.4 ppm and 0.6 ppm) by diluting *nickel standard solution (10 ppm Ni) R* with *0.1 M nitric acid*.

Source Nickel hollow-cathode lamp.

Wavelength 232.0 nm.

Atomisation device Air-acetylene flame.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.25 per cent, determined on 1.000 g by drying in an oven at 105 °C.

ASSAY

Dissolve 80 mg in a mixture of 10 ml of *dilute sulphuric acid R* and 80 ml of *carbon dioxide-free water R*. Add 1 ml of *starch solution R*. Titrate with *0.05 M iodine* until a persistent violet-blue colour is obtained.

1 ml of *0.05 M iodine* is equivalent to 9.91 mg of $C_6H_7NaO_6$.

STORAGE

In a non-metallic container, protected from light.

Ph Eur

Sodium Aurothiomalate

General Notices

(Ph Eur monograph 1994)

39377-38-3

Action and use

Used in the treatment of rheumatoid arthritis.

Preparation

Sodium Aurothiomalate Injection

Ph Eur

DEFINITION

Mixture of monosodium and disodium salts of (*2RS*)-2-(aurosulphanyl)butanedioic acid.

CONTENT

— *gold* (Au; A_r 197.0): 44.5 per cent to 46.0 per cent (dried substance);

— *sodium* (Na; A_r 22.99): 10.8 per cent to 11.8 per cent (dried substance).

CHARACTERS

Appearance

Fine, pale yellow, hygroscopic powder.

Solubility

Very soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Dissolve 20 mg in *water R* and dilute to 2 ml with the same solvent. Add 2 ml of *strong hydrogen peroxide solution R* and 1 ml of *sodium hydroxide solution R*. Carefully heat to boiling and boil for 30 s. A precipitate is produced that appears brownish-black by reflected light and bluish-green by transmitted light.

B. To 20 mg add 2 ml of *water R*. The solution gives reaction (a) of sodium *(2.3.1)*.

C. Ignite 100 mg, dissolve the residue in *hydrochloric acid R* and dilute to 10 ml with the same acid. Allow to stand. 5 ml of the clear supernatant gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 1.0 g in *water R* and dilute to 10 ml with the same solvent. Filter, seal in an ampoule and heat at 100 °C for 1 h. Cool and dilute the contents of the ampoule to 100 ml with *water R*. The solution remains clear and is not more intensely coloured than a 0.100 g/l solution of *potassium ferricyanide R*.

pH *(2.2.3)*

6.0 to 7.0.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *fumaric acid R* and 100.0 mg of *thiomalic acid R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 25.0 ml with *water R*.

Reference solution (b) Dissolve 12.0 mg of *thiomalic acid R* in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (c) Dissolve 10.0 mg of *maleic acid R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 25.0 ml with *water R*.

Column:

- *size*: l = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 90 volumes of a 10.5 g/l solution of *phosphoric acid R*, 100 volumes of *methanol R2* and 810 volumes of *water R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 10 µl.

Run time Twice the retention time of impurity C.

Relative retention With reference to impurity C (retention time = about 8 min): impurity A = about 0.4; impurity B = about 0.6. Aurothiomalate does not elute under the chromatographic conditions described.

System suitability reference solution (a):

- *resolution*: minimum 5.0 between the peaks due to impurities B and C.

Limits:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity C*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent).

Glycerol

Maximum 8.0 per cent.

Test solution Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 0.80 g of *glycerol R* to 100.0 ml with *water R*.

Reference solution (b) To 2.5 ml of reference solution (a) add 7.5 ml of *water R*.

Reference solution (c) To 5.0 ml of reference solution (a) add 5.0 ml of *water R*.

Reference solution (d) To 7.5 ml of reference solution (a) add 2.5 ml of *water R*.

Blank solution 10 ml of *water R*.

To the test solution, reference solutions (b), (c) and (d) and the blank solution, add 2.5 ml of a freshly prepared 235 g/l solution of *sodium hydroxide R* and mix. Add dropwise in 0.2 ml increments a 38.0 g/l solution of *cupric chloride R*, shaking vigorously after each addition, until the solutions become slightly turbid. Then add 0.2 ml of the 38.0 g/l solution of *cupric chloride R*. Stopper and shake vigorously for 1 min. Dilute to 25.0 ml with *water R* and mix. Centrifuge for 2 min. Measure the absorbance *(2.2.25)* of the supernatant solution of a 1 cm layer at 635 nm. Use the solution prepared from the blank solution as the compensation liquid. Draw a calibration curve and calculate the content of glycerol in the sample.

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

ASSAY

Gold

Heat 0.2 g with 10 ml of *sulphuric acid R* and continue to boil gently until a clear, pale yellow liquid is produced. Cool, add about 1 ml of *nitric acid R* dropwise and boil for 1 h. Cool, dilute to 70 ml with *water R*, boil for 5 min and filter. Wash the residue of gold with *water R* at 60 °C. Dry and ignite at a temperature of at least 600 °C for 3 h. Weigh the residue and calculate the percentage content of Au.

Sodium

Evaporate to dryness the filtrate and washings obtained in the assay for gold, moisten with *sulphuric acid R* and ignite at 600 ± 50 °C for 3 h.

1.000 g of residue is equivalent to 0.324 g of Na.

STORAGE

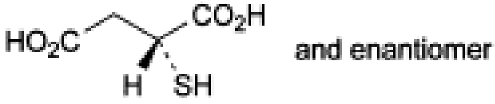
In an airtight container.

IMPURITIES

Specified impurities: A, B, C.

A. maleic acid,

B. (*2E*)-butenedioic acid (fumaric acid),



and enantiomer

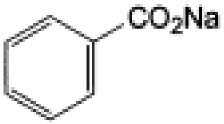
C. (*2RS*)-2-sulphanylbutanedioic acid (thiomalic acid).

Ph Eur

Sodium Benzoate

General Notices

(Ph Eur monograph 0123)



$C_7H_5NaO_2$ 144.1 *532-32-1*

Ph Eur

DEFINITION

Sodium benzenecarboxylate.

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline or granular powder or flakes, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in ethanol (90 per cent *V/V*).

IDENTIFICATION

A. It gives reactions (b) and (c) of benzoates *(2.3.1)*.

B. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 10 ml of *carbon dioxide-free water R* and 0.2 ml of *phenolphthalein solution R*. Not more than 0.2 ml of *0.1 M sodium hydroxide* or *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Halogenated compounds

Maximum 200 ppm for ionised chlorine and maximum 300 ppm for total chlorine.

All glassware used must be chloride-free and may be prepared by soaking overnight in a 500 g/l solution of nitric acid R, rinsed with water R and stored full of water R. It is recommended that glassware be reserved exclusively for this test.

Test solution To 20.0 ml of solution S add 5 ml of *water R* and dilute to 50.0 ml with *ethanol (96 per cent) R*.

Determination of ionised chlorine
In three 25 ml volumetric flasks, prepare the following solutions.

Solution (a) To 4.0 ml of the test solution add 3 ml of *dilute sodium hydroxide solution R* and 3 ml of *ethanol (96 per cent) R*. This solution is used to prepare solution A.

Solution (b) To 3 ml of *dilute sodium hydroxide solution R* add 2 ml of *water R* and 5 ml of *ethanol (96 per cent) R*. This solution is used to prepare solution B.

Solution (c) To 4.0 ml of *chloride standard solution (8 ppm Cl) R* add 6.0 ml of *water R*. This solution is used to prepare solution C.

In a fourth 25 ml volumetric flask, place 10 ml of *water R*. To each flask add 5 ml of *ferric ammonium sulphate solution R5*, mix and add dropwise and with swirling 2 ml of *nitric acid R* and 5 ml of *mercuric thiocyanate solution R*. Shake. Dilute the contents of each flask to 25.0 ml with *water R* and allow the solutions to stand in a water-bath at 20 °C for 15 min. Measure at 460 nm in a 2 cm cell the absorbance *(2.2.25)* of solution A using solution B as the compensation liquid, and the absorbance of solution C using the solution obtained with 10 ml of *water R* as the compensation liquid. The absorbance of solution A is not greater than that of solution C.

Determination of total chlorine
Solution (a) To 10.0 ml of the test solution add 7.5 ml of *dilute sodium hydroxide solution R* and 0.125 g of *nickel-aluminium alloy R* and heat on a water-bath for 10 min. Allow to cool to room temperature, filter into a 25 ml volumetric flask and wash the filter with 3 quantities, each of 2 ml, of *ethanol (96 per cent) R* (a slight precipitate may form that disappears on acidification). Dilute the filtrate and washings to 25.0 ml with *water R*. This solution is used to prepare solution A.

Solution (b) In the same manner, prepare a similar solution replacing the test solution by a mixture of 5 ml of *ethanol (96 per cent) R* and 5 ml of *water R*. This solution is used to prepare solution B.

Solution (c) To 6.0 ml of *chloride standard solution (8 ppm Cl) R* add 4.0 ml of *water R*. This solution is used to prepare solution C.

In four 25 ml volumetric flasks, place separately 10 ml of solution (a), 10 ml of solution (b), 10 ml of solution (c) and 10 ml of *water R*. To each flask add 5 ml of *ferric ammonium sulphate solution R5*, mix and add dropwise and with swirling 2 ml of *nitric acid R* and 5 ml of *mercuric thiocyanate solution R*. Shake. Dilute the contents of each flask to 25.0 ml with *water R* and allow the solutions to stand in a water-bath at 20 °C for 15 min. Measure at 460 nm in a 2 cm cell the absorbance *(2.2.25)* of solution A using solution B as the compensation liquid, and the absorbance of solution C using the solution obtained with 10 ml of *water R* as the compensation liquid. The absorbance of solution A is not greater than that of solution C.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 1.00 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.250 g in 20 ml of *anhydrous acetic acid R*, heating to 50 °C if necessary. Cool. Using 0.05 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until a green colour is obtained.

1 ml of *0.1 M perchloric acid* is equivalent to 14.41 mg of $C_7H_5NaO_2$.

Ph Eur

Sodium Bicarbonate

General Notices

(Sodium Hydrogen Carbonate, Ph Eur monograph 0195)

$NaHCO_3$ 84.0 *144-55-8*

Action and use

Antacid; used in treatment of electrolyte deficiency.

Preparations

Sodium Bicarbonate Ear Drops

Sodium Bicarbonate Eye Lotion

Sodium Bicarbonate Intravenous Infusion

Sodium Bicarbonate Oral Solution

Compound Sodium Bicarbonate Tablets

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, practically insoluble in ethanol (96 per cent).

When heated in the dry state or in solution, it gradually changes into sodium carbonate.

IDENTIFICATION

A. To 5 ml of solution S (see Tests) add 0.1 ml of *phenolphthalein solution R*. A pale pink colour is produced. Heat; gas is evolved and the solution becomes red.

B. It gives the reaction of carbonates and bicarbonates *(2.3.1)*.

C. Solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in 90 ml of *carbon dioxide-free water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Carbonates

The pH *(2.2.3)* of freshly prepared solution S is not greater than 8.6.

Chlorides *(2.4.4)*

Maximum 150 ppm.

To 7 ml of solution S add 2 ml of *nitric acid R* and dilute to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 150 ppm.

To a suspension of 1.0 g in 10 ml of *distilled water R* add *hydrochloric acid R* until neutral and about 1 ml in excess. Dilute to 15 ml with *distilled water R*.

Ammonium *(2.4.1)*

Maximum 20 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*. Prepare the standard using a mixture of 5 ml of *water R* and 10 ml of *ammonium standard solution (1 ppm NH_4) R*.

Arsenic *(2.4.2, Method A)*

Maximum 2 ppm, determined on 0.5 g.

Calcium *(2.4.3)*

Maximum 100 ppm.

To a suspension of 1.0 g in 10 ml of *distilled water R* add *hydrochloric acid R* until neutral and dilute to 15 ml with *distilled water R*.

Iron *(2.4.9)*

Maximum 20 ppm.

Dissolve 0.5 g in 5 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in a mixture of 2 ml of *hydrochloric acid R* and 18 ml of *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

Dissolve 1.500 g in 50 ml of *carbon dioxide-free water R*. Titrate with *1 M hydrochloric acid*, using 0.2 ml of methyl orange solution R as indicator.

1 ml of *1 M hydrochloric acid* is equivalent to 84.0 mg of $NaHCO_3$.

Ph Eur

Sodium Bromide

General Notices

(Ph Eur monograph 0190)

NaBr 102.9 *7647-15-6*

Ph Eur

DEFINITION

Content

98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, granular powder or small, colourless, transparent or opaque crystals, slightly hygroscopic.

Solubility

Freely soluble in water, soluble in alcohol.

IDENTIFICATION

A. It gives reaction (a) of bromides *(2.3.1)*.

B. Solution S (see Tests) gives the reactions of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromates

To 10 ml of solution S add 1 ml of *starch solution R*, 0.1 ml of a 100 g/l solution of *potassium iodide R* and 0.25 ml of *0.5 M sulphuric acid* and allow to stand protected from light for 5 min. No blue or violet colour develops.

Chlorides

Maximum 0.6 per cent.

In a conical flask, dissolve 1.000 g in 20 ml of *dilute nitric acid R*. Add 5 ml of *strong hydrogen peroxide solution R* and heat on a water-bath until the solution is completely decolourised. Wash down the sides of the flask with a little *water R* and heat on a water-bath for 15 min. Allow to cool, dilute to 50 ml with *water R* and add 5.0 ml of *0.1 M silver nitrate* and 1 ml of *dibutyl phthalate R*. Shake and titrate with *0.1 M ammonium thiocyanate*, using 5 ml of *ferric ammonium sulphate solution R2* as indicator. Not more than 1.7 ml of *0.1 M silver nitrate* is used. Note the volume of *0.1 M silver nitrate* used (see Assay). Carry out a blank test.

Iodides

To 5 ml of solution S add 0.15 ml of *ferric chloride solution R1* and 2 ml of *methylene chloride R*. Shake and allow to separate. The lower layer is colourless *(2.2.2, Method I)*.

Sulphates *(2.4.13)*

Maximum 100 ppm.

15 ml of solution S complies with the limit test for sulphates.

Iron *(2.4.9)*

Maximum 20 ppm.

5 ml of solution S diluted to 10 ml with *water R* complies with the limit test for iron.

Magnesium and alkaline-earth metals *(2.4.7)*

Maximum 200 ppm, calculated as Ca.

10.0 g complies with the limit test for magnesium and alkaline-earth metals. The volume of *0.01 M sodium edetate* used does not exceed 5.0 ml.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 3.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 2.000 g in *water R* and dilute to 100.0 ml with the same solvent. To 10.0 ml of the solution add 50 ml of *water R*, 5 ml of *dilute nitric acid R*, 25.0 ml of *0.1 M silver nitrate* and 2 ml of *dibutyl phthalate R*. Shake. Titrate with *0.1 M ammonium thiocyanate*, using 2 ml of *ferric ammonium sulphate solution R2* as indicator and shaking vigorously towards the end-point.

1 ml of *0.1 M silver nitrate* is equivalent to 10.29 mg of NaBr.

Calculate the percentage content of NaBr from the expression:

$$a - 2.902\,b$$

a = percentage content of NaBr and NaCl obtained in the assay and calculated as NaBr,

b = percentage content of Cl in the test for chlorides.

STORAGE

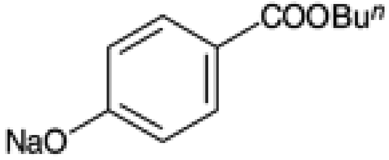
In an airtight container .

Ph Eur

Sodium Butyl Hydroxybenzoate

General Notices

Sodium Butylparaben



$C_{11}H_{13}NaO_3$ 216.2 *36457-20-2*

Action and use

Antimicrobial preservative.

DEFINITION

Sodium Butyl Hydroxybenzoate is the sodium salt of butyl 4-hydroxybenzoate. It contains not less than 99.0% and not more than 102.0% of $C_{11}H_{13}NaO_3$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white powder; hygroscopic.

Freely soluble in *water* and in *ethanol (96%)*.

IDENTIFICATION

A. Dissolve 0.5 g in 5 ml of *water* and acidify to *litmus paper* with *hydrochloric acid*. A white precipitate is produced. Wash the precipitate with *water* and dry. The *infrared absorption spectrum* of the precipitate, Appendix II A, is concordant with the *reference spectrum* of butyl hydroxybenzoate *(RS 036)*.

B. The residue on ignition yields the reactions characteristic of *sodium salts*, Appendix VI.

TESTS

Alkalinity

pH of a 0.1% w/v solution, 9.5 to 10.5, Appendix V L.

Clarity of solution

Dissolve 1.0 g in 10 ml of *water*. The solution is *clear*, Appendix IV A.

Chloride

Dissolve 1.0 g in 100 ml of *water*, add 1 ml of *nitric acid* and filter. 15 ml of the filtrate complies with the *limit test for chlorides*, Appendix VII (330 ppm).

Sulphate

Dissolve 0.50 g in 40 ml of *water*, add 3.5 ml of 2M *hydrochloric acid*, dilute to 60 ml with *water* and filter. 15 ml of the filtrate complies with the *limit test for sulphates*, Appendix VII (0.12%).

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a plate precoated with silica gel F_{254} the surface of which has been modified with chemically-bonded octadecylsilyl groups (Whatman KC18F plates are suitable) and a mixture of 70 volumes of *methanol*, 30 volumes of *water* and 1 volume of *glacial acetic acid* as the mobile phase. Apply separately to the plate 2 µl of each of the following solutions. For solution (1) dilute a 2.0% w/v solution of the substance being examined in *water* with an equal volume of *acetone*. For solution (2) dilute 1 volume of solution (1) to 25 volumes with a mixture of equal volumes of *acetone* and *water*. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Water

Not more than 5.0% w/w, Appendix IX C. Use 1 g.

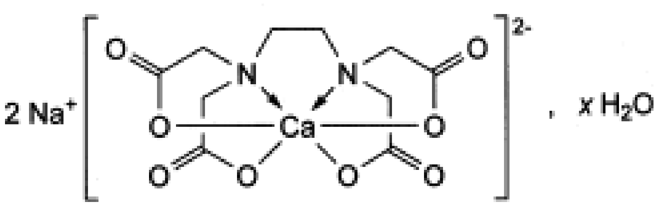
ASSAY

Gently boil 0.1 g under a reflux condenser with 25 ml of 1.25M *sodium hydroxide* for 30 minutes. Allow to cool, add 25 ml of 0.0333M *potassium bromate VS*, 5 ml of a 12.5% w/v solution of *potassium bromide* and 10 ml of *hydrochloric acid* and immediately stopper the flask. Shake for 15 minutes and allow to stand for 15 minutes. Add 25 ml of *dilute potassium iodide solution* and shake vigorously. Titrate the liberated iodine with 0.1M *sodium thiosulphate VS* using *starch mucilage*, added towards the end of the titration, as indicator. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of potassium bromate required. The volume of 0.0333M *potassium bromate VS* used is equivalent to half of the volume of 0.1M *sodium thiosulphate VS* required for the titration. Each ml of 0.0333M *potassium bromate VS* is equivalent to 7.207 mg of $C_{11}H_{13}NaO_3$.

Sodium Calcium Edetate

General Notices

(Ph Eur monograph 0231)



$C_{10}H_{12}CaN_2Na_2O_8,xH_2O$ 374.3 *62-33-9*
(anhydrous) *(anhydrous)*

Action and use

Chelating agent.

Preparation

Sodium Calcium Edetate Intravenous Infusion

Ph Eur

DEFINITION

Disodium [(ethylenedinitrilo)tetraacetato]calciate(2-).

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

It contains a variable amount of water of crystallisation.

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, C, D.

Second identification *B, C, D*.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *Sodium calcium edetate CRS*.

B. Dissolve 2 g in 10 ml of *water R*, add 6 ml of *lead nitrate solution R*, shake and add 3 ml of *potassium iodide solution R*. No yellow precipitate is formed. Make alkaline to *red litmus paper R* by the addition of *dilute ammonia R2* and add 3 ml of *ammonium oxalate solution R*. A white precipitate is formed.

C. Ignite. The residue gives reaction (b) of calcium *(2.3.1)*.

D. Dissolve 0.5 g in 10 ml of *water R* and add 10 ml of *potassium pyroantimonate solution R*. A white, crystalline precipitate is formed. The formation of the precipitate is accelerated by rubbing the wall of the tube with a glass rod.

TESTS

Solution S

Dissolve 5.0 g in *water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

6.5 to 8.0.

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Impurity A

Liquid chromatography *(2.2.29)*. *Carry out the test protected from light*.

Solvent mixture Dissolve 10.0 g of *ferric sulphate pentahydrate R* in 20 ml of *0.5 M sulphuric acid* and add 780 ml of *water R*. Adjust to pH 2.0 with *1 M sodium hydroxide* and dilute to 1000 ml with *water R*.

Test solution Dissolve 0.100 g of the substance to be examined in the solvent mixture and dilute to 25.0 ml with the solvent mixture.

Reference solution Dissolve 40.0 mg of *nitrilotriacetic acid R* (impurity A) in the solvent mixture and dilute to 100.0 ml with the solvent mixture. To 1.0 ml of this solution add 0.1 ml of the test solution and dilute to 100.0 ml with the solvent mixture.

Column:

— *size:* *l* = 0.10 m, Ø = 4.6 mm;

— *stationary phase*: spherical *graphitised carbon for chromatography R1* (5 µm) with a specific surface area of 120 m^2/g and a pore size of 25 nm.

Mobile phase Dissolve 50.0 mg of *ferric sulphate pentahydrate R* in 50 ml of *0.5 M sulphuric acid* and add 750 ml of *water R*; adjust to pH 1.5 with *0.5 M sulphuric acid* or *1 M sodium hydroxide*, add 20 ml of *ethylene glycol R* and dilute to 1000 ml with *water R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 273 nm.

Injection 20 µl; filter the solutions and inject immediately.

Run time 4 times the retention time of the iron complex of impurity A.

Retention time Iron complex of impurity A = about 5 min; iron complex of edetic acid = about 10 min.

System suitability
Reference solution:

- *resolution*: minimum 7 between the peaks due to the iron complex of impurity A and the iron complex of edetic acid;
- *signal-to-noise ratio*: minimum 50 for the peak due to impurity A.

Limit:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (0.1 per cent).

Disodium edentate

Maximum 1.0 per cent.

Dissolve 5.0 g in 250 ml of *water R*. Add 10 ml of *ammonium chloride buffer solution pH 10.0 R* and about 50 mg of *mordant black 11 triturate R*. Not more than 1.5 ml of *0.1 M magnesium chloride* is required to change the colour of the indicator to violet.

Chlorides

Maximum 0.1 per cent.

Dissolve 0.7 g in *water R* and dilute to 20 ml with the same solvent. Add 30 ml of *dilute nitric acid R*, allow to stand for 30 min and filter. Dilute 10 ml of the filtrate to 50 ml with *water R*. Use this solution as the test solution. Prepare the reference solution using 0.40 ml of *0.01 M hydrochloric acid*, add 6 ml of *dilute nitric acid R* and dilute to 50 ml with *water R*. Filter both solutions if necessary. Add 1 ml of *silver nitrate solution R2* to the test solution and to the reference solution and mix. After standing for 5 min protected from light, any opalescence in the test solution is not more intense than that in the reference solution.

Iron *(2.4.9)*

Maximum 80 ppm.

Dilute 2.5 ml of solution S to 10 ml with *water R*. Add 0.25 g of *calcium chloride R* to the test solution and the standard before the addition of the *thioglycollic acid R*.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water *(2.5.12)*

5.0 per cent to 13.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.500 g in *water R* and dilute to 200 ml with the same solvent. To 20.0 ml of this solution, add 80 ml of *water R* and adjust to pH 2 with *dilute nitric acid R*. Titrate with *0.01 M bismuth nitrate*, using 0.1 ml of a 1 g/l solution of *xylenol orange R* as indicator. The colour of the solution changes from yellow to red.

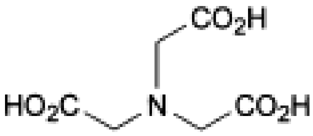
1 ml of *0.01 M bismuth nitrate* is equivalent to 3.74 mg of $C_{10}H_{12}CaN_2Na_2O_8$.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities A.



A. nitrilotriacetic acid.

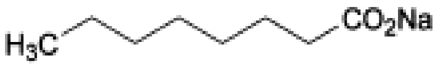
General Notices

Sodium Octanoate

(Ph Eur monograph 1471)



$C_8H_{15}NaO_2$ 166.2 *1984-06-1*

Action and use

Excipient.

Ph Eur

DEFINITION

Sodium octanoate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble or freely soluble in water, freely soluble in acetic acid, sparingly soluble in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Examine the chromatograms obtained in the test for related substances.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. To 0.2 ml of solution S (see Tests) add 0.3 ml of *water R*. The solution gives reaction (b) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

8.0 to 10.5 for solution S.

Related substances

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution Dissolve 0.116 g in *water R* and dilute to 5 ml with the same solvent. Add 1 ml of a 2.8 per cent *V/V* solution of *sulphuric acid R* and shake with 10 ml of *ethyl acetate R*. Separate the organic layer and dry over *anhydrous sodium sulphate R*.

Reference solution (a) Dissolve 0.10 g of *caprylic acid CRS* in *ethyl acetate R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of the test solution to 100 ml with *ethyl acetate R*. Dilute 5 ml of this solution to 50 ml with *ethyl acetate R*.

Column:

— *material*: fused silica;

— *size*: *l* = 30 m, Ø = 0.25 mm;

$Na_2CO_3,10H_2O$ 286.1 *497-19-8*

Ph Eur

DEFINITION

Content

36.7 per cent to 40.0 per cent of Na_2CO_3.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless, transparent crystals, efflorescent.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 1 g in *water R* and dilute to 10 ml with the same solvent. The solution is strongly alkaline *(2.2.4)*.

B. The solution prepared for identification test A gives the reaction of carbonates *(2.3.1)*.

C. The solution prepared for identification test A gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in portions in a mixture of 5 ml of *hydrochloric acid R* and 25 ml of *distilled water R*. Heat the solution to boiling and cool. Add *dilute sodium hydroxide solution R* until the solution is neutral and dilute to 50 ml with *distilled water R*.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y6 *(2.2.2, Method I)*.

Dissolve 4.0 g in 10 ml of *water R*.

Alkali hydroxides and bicarbonates

Dissolve 1.0 g in 20 ml of *water R*, add 20 ml of *barium chloride solution R1* and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R*. The solution does not become red. Heat the remainder of the filtrate to boiling for 2 min. The solution remains clear *(2.2.1)*.

Chlorides ***(2.4.4)***

Maximum 50 ppm.

Dissolve 1.0 g in *water R*, add 4 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 100 ppm, determined on solution S.

Arsenic ***(2.4.2, Method A)***

Maximum 2 ppm, determined on 5 ml of solution S.

Iron ***(2.4.9)***

Maximum 20 ppm.

Dilute 5 ml of solution S to 10 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

ASSAY

Dissolve 2.000 g in 25 ml of *water R*. Titrate with *1 M hydrochloric acid*, using 0.2 ml of *methyl orange solution R* as indicator.

1 ml of *1 M hydrochloric acid* is equivalent to 52.99 mg of Na_2CO_3.

STORAGE

In an airtight container.

Ph Eur

Sodium Cetostearyl Sulphate

General Notices

(Ph Eur monograph 0847)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of sodium cetyl sulphate ($C_{16}H_{33}NaO_4S$; M_r 344.5) and sodium stearyl sulphate ($C_{18}H_{37}NaO_4S$; M_r 372.5). A suitable buffer may be added.

Content:

— *sodium cetostearyl sulphate*: minimum 90.0 per cent (anhydrous substance);

— *sodium cetyl sulphate*: minimum 40.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or pale yellow, amorphous or crystalline powder.

Solubility

Soluble in hot water giving an opalescent solution, practically insoluble in cold water, partly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *B, D, F*.

Second identification *A, C, D, E, F*.

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in 10 ml of *ethanol (70 per cent V/V) R*, heating on a water-bath.

Reference solution Dissolve 50 mg of *sodium cetostearyl sulphate CRS* in 10 ml of *ethanol (70 per cent V/V) R*, heating on a water-bath.

Plate *TLC silanised silica gel plate R*.

Mobile phase *water R*, *acetone R*, *methanol R* (20:40:40 *V/V/V*).

Application 2 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Spray with a 50 g/l solution of *phosphomolybdic acid R* in *ethanol (96 per cent) R*. Heat at 120 C until the spots appear (about 3 h).

Results The principal spots in the chromatogram obtained with the test solution are similar in position and colour to the principal spots in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results The 2 principal peaks in the chromatogram obtained with test solution (c) are similar in retention time to the 2 principal peaks in the chromatogram obtained with the reference solution.

C. Dissolve 0.1 g in 10 ml of *water R* and shake. A foam is formed.

D. It gives a yellow colour to a non-luminous flame.

E. To 0.1 ml of the solution prepared for identification test C add 0.1 ml of a 1 g/l solution of *methylene blue R* and 2 ml of *dilute sulphuric acid R*. Add 2 ml of *methylene chloride R* and shake. The methylene chloride layer has an intense blue colour.

F. Mix about 10 mg with 10 ml of *anhydrous ethanol R*. Heat to boiling on a water-bath, shaking frequently. Filter immediately and evaporate to dryness. Dissolve the residue in 7 ml of *water R*, add 3 ml of *dilute hydrochloric acid R* and evaporate the solution to half its volume. Allow to cool. Filter. To the filtrate add 1 ml of *barium chloride solution R1*. A white, crystalline precipitate is formed.

TESTS

Acidity or alkalinity

Dissolve 0.5 g with heating in a mixture of 10 ml of *water R* and 15 ml of *ethanol (90 per cent V/V) R*. Add 0.1 ml of *phenolphthalein solution R1*. The solution is colourless. Add 0.1 ml of *0.1 M sodium hydroxide*. The solution is red.

Sodium chloride and sodium sulphate

Maximum 8.0 per cent for the sum of the percentage contents.

Sodium chloride

Dissolve 5.00 g in 50 ml of *water R*, add *dilute nitric acid R* dropwise until the solution is neutral to *blue litmus paper R*. Add 2 ml of *potassium chromate solution R* and titrate with *0.1 M silver nitrate*.

1 ml of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

Sodium sulphate Dissolve 0.500 g in 20 ml of *water R*, warming gently if necessary, and add 1 ml of a 0.5 g/l solution of *dithizone R* in *acetone R*. If the solution is red, add *1 M nitric acid*, dropwise, until a bluish-green colour is obtained. Add 2.0 ml of *dichloroacetic acid solution R* and 80 ml of *acetone R*. Titrate with *0.01 M lead nitrate* until a persistent orange-red colour is obtained.

1 ml of *0.01 M lead nitrate* is equivalent to 1.420 mg of Na_2SO_4.

Free cetostearyl alcohol

Maximum 4.0 per cent.

From the chromatogram obtained with test solution (a) in the assay, calculate the percentage content of free cetostearyl alcohol in the substance to be examined, using the following expression:

$$S\frac{100 \times m_H}{S_{Ha(corr)} \times m}$$

S = sum of the areas of the peaks due to cetyl alcohol and stearyl alcohol in the chromatogram obtained with test solution (a),

m_H = mass of the internal standard added in the preparation of test solution (a), in milligrams,

$S_{Ha(corr)}$ = corrected area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

m = mass of sodium cetostearyl sulphate used for the preparation of test solution (a), in milligrams.

Water *(2.5.12)*

Maximum 1.5 per cent, determined on 5.00 g.

ASSAY

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.20 g of *heptadecanol CRS* in *anhydrous ethanol R* and dilute to 50 ml with the same solvent.

Test solution (a) Dissolve 0.300 g of the substance to be examined in 50 ml of *anhydrous ethanol R* and add 2 ml of the internal standard solution and 48 ml of *water R*. Shake with 4 quantities, each of 25 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers. Reserve the hydro-alcoholic layer for the preparation of test solutions (c) and (d). Wash the organic layer with 2 quantities, each of 30 ml, of *water R*. Dry over *anhydrous sodium sulphate R* and filter.

Test solution (b) Dissolve 0.300 g of the substance to be examined in 50 ml of *anhydrous ethanol R* and add 50 ml of *water R*. Shake with 4 quantities, each of 25 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to facilitate the separation of the layers. Combine the organic layers, wash with 2 quantities, each of 30 ml, of *water R*. Dry over *anhydrous sodium sulphate R* and filter.

Test solution (c) Transfer 25 ml of the hydro-alcoholic solution obtained in the preparation of test solution (a) to a 200 ml flask that can be fitted with a reflux condenser. Add 20 ml of *hydrochloric acid R* and 10 ml of the internal standard solution. Boil under a reflux condenser for 2 h. Allow to cool and shake with 4 quantities, each of 20 ml, of *pentane R*. Combine the organic layers and wash with 2 quantities, each of 20 ml, of *water R*. Dry over *anhydrous sodium sulphate R* and filter.

Test solution (d) Transfer 25 ml of the hydro-alcoholic solution obtained in the preparation of test solution (a) to a 200 ml flask that can be fitted with a reflux condenser. Add 20 ml of *hydrochloric acid R* and 10 ml of *anhydrous ethanol R*. Boil under a reflux condenser for 2 h. Allow to cool and shake with 4 quantities, each of 20 ml, of *pentane R*. Combine the organic layers and wash with 2 quantities, each of 20 ml, of *water R*. Dry over *anhydrous sodium sulphate R* and filter.

Reference solution Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in *anhydrous ethanol R* and dilute to 10 ml with the same solvent.

Column:

- *material*: fused silica;
- *size:* l = 25 m, Ø = 0.25 mm;
- *stationary phase*: *poly(dimethyl)siloxane R* or another suitable polar phase.

Carrier gas *nitrogen for chromatography R*.

Flow rate 1 ml/min.

Split ratio 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 20	150 → 250
Injection port		250
Detector		250

Detection Flame ionisation.

Elution order Cetyl alcohol, heptadecanol (internal standard) and stearyl alcohol.

Inject 1 µl of test solution (a) and test solution (b). If the chromatogram obtained with test solution (b) shows a peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a), calculate the ratio *r* using the following expression:

$$\frac{S_{ci}}{S_i}$$

S_{ci} = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (b),

S_i = area of the peak with the same retention time as the peak due to the internal standard in the chromatogram obtained with test solution (a).

If *r* is less than 300, calculate the corrected area $S_{Ha(corr)}$ of the peak due to the internal standard in the chromatogram obtained with test solution (a) using the following expression:

$$S'_{Ha} - \frac{S_i \times S_c}{S_{ci}}$$

S'_{Ha} = area of the peak due to the internal standard in the chromatogram obtained with test solution (a),

S_c = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (a).

Inject 1 µl of test solution (c) and test solution (d). Carry out the correction for interference in the same manner as for test solution (a) and calculate the corrected area $S_{Hc(corr)}$ of the peak due to the internal standard in the chromatogram obtained with test solution (c).

Inject equal volumes of the reference solution, test solution (c) and test solution (d). Identify the peaks in the chromatograms obtained with the test solutions by comparison of their retention times with those of the peaks in the chromatogram obtained with the reference solution. Determine the area of each peak.

Calculate the percentage content of sodium cetyl sulphate in the substance to be examined, using the following expression:

$$\frac{(A \times 1.421) \times m'_H \times 100}{S_{Hc(corr)} \times m'}$$

A = area of the peak due to cetyl alcohol in the chromatogram obtained with test solution (c),

m'_H = mass of the internal standard added in the preparation of test solution (c), in milligrams,

$S_{Hc(corr)}$ = corrected area of the peak due to the internal standard in the chromatogram obtained with test solution (c),

m' = mass of the substance to be examined in test solution (c), in milligrams.

Calculate the percentage content of sodium stearyl sulphate in the substance to be examined, using the following expression:

$$\frac{(B \times 1.377) \times m'_H \times 100}{S_{Hc(corr)} \times m'}$$

B = area of the peak due to stearyl alcohol in the chromatogram obtained with test solution (c).

The percentage content of sodium cetostearyl sulphate corresponds to the sum of the percentage content of sodium cetyl sulphate and the percentage content of sodium stearyl sulphate.

LABELLING

The label states, where appropriate, the name and concentration of any added buffer.

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals or white or almost white pearls.

Solubility

Freely soluble in water, practically insoluble in anhydrous ethanol.

IDENTIFICATION

A. It gives the reactions of chlorides *(2.3.1)*.

B. It gives the reactions of sodium *(2.3.1)*.

TESTS

If the substance is in the form of pearls crush before use.

Solution S

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 20 ml of solution S add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Bromides

Maximum 100 ppm.

To 0.5 ml of solution S add 4.0 ml of *water R*, 2.0 ml of *phenol red solution R2* and 1.0 ml of a 0.1 g/l solution of *chloramine R* and mix immediately. After exactly 2 min, add 0.15 ml of 0*.1 M sodium thiosulphate*, mix and dilute to 10.0 ml with *water R*. The absorbance *(2.2.25)* of the solution measured at 590 nm, using *water R* as the compensation liquid, is not greater than that of a standard prepared at the same time and in the same manner, using 5.0 ml of a 3.0 mg/l solution of *potassium bromide R*.

Ferrocyanides

Dissolve 2.0 g in 6 ml of *water R*. Add 0.5 ml of a mixture of 5 ml of a 10 g/l solution of *ferric ammonium sulphate R* in a 2.5 g/l solution of *sulphuric acid R* and 95 ml of a 10 g/l solution of *ferrous sulphate R*. No blue colour develops within 10 min.

Iodides

Moisten 5 g by the dropwise addition of a freshly prepared mixture of 0.15 ml of *sodium nitrite solution R*, 2 ml of *0.5 M sulphuric acid*, 25 ml of *iodide-free starch solution R* and 25 ml of *water R*. After 5 min, examine in daylight. The mixture shows no blue colour.

Nitrites

To 10 ml of solution S add 10 ml of *water R*. The absorbance *(2.2.25)* is not greater than 0.01 at 354 nm.

Phosphates *(2.4.11)*

Maximum 25 ppm.

Dilute 2 ml of solution S to 100 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 200 ppm.

Dilute 7.5 ml of solution S to 30 ml with *distilled water R*.

Aluminium ***(2.4.17)***

Maximum 0.2 ppm, if intended for use in the manufacture of peritoneal dialysis solutions, haemodialysis solutions or haemofiltration solutions.

Prescribed solution Dissolve 20.0 g in 100 ml of *water R* and add 10 ml of *acetate buffer solution pH 6.0 R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *water R*.

Arsenic ***(2.4.2, Method A)***

Maximum 1 ppm, determined on 5 ml of solution S.

Barium

To 5 ml of solution S add 5 ml of *distilled water R* and 2 ml of *dilute sulphuric acid R*. After 2 h, any opalescence in the solution is not more intense than that in a mixture of 5 ml of solution S and 7 ml of *distilled water R*.

Iron ***(2.4.9)***

Maximum 2 ppm, determined on solution S.

Prepare the standard using a mixture of 4 ml of *iron standard solution (1 ppm Fe) R* and 6 ml of *water R*.

Magnesium and alkaline-earth metals ***(2.4.7)***

Maximum 100 ppm, calculated as Ca and determined on 10.0 g.

Use 150 mg of *mordant black 11 triturate R*. The volume of *0.01 M sodium edetate* used is not more than 2.5 ml.

Potassium: maximum 5.00×10^2 ppm, if intended for use in the manufacture of parenteral dosage forms or haemodialysis, haemofiltration or peritoneal dialysis solutions.

Atomic emission spectrometry *(2.2.22, Method I)*.

Test solution Dissolve 1.00 g in *water R* and dilute to 100.0 ml with the same solvent.

Reference solutions Dissolve 1.144 g of *potassium chloride R*, previously dried at 100-105 °C for 3 h, in *water R* and dilute to 1000.0 ml with the same solvent (600 µg of K per millilitre). Dilute as required.

Wavelength 766.5 nm.

Heavy metals ***(2.4.8)***

Maximum 5 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Bacterial endotoxins *(2.6.14)*

Less than 5 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Dissolve 50.0 mg in *water R* and dilute to 50 ml with the same solvent. Titrate with *0.1 M silver nitrate* determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

LABELLING

The label states:

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms;

— where applicable, that the substance is suitable for use in the manufacture of peritoneal dialysis solutions, haemodialysis solutions or haemofiltration solutions.

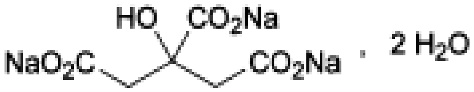
Sodium Citrate

General Notices

Trisodium Citrate

(Ph Eur monograph 0412)



$C_6H_5Na_3O_7,2H_2O$ 294.1 *6132-04-3*

Action and use

Systemic alkalinising substance.

Preparations

Compound Glucose, Sodium Chloride and Sodium Citrate Oral Solution

Sodium Citrate Eye Drops

Sodium Citrate Irrigation Solution

Ph Eur

DEFINITION

Trisodium 2-hydroxypropane-1,2,3-tricarboxylate dihydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or white or almost white, granular crystals, slightly deliquescent in moist air.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. To 1 ml of solution S (see Tests) add 4 ml of *water R*. The solution gives the reaction of citrates *(2.3.1)*.

B. 1 ml of solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R*. Not more than 0.2 ml of *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Readily carbonisable substances

To 0.20 g of the powdered substance to be examined add 10 ml of *sulphuric acid R* and heat in a water-bath at 90 ± 1 °C for 60 min. Cool rapidly. The solution is not more intensely coloured than reference solution Y_2 or GY_2 *(2.2.2, Method II)*.

Chlorides *(2.4.4)*

Maximum 50 ppm.

Dilute 10 ml of solution S to 15 ml with *water R.*

Oxalates

Maximum 300 ppm.

Dissolve 0.50 g in 4 ml of *water R*, add 3 ml of *hydrochloric acid R* and 1 g of *zinc R* in granules and heat on a water-bath for 1 min. Allow to stand for 2 min, decant the liquid into a test-tube containing 0.25 ml of a 10 g/l solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 ml of *potassium ferricyanide solution R*. Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 4 ml of a 50 mg/l solution of *oxalic acid R*.

Sulphates *(2.4.13)*

Maximum 150 ppm.

To 10 ml of solution S add 2 ml of *hydrochloric acid R1* and dilute to 15 ml with *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Water *(2.5.12)*

11.0 per cent to 13.0 per cent, determined on 0.300 g. After adding the substance to be examined, stir for 15 min before titrating.

Pyrogens ***(2.6.8)***

If intended for use in the manufacture of large-volume parenteral dosage forms, the competent authority may require that it comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 ml of a freshly prepared solution in *water for injections R* containing per millilitre 10.0 mg of the substance to be examined and 7.5 mg of pyrogen-free *calcium chloride R*.

ASSAY

Dissolve 0.150 g in 20 ml of *anhydrous acetic acid R*, heating to about 50 °C. Allow to cool. Titrate with *0.1 M perchloric acid*, using 0.25 ml of *naphtholbenzein solution R* as indicator until a green colour is obtained.

1 ml of *0.1 M perchloric acid* is equivalent to 8.602 mg of $C_6H_5Na_3O_7$.

STORAGE

In an airtight container .

Ph Eur

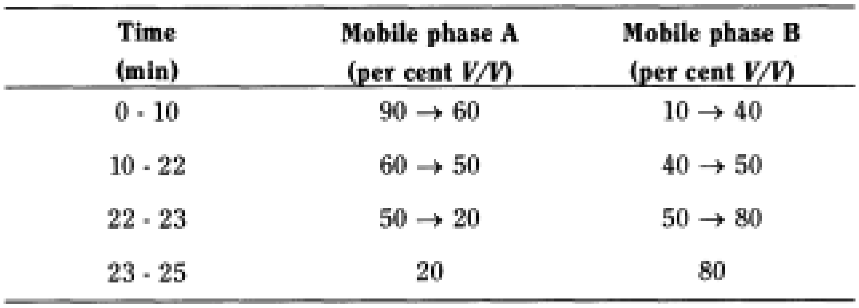
Column:

- *size: l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *anion exchange resin R*;
- *particle size*: 9 µm.

Mobile phase:

- *mobile phase A*: 0.21 g/l solution of *sodium hydroxide R* in *carbon dioxide-free water R*; close immediately, mix and use under helium pressure;
- *mobile phase B*: 4.2 g/l solution of *sodium hydroxide R* in *carbon dioxide-free water R*; close immediately, mix and use under helium pressure;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	90 → 60	10 → 40
10 - 22	60 → 50	40 → 50
22 - 23	50 → 20	50 → 80
23 - 25	20	80

Flow rate 1 ml/min.

Detection Conductivity detector. Use a self-regenerating anion suppressor.

Injection 20 µl.

Identification of impurities Use the chromatogram obtained with reference solution (c) to identify the peak due to impurity B.

Relative retention With reference to clodronate (retention time = about 13 min): impurities A and B = about 0.7; impurity D = about 1.1.

System suitability Reference solution (b):

— *peak-to-valley ratio*: minimum 3, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to clodronate.

Limits:

— *sum of impurities A and B*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit*: 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

0.5 g complies with test G. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Water *(2.5.12)*

18.5 per cent to 21.0 per cent, determined on 0.100 g.

ASSAY

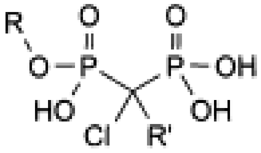
Dissolve 0.140 g in 10 ml of *water R*. Add 10 ml of *concentrated sodium hydroxide solution R* and some glass beads. Boil until the solution is completely decolourised (about 10 min). Cool in an ice-bath and add 30 ml of *water R* and 10 ml of *nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M silver nitrate* is equivalent to 14.44 mg of $CH_2Cl_2Na_2O_6P_2$.

IMPURITIES

Specified impurities *A, B.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *D*.



A. R = $CH(CH_3)_2$, R' = Cl: [dichloro[hydroxy(1-methylethoxy)phosphinoyl]methyl]phosphonic acid,

D. R = R' = H: (chloromethylene)bis(phosphonic acid),

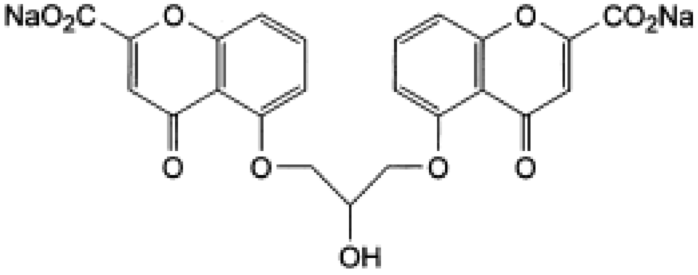
B. phosphoric acid.

Ph Eur

Sodium Cromoglicate

General Notices

(Ph Eur monograph 0562)



$C_{23}H_{14}Na_2O_{11}$ 512.3 *15826-37-6*

Action and use

Prophylaxis of allergic conditions.

Preparations

Sodium Cromoglicate Eye Drops

Sodium Cromoglicate Powder for Inhalation

Ph Eur

DEFINITION

Sodium cromoglicate contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of disodium 5,5′-[(2-hydroxypropane-1,3-diyl)bis(oxy)]bis(4-oxo-4*H*-1-benzopyran-2-carboxylate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, hygroscopic, soluble in water, practically insoluble in alcohol.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Dissolve 10.0 mg in *phosphate buffer solution pH 7.4 R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with the same solvent. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows two absorption maxima, at 239 nm and 327 nm. The ratio of the absorbance at the maximum at 327 nm to that at the maximum at 239 nm is 0.25 to 0.30.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sodium cromoglicate CRS*. Examine the substances prepared as discs.

C. Dissolve about 5 mg in 0.5 ml of *methanol R*. Add 3 ml of a solution in *methanol R* containing 5 g/l of *aminopyrazolone R* and 1 per cent *V/V* of *hydrochloric acid R*. Allow to stand for 5 min. The solution shows an intense yellow colour.

D. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *phenolphthalein solution R*. The solution is colourless. Add 0.2 ml of *0.01 M sodium hydroxide*. The solution is pink. Add 0.4 ml of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.25 ml of *methyl red solution R*. The solution is red.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 1 volume of *acetone R*, 4 volumes of *tetrahydrofuran R* and 6 volumes of *water R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 10 mg of *1,3-bis(2-acetyl-3-hydroxyphenoxy)-2-propanol CRS* in *chloroform R* and dilute to 100 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 5 volumes of *glacial acetic acid R*, 50 volumes of *ethyl acetate R* and 50 volumes of *toluene R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot (which remains at the starting point), is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

OXALATE

Dissolve 0.10 g in 20 ml of *water R*, add 5.0 ml of *iron salicylate solution R* and dilute to 50.0 ml with *water R*. Determine the absorbance (*2.2.25*) at 480 nm. The absorbance is not less than that of a standard prepared in the same manner using 0.35 mg of *oxalic acid R* instead of the substance to be examined.

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of

lead standard solution (10 ppm Pb) R.

Loss on drying *(2.2.32)*

Not more than 10.0 per cent, determined on 1.000 g by drying over *diphosphorus pentoxide R* at 105 °C and at a pressure of 300 Pa to 600 Pa.

ASSAY

Dissolve 0.200 g with heating in a mixture of 5 ml of *2-propanol R* and 25 ml of *ethylene glycol R*. Cool and add 30 ml of *dioxan R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 25.62 mg of $C_{23}H_{14}Na_2O_{11}$.

STORAGE

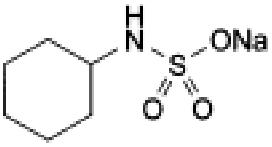
Store in an airtight container, protected from light.

Ph Eur

Sodium Cyclamate

General Notices

(Ph Eur monograph 0774)



$C_6H_{12}NNaO_3S$ 201.2 *139-05-9*

Action and use

Sweetening agent.

Ph Eur

DEFINITION

Sodium *N*-cyclohexylsulphamate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *A*, E.

Second identification *B*, C, D, E.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Sodium cyclamate CRS*.

B. Examine the chromatograms obtained in the test for impurity A.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in

position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 1 ml of solution S (see Tests), add 1 ml of *water R* and 2 ml of *silver nitrate solution R1*, then shake. A white, crystalline precipitate is formed.

D. To 1 ml of solution S add 5 ml of *water R*, 2 ml of *dilute hydrochloric acid R* and 4 ml of *barium chloride solution R1* and mix. The solution is clear. Add 2 ml of *sodium nitrite solution R*. A voluminous white precipitate is formed and gas is given off.

E. A mixture of 1 ml of solution S and 1 ml of *water R* gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.5 to 7.5 for solution S.

Absorbance *(2.2.25)*

Maximum 0.10, determined at 270 nm on solution S.

Impurity A

Thin-layer chromatography *(2.2.27)*.

Test solution (a) Solution S.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *water R*.

Reference solution (a) Dissolve 0.10 g of *sodium cyclamate CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *sulphamic acid R* (impurity A) in *water R* and dilute to 100 ml with the same solvent.

Plate *TLC silica gel G plate R*.

Mobile phase *Concentrated ammonia R*, *water R*, *ethyl acetate R*, *propanol R* (10:10:20:70 *V/V/V/V*).

Application 2 µl.

Development Over a path of 12 cm.

Drying In a current of warm air, then heat at 105 C for 5 min.

Detection Spray the hot plate with *strong sodium hypochlorite solution R* diluted to a concentration of 5 g/l of active chlorine. Place in a current of cold air until an area of coating below the points of application gives at most a faint blue colour with a drop of *potassium iodide and starch solution R*; avoid prolonged exposure to cold air. Spray with *potassium iodide and starch solution R* and examine the chromatograms within 5 min.

Limit Test solution (a):

— *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.1 per cent).

Impurities B, C and D

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 2 µl of *tetradecane R* in *methylene chloride R* and dilute to 100 ml with the same solvent.

Test solution Dissolve 2.00 g of the substance to be examined in 20 ml of *water R*, add 0.5 ml of *strong sodium hydroxide solution R* and shake with 30 ml of *toluene R*. Shake 20 ml of the upper layer with 4 ml of a mixture of equal volumes of *dilute acetic acid R* and *water R*. Separate the lower layer, add 0.5 ml of *strong sodium hydroxide solution R* and 0.5 ml of the internal standard solution and shake. Use the lower layer immediately after separation.

Reference solution Dissolve 10.0 mg (about 12 µl) of *cyclohexylamine R* (impurity C), 1.0 mg (about 1.1 µl) of *dicyclohexylamine R* (impurity D) and 1.0 mg (about 1 µl) of *aniline R* (impurity B) in *water R*, then dilute to 1000 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R* (solution A). To 20.0 ml of solution A, add 0.5 ml of *strong sodium hydroxide solution R* and extract with 30 ml of *toluene R*. Shake 20 ml of the upper layer with 4 ml of a mixture of equal volumes of *dilute acetic acid R* and *water R*. Separate the lower layer, add 0.5 ml of *strong sodium hydroxide solution R* and 0.5 ml of the internal standard solution and shake. Use the lower layer immediately after separation.

Column:
- *material*: fused silica;
- *size*: *l* = 25 m, Ø = 0.32 mm;
- *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.51 µm).

Carrier gas *helium for chromatography R*.

Flow rate 1.8 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	85
	1 - 9	85 → 150
	9 - 13	150
Injection port		250
Detector		270

Detection Flame ionisation.

Injection 1.5 µl; use a split vent at a flow rate of 20 ml/min.

Relative retention With reference to impurity C (retention time = about 2.3 min): impurity B =

about 1.4; tetradecane = about 4.3; impurity D = about 4.5.

Limits:

- — *impurity C*: maximum 10 ppm;
- — *impurities B, D*: for each impurity, maximum 1 ppm.

Sulphates ***(2.4.13)***

Maximum 0.1 per cent.

Dilute 1.5 ml of solution S to 15 ml with *distilled water R*.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

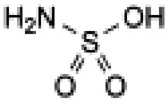
ASSAY

Dissolve without heating 0.150 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

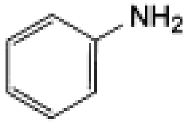
1 ml of *0.1 M perchloric acid* is equivalent to 20.12 mg of $C_6H_{12}NNaO_3S$.

IMPURITIES

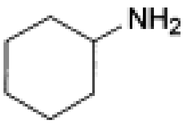
Specified impurities *A, B, C, D*.



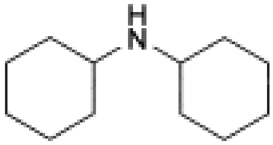
A. sulphamic acid,



B. aniline (phenylamine),



C. cyclohexanamine,



D. *N*-cyclohexylcyclohexanamine.

Ph Eur

Sodium Dihydrogen Phosphate Dihydrate

General Notices

Sodium Acid Phosphate

(Ph Eur monograph 0194)

$NaH_2PO_4,2H_2O$ 156.0 *13472-35-0*

Preparation

Phosphates Enema

Ph Eur

DEFINITION

Content

98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder or colourless crystals.

Solubility

Very soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly acid *(2.2.4)*.

B. Solution S gives the reactions of phosphates *(2.3.1)*.

C. Solution S previously neutralised using a 100 g/l solution of *potassium hydroxide R* gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

4.2 to 4.5.

To 5 ml of solution S add 5 ml of *carbon dioxide-free water R*.

Reducing substances

To 5 ml of solution S add 0.25 ml of *0.02 M potassium permanganate* and 5 ml of *dilute sulphuric acid R* and heat in a water-bath for 5 min. The solution retains a slight red colour.

Chlorides ***(2.4.4)***

Maximum 200 ppm.

Dilute 2.5 ml of solution S to 15 ml with *water R*.

Sulphates ***(2.4.13)***

Maximum 300 ppm.

To 5 ml of solution S add 0.5 ml of *hydrochloric acid R* and dilute to 15 ml with *distilled water R*.

Arsenic ***(2.4.2, Method A)***

Maximum 2 ppm, determined on 0.5 g.

Iron ***(2.4.9)***

Maximum 10 ppm, determined on solution S.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

21.5 per cent to 24.0 per cent, determined on 0.50 g by drying in an oven at 130 °C.

ASSAY

Dissolve 2.500 g in 40 ml of *water R*. Titrate with carbonate-free *1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *1 M sodium hydroxide* is equivalent to 0.120 g of NaH_2PO_4.

Ph Eur

Sodium Dihydrogen Phosphate Monohydrate

General Notices

NaH_2PO_4,H_2O 138.0 *10049-21-5*

Action and use

Excipient.

Preparation

Phosphates enema

DEFINITION

Sodium Dihydrogen Phosphate Monohydrate contains not less than 98.0% and not more than 100.5% of NaH_2PO_4, calculated with reference to the dried substance.

CHARACTERISTICS

Colourless crystals or a white powder.

Very soluble in *water*; very slightly soluble in *ethanol (96%)*.

Dissolve 10.0 g in sufficient *carbon dioxide-free water* prepared from *distilled water* to produce 100 ml (solution S).

IDENTIFICATION

A. Solution S is *faintly acid ,* Appendix V K.

B. Solution S yields the reactions characteristic of *phosphates*, Appendix VI.

C. Solution S neutralised with a 10% w/v solution of *potassium hydroxide* yields reaction A characteristic of *sodium salts*, Appendix VI.

D. Complies with the test for Loss on drying.

TESTS

Acidity

pH of a mixture of 5 ml of solution S and 5 ml of *carbon dioxide-free water* , 4.2 to 4.5, Appendix V L.

Clarity and colour of solution

Solution S is *clear*, Appendix IV A, and *colourless*, Appendix IV B, Method II.

Arsenic

0.5 g complies with the *limit test for arsenic*, Appendix VII (2 ppm).

Heavy metals

12 ml of solution S complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (10 ppm).

Iron

10 ml of solution S complies with the *limit test for iron*, Appendix VII (10 ppm).

Chloride

Dilute 2.5 ml of solution S to 15 ml with *water*. The resulting solution complies with the *limit test for chlorides*, Appendix VII (200 ppm).

Sulphate

To 5 ml of solution S add 0.5 ml of *hydrochloric acid* and dilute to 15 ml with *distilled water*. The resulting solution complies with the *limit test for sulphates*, Appendix VII (300 ppm).

Reducing substances

To 5 ml of solution S add 0.25 ml of 0.02M *potassium permanganate* and 5 ml of 1M *sulphuric acid* and heat in a water bath for 5 minutes. The solution retains a slight red colour.

Loss on drying

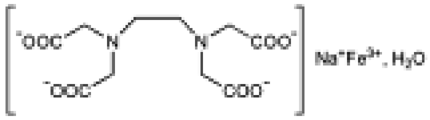
When dried to constant weight at 130°, loses 11.5 to 14.5% of its weight. Use 0.5 g.

ASSAY

Dissolve 2.2 g in 50 ml of *water* and titrate with carbonate-free 1M *sodium hydroxide VS* determining the end point potentiometrically. Each ml of 1M *sodium hydroxide VS* is equivalent to 0.120 g of NaH_2PO_4.

Sodium Feredetate

General Notices



$C_{10}H_{21}N_2O_8FeNa,H_2O$ 385.1 *15708-41-5* (anhydrous)

Action and use

Source of iron.

Preparation

Sodium Feredetate Oral Solution

DEFINITION

Sodium Feredetate is iron(III) sodium ethylenediaminetetra-acetate monohydrate. It contains not less than 98.0% and not more than 102.0% of $C_{10}H_{12}O_8N_2FeNa$, calculated with reference to the dried substance.

CHARACTERISTICS

A yellow or yellowish brown, crystalline powder; hygroscopic.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of sodium feredetate *(RS 378)*.

B. Ignite 0.5 g and allow to cool. Dissolve the residue in 2 ml of *hydrochloric acid*, add sufficient *water* to produce 20 ml and filter. The filtrate yields reaction C characteristic of *iron salts*, Appendix VI. Dilute 1 volume of the filtrate to 10 volumes with *water*; the solution yields reaction B characteristic of *iron salts*, Appendix VI.

C. Dissolve 2 g in 30 ml of *water*, slowly add 6.5 ml of a 20% w/v solution of *potassium hydroxide*, shake and filter the resulting suspension. Evaporate 8 ml of the filtrate to dryness, ignite and dissolve the residue in 4 ml of *water*. The solution yields reaction B characteristic of *sodium salts*, Appendix VI.

TESTS

Acidity

pH of a 1% w/v solution, 4.0 to 6.5, Appendix V L.

Free iron

Not more than 500 ppm when determined by the following method. Dissolve 0.2 g in sufficient *water* to produce 20 ml and filter. Label three tubes A, B and C. Place 5 ml of the filtrate into each of tubes A and B and 4 ml of *water* and 1 ml of an iron standard solution prepared in the following manner in tube C. For the iron standard solution dilute 25 volumes of a 0.1726% w/v solution of *ammonium iron(III) sulphate* in 0.05M *sulphuric acid* to 200 volumes with *water* (25 ppm of Fe(III)). Add 1 ml of a 1.0% w/v solution of *disodium catechol-3,5-disulphonate* into each of tubes A and C and 1 ml of *water* to tube B. Measure the *absorbance* of solution A at 670 nm, Appendix II B, using solution B in the reference cell and of solution C using *water* in the reference cell. The absorbance of solution A is not greater than that of solution C.

Heavy metals

1 g complies with *limit test D for heavy metals*, Appendix VII (20 ppm). Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard solution.

Free sodium edetate

To 4 ml of a 1.0% w/v solution add 2 ml of *ferric iron standard solution (50 ppm)* and 1 ml of a 1.0% w/v solution of *disodium catechol-3,5-disulphonate* and mix. Prepare a standard in the same manner using 4 ml of a 0.010% w/v solution of *disodium edetate* in place of the solution of the substance being examined. Measure the *absorbance* of the solutions at 670 nm, Appendix II B, using *water* in the reference cell. The absorbance of the solution of the substance being examined is not less than that of the standard solution (1%).

Sulphates

Dissolve 2 g in 40 ml of *water*, add 5 ml of a 20% w/v solution of *sodium hydroxide* and sufficient *water* to produce 50 ml, shake and filter. Evaporate 6.2 ml of this solution to dryness and ignite until no trace of carbon remains. Cool and dissolve the residue in 10 ml of *distilled water*. Neutralise the solution with 2M *hydrochloric acid* using *litmus paper* as external indicator and add 2 ml in excess. Boil the solution, cool, dilute to 15 ml with *distilled water* and filter. The filtrate complies with the *limit test for sulphates*, Appendix VII (600 ppm).

Loss on drying

When dried over silica gel at 120° at a pressure not exceeding 2 kPa for 5 hours, loses 4.0 to 13.5% of its weight. Use 1 g.

ASSAY

Dissolve 1 g in 40 ml of *water* in an iodine flask, add 20 ml of *hydrochloric acid* and 3 g of *potassium iodide,* close the flask and allow to stand for 5 minutes. Titrate the liberated iodine with 0.1M *sodium thiosulphate VS* using *starch mucilage* as indicator. Repeat the procedure without the substance being examined. The difference between the titrations represents the amount of sodium thiosulphate required. Each ml of 0.1M *sodium thiosulphate VS* is equivalent to 36.71 mg of $C_{10}H_{12}O_8N_2FeNa$.

STORAGE

Sodium Feredetate should be kept in an airtight container.

Sodium Fluoride

General Notices

(Ph Eur monograph 0514)

NaF 41.99 *7681-49-4*

Action and use

Used in prevention of dental caries.

Preparations

Sodium Fluoride Mouthwash

Sodium Fluoride Oral Drops

Sodium Fluoride Oral Solution

Sodium Fluoride Tablets

Ph Eur

DEFINITION

Content

98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder or colourless crystals.

Solubility

Soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. To 2 ml of solution S (see Tests) add 0.5 ml of *calcium chloride solution R*. A gelatinous white precipitate is formed that dissolves on adding 5 ml of *ferric chloride solution R1*.

B. To about 4 mg add a mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R* and mix. The colour changes from red to yellow.

C. Solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* without heating and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

Dissolve 2.5 g of *potassium nitrate R* in 40 ml of solution S and dilute to 50 ml with *carbon dioxide-free water R*. Cool to 0 °C and add 0.2 ml of *phenolphthalein solution R*. If the solution is colourless, not more than 1.0 ml of *0.1 M sodium hydroxide* is required to produce a red colour that persists for at least 15 s. If the solution is red, not more than 0.25 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Chlorides *(2.4.4)*

Maximum 200 ppm.

Dilute 10 ml of solution S to 15 ml with *water R*.

Fluorosilicates

Heat to boiling the neutralised solution obtained in the test for acidity or alkalinity and titrate whilst hot. Not more than 0.75 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator to red.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dissolve 0.25 g in 10 ml of a saturated solution of *boric acid R* in *distilled water R*. Add 5 ml of *distilled water R* and 0.6 ml of *hydrochloric acid R1*. Prepare the standard by mixing 0.6 ml of *hydrochloric acid R1*, 5 ml of *sulphate standard solution (10 ppm SO_4) R* and 10 ml of a saturated solution of *boric acid R* in *distilled water R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 130 °C for 3 h.

ASSAY

Dissolve 0.100 g in *water R* and dilute to 60 ml with the same solvent. Titrate with *0.1 M lanthanum nitrate*, determining the end-point potentiometrically *(2.2.20)* using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

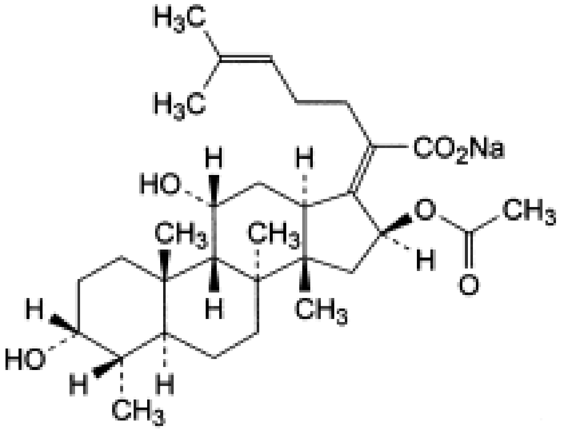
1 ml of *0.1 M lanthanum nitrate* is equivalent to 12.60 mg of NaF.

Ph Eur

Sodium Fusidate

General Notices

(Ph Eur monograph 0848)



$C_{31}H_{47}NaO_6$ 538.7 *751-94-0*

Action and use

Antibacterial.

Preparation

Sodium Fusidate Ointment

Ph Eur

DEFINITION

Sodium (*Z*)-*ent*-16α-(acetyloxy)-3β,11β-dihydroxy-4β,8,14-trimethyl-18-nor-5β,10α-cholesta-17(20),24-dien-21-oate.

Antimicrobial substance produced by the growth of certain strains of *Fusidium coccineum* or by any other means.

Content

97.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, slightly hygroscopic.

Solubility

Freely soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dissolve 0.1 g in 5 ml of *water R*, add 5 ml of *chloroform R* and 0.1 ml of *dilute phosphoric acid R*. Shake vigorously for 1 min, allow to separate and filter the lower layer through absorbent cotton covered with *anhydrous sodium sulphate R*. Repeat the extraction with 2 quantities, each of 5 ml, of *chloroform R* and evaporate the combined extracts to dryness under reduced pressure. Dry the residue over *diphosphorus pentoxide R* under reduced pressure for 2 h, dissolve in 1 ml of *chloroform R*.

Comparison *Ph. Eur. reference spectrum of fusidic acid*.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 24 mg of *diethanolamine fusidate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel F_{254} plate R.*

Mobile phase *Methanol R*, *cyclohexane R*, *glacial acetic acid R*, *chloroform R* (2.5:10:10:80 *V/V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. Ignite 1 g. The residue gives reaction (a) of sodium *(2.3.1)*.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution B_6 *(2.2.2, Method II)*.

Dissolve 1.5 g in 10 ml of *water R*.

pH (2.2.3)

7.5 to 9.0.

Dissolve 0.125 g in 10 ml of *carbon dioxide-free water R*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *3-ketofusidic acid CRS* in 5 ml of the mobile phase. To 1.0 ml of this solution add 0.20 ml of the test solution and dilute to 20.0 ml with the mobile phase.

Reference solution (b) Dilute 20 µl of the test solution to 100.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.125-0.15 m, Ø = 4-5 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *Methanol R*, 10 g/l solution of *phosphoric acid R*, *water R*, *acetonitrile R* (10:20:20:50 *V/V/V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 235 nm.

Injection 20 µl.

Run time 3.5 times the retention time of sodium fusidate.

System suitability:

— *resolution:* minimum 2.5 between the peaks due to 3-ketofusidic acid and sodium fusidate in the chromatogram obtained with reference solution (a);

— *signal-to-noise* ratio: minimum 3 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *total*: not more than twice the area of the peak due to sodium fusidate in the chromatogram obtained with reference solution (a) (2.0 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Water *(2.5.12)*

Maximum 2.0 per cent, determined on 0.50 g.

ASSAY

Dissolve 0.500 g in 30 ml of *water R* and add 40 ml of *ethanol (96 per cent) R*. Titrate with *0.1 M hydrochloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M hydrochloric acid* is equivalent to 53.87 mg of $C_{31}H_{47}NaO_6$.

STORAGE

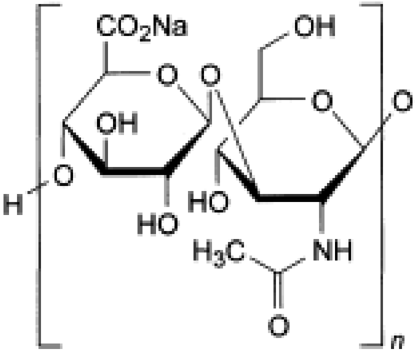
In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

Ph Eur

Sodium Hyaluronate

General Notices

(Ph Eur monograph 1472)



$(C_{14}H_{20}NNaO_{11})_n$ *9067-32-7*

Action and use

High viscosity mucopolysaccharide.

Ph Eur

DEFINITION

Sodium salt of hyaluronic acid, a glycosaminoglycan consisting of D-glucuronic acid and *N*-acetyl-D-glucosamine disaccharide units.

Content

95.0 per cent to 105.0 per cent (dried substance).

Intrinsic viscosity

90 per cent to 120 per cent of the value stated on the label.

PRODUCTION

It is extracted from cocks' combs or obtained by fermentation from *Streptococci*, Lancefield Groups A and C. When produced by fermentation of gram-positive bacteria, the process must be shown to reduce or eliminate pyrogenic or inflammatory components of the cell wall.

CHARACTERS

Appearance

White or almost white, very hygroscopic powder or fibrous aggregate.

Solubility

Sparingly soluble or soluble in water, practically insoluble in acetone and in anhydrous ethanol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison Ph. Eur. reference spectrum of sodium hyaluronate.

B. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Weigh a quantity of the substance to be examined equivalent to 0.10 g of the dried substance and add 30.0 ml of a 9 g/l solution of *sodium chloride R*. Mix gently on a shaker until dissolved (about 12 h).

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 600 nm is not greater than 0.01.

pH *(2.2.3)*

5.0 to 8.5.

Dissolve the substance to be examined in *carbon dioxide-free water R* to obtain a solution containing a quantity equivalent to 5 mg of the dried substance per millilitre.

Intrinsic viscosity

Sodium hyaluronate is very hygroscopic and must be protected from moisture during weighing.

Buffer solution (*0.15 M sodium chloride in 0.01 M phosphate buffer solution pH 7.0*). Dissolve 0.78 g of *sodium dihydrogen phosphate R* and 4.50 g of *sodium chloride R* in *water R* and dilute to 500.0 ml with the same solvent (solution A). Dissolve 1.79 g of *disodium hydrogen phosphate R* and 4.50 g of *sodium chloride R* in *water R* and dilute to 500.0 ml with the same solvent (solution B). Mix solutions A and B until a pH of 7.0 is reached. Filter through a sintered-glass filter (4) *(2.1.2)*.

Test solution (a) Weigh 0.200 g (m_{0p}) (*NOTE: this value is only indicative and should be adjusted after an initial measurement of the viscosity of test solution (a))* of the substance to be examined and dilute with 50.0 g (m_{0s}) of buffer solution at 4 °C. Mix the solution by shaking at 4 °C during 24 h. Weigh 5.00 g (m_{1p}) of the solution and dilute with 100.0 g (m_{1s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) *(2.1.2)*, and discard the first 10 ml.

Test solution (b) Weigh 30.0 g (m_{2p}) of test solution (a) and dilute with 10.0 g (m_{2s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) *(2.1.2)* and discard the first 10 ml.

Test solution (c) Weigh 20.0 g (m_{3p}) of test solution (a) and dilute with 20.0 g (m_{3s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) *(2.1.2)* and discard the first 10 ml.

Test solution (d) Weigh 10.0 g (m_{4p}) of test solution (a) and dilute with 30.0 g (m_{4s}) of buffer solution at 25 °C. Mix this solution by shaking for 20 min. Filter the solution through a sintered-glass filter (100) *(2.1.2)* and discard the first 10 ml.

Determine the flow-times *(2.2.9)* for the buffer solution (t_0) and for the 4 test solutions (t_1, t_2, t_3 and t_4), at 25.00 ± 0.03 °C. Use an appropriate suspended level viscometer (specifications: viscometer constant about 0.005 mm^2/s^2, kinematic viscosity of 1-5 mm^2/s, internal diameter of tube *R* 0.53 mm, volume of bulb *C* 5.6 ml, internal diameter of tube *N* 2.8-3.2 mm) with a funnel-shaped lower capillary end. Use the same viscometer for all measurements; measure all outflow times in triplicate. The test is not valid unless the results do not differ by more than 0.35 per cent from the mean and if the flow time t_1 is not less than 1.6 and not more than 1.8 times t_0. If this is not the case, adjust the value of m_{0p} and repeat the procedure.

Calculation of the relative viscosities Since the densities of the sodium hyaluronate solutions and of the solvent are almost equal, the relative viscosities η_{ri} (being η_{r1}, η_{r2}, η_{r3} and η_{r4}) can be calculated from the ratio of the flow times for the respective solutions t_i (being t_1, t_2, t_3 and t_4) to the flow time of the solvent t_0, but taking into account the kinetic energy correction factor for the capillary (B = 30 800 s^3), using the following expression:

$$\frac{t_i - \frac{B}{t_i^2}}{t_0 - \frac{B}{t_0^2}}$$

Calculation of the concentrations Calculate the concentration c_1 (expressed in kg/m^3) of sodium hyaluronate in test solution (a) using the following expression:

$$\frac{m_{0p} \times x \times (100 - h) \times m_{1p} \times \rho_{25}}{100 \times 100 \times (m_{0p} + m_{0s}) \times (m_{1p} + m_{1s})}$$

x = percentage content of sodium hyaluronate as determined under Assay;

h = percentage loss on drying;

ρ_{25} = 1005 kg/m^3 (density of the test solution at 25 °C).

Calculate the concentration c_2 (expressed in kg/m^3) of sodium hyaluronate in test solution (b) using the following expression:

$$c_1 \times \frac{m_{2p}}{m_{2s} + m_{2p}}$$

Calculate the concentration c_3 (expressed in kg/m^3) of sodium hyaluronate in test solution (c) using the following expression:

$$c_1 \times \frac{m_{3p}}{m_{3s} + m_{3p}}$$

Calculate the concentration c_4 (expressed in kg/m^3) of sodium hyaluronate in test solution (d) using the following expression:

$$c_1 \times \frac{m_{4p}}{m_{4s} + m_{4p}}$$

Calculation of the intrinsic viscosity Calculate the intrinsic viscosity [η] by linear least-squares regression analysis using the Martin equation:

$$\log\left(\frac{\eta_r - 1}{c}\right) = \log[\eta] + k[\eta]c$$

The decimal antilogarithm of the intercept is the intrinsic viscosity expressed in m^3/kg.

Sulphated glycosaminoglycans

Maximum 1 per cent, if the product is extracted from cocks' combs.

Appropriate safety precautions are to be taken when handling perchloric acid at elevated temperature.

Test solution Introduce a quantity of the substance to be examined equivalent to 50.0 mg of the dried substance into a test-tube 150 mm long and 16 mm in internal diameter and dissolve in 1.0 ml of *perchloric acid R*.

Reference solution Dissolve 0.149 g of *anhydrous sodium sulphate R* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of this solution to 100.0 ml with *water R*. Evaporate 1.0 ml in a test-tube 150 mm long and 16 mm in internal diameter in a heating block at 90-95 °C, and dissolve the residue in 1.0 ml of *perchloric acid R*.

Plug each test-tube with a piece of glass wool. Place the test-tubes in a heating block or a silicone oil bath maintained at 180 °C and heat until clear, colourless solutions are obtained (about 12 h). Remove the test-tubes and cool to room temperature. Add to each test-tube 3.0 ml of a 33.3 g/l solution of *barium chloride R*, cap and shake vigorously. Allow the test-tubes to stand for 30 min. Shake each test-tube once again, and determine the absorbance *(2.2.25)* at 660 nm, using *water R* as a blank.

The absorbance obtained with the test solution is not greater than the absorbance obtained with the reference solution.

Nucleic acids

The absorbance *(2.2.25)* of solution S at 260 nm is maximum 0.5.

Protein

Maximum 0.3 per cent; maximum 0.1 per cent, if intended for use in the manufacture of parenteral preparations.

Test solution (a) Dissolve the substance to be examined in *water R* to obtain a solution containing a quantity equivalent to about 10 mg of the dried substance per millilitre.

Test solution (b) Mix equal volumes of test solution (a) and *water R*.

Reference solutions Prepare a 0.5 mg/ml stock solution of *bovine albumin R* in *water R*. Prepare 5 dilutions of the stock solution containing between 5 µg/ml and 50 µg/ml of *bovine albumin R*.

Add 2.5 ml of freshly prepared *cupri-tartaric solution R3* to test-tubes containing 2.5 ml of *water R* (blank), 2.5 ml of the test solutions (a) or (b) or 2.5 ml of the reference solutions. Mix after each addition. After about 10 min, add to each test-tube 0.50 ml of a mixture of equal volumes of *phosphomolybdotungstic reagent R* and *water R* prepared immediately before use. Mix after each addition. After 30 min, measure the absorbance *(2.2.25)* of each solution at 750 nm against the blank. From the calibration curve obtained with the 5 reference solutions determine the content of protein in the test solutions.

Chlorides *(2.4.4)*

Maximum 0.5 per cent.

Dissolve 67 mg in 100 ml of *water R*.

Iron

Maximum 80.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve a quantity of the substance to be examined equivalent to 0.25 g of the dried substance in 1 ml of *nitric acid R* by heating on a water-bath. Cool and dilute to 10.0 ml with *water R*.

Reference solutions Prepare 2 reference solutions in the same manner as the test solution, adding 1.0 ml and 2.0 ml respectively of *iron standard solution (10 ppm Fe) R* to the dissolved substance to be examined.

Source Iron hollow-cathode lamp using a transmission band of 0.2 nm.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Heavy metals *(2.4.8)*

Maximum 20 ppm; maximum 10 ppm if intended for use in the manufacture of parenteral preparations.

1.0 g complies with test F. Prepare the reference solution using 2.0 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 20.0 per cent, determined on 0.500 g by drying at 100-110 °C over *diphosphorus pentoxide R* for 6 h.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^2 micro-organisms per gram. Use 1 g of the substance to be examined.

Bacterial endotoxins ***(2.6.14)***

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins; less than 0.05 IU/mg, if intended for use in the manufacture of intra-ocular preparations or intra-articular preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Determine the glucuronic acid content by reaction with carbazole as described below.

Reagent A Dissolve 0.95 g of *disodium tetraborate R* in 100.0 ml of *sulphuric acid R*.

Reagent B Dissolve 0.125 g of *carbazole R* in 100.0 ml of *anhydrous ethanol R*.

Test solution Prepare this solution in triplicate. Dissolve 0.170 g of the substance to be examined in *water R* and dilute to 100.0 g with the same solvent. Dilute 10.0 g of this solution to 200.0 g with *water R*.

Reference stock solution Dissolve 0.100 g of *D-glucuronic acid R*, previously dried to constant mass in vacuum over *diphosphorus pentoxide R (2.2.32)*, in *water R* and dilute to 100.0 g with the same solvent.

Reference solutions Prepare 5 dilutions of the reference stock solution containing between 6.5 µg/g and 65 µg/g of *D-glucuronic acid R*.

Place 25 test-tubes, numbered 1 to 25, in iced water. Add 1.0 ml of the 5 reference solutions in triplicate to the test-tubes 1 to 15 (reference tubes), 1.0 ml of the 3 test solutions in triplicate to the test-tubes 16 to 24 (sample tubes), and 1.0 ml of *water R* to test-tube 25 (blank). Add to each test-tube 5.0 ml of freshly prepared reagent A, previously cooled in iced water. Tightly close the test-tubes with plastic caps, shake the contents, and place on a water bath for exactly 15 min. Cool in iced water, and add to each test tube 0.20 ml of reagent B. Recap the tubes, shake, and put them again on a water-bath for exactly 15 min. Cool to room temperature and measure the absorbance *(2.2.25)* of the solutions at 530 nm, against the blank.

From the calibration curve obtained with the mean absorbances read for each reference solution, determine the mean concentrations of D-glucuronic acid in the test solutions.

Calculate the percentage content of sodium hyaluronate using the following expression:

$$\frac{c_g}{c_s} \times Z \times \frac{100}{100 - h} \times \frac{401.3}{194.1}$$

c_g = mean of concentrations of D-glucuronic acid in the test solutions, in milligrams per gram;

c_s = mean of concentrations of the substance to be examined in the test solutions, in milligrams per gram;

Z = determined percentage content of $C_6H_{10}O_7$ in *D-glucuronic acid R*;

h = percentage loss on drying;

401.3 = relative molecular mass of the disaccharide fragment;

194.1 = relative molecular mass of glucuronic acid.

STORAGE

In an airtight container, protected from light and humidity. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

- the intrinsic viscosity;
- the origin of the substance;
- the intended use of the substance;
- where applicable, that the substance is suitable for parenteral administration other than intra-articular administration;
- where applicable, that the substance is suitable for parenteral administration, including intra-articular administration;
- where applicable that the material is suitable for intra-ocular use.

Ph Eur

Sodium Hydroxide

General Notices

Caustic Soda

(Ph Eur monograph 0677)

NaOH 40.00 *1310-73-2*

Ph Eur

DEFINITION

Content

97.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline masses, supplied as pellets, sticks or slabs, deliquescent, readily absorbing carbon dioxide.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. pH *(2.2.3)*: minimum 11.0.

Dissolve 0.1 g in 10 ml of *water R*. Dilute 1 ml of the solution to 100 ml with *water R*.

B. 2 ml of solution S (see Tests) gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Carry out the procedure described below with caution. Dissolve 5.0 g in 12 ml of *distilled water R*. Add 17 ml of *hydrochloric acid R1*, adjust to pH 7 with *1 M hydrochloric acid* and dilute to 50 ml with *distilled water R*.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1.0 g in 10 ml of *water R*.

Carbonates

Maximum 2.0 per cent, calculated as Na_2CO_3 as determined in the assay.

Chlorides *(2.4.4)*

Maximum 50 ppm.

Dissolve 1.0 g in 5 ml of *water R*, acidify the solution with about 4 ml of *nitric acid R* and dilute to 15 ml with *water R*. The solution, without addition of *dilute nitric acid R*, complies with the test.

Sulphates *(2.4.13)*

Maximum 50 ppm.

Dissolve 3.0 g in 6 ml of distilled *water R*, adjust to pH 7 with *hydrochloric acid R* (about 7.5 ml) and dilute to 15 ml with *distilled water R*.

Iron *(2.4.9)*

Maximum 10 ppm, determined on solution S.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

ASSAY

Dissolve 2.000 g in about 80 ml of *carbon dioxide-free water R*. Add 0.3 ml of *phenolphthalein solution R* and titrate with *1 M hydrochloric acid*. Add 0.3 ml of *methyl orange solution R* and continue the titration with *1 M hydrochloric acid*.

1 ml of *1 M hydrochloric acid* used in the 2nd part of the titration is equivalent to 0.1060 g of Na_2CO_3.

1 ml of *1 M hydrochloric acid* used in the combined titrations is equivalent to 40.00 mg of total alkali, calculated as NaOH.

STORAGE

In an airtight, non-metallic container.

Ph Eur

Sodium Iodide

General Notices

(Ph Eur monograph 0196)

NaI 149.9 *7681-82-5*

Preparation

Sodium Iodide Injection

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, hygroscopic.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of iodides *(2.3.1).*

B. Solution S gives the reactions of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Alkalinity

To 12.5 ml of solution S add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.7 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator.

Iodates

To 10 ml of solution S add 0.25 ml of *iodide-free starch solution R* and 0.2 ml of *dilute sulphuric acid R* and allow to stand protected from light for 2 min. No blue colour develops.

Sulphates *(2.4.13)*

Maximum 150 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R*.

Thiosulphates

To 10 ml of solution S add 0.1 ml of *starch solution R* and 0.1 ml of *0.005 M iodine*. A blue colour is produced.

Iron *(2.4.9)*

Maximum 20 ppm.

Dilute 5 ml of solution S to 10 ml with *water R*.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 3.0 per cent, determined on 1.00 g by drying in an oven at 105 °C for 3 h.

ASSAY

Dissolve 1.300 g in *water R* and dilute to 100.0 ml with the same solvent. To 20.0 ml of the solution add 40 ml of *hydrochloric acid R* and titrate with *0.05 M potassium iodate* until the colour changes from red to yellow. Add 5 ml of *chloroform R* and continue the titration, shaking vigorously, until the chloroform layer is decolorised.

1 ml of *0.05 M potassium iodate* is equivalent to 14.99 mg of NaI.

STORAGE

Protected from light.

Ph Eur

Sodium Lactate Solution

General Notices

(Ph Eur monograph 1151)

Action and use

Systemic alkalinising agent.

Ph Eur

DEFINITION

Solution of a mixture of the enantiomers of sodium 2-hydroxypropanoate in approximately equal proportions.

Content

Minimum 50.0 per cent *m/m* of sodium 2-hydroxypropanoate ($C_3H_5NaO_3$; M_r 112.1); 96.0 per cent to 104.0 per cent of the content of sodium lactate stated on the label.

CHARACTERS

Appearance

Clear, colourless, slightly syrupy liquid.

Solubility

Miscible with water and with alcohol.

IDENTIFICATION

A. To 0.1 ml add 10 ml of *water R*. 5 ml of the solution gives the reaction of lactates *(2.3.1)*.

B. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dilute a quantity of the substance to be examined corresponding to 40.0 g of sodium lactate to 200 ml with *distilled water R*.

Appearance of solution

The substance to be examined is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.5 to 9.0 for the substance to be examined.

Reducing sugars and sucrose

To 5 ml of the substance to be examined add 2 ml of *dilute sodium hydroxide solution R* and 0.2 ml of *copper sulphate solution R*. The solution is clear and blue and remains so on boiling. Add to the hot solution 4 ml of *hydrochloric acid R*. Boil for 1 min. Add 6 ml of *strong sodium hydroxide solution R* and heat to boiling again. The solution is clear and blue.

Methanol

Gas chromatography *(2.4.24)*.

Limit:

— *methanol*: maximum 50 ppm, calculated with reference to sodium lactate, if intended for use in the manufacture of parenteral dosage forms, dialysis, haemodialysis or haemofiltration solutions.

Chlorides *(2.4.4)*

Maximum 50 ppm calculated with reference to sodium lactate.

Dilute 5 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides.

Oxalates and phosphates

To 1 ml of the substance to be examined add 15 ml of *alcohol R* and 2 ml of *calcium chloride solution R*. Heat at 75 °C for 5 min. Any opalescence in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 1 ml of the substance to be examined, 15 ml of *alcohol R* and 2 ml of *water R*.

Sulphates *(2.4.13)*

Maximum 100 ppm calculated with reference to sodium lactate.

To 7.5 ml of solution S, add 1.9 ml of *hydrochloric acid R1* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates without addition of 0.5 ml of *acetic acid R*. Acidify the standard solution with 0.05 ml of *hydrochloric acid R1* instead of 0.5 ml of *acetic acid R*.

Aluminium

Maximum 0.1 ppm, if intended for use in the manufacture of parenteral dosage forms, dialysis, haemodialysis or haemofiltration solutions.

Atomic absorption spectrometry *(2.2.23, Method I)*. For the preparation of the solutions, use equipment that is aluminium-free or that will not release aluminium under the conditions of use (glass, polyethylene, etc).

Modifier solution Dissolve 100.0 g of *ammonium nitrate R* in a mixture of 50 ml of *water R* and 4 ml of *nitric acid R* and dilute to 200 ml with *water R*.

Blank solution Dilute to 2.0 ml of the modifier solution to 25.0 ml with *water R*.

Test solution To 1.25 g add 2.0 ml of the modifier solution and dilute to 25.0 ml with *water R*.

Reference solutions Prepare the reference solutions immediately before use (0.010 ppm to 0.050 ppm of aluminium) using *aluminium standard solution (200 ppm Al) R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device A graphite furnace.

Carrier gas *argon R*.

Conditions The device is equipped with a non-specific absorption correction system. Heat the oven to 120 °C for as many seconds as there are microlitres of solution introduced into the apparatus, then heat at 1000 °C for 30 s and finally at 2700 °C for 6 s.

Barium

To 10 ml of solution S add 10 ml of *calcium sulphate solution R*. Allow to stand for 30 min. Any opalescence *(2.2.1)* in the solution is not more intense than that of a standard prepared at the same time and in the same manner using a mixture of 10 ml of solution S and 10 ml of *distilled water R*.

Iron *(2.4.9)*

Maximum 10 ppm calculated with reference to sodium lactate.

Dilute 5 ml of solution S to 10 ml with *water R*. The solution complies with the limit test for iron.

Heavy metals *(2.4.8)*

Maximum 10 ppm calculated with reference to sodium lactate.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R*.

Bacterial endotoxins *(2.6.14)*

Less than 5 IU/g, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve a quantity of the substance to be examined corresponding to 75.0 mg of sodium lactate in a mixture of 10 ml of *glacial acetic acid R* and 20 ml of *acetic anhydride R*. Allow to stand for 15 min. Add 1 ml of *naphtholbenzein solution R* and titrate with *0.1 M perchloric acid*.

1 ml of *0.1 M perchloric acid* is equivalent to 11.21 mg of $C_3H_5NaO_3$.

LABELLING

The label states:

- where applicable, that the substance is suitable for use in the manufacture of dialysis, haemodialysis and haemofiltration solutions;
- where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms;
- the declared content of sodium lactate.

Ph Eur

Sodium Lauryl Sulphate

General Notices

Sodium Dodecyl Sulphate

(Sodium Laurilsulfate, Ph Eur monograph 0098)

Action and use

Anionic emulsifying agent.

Ph Eur

DEFINITION

Mixture of sodium alkyl sulphates consisting chiefly of sodium dodecyl sulphate ($C_{12}H_{25}NaO_4S$; Mr 288.4).

Content:

— *sodium alkyl sulphates*: minimum 85.0 per cent, expressed as $C_{12}H_{25}NaO_4S$.

CHARACTERS

Appearance

White or pale yellow, powder or crystals.

Solubility

Freely soluble in water giving an opalescent solution, partly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 0.1 g in 10 ml of *water R* and shake. A copious foam is formed.

B. To 0.1 ml of the solution prepared for identification test A, add 0.1 ml of a 1 g/l solution of *methylene blue R* and 2 ml of *dilute sulphuric acid R.* Add 2 ml of *methylene chloride R* and shake. An intense blue colour develops in the methylene chloride layer.

C. Mix about 10 mg with 10 ml of *anhydrous ethanol R.* Heat to boiling on a water-bath, shaking frequently. Filter immediately and evaporate the ethanol. Dissolve the residue in 8 ml of *water R*, add 3 ml of *dilute hydrochloric acid R,* evaporate the solution to half its volume and allow to cool. Separate the congealed fatty alcohols by filtration. To the filtrate add 1 ml of *barium chloride solution R1*. A white, crystalline precipitate is formed.

D. Ignite 0.5 g. The residue gives reaction (a) of sodium *(2.3.1).*

TESTS

Alkalinity

Dissolve 1.0 g in 100 ml of *carbon dioxide-free water R* and add 0.1 ml of *phenol red solution R*. Not more than 0.5 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Non-esterified alcohol

Maximum 4 per cent.

Dissolve 10 g in 100 ml of *water R*, add 100 ml of *ethanol (96 per cent) R* and shake the solution with 3 quantities, each of 50 ml, of *pentane R*, adding *sodium chloride R*, if necessary, to promote separation of the 2 layers. Wash the combined organic layers with 3 quantities, each of 50 ml, of *water R*, dry over *anhydrous sodium sulphate R*, filter and evaporate on a water-bath until the solvent has evaporated. Heat the residue at 105 °C for 15 min and cool. The residue weighs a maximum of 0.4 g.

Sodium chloride and sodium sulphate

Maximum 8.0 per cent for the total percentage content.

Sodium chloride

Dissolve 5.00 g in 50 ml of *water R*, add *dilute nitric acid R* dropwise until the solution is neutral to *blue litmus paper R*, add 2 ml of *potassium chromate solution R* and titrate with *0.1 M silver nitrate*.

1 ml of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

Sodium sulphate

Dissolve 0.500 g in 20 ml of *water R*, warming gently if necessary, then add 1 ml of a 0.5 g/l solution of *dithizone R1* in *acetone R*. If the solution is red, add *1 M nitric acid*, dropwise, until the solution becomes bluish-green. Add 2.0 ml of *dichloroacetic acid solution R* and 80 ml of *acetone R*. Titrate with *0.01 M lead nitrate* until a persistent violet-red or orange-red colour is obtained. Carry out a blank titration.

1 ml of *0.01 M lead nitrate* is equivalent to 1.420 mg of Na_2SO_4.

ASSAY

Dissolve 1.15 g in *water R*, warming if necessary, and dilute to 1000.0 ml with the same solvent. To 20.0 ml of the solution add 15 ml of *chloroform R* and 10 ml of *dimidium bromide-sulphan blue mixed solution R*. Titrate with *0.004 M benzethonium chloride*, shaking vigorously and allowing the layers to separate before each addition, until the pink colour of the chloroform layer is completely discharged and a greyish-blue colour is obtained.

1 ml of *0.004 M benzethonium chloride* is equivalent to 1.154 mg of sodium alkyl sulphates, expressed as $C_{12}H_{25}NaO_4S$.

Ph Eur

Sodium Metabisulphite

General Notices

Sodium Pyrosulphite

(Ph Eur monograph 0849)

$Na_2S_2O_5$ 190.1 *7681-57-4*

Action and use

Antioxidant.

Ph Eur

DEFINITION

Sodium metabisulphite also called sodium disulphite.

Content

95.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. pH (see Tests).

B. To 0.4 ml of *iodinated potassium iodide solution R* add 8 ml of *distilled water R* and 1 ml of solution S diluted 1 to 10 in *distilled water R*. The solution is colourless and gives reaction (a) of sulphates *(2.3.1)*.

C. Solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH ***(2.2.3)***

3.5 to 5.0 for solution S.

Thiosulphates

To 5 ml of solution S add 5 ml of *dilute hydrochloric acid R*. The solution remains clear *(2.2.1)* for at least 15 min.

Arsenic ***(2.4.2, Method A)***

Maximum 5 ppm.

Mix 0.20 g with 2 ml of *water R* in a dish. Add, drop by drop, 1.5 ml of *nitric acid R*. Evaporate the mixture to dryness on a water-bath. Heat over a flame until no more vapour is evolved. Take up the residue in 25 ml of *water R*.

Iron ***(2.4.9)***

Maximum 20 ppm, determined on solution S.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

To 40 ml of solution S in a silica crucible, add 10 ml of *hydrochloric acid R* and evaporate to dryness. Dissolve the residue in 19 ml of *water R* and add 1 ml of a 40 g/l solution of *sodium fluoride R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (2 ppm Pb) R*.

ASSAY

Dissolve 0.200 g in 50.0 ml of *0.05 M iodine*. Add 5 ml of *dilute hydrochloric acid R*. Titrate with *0.1 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration, as indicator.

1 ml of *0.05 M iodine* is equivalent to 4.753 mg of $Na_2S_2O_5$.

STORAGE

Protected from light.

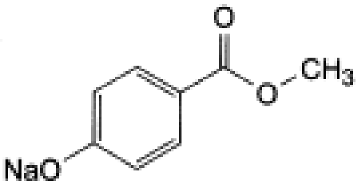
Ph Eur

Sodium Methyl Hydroxybenzoate

General Notices

Sodium Methylparaben

(Sodium Methyl Parahydroxybenzoate, Ph Eur monograph 1262)



$C_8H_7NaO_3$ 174.1 *5026-62-0*

Action and use

Antimicrobial preservative.

Ph Eur

DEFINITION

Sodium methyl parahydroxybenzoate contains not less than 99.0 per cent and not more than the equivalent of 102.0 per cent of sodium 4-(methoxycarbonyl)phenolate, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. Dissolve 0.5 g in 50 ml of *water R*. Immediately add 5 ml of *hydrochloric acid R1.* Filter and wash the precipitate with *water R*. Dry under vacuum at 80 °C for 2 h. The precipitate obtained melts *(2.2.14)* at 125 °C to 128 °C.

B. Examine the precipitate obtained in identification test A by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *methyl parahydroxybenzoate CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (c).

D. To about 10 mg in a test-tube add 1 ml of *sodium carbonate solution R*, boil for 30 s and cool. Add 5 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R* and mix. An orange to red colour develops.

E. To 1 ml of solution S (see Tests) add 1 ml of *water R*. The solution gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S examined immediately after preparation is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method I)*.

pH *(2.2.3)*

Dilute 1 ml of solution S to 100 ml with *carbon dioxide-free water R*. The pH of the solution is 9.5 to 10.5.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable octadecylsilyl silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a) Dissolve 0.100 g in 10 ml of *water R*. Immediately add 2 ml of *hydrochloric acid R* and shake with 50 ml of *ether R*. Evaporate the upper layer to dryness and dissolve the residue to 10 ml with *acetone R*.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *acetone R*.

Reference solution (a) Dissolve 34.3 mg of *4-hydroxybenzoic acid R* in *acetone R* and dilute to 100 ml with the same solvent.

Reference solution (b) Dilute 0.5 ml of test solution (a) to 100 ml with *acetone R.*

Reference solution (c) Dissolve 10 mg of methyl *parahydroxybenzoate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (d) Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 ml of test solution (a) and dilute to 10 ml with *acetone R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *glacial acetic acid R*, 30 volumes of *water R* and 70 volumes of *methanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with test solution (a): any spot due to 4-hydroxybenzoic acid is not more intense than the spot in the chromatogram obtained with reference solution (a) (4 per cent) and any spot, apart from the principal spot and the spot due to 4-hydroxybenzoic acid, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated principal spots.

Chlorides *(2.4.4)*

To 10 ml of solution S, add 30 ml of *water R* and 1 ml of *nitric acid R* and dilute to 50 ml with water R. Shake and filter. Dilute 10 ml of the filtrate to 15 ml with *water R.* The solution complies with the limit test for chlorides (350 ppm). Prepare the standard using 14 ml of *chloride standard solution (5 ppm Cl) R* to which 1 ml of *water R* has been added.

Sulphates *(2.4.13)*

To 25 ml of solution S, add 5 ml of *distilled water R* and 10 ml of *hydrochloric acid R* and dilute to 50 ml with *distilled water R*. Shake and filter. Dilute 10 ml of the filtrate to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Heavy metals *(2.4.8)*

2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

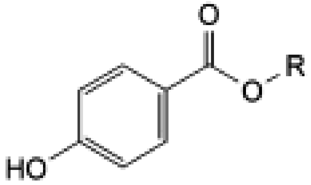
Not more than 5.0 per cent, determined on 0.500 g by the semi-micro determination of water.

ASSAY

Dissolve 0.150 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid,* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 17.41 mg of $C_8H_7NaO_3$.

IMPURITIES



A. R = H: 4-hydroxybenzoic acid,

B. R = CH_2-CH_3: ethyl 4-hydroxybenzoate,

C. R = CH_2-CH_2-CH_3: propyl 4-hydroxybenzoate,

D. R = CH_2-CH_2-CH_2-CH_3: butyl 4-hydroxybenzoate.

DEFINITION

Content

98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder or colourless crystals.

Solubility

Freely soluble in water.

IDENTIFICATION

A. Loss on drying (see Tests).

B. Dissolve 0.2 g in 5 ml of a mixture of equal volumes of *nitric acid R* and *water R* and add 0.1 g of *ammonium chloride R*. Add 0.3 ml of *disodium hydrogen phosphate solution R* and heat slowly at 50-60 °C. A yellow precipitate is formed.

C. Dissolve 0.15 g in 2 ml of *water R*, the solution gives reaction (a) of sodium (*2.3.1*).

TESTS

Solution S

Dissolve 10.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Chlorides

Maximum 50 ppm.

To 10 ml of a mixture of equal volumes of *nitric acid R* and *water R* add 10 ml of solution S with shaking. Add 1 ml of *0.1 M silver nitrate*. Any opalescence in the solution is not more intense after 5 min than that of a standard solution prepared at the same time in the same manner with 2 ml of *chloride standard solution (50 ppm Cl) R*.

Phosphates

Maximum 200 ppm.

Dissolve 2.0 g by heating in 13 ml of *water R.* In the still hot solution, dissolve 8.0 g of *ammonium nitrate R1*. Add this solution to 27 ml of a mixture of equal volumes of *nitric acid R* and *water R.* Any yellow colour or opalescence in the solution is not more intense within 3 h than that in a standard solution prepared at the same time as follows: dissolve 1.0 g in 12 ml of *water R* and add 1 ml of *phosphate standard solution (200 ppm* PO_4*) R.*

Ammonium ***(2.4.1, Method B)***

Maximum 10 ppm, determined on 0.10 g.

Prepare the standard using 1 ml of *ammonium standard solution (1 ppm* NH_4*) R*.

Heavy metals

Maximum 10 ppm.

To 10 ml of solution S, add 2 ml of *water R,* 6 ml of a 168 g/l solution of *sodium hydroxide R* and 2 ml of *concentrated ammonia R* (solution A). To 0.5 ml of *thioacetamide reagent R* add a mixture of 15 ml of solution A and 5 ml of *water R*. Any coloration of the solution is not more intense after 2 min than that of a reference solution prepared at the same time as follows: to 0.5 ml of *thioacetamide reagent R* add a mixture of 5 ml of solution A, 1 ml of *lead standard solution (10 ppm Pb) R* and 14 ml of *water R*.

Loss on drying ***(2.2.32)***

14.0 per cent to 16.0 per cent, determined on 1.000 g by drying in an oven at 140 °C for 3 h.

ASSAY

Dissolve 0.100 g in 30 ml of *water R*, add 0.5 g of *hexamethylenetetramine R* and 0.1 ml of a 250 g/l solution of *nitric acid R*. Heat to 60 °C. Titrate with *0.05 M lead nitrate* using *4-(2-pyridylazo)resorcinol monosodium salt R* as indicator.

1 ml of *0.05 M lead nitrate* is equivalent to 10.30 mg of Na_2MoO_4.

Ph Eur

Sodium Nitrite

General Notices

(Ph Eur monograph 1996)

$NaNO_2$ 69.0 *7632-00-0*

Action and use

Used in treatment of cyanide poisoning.

Ph Eur

DEFINITION

Content

98.5 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

Colourless crystals or mass or yellowish rods, hygroscopic.

Solubility

Freely soluble in water, soluble in alcohol.

IDENTIFICATION

A. Dilute 1 ml of solution S1 (see Tests) to 25 ml with *water R*. To 0.1 ml of the solution add 1 ml of *sulphanilic acid solution R1*. Allow to stand for 2-3 min. Add 1 ml of β*-naphthol solution R* and 1 ml of *dilute sodium hydroxide solution R*. An intense red colour develops.

B. To 1 ml of the solution prepared for identification test A add 3 ml of a 20 g/l solution of *phenazone R* and 0.4 ml of *dilute sulphuric acid R.* An intense green colour develops.

C. To 0.15 ml of solution S1, add 0.35 ml of *water R*. The solution gives reaction (b) of sodium *(2.3.1)*.

TESTS

Solution S1

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Solution S2

Dissolve 3 g in *distilled water R*. Cautiously add 10 ml of *nitric acid R* and evaporate to dryness. Dissolve the residue in 10 ml of *distilled water R*, neutralise with *dilute sodium* *hydroxide solution R* and dilute to 30 ml with *distilled water R.*

Appearance of solution

Solution S1 is clear *(2.2.1)* and not more intensely coloured than reference solution B_6 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S1, add 0.05 ml of *phenol red solution R*. Add 0.1 ml of *0.01 M sodium hydroxide*. The solution is red. Add 0.3 ml of *0.01 M hydrochloric acid*. The solution is yellow.

Chlorides *(2.4.4)*

Maximum 50 ppm.

Dilute 10 ml of solution S2 to 15 ml with *water R*. The solution complies with the limit test for chlorides.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 7.5 ml of solution S2 to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dilute 10 ml of solution S2 to 20 ml with *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying *in vacuo*.

ASSAY

Dissolve 0.400 g in 100.0 ml of *water R*. Introduce 20.0 ml of the solution, while stirring continuously and keeping the tip of the pipette below the surface of the liquid, into a conical flask containing 30.0 ml of *0.1 M cerium sulphate*. Immediately stopper the flask and allow to stand for 2 min. Add 10 ml of a 200 g/l solution of *potassium iodide R* and 2 ml of *starch solution R.*

While stirring continuously, titrate with *0.1 M sodium thiosulphate* until the blue colour disappears. Carry out a blank titration.

1 ml of *0.1 M cerium sulphate* is equivalent to 3.45 mg of $NaNO_2$.

STORAGE

In an airtight container.

Ph Eur

Sodium Nitroprusside

General Notices

(Ph Eur monograph 0565)

$Na_2[Fe(CN)_5NO],2H_2O$ 298.0 *13755-38-9*

Action and use

Vasodilator.

Preparation

Sodium Nitroprusside Intravenous Infusion

Ph Eur

DEFINITION

Sodium pentacyanonitrosylferrate (III) dihydrate.

Content

99.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance

Reddish-brown powder or crystals.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 0.700 g in *water R* and dilute to 100.0 ml with the same solvent. Examine the solution immediately after preparation.

Spectral range 350-600 nm.

Absorption maximum At 395 nm.

Shoulder At about 510 nm.

Absorption minimum At 370 nm.

Specific absorbance at the absorption maximum 0.65 to 0.80.

B. Dissolve about 20 mg in 2 ml of *water R* and add 0.1 ml of *sodium sulphide solution R*. A deep violet-red colour is produced.

C. Dissolve 50 mg in 1 ml of *water R* and acidify the solution by the addition of *hydrochloric acid R*. Place a drop of the solution in an oxidising flame. A persistent yellow colour is produced.

TESTS

Insoluble matter

Maximum 100 ppm.

Dissolve 10 g without heating in 50 ml of *water R*. Allow to stand for 30 min and filter through a sintered-glass filter (16) *(2.1.2)*. Wash the filter with cold *water R* until the filtrate is colourless. Dry the residue on the filter at 105 °C. The residue weighs a maximum of 1 mg.

Chlorides *(2.4.4)*

Maximum 200 ppm.

In a metallic crucible (nickel) mix 1.0 g with 8 ml of a 200 g/l solution of *sodium hydroxide R*. Heat slowly and evaporate carefully to dryness over a small flame, then heat to a dull red colour for 30 min. Allow to cool and transfer the solid residue with 3 quantities, each of 8 ml, of *dilute sulphuric acid R.* Filter the sulphuric acid extracts on a filter paper and collect the filtrates. Render the filtrate acid to *litmus paper R* by adding, if necessary, a few drops of dilute *sulphuric acid R*. Wash the crucible and the filter paper with 3 quantities, each of 10 ml, of *water R,* add the washings to the main sulphuric acid solution and dilute to 60 ml with *water R*. Mix.

Ferricyanides

Maximum 200 ppm.

Dissolve 1.25 g in *acetate buffer solution pH 4.6 R* and dilute to 50.0 ml with the same buffer solution. Use three 50 ml volumetric flasks (A, B, C). To flask B add 1.0 ml of *ferricyanide standard solution (50 ppm Fe(CN)6) R*. To flasks A and B add 1 ml of a 5 g/l solution of *ferrous ammonium sulphate R*. To the 3 flasks add 10.0 ml of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 ml with *water R*. Allow to stand for 30 min. The absorbance *(2.2.25)* of the solution in flask A measured at 720 nm using the solution in flask C as the compensation liquid is not greater than the absorbance of the solution in flask B measured at 720 nm using the solution in flask A as the compensation liquid.

Ferrocyanides

Maximum 200 ppm.

Dissolve 4.0 g in *water R* and dilute to 100.0 ml with the same solvent. Use three 50 ml volumetric flasks (A, B, C). To flask B add 2.0 ml of *ferrocyanide standard solution (100 ppm* $Fe(CN)_6$*) R*. To flasks A and B add 1 ml of *ferric chloride solution R2*. To the 3 flasks add 25.0 ml of the solution of the substance to be examined. Dilute the contents of each flask to 50.0 ml with *water R*. Allow to stand for 30 min. The absorbance *(2.2.25)* of the solution in flask A measured at 695 nm using the solution in flask C as the compensation liquid is not greater than the absorbance of the solution in flask B measured at 695 nm using the solution in flask A as the compensation liquid.

Sulphates

Maximum 100 ppm.

Test solution Dissolve 3.6 g in 120 ml of *distilled water R,* add with mixing 4 ml of *sulphate standard solution (10 ppm SO_4) R* and 20 ml of a 250 g/l solution of *cupric chloride R* and dilute to 150.0 ml with *distilled water R*. Allow to stand for 16 h and filter or centrifuge until a clear light-blue solution is obtained.

Reference solution To 40 ml of *sulphate standard solution (10 ppm SO_4) R* add 80 ml of *distilled water R* and 12-13 ml of a 250 g/l solution of *cupric chloride R*. Dilute to 150.0 ml with *distilled water R*. The volume of cupric chloride solution added is such that the colour of the final solution matches that of the test solution.

Allow the solutions to stand. Filter both solutions, discarding the first 25 ml of filtrate. To 100 ml of each filtrate, add 0.5 ml of *acetic acid R*. Mix and add 2 ml of a 250 g/l solution of *barium chloride R* and mix again. The test solution is not more opalescent than the reference solution.

Water *(2.5.12)*

9.0 per cent to 15.0 per cent, determined on 0.250 g.

ASSAY

Dissolve 0.250 g in 100 ml of *water R* and add 0.1 ml of *dilute sulphuric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)* with a silver-mercurous sulphate electrode system.

1 ml of *0.1 M silver nitrate* is equivalent to 13.10 mg of $Na_2[Fe(CN)_5(NO)]$.

STORAGE

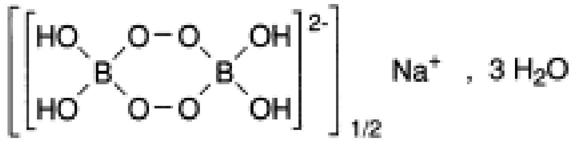
Protected from light.

Ph Eur

Sodium Perborate

General Notices

(Hydrated Sodium Perborate, Ph Eur monograph 1997)



$NaBH_2O_4,3H_2O$ 153.9 *7632-04-4*

Action and use

Antiseptic.

Ph Eur

DEFINITION

Content

96.0 per cent to 103.0 per cent.

CHARACTERS

Appearance

Colourless, prismatic crystals or white or almost white powder, stable in the crystalline form.

Solubility

Sparingly soluble in water, with slow decomposition. It dissolves in dilute mineral acids.

IDENTIFICATION

A. Mix 1 ml of a saturated solution with a mixture of 1 ml of *dilute sulphuric acid R* and 0.2 ml of a 70 g/l solution of *potassium dichromate R*, shake with 2 ml of *ether R* and allow to stand. A blue colour is produced in the ether layer.

B. The mixture obtained by treating about 100 mg with 0.1 ml of *sulphuric acid R* and 5 ml of *methanol R* burns with a greenish flame when ignited.

C. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Chlorides ***(2.4.4)***

Maximum 330 ppm.

Dissolve 0.15 g in 15 ml of *water R*. The solution complies with the limit test for chlorides.

Sulphates ***(2.4.13)***

Maximum 1.2 per cent.

Dissolve 0.13 g in 150 ml of *distilled water R*. 15 ml of the solution complies with the limit test for sulphates.

Iron ***(2.4.9)***

Maximum 20 ppm.

Dissolve 2.5 g in 10 ml of *dilute hydrochloric acid R* with heating, evaporate to dryness, with stirring, and dissolve the residue in 25 ml of hot *water R*. Dilute 5 ml of the obtained solution to 10 ml with *water R*. The solution complies with the limit test for iron.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of the solution obtained in the test for iron complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R.*

ASSAY

Dissolve 0.300 g in 50.0 ml of *water R*. Dilute 10.0 ml of the solution to 50 ml with *water R* and add 10 ml of dilute *sulphuric acid R*. Titrate with *0.02 M potassium permanganate*.

1 ml of *0.02 M potassium permanganate* is equivalent to 7.693 mg of NaH_8BO_7.

STORAGE

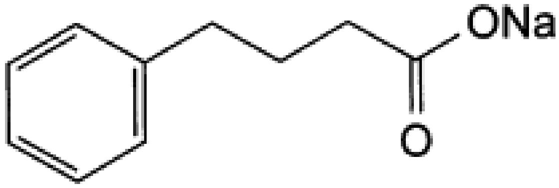
In an airtight container .

Ph Eur

Sodium Phenylbutyrate

General Notices

(Ph Eur monograph 2183)



$C_{10}H_{11}NaO_2$ 186.2 *1716-12-7*

Action and use

Glutamine conjugate; treatment of hyperammonaemia.

Ph Eur

DEFINITION

Sodium 4-phenylbutanoate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish-white powder.

Solubility

Freely soluble in water and in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison sodium phenylbutyrate CRS.

B. Dissolve 0.15 g in 2 ml of *water R*. The solution gives reaction (a) of sodium *(2.3.1)*.

TESTS

pH ***(2.2.3)***

6.5 to 7.5.

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Impurity C

Gas chromatography *(2.2.28)*.

Silylation solution To 2 ml of *N,O-bis(trimethylsilyl)trifluoroacetamide R* add 0.04 ml of *chlorotrimethylsilane R* and mix.

Test solution Dissolve 50.0 mg of the substance to be examined in 3 ml of *water R* and add 0.5 ml of *hydrochloric acid R*. Extract with 2 quantities, each of 5 ml, of *methylene chloride R*. Evaporate the combined methylene chloride extracts to dryness in a vial with a screw cap and add 0.5 ml of the silylation solution. Seal the vial and heat at 70 ± 5 °C for 20 min.

Reference solution (a) Dissolve 5.0 mg of *sodium phenylbutyrate impurity C CRS* in *methylene chloride R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 10.0 ml with *methylene chloride R*. Place 1.0 ml of this solution in a vial with a screw cap, evaporate to dryness and add 0.5 ml of the silylation solution. Seal the vial and heat at 70 ± 5 °C for 20 min.

Reference solution (c) Dissolve 10 mg of the substance to be examined in 25 ml of *water R.* To 3 ml of this solution add 0.1 ml of *hydrochloric acid R*. Extract with 2 quantities, each of 5 ml, of *methylene chloride R*. Combine the methylene chloride extracts in a vial with a screw cap and add 2 ml of reference solution (a). Evaporate to dryness and add 0.5 ml of the silylation solution. Seal the vial and heat at 70 ± 5 °C for 20 min.

Column:

— *material*: fused silica;

— *size: l* = 25 m, Ø = 0.25 mm;

— *stationary phase*: *poly(dimethyl)(diphenyl)siloxane R* (film thickness 1.0 µm).

Carrier gas *helium for chromatography R*.

Flow rate 0.9 ml/min.

Split ratio 1:100.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	50
	5 - 27	50 → 270
	27 - 32	270
Injection port		270
Detector		270

Detection Flame ionisation.

Injection 1 µl.

Relative retention With reference to phenylbutyrate (retention time = about 20 min): impurity C = about 0.98.

System suitability Reference solution (c):

— *resolution*: minimum 3.0 between the peaks due to impurity C and phenylbutyrate.

Limit:
— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.20 g of the substance to be examined in 10 ml of *methanol R* and dilute to 50.0 ml with *water R*.

Reference solution (a) Dissolve 4.0 mg of *α-tetralone R* (impurity B) in 10 ml of *methanol R* and dilute to 200.0 ml with the same solvent.

Reference solution (b) Dissolve 0.20 g of the substance to be examined in 10 ml of *methanol R*, add 1 ml of reference solution (a) and dilute to 50 ml with *water R*.

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 50.0 ml with *water R.*

Reference solution (d) Dissolve 5.0 mg of *3-benzoylpropionic acid R* (impurity A) in 2.5 ml of *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml of this solution to 50.0 ml with *water R.*

Column:
— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *base-deactivated end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *glacial acetic acid R*, *methanol R*, *water R* (1:49:50 *V/V/V*).

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 245 nm.

Injection 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time Twice the retention time of phenylbutyrate.

Relative retention With reference to phenylbutyrate (retention time = about 17 min): impurity A = about 0.3; impurity B = about 0.7.

System suitability Reference solution (b):

— *resolution*: minimum 6 between the peaks due to impurity B and phenylbutyrate.

Limits:
— *impurity A*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.01 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.05 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent);

— *disregard limit of impurities other than B*: 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (d) (0.03 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 25 volumes of *water R* and 75 volumes of *ethanol (96 per cent) R.*

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 2.00 g.

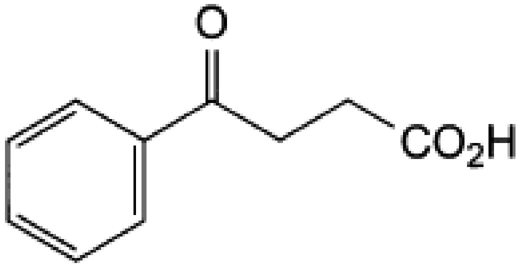
ASSAY

Disperse 0.150 g in 50 ml of *anhydrous acetic acid R*. The opalescence of the solution disappears during the titration. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

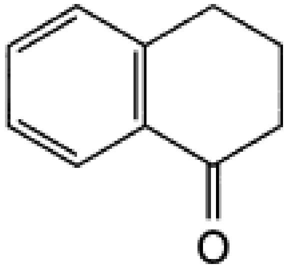
1 ml of *0.1 M perchloric acid* is equivalent to 18.62 mg of $C_{10}H_{11}NaO_2$.

IMPURITIES

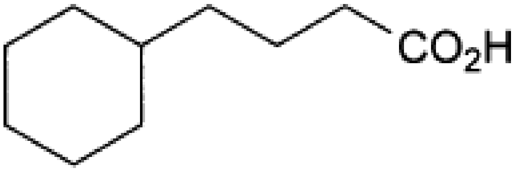
Specified impurities *A, B, C*.



A. 4-oxo-4-phenylbutanoic acid (3-benzoylpropionic acid),



B. 3,4-dihydronaphthalen-1(2*H*)-one (α-tetralone),



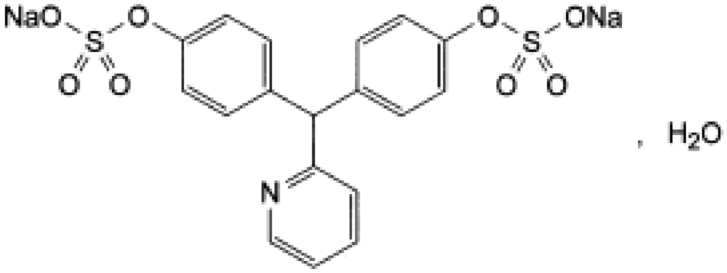
C. 4-cyclohexylbutanoic acid.

Ph Eur

Sodium Picosulfate

General Notices

(Ph Eur monograph 1031)



$C_{18}H_{13}NNa_2O_8S_2,H_2O$ 499.4 *10040-45-6*
(anhydrous)

Action and use

Stimulant laxative.

Preparation

Compound Sodium Picosulfate Powder for Oral Solution

Sodium Picosulfate Oral Solution

Ph Eur

DEFINITION

Sodium picosulfate contains not less than 98.5 per cent and not more than the equivalent of 100.5 per cent of 4,4′-(pyridin-2-ylmethylene)bisphenyl bis(sodium sulphate), calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, freely soluble in water, slightly soluble in alcohol.

IDENTIFICATION

First identification *A, E.*

Second identification *B, C, D, E.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sodium picosulfate CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 5 ml of solution S (see Tests) add 1 ml of *dilute hydrochloric acid R* and heat to boiling. Add 1 ml of *barium chloride solution R1*. A white precipitate is formed.

D. To about 10 mg add 3 ml of *sulphuric acid R* and 0.1 ml of *potassium dichromate solution R1*. A violet colour develops.

E. The solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 2.5 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution GY_7 *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0*.05 ml of phenolphthalein solution R*. The solution is colourless. Not more than 0.25 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel* GF_{254} *R* as the coating substance.

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R.*

Reference solution (a) Dissolve 20 mg of *sodium picosulfate CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dilute 2 ml of test solution (b) to 100 ml with *methanol R*.

Reference solution (c) Dissolve 0.20 g of the substance to be examined in 2 ml of a 103 g/l solution of *hydrochloric acid R*. Heat rapidly to boiling and maintain boiling for 10 s. Cool in iced water and dilute to 10 ml with *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 10 cm using a mixture of 2.5 volumes of *anhydrous formic acid R*, 12.5 volumes of *water R*, 25 volumes of *methanol R* and 60 volumes of *ethyl acetate R*. Dry the plate in a current of hot air for 15 min and examine in ultraviolet light at 254 nm. Spray with a 200 g/l solution of *hydrochloric acid R* in *methanol R* and heat at 110 °C for 10 min. Spray the hot plate with a freshly prepared solution containing 50 g/l of *ferric chloride R* and 1 g/l of *potassium ferricyanide R.* Examine the wet plate. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows three clearly separated spots. A fourth spot may be present on the starting-line.

Chlorides *(2.4.4)*

Dilute 5 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dilute 7.5 ml of solution S to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (400 ppm).

Heavy metals *(2.4.8)*

12 ml of solution S complies with limit test A for heavy metals (20 ppm). Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Water *(2.5.12)*

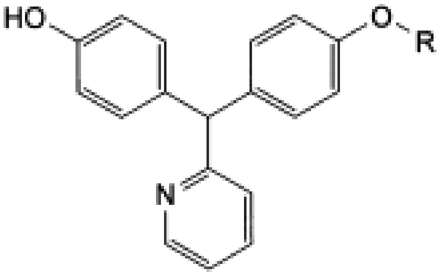
3.0 per cent to 5.0 per cent, determined on 0.500 g by the semi-micro determination of water.

ASSAY

Dissolve 0.400 g in 80 ml of *methanol R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 48.14 mg of $C_{18}H_{13}NNa_2O_8S_2$.

IMPURITIES



A. R = SO_3Na: 4-[(pyridin-2-yl)(4-hydroxyphenyl)methyl]phenyl sodium sulphate,

B. R = H: 4,4′-[(pyridin-2-yl)methylene]bisphenol.

Ph Eur

Sodium Polystyrene Sulphonate

General Notices

(Ph Eur monograph 1909)

Action and use

Used in the treatment of hyperkalaemia.

Ph Eur

DEFINITION

Polystyrene sulphonate resin prepared in the sodium form.

Exchange capacity

2.8 mmol to 3.4 mmol of potassium per gram (dried substance).

Content

9.4 per cent to 11.0 per cent of Na (dried substance).

CHARACTERS

Appearance

Almost white or light brown powder.

Solubility

Practically insoluble in water, in alcohol and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs using finely ground substance.

Comparison *Ph. Eur. reference spectrum of sodium polystyrene sulphonate*.

B. Suspend 0.1 g in *water R*, add 2 ml of a 150 g/l solution of *potassium carbonate R*, and heat to boiling. Allow to cool and filter. To the filtrate add 4 ml of *potassium pyroantimonate solution R* and heat to boiling. Allow to cool in iced water and if necessary rub the inside of the test-tube with a glass rod. A dense white precipitate is formed.

TESTS

Styrene

Liquid chromatography *(2.2.29)*.

Test solution Shake 10.0 g of the substance to be examined with 10 ml of *acetone R* for 30 min, centrifuge and use the supernatant liquid.

Reference solution Dissolve 10 mg of *styrene R* in *acetone R* and dilute to 100 ml with the same solvent. Dilute 1 ml of this solution to 100 ml with *acetone R*.

Column:
- *size:* *l* = 0.25 m, Ø = 4 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R, water R* (1:1 *V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Limit:
- *styrene*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (1 ppm).

Calcium

Maximum 0.10 per cent.

Atomic emission spectrometry *(2.2.22, Method I)*.

Test solution To 1.10 g add 5 ml of *hydrochloric acid R*, heat to boiling, cool and add 10 ml of *water R.* Filter, wash the filter and residue with *water R* and dilute the filtrate and washing to 25.0 ml with *water R*.

Reference solutions Prepare the reference solutions using *calcium standard solution (400 ppm Ca) R*, diluted as necessary with *water R*.

Wavelength 422.7 nm.

Potassium

Maximum 0.10 per cent.

Atomic emission spectrometry *(2.2.22, Method I)*.

Test solution To 1.10 g add 5 ml of *hydrochloric acid R*, heat to boiling, cool and add 10 ml of *water R*. Filter, wash the filter and residue with *water R* and dilute the filtrate and washings to 25.0 ml with *water R*.

Reference solutions Prepare the reference solutions using *potassium standard solution (100 ppm K) R*, diluted as necessary with *water R*.

Wavelength 766.5 nm.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Treat 1.0 g as described in limit test F. After the addition of the *buffer solution pH 3.5 R* and of the *thioacetamide reagent R*, dilute to 50 ml with *water R* and continue as described in limit test E, beginning at the words "mix and allow to stand for 10 min...".

Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Loss on drying *(2.2.32)*

Maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Microbial contamination *(2.6.13)*

Not more than 10^2 enterobacteria and certain other gram-negative bacteria per gram.

ASSAY

Sodium

Atomic emission spectrometry *(2.2.22, Method I)*.

Test solution In a platinum crucible moisten 0.90 g with a few drops of *sulphuric acid R*, ignite very gently and allow to cool. Moisten with a few drops of *sulphuric acid R* again, ignite at 800 ± 50 °C until a carbon-free ash is obtained and allow to cool.

Add 20 ml of *water R* to the crucible, warm gently on a water-bath until dissolution, cool, transfer quantitatively to a 100 ml graduated flask and dilute to 100.0 ml with *water R*. Dilute 5 ml of this solution to 1000.0 ml with *water R*.

Reference solutions Prepare the reference solutions using *sodium standard solution (200 ppm Na) R*, diluted as necessary with *water R*.

Wavelength 589 nm.

Exchange capacity

Atomic emission spectrometry *(2.2.22, Method I)*.

Solution A 9.533 g/l solution of *potassium chloride R*.

Test solution To 1.6 g of the substance to be examined in a dry 250 ml ground-glass-stoppered flask add 100 ml of solution A, stopper and shake for 15 min. Filter, discard the first 20 ml of the filtrate and dilute 4 ml of the filtrate to 1000 ml with *water R*.

Reference solutions Prepare the reference solutions by diluting 0, 1, 2, 3 and 4 ml of solution A respectively and 4, 3, 2, 1 and 0 ml of a 7.63 g/l solution of *sodium chloride R* to 1000 ml with *water R*.

Wavelength 766.5 nm.

Prepare a calibration curve using the reference solutions and calculate the potassium exchange capacity of the substance to be examined in millimoles per gram taking the concentration of potassium in solution A as 128 mmoles of K per litre.

STORAGE

In an airtight container.

IMPURITIES

Specified impurities *A.*

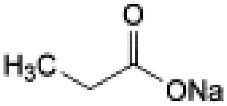
A. styrene.

Ph Eur

Sodium Propionate

General Notices

(Ph Eur monograph 2041)



$C_3H_5NaO_2$ 96.1 *137-40-6*

Action and use

Antifungal.

Ph Eur

DEFINITION

Sodium propanoate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless crystals or, white or almost white powder, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of sodium propionate.*

B. Dissolve 0.1 g in a mixture of 2 ml of *copper sulphate solution R* and 2 ml of *methylene chloride R*. Shake vigorously and allow to stand. Both the upper and the lower layer show a blue colour.

C. To 5 ml of solution S (see Tests) add 2 ml of *0.1 M silver nitrate*. A white precipitate is formed.

D. Solution S gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 10 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

7.8 to 9.2.

Dilute 1 ml of solution S to 5 ml with *water R*.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 0.250 g of the substance to be examined in *water R* and dilute to 100 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of the substance to be examined and 10 mg of *sodium acetate R* in *water R* and dilute to 100 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100 ml with *water R*.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dilute 1 ml of *phosphoric acid R* to 1000 ml with *water R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

System suitability Reference solution (a):

- *resolution*: minimum 5 between the peaks due to sodium acetate and sodium propionate.

Limits:

- *any impurity*: not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than half the area of the principal peak in the chromatrogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit:* 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Readily oxidisable substances

In a ground-glass-stoppered conical flask introduce 10 g of the substance to be examined. Add 100 ml of *water R* and stir to dissolve. Add 25 ml of *sodium hypobromite solution R* and 10 ml of a 200 g/l solution of *sodium acetate R*, stopper the flask and allow to stand for 15 min. Add 10 ml of *potassium iodide solution R* and 20 ml of *hydrochloric acid R* while cooling. Titrate with *0.2 M sodium thiosulphate*, adding 2 ml of *starch solution R* towards the end of the titration. Carry out a blank titration. The difference between the volumes used in the 2 titrations is not greater than 2.2 ml.

Iron *(2.4.9)*

Maximum 10 ppm.

10 ml of solution S complies with the limit test for iron.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by heating in an oven at 105 °C for 3 h.

ASSAY

Dissolve 80.0 mg in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 9.61 mg of $C_3H_5NaO_2$.

STORAGE

In an airtight container.

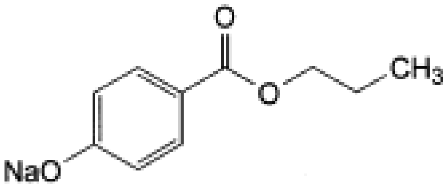
Ph Eur

Sodium Propyl Hydroxybenzoate

General Notices

Sodium Propylparaben

(Sodium Propyl Parahydroxybenzoate, Ph Eur monograph 1263)



$C_{10}H_{11}NaO_3$ 202.2 *35285-69-9*

Action and use

Antimicrobial preservative.

Ph Eur

DEFINITION

Sodium propyl parahydroxybenzoate contains not less than 99.0 per cent and not more than the equivalent of 104.0 per cent of sodium 4-(propoxycarbonyl)phenolate, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, freely soluble in water, sparingly soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification *A, B, E*.

Second identification *A, C, D, E*.

A. Dissolve 0.5 g in 50 ml of *water R*. Immediately add 5 ml of *hydrochloric acid R1*. Filter, and wash the precipitate with *water R*. Dry at 80 °C *in vacuo* for 2 h. The melting point *(2.2.14)* of the precipitate is 96 °C to 99 °C.

B. Examine the precipitate obtained in identification test A by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *propyl parahydroxybenzoate CRS*.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (c).

D. To about 10 mg in a test-tube add 1 ml of *sodium carbonate solution R*, boil for 30 s and cool. Add 5 ml of *aminopyrazolone solution R* and 1 ml of *potassium ferricyanide solution R* and mix. An orange to red colour develops.

E. To 1 ml of solution S (see Tests) add 1 ml of *water R*. The solution gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R*, and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S, examined immediately after preparation, is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

Dilute 1 ml of solution S to 100 ml with *carbon dioxide-free water R*. The pH of the solution is 9.5 to 10.5.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using as the coating substance a suitable octadecylsilyl silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a) Dissolve 0.100 g of the substance to be examined in 10 ml of *water R*. Immediately add 2 ml of *hydrochloric acid R* and shake with 50 ml of *ether R*. Evaporate the upper layer to dryness and take up the residue with 10 ml of *acetone R.*

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *acetone R*.

Reference solution (a) Dissolve 34.3 mg of *4-hydroxybenzoic acid R* in *acetone R* and dilute to 100 ml with the same solvent.

Reference solution (b) Dilute 0.5 ml of test solution (a) to 100 ml with *acetone R*.

Reference solution (c) Dissolve 10 mg of *propyl parahydroxybenzoate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (d) Dissolve 10 mg of *ethyl parahydroxybenzoate CRS* in 1 ml of test solution (a) and dilute to 10 ml with *acetone R*.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *glacial acetic acid R*, 30 volumes of *water R* and 70 volumes of *methanol R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with test solution (a): any spot due to 4-hydroxybenzoic acid is not more intense than the spot in the chromatogram obtained with reference solution (a) (4 per cent); and any spot, apart from the principal spot and the spot due to 4-hydroxybenzoic acid, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated principal spots.

Chlorides *(2.4.4)*

To 10 ml of solution S add 30 ml of *water R* and 1 ml of *nitric acid R* and dilute to 50 ml with *water R*. Shake and filter. Dilute 10 ml of the filtrate to 15 ml with *water R*. The solution complies with the limit test for chlorides (350 ppm). Prepare the standard using 14 ml of *chloride standard solution (5 ppm Cl) R* to which 1 ml of *water R* has been added.

Sulphates ***(2.4.13)***

To 25 ml of solution S add 5 ml of *distilled water R* and 10 ml of *hydrochloric acid R* and dilute to 50 ml with *distilled water R*. Shake and filter. Dilute 10 ml of the filtrate to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Heavy metals ***(2.4.8)***

2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water ***(2.5.12)***

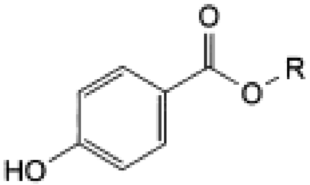
Not more than 5.0 per cent, determined on 0.500 g by the semi-micro determination of water.

ASSAY

Dissolve 0.150 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 20.22 mg of $C_{10}H_{11}NaO_3$.

IMPURITIES



A. R = H: 4-hydroxybenzoic acid,

B. R = CH_3 : methyl 4-hydroxybenzoate,

C. R = CH_2-CH_3: ethyl 4-hydroxybenzoate,

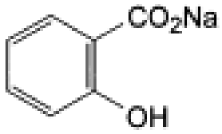
D. R = CH_2-CH_2-CH_2-CH_3: butyl 4-hydroxybenzoate.

Ph Eur

Sodium Salicylate

General Notices

(Ph Eur monograph 0413)



$C_7H_5NaO_3$ 160.1 *54-21-7*

Action and use

Anti-inflammatory; analgesic.

Ph Eur

DEFINITION

Sodium 2-hydroxybenzenecarboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or small, colourless crystals or shiny flakes.

Solubility

Freely soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison sodium salicylate CRS.

B. Solution S (see Tests) gives the reactions of salicylates *(2.3.1)*.

C. It gives reaction (b) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II).*

Acidity

To 20 ml of solution S add 0.1 ml of *phenol red solution R*. The solution is yellow. Not more than 2.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to violet-red.

Chlorides *(2.4.4)*

Maximum 200 ppm.

To 5 ml of solution S add 5 ml of *water R* and 10 ml of *dilute nitric acid R* and filter. Dilute 10 ml of the filtrate to 15 ml with *water R.*

Sulphates *(2.4.13)*

Maximum 600 ppm.

Dilute 2.5 ml of solution S to 15 ml with *distilled water R.*

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.6 g in 16 ml of a mixture of 5 volumes of *water R* and 10 volumes of *ethanol (96 per cent) R.* 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 5 volumes of *water R* and 10 volumes of *ethanol (96 per cent) R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

ASSAY

Dissolve 0.130 g in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 16.01 mg of $C_7H_5NaO_3$.

STORAGE

In an airtight container, protected from light.

Ph Eur

Sodium Selenite Pentahydrate

General Notices

(Ph Eur monograph 1677)

$Na_2SeO_3,5H_2O$ 263.0 *26970-82-1*

Action and use

Used in treatment of selenium deficiency.

Ph Eur

DEFINITION

Content

98.5 per cent to 101.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, practically insoluble in ethanol (96 per cent).

IDENTIFICATION

A. Dissolve 50 mg in 5 ml of a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and heat to boiling. Add 0.05 g of *ascorbic acid R*; a red precipitate is formed which may become black.

B. Dissolve 50 mg in a mixture of 1 ml of *dilute hydrochloric acid R* and 5 ml of *water R.* Add 1 ml of *barium chloride solution R1*; the solution remains clear.

C. It gives reaction (a) of sodium *(2.3.1)*.

D. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH ***(2.2.3)***

9.8 to 10.8 for solution S.

Chlorides ***(2.4.4)***

Maximum 50 ppm.

To 10 ml of solution S add 2 ml of *nitric acid R* and dilute to 15 ml with *water R*.

Sulphates and selenates ***(2.4.13)***

Maximum 300 ppm (determined as sulphates).

Dissolve 0.5 g in 10 ml of *distilled water R*. Add 0.5 ml of *hydrochloric acid R1* and dilute to 15 ml with *distilled water R*.

Iron

Maximum 50 ppm.

To 2 ml of solution S add 2 ml of a 200 g/l solution of *sulphosalicylic acid R*, 5 ml of *concentrated ammonia R* and dilute to 10 ml with *water R*. The solution is not more intensely coloured than a reference solution prepared in the same manner using 1 ml of *iron standard solution (10 ppm Fe) R*.

ASSAY

Dissolve 0.120 g in 50 ml of *water R*, add 7 ml of *glacial acetic acid R,* 25.0 ml of *0.1 M sodium thiosulphate* and 0.5 g of *potassium iodide R.* Titrate immediately with *0.05 M iodine solution* using *starch solution R* as indicator.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 6.575 mg of $Na_2SeO_3,5H_2O$.

STORAGE

In an airtight container.

Ph Eur

Sodium Starch Glycolate (Type A)

General Notices

(Ph Eur monograph 0983)

Action and use

Excipient.

Ph Eur

DEFINITION

Sodium salt of a cross-linked partly *C*-carboxymethylated potato starch.

Content

2.8 per cent to 4.2 per cent of Na (A_r 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

CHARACTERS

Appearance

White or almost white, fine, free-flowing powder, very hygroscopic.

Solubility

Practically insoluble in methylene chloride. It gives a translucent suspension in water.

Examined under a microscope it is seen to consist of: granules, irregularly shaped, ovoid or pear-shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

IDENTIFICATION

A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 ml of *carbon dioxide-free water R.* The mixture has the appearance of a gel. Add 100 ml of *carbon dioxide-free water R* and shake. A suspension forms that settles after standing.

C. To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.

D. Solution S2 (see Tests) gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S1

Centrifuge the suspension obtained in identification test B at 2500 g for 10 min. Collect carefully the supernatant liquid.

Solution S2

Place 2.5 g in a silica or platinum crucible and add 2 ml of a 500 g/l solution of *sulphuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulphuric acid R*, heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R,* evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 ml of *water R*.

Appearance of solution S1

Solution S1 is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.5 to 7.5.

Disperse 1.0 g in 30 ml of *water R*.

Sodium glycolate

Maximum 2.0 per cent. Carry out the test protected from light.

Test solution Place 0.20 g in a beaker. Add 5 ml of *acetic acid R* and 5 ml of *water R*. Stir until dissolution is complete (about 10 min). Add 50 ml of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 ml with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Reference solution Dissolve 0.310 g of *glycollic acid R*, previously dried in vacuo over *diphosphorus pentoxide R* at room temperature overnight, in *water R* and dilute to 500.0 ml with the same solvent. To 5.0 ml of this solution add 5 ml of *acetic acid R* and allow to stand for about 30 min. Add 50 ml of *acetone R* and 1 g of *sodium chloride R.* Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R.* Combine the filtrate and washings and dilute to 100.0 ml with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Heat 2.0 ml of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 ml of *2,7-dihydroxynaphthalene solution R*. Shake and heat in a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 ml with sulphuric *acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance at 540 nm *(2.2.25)* using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 ml of the reference solution.

Sodium chloride

Maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 ml of *water R.* Add 1 ml of *nitric acid R.* Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*, using a silver indicator electrode.

1 ml of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

Iron *(2.4.9)*

Maximum 20 ppm determined on 10 ml of solution S2.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

Microbial contamination

It complies with the test for *Escherichia coli* and *Salmonella (2.6.13)*.

ASSAY

Shake 1.000 g with 20 ml of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate solution R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 ml of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

STORAGE

In an airtight container, protected from light.

Ph Eur

Sodium Starch Glycolate (Type B)

General Notices

(Ph Eur monograph 0984)

Action and use

Excipient.

Ph Eur

DEFINITION

Sodium salt of a cross-linked partly *C*-carboxymethylated potato starch.

Content

2.0 per cent to 3.4 per cent of Na (A_r 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

CHARACTERS

Appearance

White or almost white, fine, free-flowing powder, very hygroscopic.

Solubility

Practically insoluble in methylene chloride. It gives a translucent suspension in water.

Examined under a microscope it is seen to consist of: granules, irregularly shaped, ovoid or pear shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

IDENTIFICATION

A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 ml of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 ml of *carbon dioxide-free water R* and shake. A suspension forms that settles after standing.

C. To an acidified solution, add *iodinated potassium iodide solution R1*. The solution becomes blue or violet.

D. Solution S2 (see Tests) gives reaction (a) of sodium *(2.3.1).*

TESTS

Solution S1

Centrifuge the suspension obtained in identification test B at 2500 g for 10 min. Collect carefully the supernatant liquid.

Solution S2

Place 2.5 g in a silica or platinum crucible and add 2 ml of a 500 g/l solution of *sulphuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *dilute sulphuric acid R* and heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 ml of *water R*.

Appearance of solution S1

Solution S1 is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

3.0 to 5.0.

Disperse 1.0 g in 30 ml of *water R*.

Sodium glycolate

Maximum 2.0 per cent. Carry out the test protected from light.

Test solution Place 0.20 g in a beaker. Add 5 ml of *acetic acid R* and 5 ml of *water R.* Stir until dissolution is complete (about 10 min). Add 50 ml of *acetone R* and 1 g of *sodium chloride R*. Filter through a fast filter paper impregnated with *acetone R,* rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 ml with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Reference solution Dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide* R at room temperature overnight, in *water R* and dilute to 500.0 ml with the same solvent. To 5.0 ml of this solution add 5 ml of *acetic acid R* and allow to stand for about 30 min. Add 50 ml of *acetone R* and 1 g of *sodium chloride R.* Filter through a fast filter paper impregnated with *acetone R*, rinse the beaker and filter with *acetone R*. Combine the filtrate and washings and dilute to 100.0 ml with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Heat 2.0 ml of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 ml of *2,7-dihydroxynaphthalene solution R.* Shake and heat in a water-bath for 20 min. Cool under running water, transfer quantitatively to a volumetric flask and dilute to 25.0 ml with *sulphuric acid R*, maintaining the flasks under running water. Within 10 min, measure the absorbance at 540 nm (*2.2.25*) using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 ml of the reference solution.

Sodium chloride

Maximum 7.0 per cent.

Place 0.500 g in a beaker and suspend in 100 ml of *water R*. Add 1 ml of *nitric acid R*. Titrate with 0.1 M silver nitrate, determining the end-point potentiometrically *(2.2.20)* using a silver indicator electrode.

1 ml of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

Iron *(2.4.9)*

Maximum 20 ppm determined on 10 ml of solution S2.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 10.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 1.5 h.

Microbial contamination

It complies with the test for *Escherichia coli* and *Salmonella (2.6.13)*.

ASSAY

Shake 1.000 g with 20 ml of *ethanol (80 per cent V/V) R*, stir for 10 min and filter. Repeat the operation until chloride has been completely extracted and verify the absence of chloride using *silver nitrate R2*. Dry the residue at 105 °C to constant mass. To 0.700 g of the dried residue, add 80 ml of *glacial acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*. Carry out a blank titration.

1 ml of 0*.1 M perchloric acid* is equivalent to 2.299 mg of Na.

STORAGE

In an airtight container, protected from light.

Ph Eur

Sodium Starch Glycolate (Type C)

General Notices

(Ph Eur monograph 1566)

Action and use

Excipient.

Ph Eur

DEFINITION

Sodium salt of a partly *O*-carboxymethylated starch, cross-linked by physical dehydration.

Content

2.8 per cent to 5.0 per cent of Na (A_r 22.99) (substance washed with ethanol (80 per cent *V/V*) and dried).

CHARACTERS

Appearance

White or almost white, fine, free-flowing powder, very hygroscopic.

Microscopic examination

It is seen to consist of granules, irregularly shaped, ovoid or pear-shaped, 30-100 µm in size, or rounded, 10-35 µm in size; compound granules consisting of 2-4 components occur occasionally; the granules have an eccentric hilum and clearly visible concentric striations; between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum; small crystals are visible at the surface of the granules. The granules show considerable swelling in contact with water.

Solubility

Soluble in water, practically insoluble in methylene chloride. It gives a translucent gel-like product in water.

IDENTIFICATION

A. pH (see Tests).

B. Prepare with shaking and without heating a mixture of 4.0 g of the substance to be examined and 20 ml of *carbon dioxide-free water R*. The mixture has the appearance of a gel. Add 100 ml of *carbon dioxide-free water R* and shake: the gel remains stable (difference from types A and B). Keep the gel for the tests for appearance of gel and pH.

C. To 5 ml of the gel obtained in identification test B add 0.05 ml of *iodine solution R1*. A dark blue colour is produced.

D. Solution S (see Tests) gives reaction (a) of sodium *(2.3.1).*

TESTS

Solution S

Place 2.5 g in a silica or platinum crucible and add 2 ml of a 500 g/l solution of *sulphuric acid R*. Heat on a water-bath, then cautiously over a naked flame, raising the temperature progressively, and then incinerate in a muffle furnace at 600 ± 25 °C. Continue heating until all black particles have disappeared. Allow to cool, add a few drops of *sulphuric acid R,* heat and incinerate as above. Allow to cool, add a few drops of *ammonium carbonate solution R*, evaporate to dryness and incinerate cautiously. Allow to cool and dissolve the residue in 50 ml of *water R*.

Appearance of gel

The gel obtained in identification test B is colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.5 to 7.5 for the gel obtained in identification test B.

Sodium glycolate

Maximum 2.0 per cent. Carry out the test protected from light.

Test solution Place 0.20 g in a beaker. Add 5 ml of *acetic acid R* and 5 ml of *water R*. Stir until dissolution is complete (about 10 min). Add 50 ml of *acetone R* and 1 g of *sodium chloride R.* Filter through a fast filter paper impregnated with *acetone R,* rinse the beaker and filter with *acetone R.* Combine the filtrate and washings and dilute to 100.0 ml with *acetone R*. Allow to stand for 24 h without shaking. Use the clear supernatant liquid.

Reference solution Dissolve 0.310 g of *glycollic acid R*, previously dried *in vacuo* over *diphosphorus pentoxide R*, in *water R* and dilute to 500.0 ml with the same solvent. To 5.0 ml of this solution, add 5 ml of *acetic acid R* and allow to stand for about 30 min. Add 50 ml of *acetone R* and 1 g of *sodium chloride R* and dilute to 100.0 ml with *acetone R*.

Heat 2.0 ml of the test solution on a water-bath for 20 min. Cool to room temperature and add 20.0 ml of *2,7-dihydroxynaphthalene solution R*. Shake and heat on a water-bath for 20 min. Cool under running water, transfer to a volumetric flask and dilute to 25.0 ml with sulphuric *acid R*, maintaining the flask under running water. Within 10 min, measure the absorbance *(2.2.25)* at 540 nm using *water R* as the compensation liquid. The absorbance of the solution prepared with the test solution is not greater than that of a solution prepared at the same time and in the same manner with 2.0 ml of the reference solution.

Sodium chloride

Maximum 1 per cent.

Shake 1.00 g with 20 ml of *ethanol (80 per cent V/V) R* for 10 min and filter. Repeat the operation 4 times. Dry the residue to constant mass at 100 °C and set aside for the assay. Combine the filtrates. Evaporate to dryness, take up the residue with *water R* and dilute to 25.0 ml with the same solvent. To 10.0 ml of the solution add 30 ml of *water R* and 5 ml of *dilute nitric acid R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*, using a silver indicator electrode.

1 ml of *0.1 M silver nitrate* is equivalent to 5.844 mg of NaCl.

Iron *(2.4.9)*

Maximum 20 ppm, determined on solution S.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 7.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Microbial contamination

It complies with the test for *Escherichia coli* and *Salmonella (2.6.13)*.

ASSAY

To 0.500 g of the dried and crushed residue obtained in the test for sodium chloride add 80 ml of *anhydrous acetic acid R* and heat under a reflux condenser for 2 h. Cool the solution to room temperature. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20).* Carry out a blank test.

1 ml of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

STORAGE

In an airtight container, protected from light.

Ph Eur

Sodium Stearate

General Notices

(Ph Eur monograph 2058)

822-16-2

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of sodium salts of different fatty acids consisting mainly of stearic (octadecanoic) acid [$C_{17}H_{35}COONa$; M_r 306.5] and palmitic (hexadecanoic) acid [$C_{15}H_{31}COONa$; M_r 278.4].

Content:

— *sodium*: 7.4 per cent to 8.5 per cent (A_r 22.99) (dried substance);

— *stearic acid in the fatty acid fraction*: minimum 40 per cent;

— *sum of stearic acid and palmitic acid in the fatty acid fraction*: minimum 90 per cent.

CHARACTERS

Appearance

White or yellowish, fine powder, greasy to the touch.

Solubility

Slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

First identification C, D.

Second identification A, B, D.

A. Freezing point *(2.2.18)*

Minimum 53 °C for the residue obtained in the preparation of solution S (see Tests).

B. Acid value *(2.5.1)*

195 to 210, determined on 0.200 g of the residue obtained in the preparation of solution S dissolved in 25 ml of the prescribed mixture of solvents.

C. Examine the chromatograms obtained in the assay of stearic acid and palmitic acid.

Results The 2 principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the 2 principal peaks in the chromatogram obtained with the reference solution.

D. Solution S gives reaction (b) of sodium *(2.3.1)*.

TESTS

Solution S

To 10.0 g add 100 ml of *peroxide-free ether R* and 80 ml of *acetic acid R*. Boil under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 8 ml, of *acetic acid R*. Combine the aqueous layers, wash with 30 ml of *peroxide-free ether R* and dilute to 100 ml with *distilled water R* (solution S). Evaporate the ether layers to dryness on a water-bath and dry the residue at 100-105 °C.

Acidity or alkalinity

Suspend 2.0 g in 50 ml of previously neutralised *ethanol (96 per cent) R.* Heat under reflux to dissolve and add 3 drops of *phenolphthalein solution R*; the solution is colourless. Not less than 0.60 ml and not more than 0.85 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Chlorides *(2.4.4)*

Maximum 0.2 per cent.

Dilute 0.25 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 0.3 per cent.

Dilute 0.5 ml of solution S to 15 ml with *distilled water R*.

Nickel

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Place 50.0 mg of the substance to be examined in a polytetrafluoroethylene digestion flask and add 0.5 ml of a mixture of 1 volume of *heavy metal-free hydrochloric acid R* and 5 volumes of *heavy metal-free nitric acid R*. Allow to digest at 170 °C for 5 h. Allow to cool. Dissolve the residue in *water R* and dilute to 5.0 ml with the same solvent.

Reference solutions Prepare the reference solutions using *nickel standard solution (10 ppm Ni) R*, diluted as necessary with *water R*.

Source Nickel hollow-cathode lamp.

Wavelength 232.0 nm.

Atomisation device air-acetylene flame.

Loss on drying *(2.2.32)*

Maximum 5.0 per cent.

In a weighing glass introduce 1.0 g of previously *washed sand R*, dry at 105 °C and weigh. Add 0.500 g of the substance to be examined and 10 ml of *ethanol (96 per cent) R*. Evaporate at 80 °C and dry the residue at 105 °C for 4 h.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 micro-organisms per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)*.

ASSAY

Sodium

Dissolve 0.250 g with gentle heating in a mixture of 5 ml of *acetic anhydride R* and 20 ml of *anhydrous acetic acid R*. Cool and add 20 ml of *dioxan R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 2.299 mg of Na.

Stearic acid and palmitic acid

Gas chromatography *(2.2.28)*: use the normalisation procedure.

Test solution In a conical flask fitted with a reflux condenser, dissolve 0.10 g of the substance to be examined in 5 ml of *boron trifluoride-methanol solution R.* Boil under a reflux condenser for 10 min. Add 4 ml of *heptane R* through the condenser and boil again under a reflux condenser for 10 min. Allow to cool. Add 20 ml of *saturated sodium chloride solution R.* Shake and allow the layers to separate. Remove about 2 ml of the organic layer and dry over 0.2 g of *anhydrous sodium sulphate R.* Dilute 1.0 ml of the solution to 100.0 ml with *heptane R.*

Reference solution Prepare the reference solution in the same manner as the test solution using 50.0 mg of *palmitic acid CRS* and 50.0 mg of *stearic acid CRS* instead of the substance to be examined.

Column:

- *material:* fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase*: *macrogol 20 000 R* (film thickness 0.5 µm).

Carrier gas *helium for chromatography R*.

Flow rate 2.4 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240

Injection 2 µl.

Relative retention With reference to stearyl trimethylsilyl fumarate (retention time = about 9 min): stearyl alcohol = 0.30; stearyl trimethylsilyl ether = 0.35; palmityl trimethylsilyl fumarate = 0.80; heptadecyl trimethylsilyl fumarate = 0.85; stearyl trimethylsilyl maleate = 0.90; nonadecyl trimethylsilyl fumarate = 1.05; eicos-11-enyl trimethylsilyl fumarate = 1.15; distearyl fumarate = 2.25.

System suitability:

- *resolution*: minimum 1.5 between the peaks in the chromatogram obtained with the reference solution.

Limits:
- *any impurity:* maximum 0.5 per cent;

— *total*: maximum 5.0 per cent.

Water ***(2.5.12)***

Maximum 5.0 per cent, determined on 0.250 g.

ASSAY

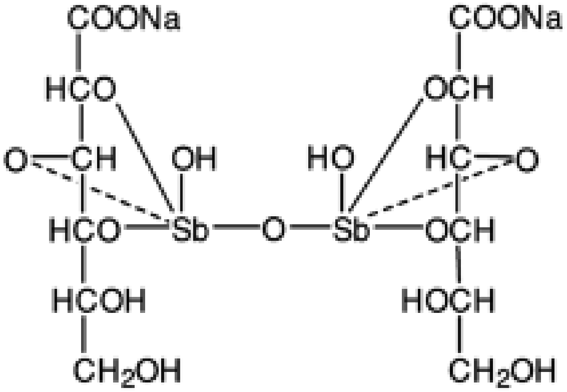
Dissolve 0.250 g, accurately weighed, in 10 ml of *methylene chloride R* and add 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 39.05 mg of $C_{22}H_{39}NaO_4$.

Ph Eur

Sodium Stibogluconate

General Notices



16037-91-5

Action and use

Trivalent ammonium compound; antiprotozoal.

Preparation

Sodium Stibogluconate Injection

DEFINITION

Sodium Stibogluconate is mainly the disodium salt of µ-oxy-bis[gluconato(3-)-*O* ^{2}, *O* ^{3},*O* ^{4}-hydroxoantimony]. It contains not less than 30.0% and not more than 34.0% of antimony(V), calculated with reference to the dried and methanol-free substance.

PRODUCTION

The method of manufacture is such as to ensure consistently controlled reaction stoichiometry in order to yield sodium stibogluconate that is satisfactory with regard to intrinsic toxicity.

CHARACTERISTICS

A colourless, mostly amorphous powder.

Very soluble in *water*; practically insoluble in *ethanol (96%)* and in *ether* .

IDENTIFICATION

A. A solution is dextrorotatory.

B. Pass *hydrogen sulphide* into a 5% w/v solution for several minutes. An orange precipitate is produced.

C. When heated, it chars without melting leaving a residue which yields the reactions characteristic of *antimony compounds* and the reactions characteristic of *sodium salts*, Appendix VI.

TESTS

Stability and acidity of solution

Heat a solution containing the equivalent of 10% w/v of antimony(V) in an autoclave at 115.5° and at a pressure of 70 kPa for 30 minutes. The resulting solution is colourless or almost colourless and has a pH of 5.0 to 5.6, Appendix V L.

Antimony(III)

Dissolve 2 g in 30 ml of *water*, add 15 ml of *hydrochloric acid* and titrate with 0.00833M *potassium bromate VS* using *methyl orange solution* as indicator. Not more than 1.3 ml of 0.00833M *potassium bromate VS* is required.

Chloride

Dissolve 2.5 g in 50 ml of *water* and add 2 ml of 2M *nitric acid* and 75 ml of *acetate buffer pH 5.0*. Titrate with 0.1M *silver nitrate VS* determining the end point potentiometrically. Not more than 3.0 ml of 0.1M *silver nitrate VS* is required.

Methanol

Not more than 2.0% w/w when determined by the following method. Carry out the method for *gas chromatography*, Appendix III B, using the following solutions. For solution (1) add 1 ml of a 1.0% v/v solution of *methanol* to 5 ml of a 0.2% v/v solution of *absolute ethanol* (internal standard). For solution (2) add 5 ml of *water* to 0.5 g of the substance being examined and mix with the aid of ultrasound until solution is complete. For solution (3) add 5 ml of a 0.2% v/v solution of the internal standard to 0.5 g of the substance being examined and mix with the aid of ultrasound until solution is complete.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with porous polymer beads (80 to 100 mesh) (Porapak Q and Chromosorb 101 are suitable) and maintained at 130°.

Calculate the percentage w/w of methanol taking 0.792 g as its weight per ml at 20°.

Loss on drying

When dried to constant weight at 130° at a pressure not exceeding 0.7 kPa, loses not more than 15.0% of its weight. Use 1 g.

ASSAY

Dissolve 0.16 g in 30 ml of *hydrochloric acid*, add 70 ml of *orthophosphoric acid* and stir carefully until completely mixed. Titrate with 0.05M *ammonium iron(II) sulphate VS* prepared using *sulphuric acid (1%)* and determining the end point potentiometrically using a platinum electrode and a silver-silver chloride reference electrode. Each ml of 0.05M *ammonium iron(II) sulphate VS* is equivalent to 3.044 mg of antimony(V).

Antioxidant.

Ph Eur

DEFINITION

Content

48.0 per cent to 52.5 per cent of Na_2SO_3.

CHARACTERS

Appearance

Colourless crystals.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is slightly alkaline *(2.2.4)* .

B. To 5 ml of solution S add 0.5 ml of *0.05 M iodine* . The solution is colourless and gives reaction (a) of sulphates *(2.3.1)* .

C. Solution S gives reaction (a) of sodium *(2.3.1)* .

D. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 10 g in *water R* and dilute to 100 ml with the same solvent.

Solution S1

To 20.0 g add 25 ml of *water R* . Shake until mostly dissolved, and carefully and progressively, add 15 ml of *hydrochloric acid R* . Heat to boiling. Cool and dilute to 100.0 ml with *water R* .

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method I)*.

Thiosulphates

Maximum 0.05 per cent.

To 4.00 g add 100 ml of *water R* . Shake to dissolve, add 10 ml of *formaldehyde solution R* and 10 ml of *acetic acid R* . Allow to stand for 5 min, then add 0.5 ml of *starch solution R* and titrate with *0.05 M iodine* . Carry out a blank titration. The difference between the volumes used in the titrations is not more than 0.15 ml.

Iron *(2.4.9)*

Maximum 5 ppm, determined on solution S1.

Selenium

Maximum 5 ppm.

To 6.0 g add 10 ml of *formaldehyde solution R* , carefully and progressively add 2 ml of *hydrochloric acid R* . Heat on a water-bath for 20 min. Any pink colour in the solution is not more intense than that of a standard prepared at the same time and in the same manner using 2.0 g of the substance to be examined to which 0.2 ml of *selenium standard solution (100 ppm Se) R* has been added.

Zinc

Maximum 12.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dilute 2.0 ml of solution S1 to 10.0 ml with *water R.*

Reference solutions Prepare the reference solutions using *zinc standard solution (100 ppm Zn) R* , diluting with *water R* .

Source Zinc hollow-cathode lamp.

Wavelength 213.9 nm.

Atomisation device Air-acetylene flame.

Heavy metals *(2.4.8)*

Maximum 5 ppm.

Evaporate 20 ml of solution S1 almost to dryness. Add 10 ml of *water R* , neutralise with *concentrated ammonia R* and dilute to 20 ml with *water R* . 12 ml of this solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R* .

ASSAY

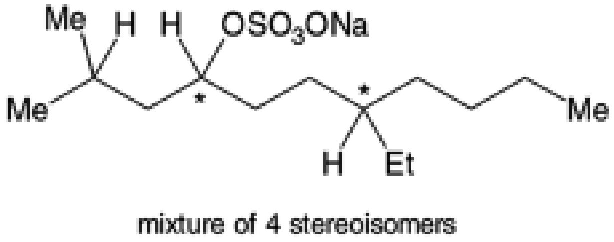
Introduce 0.500 g into a 500 ml conical flask containing 50.0 ml of *0.05 M iodine* . Shake until completely dissolved. Add 1 ml of *starch solution R* and titrate the excess of iodine with *0.1 M sodium thiosulphate* . Carry out a blank titration.

1 ml of *0.05 M iodine* is equivalent to 6.30 mg of Na_2SO_3.

Ph Eur

Sodium Tetradecyl Sulphate Concentrate

General Notices



$C_{14}H_{29}NaO_4S$ 316.4 *139-88-8*

Action and use

Sclerosant.

Preparation

Sodium Tetradecyl Sulphate Injection

DEFINITION

Sodium Tetradecyl Sulphate Concentrate is an aqueous gel containing sodium *all-rac*-4-ethyl-1-isobutyloctyl sulphate. It contains not less than 46.0% w/w and not more than 52.0% w/w of $C_{14}H_{29}NaO_4S$.

CHARACTERISTICS

A clear, colourless gel.

IDENTIFICATION

A. Carry out the method for *gas chromatography* , Appendix III B, using the following solutions. For solution (1) boil 0.2 g under a reflux condenser with 20 ml of 2M *hydrochloric acid* for 15 minutes, allow to cool, add 20 ml of *ethanol (96%)* and extract the mixture with two 10 ml quantities of n- *pentane* . Wash the combined pentane extracts with 20 ml of *water* and dry over *anhydrous sodium sulphate* . Solution (2) contains 0.35% w/v of *decan-1-ol* and 0.7% w/v of *dodecan-1-ol* in n- *pentane* .

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with *acid-washed, silanised diatomaceous support* (80 to 100 mesh) coated with 3% w/w of polyethylene glycol (Carbowax 20M is suitable) and maintained at 120°.

The retention time of the principal peak in the chromatogram obtained with solution (1) is less than the retention time of the peak due to dodecan-1-ol and more than that of the peak due to decan-1-ol in the chromatogram obtained with solution (2).

B. Mix 0.1 ml of a 2% w/v solution with 0.1 ml of a 0.1% w/v solution of *methylene blue* and 2 ml of 1M *sulphuric acid* , add 2 ml of *chloroform* and shake. The chloroform layer is intensely blue.

C. Mix 20 mg with 10 ml of *ethanol (96%)* and heat to boiling on a water bath, shaking frequently. Filter immediately and evaporate the ethanol. Dissolve the residue in 8 ml of *water*, add 3 ml of 2M *hydrochloric acid* , evaporate the solution to half its volume and cool. Filter to remove the congealed fatty alcohols and add 1 ml of 0.25M *barium chloride* to the filtrate. A white, crystalline precipitate is produced.

D. Yields reaction B characteristic of *sodium salts* , Appendix VI.

TESTS

Alkalinity

Dissolve 1 g in 100 ml of *water* and add 0.1 ml of *methyl red solution* ; the solution is yellow. Not more than 0.5 ml of 0.1M *hydrochloric acid VS* is required to change the colour of the solution.

Non-ionic impurities

Not more than 3.0% w/w, with respect to the nominal content of Sodium Tetradecyl Sulphate, when determined by the method for *gas chromatography* , Appendix III B, using the following solutions. Dissolve 75 mg of *dodecan-1-ol* (internal standard) in sufficient n- *hexane* to produce 100 ml (solution A). For solution (1) extract 1 g of the concentrate being examined with 10 ml of solution A followed by two 10 ml quantities of n- *hexane* . Pass 10 ml of the combined extracts at a rate of about 1.5 ml per minute through a column, 1 cm in diameter, packed with 5 g of *basic aluminium oxide* (Brockmann grade II is suitable) and pre-washed with 25 ml of n- *hexane* . Elute with 20 ml of a mixture of equal volumes of n- *hexane* and *ether* , evaporate to dryness using a rotary evaporator and dissolve the residue in 2 ml of n- *hexane* . Prepare solution (2) in the same manner but using 10 ml of n- *hexane* in place of 10 ml of solution A.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with *acid-washed, silanised diatomaceous support* (80 to 100 mesh) coated with 3% w/w of polyethylene glycol (Carbowax 20M is suitable) and maintained at 120°.

Allow the chromatography to proceed for the retention time of the peak due to the internal standard.

In the chromatogram obtained with solution (1) the sum of the areas of any *secondary peaks* is not greater than twice the area of the peak due to the internal standard.

Chloride

Dissolve 33 mg in sufficient *water* to produce 100 ml. 15 ml of the resulting solution complies with the *limit test for chlorides* , Appendix VII (1%).

Sulphated ash

10.3 to 13.3%, Appendix IX A.

ASSAY

Dissolve 2.4 g in sufficient *water* to produce 1000 ml. To 20 ml add 15 ml of *chloroform* and 10 ml of *dimidium bromide-sulphan blue mixed solution* and titrate with *0.004 M benzethonium chloride VS*, shaking vigorously and allowing the layers to separate after each addition, until the pink colour of the chloroform layer is completely discharged and a greyish blue colour is produced. Each ml of *0.004 M benzethonium chloride VS* is equivalent to 1.266 mg of $C_{14}H_{29}NaO_4S$.

STORAGE

Sodium Tetradecyl Sulphate Concentrate should be protected from light.

Sodium Thiosulphate

General Notices

(Ph Eur monograph 0414)

$Na_2S_2O_3,5H_2O$ 248.2 *10102-17-7*

Action and use

Used in treatment of cyanide poisoning.

Preparation

Sodium Thiosulphate Injection

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent of $Na_2S_2O_3,5H_2O$.

CHARACTERS

Appearance

Transparent, colourless crystals, efflorescent in dry air.

Solubility

Very soluble in water, practically insoluble in ethanol 96 per cent. It dissolves in its water of crystallisation at about 49 °C.

IDENTIFICATION

A. It decolourises iodinated *potassium iodide solution R* .

B. To 0.5 ml of solution S (see Tests) add 0.5 ml of *water R* and 2 ml of *silver nitrate solution R2* . A white precipitate is formed which rapidly becomes yellowish and then black.

C. To 2.5 ml of solution S add 2.5 ml of *water R* and 1 ml of *hydrochloric acid R* . A precipitate of sulphur is formed and gas is evolved which gives a blue colour to *starch iodate paper R* .

D. 1 ml of solution S gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

The freshly prepared solution is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Dissolve 10.0 g in 50 ml of *distilled water R* , add 1 ml of *0.1 M sodium hydroxide* and dilute to 100 ml with the same solvent.

pH *(2.2.3)*

6.0 to 8.4 for the freshly prepared solution S.

Sulphates and sulphites *(2.4.13)*

Maximum 0.2 per cent.

Dilute 2.5 ml of freshly prepared solution S to 10 ml with *distilled water R* . To 3 ml of this solution first add 2 ml of *iodinated potassium iodide solution R* and continue the addition dropwise until a very faint persistent yellow colour appears. Dilute to 15 ml with *distilled water R* .

Sulphides

To 10 ml of solution S add 0.05 ml of a freshly prepared 50 g/l solution of *sodium nitroprusside R* . The solution does not become violet.

Heavy metals

Maximum 10 ppm.

To 10 ml of solution S add 0.05 ml of *sodium sulphide solution R* . After 2 min, any brown colour in the solution is not more intense than that in a reference solution prepared at the same time and in the same manner using 10 ml of *lead standard solution (1 ppm Pb) R.*

ASSAY

Dissolve 0.500 g in 20 ml of *water R* and titrate with *0.05 M iodine,* using 1 ml of *starch solution R,* added towards the end of the titration, as indicator.

1 ml of *0.05 M iodine* is equivalent to 24.82 mg of $Na_2S_2O_3,5H_2O$.

STORAGE

In an airtight container .

Ph Eur

Sodium Valproate

General Notices

$C_8H_{15}NaO_2$ 166.2 *1069-66-5*

Action and use

Antiepileptic.

Preparations

Sodium Valproate Oral Solution

Sodium Valproate Tablets

Gastro-resistant Sodium Valproate Tablets

Ph Eur

DEFINITION

Sodium 2-propylpentanoate.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline, hygroscopic powder.

Solubility

Very soluble in water, slightly or freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry (*2.2.24*).

Comparison *sodium valproate CRS.*

If the spectra obtained in the solid state show differences, record new spectra using discs prepared by placing 50 µl of a 100 g/l solution in *methanol R* on a disc of *potassium bromide R* and evaporating the solvent *in vacuo*. Examine immediately.

B. Examine the chromatograms obtained in the test for related substances.

Results The principal peak in the chromatogram obtained with test solution (b) is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

C. 2 ml of solution S (see Tests) gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 1.25 g in 20 ml of *distilled water R* in a separating funnel, add 5 ml of *dilute nitric acid R* and shake. Allow the mixture to stand for 12 h. Use the lower layer.

Appearance of solution

The solution is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 2.0 g in *water R* and dilute to 10 ml with the same solvent.

Acidity or alkalinity

Dissolve 1.0 g in 10 ml of *water R.* Add 0.1 ml of *phenolphthalein solution R* . Not more than 0.75 ml *of 0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Gas chromatography (*2.2.28*).

Internal standard solution Dissolve 10 mg of *butyric acid R* in *heptane R* and dilute to 200 ml with the same solvent.

Test solution (a) Dissolve 0.500 g of the substance to be examined in 10 ml of *water R* . Add 5 ml of *dilute sulphuric acid R* and shake with 3 quantities, each of 20 ml, of *heptane R.* Add 10.0 ml of the internal standard solution to the combined upper layers, shake with anhydrous *sodium sulphate R* , filter and evaporate the filtrate, at a temperature not exceeding 30 °C, using a rotary evaporator. Take up the residue with *heptane R* and dilute to 10.0 ml with the same solvent. Dilute 1.0 ml of this solution to 10.0 ml with *heptane R* .

Test solution (b) Dissolve 40 mg of the substance to be examined in 100 ml of *water R* . To 10 ml of this solution add 0.5 ml of *dilute sulphuric acid R* and shake with 3 quantities, each of 5 ml, of *heptane R* . Shake with *anhydrous sodium sulphate R,* filter and evaporate the filtrate, at a temperature not exceeding 30 °C, to a volume of about 10 ml, using a rotary evaporator.

Reference solution (a) Dissolve 20 mg of *2-(1-methylethyl)pentanoic acid CRS* (impurity C) in 5.0 ml of test solution (b) and dilute to 10 ml with *heptane R* . Dilute 1 ml of this solution to 10 ml with *heptane R.*

Reference solution (b) Prepare as prescribed for test solution (b), using *sodium valproate CRS* instead of the substance to be examined.

Column:

- — *material*: wide-bore fused silica;
- — *size:* *l* = 30 m, Ø = 0.53 mm;
- — *stationary phase*: *macrogol 20 000 2-nitroterephthalate R* (film thickness 0.5 µm).

J. R = R′ = CH_2-CH_2-CH_3: 2,2-dipropylpentanenitrile.

Ph Eur

Soft Soap

General Notices

Preparation

Soap Spirit

DEFINITION

Soft Soap is soap made by the interaction of potassium hydroxide or sodium hydroxide with a suitable vegetable oil or oils or with fatty acids derived there from. It yields not less than 44.0% of fatty acids. It may be coloured with chlorophyll or not more than 0.015% of a suitable green soap dye.

CHARACTERISTICS

A yellowish white to green or brown, unctuous substance.

Soluble in *water* and in *ethanol (96%)*.

TESTS

Chlorides and other ethanol-insoluble substances

Dissolve 5 g in 100 ml of hot *ethanol (96%)* previously neutralised to *phenolphthalein solution R1*, filter through a dried and tared filter, wash the residue thoroughly with hot neutralised *ethanol (96%)* and dry to constant weight at 105°. The residue weighs not more than 0.15 g.

Free fatty acid or alkali hydroxide

Boil 250 ml of *ethanol (96%)* to remove carbon dioxide, add 0.5 ml of *phenolphthalein solution R1*, allow to cool to 70° and neutralise, if necessary, with 0.1M *sodium hydroxide VS* or 0.05M *sulphuric acid VS*. To 100 ml of the neutral ethanol add 10 g of the substance being examined and dissolve it as quickly as possible by heating under a reflux condenser. Cool to 70° and, if the solution is not pink, titrate at 70° with 0.1M *sodium hydroxide VS*; not more than 0.2 ml is required. If the solution is pink add, in a thin stream, 5 ml of hot *barium chloride solution* previously neutralised to *phenolphthalein solution R1*, mix thoroughly and titrate with 0.1M *hydrochloric acid VS* until the pink colour disappears; not more than 1.0 ml is required.

Total free alkali

To 100 ml of the neutral ethanol prepared as described in the test for Free fatty acid or alkali hydroxide add 10 g of the substance being examined and dissolve it as quickly as possible by heating under a reflux condenser. Add immediately 3 ml of 0.5M *sulphuric acid VS* and boil under a reflux condenser on a water bath for at least 10 minutes. If the solution is not pink, cool to 70° and titrate with 1M *sodium hydroxide VS* until a pink colour is produced. The volume of 0.5M *sulphuric acid VS* neutralised by the substance being examined is not more than 1.0 ml.

Unsaponifiable matter and unsaponified neutral fat

Dissolve 5 g in 80 ml of a mixture of 50 ml of *ethanol (96%)* and 100 ml of *water*, without heating more than is necessary, and transfer to a separating funnel, washing the vessel with the remaining 70 ml of the mixture. Extract with 100 ml of *ether* while still slightly warm, run off the ethanolic soap layer into a second separating funnel and extract with 50 ml of *ether*. Repeat the extraction with 50 ml of *ether* and pour the three ether extracts into a separating funnel containing 20 ml of *water*. Rotate the separating funnel without violent shaking and, after allowing the liquids to separate, run off the water. Repeat the washing with *water* in the same manner until the separated washings are not more than faintly turbid when acidified. Wash the ether solution twice by shaking vigorously with 20 ml of 0.5M *potassium hydroxide*, each washing with alkali being immediately followed by washing with 20 ml of *water*, shaking vigorously each time. Acidify the last alkali washing after separation and, if the liquid becomes turbid, repeat the washing with 0.5M *potassium hydroxide* and *water* until the alkali washing remains clear on acidification. Finally wash with successive 20 ml quantities of *water* until the washings do not give a pink colour with *phenolphthalein solution R1*. Transfer the ether solution to a tared flask and remove the ether. When nearly all the ether has evaporated, add 3 ml of *acetone*. With the aid of a gentle current of air remove the solvent completely from the flask, which is preferably almost entirely immersed in boiling *water*, held obliquely and rotated. Repeat the last operation until the weight of the residue is constant. The residue weighs not more than 40 mg.

CHARACTERISTICS OF THE FATTY ACIDS OBTAINED IN THE ASSAY

Acid value

Not more than 205, Appendix X B, when determined on 2 to 3 g of the fatty acids, using 0.5M *potassium hydroxide VS* and substituting 2.805 for 5.610 in the formula.

Iodine value

Not less than 83 (*iodine monochloride method*), Appendix X E.

Solidifying point

Not above 31°, Appendix V B, with the following modifications. Where the determination is made at 15° to 20° the 1000 ml beaker and cooling liquid need not be used. Where the room temperature falls outside this range the 1000 ml beaker should contain water maintained at 15° to 20° and the level of this water should not be below the level of the sample in the inner tube.

Transfer about 15 ml of the melted fatty acids to the inner test tube. Before the temperature of the fatty acids drops to a point 10° above their expected solidifying point, begin agitation in a vertical manner at a rate of 100 complete up and down motions per minute, the stirrer moving through a vertical distance of about 38 mm. Continue stirring in this manner until the temperature has remained constant for 30 seconds or has begun to rise within 30 seconds of ceasing to fall. Discontinue stirring immediately and lift the stirrer out of the sample. Observe the rise in temperature; the highest temperature reached after cessation of stirring is the solidifying point of the fatty acids. When reading the thermometer avoid all undue vibration as this will cause the temperature to drop before reaching the maximum.

Resin

Mix 0.5 ml of the melted fatty acids in a test tube with 2 ml of *acetic anhydride*, warm, shake until clear and cool to 15.5°. Transfer one drop of this solution to a white porcelain tile, place one drop of a cold mixture of equal volumes of *sulphuric acid* and *water* adjacent to it and gently bring the drops together with a glass rod. No transient violet colour is produced.

ASSAY

Dissolve 30 g in 100 ml of *water*, transfer to a separating funnel, acidify with 1M *sulphuric acid* and extract with successive quantities of 50, 40 and 30 ml of *ether*. Mix the ether solutions in a separating funnel and wash with *water* until the washings are free from mineral acid. Transfer the ether solution to a tared flask, remove the ether and dry the residue of fatty acids to constant weight at 80°.

Somatostatin

General Notices

(Ph Eur monograph 0949)

H–Ala–Gly–Cys–Lys–Asn–Phe–Phe–Trp–Lys–Thr–Phe–Thr–Ser–Cys–OH

$C_{76}H_{104}N_{18}O_{19}S_2$ 1638 *38916-34-6*

Action and use

Growth hormone release inhibiting hormone.

Ph Eur

DEFINITION

L-Alanylglycyl-L-cysteinyl-L-lysyl-L-asparaginyl-L-phenylalanyl-L-phenylalanyl-L-tryptophyl-L-lysyl-L-threonyl-L-phenylalanyl-L-threonyl-L-seryl-L-cysteine cyclic (3→14)-disulfide.

Synthetic cyclic tetradecapeptide having the structure of the hypothalamic hormone that inhibits the release of human growth hormone. It contains a variable amount of acetic acid. It is available in the freeze-dried form.

Content

95.0 per cent to 103.0 per cent (anhydrous and acetic acid-free substance).

CHARACTERS

Appearance

White or almost white, amorphous powder.

Solubility

Freely soluble in water and in acetic acid, practically insoluble in methylene chloride.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 1.0 mg of the substance to be examined in 1.0 ml *of water R* .

Reference solution Dissolve the contents of a vial of *somatostatin CRS* in *water R* and dilute with the same solvent to obtain a final concentration of 1 mg/ml.

Plate *TLC silica gel plate R.*

Mobile phase *glacial acetic acid R, pyridine R, water R, butanol R* (10:15:20:45 *V/V/V/V*).

Application 20 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with a 1 g/l solution of *ninhydrin R* and heat in an oven at 110 °C for about 5 min.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

C. Amino acid analysis *(2.2.56)* . For hydrolysis use Method 1 and for analysis use Method 1.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids taking 1/8 of the sum of the number of moles of aspartic acid, alanine, lysine, glycine and phenylalanine as equal to 1. The values fall within the following limits: aspartic acid: 0.90 to 1.10; glycine: 0.90 to 1.10; alanine: 0.90 to 1.10; phenylalanine: 2.7 to 3.3; serine: 0.7 to 1.05; threonine: 1.4 to 2.1; half-cystine: 1.4 to 2.1; lysine: 1.8 to 2.2. Not more than traces of other amino acids are present.

TESTS

Specific optical rotation *(2.2.7)*

- 37 to - 47 (anhydrous and acetic acid-free substance).

Dissolve 2.0 mg in 1.0 ml of a 1 per cent *V/V* solution of *glacial acetic acid R* .

Absorbance *(2.2.25)*

Maximum 0.20 at 280 nm (calculated with reference to the peptide content as determined in the assay).

Dissolve 5.0 mg in a 9 g/l solution of *sodium chloride R* and dilute to 100.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* : use the normalisation procedure.

Test solution Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to

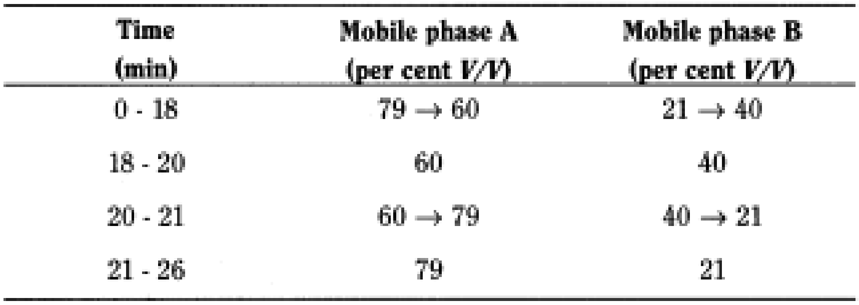
10.0 ml with the same solvent.

Column:

- *size*: *l* = 0.05 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- *mobile phase A:* dilute 11 ml of *phosphoric acid R* with *water R* , adjust to pH 2.3 with *triethylamine R* and dilute to 1000 ml with *water R* ;
- *mobile phase B: acetonitrile for chromatography R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 18	79 → 60	21 → 40
18 - 20	60	40
20 - 21	60 → 79	40 → 21
21 - 26	79	21

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 25 µl.

Limits:

- *any impurity*: maximum 1 per cent;
- *total:* maximum 2 per cent;
- *disregard limit*: 0.03 per cent.

Acetic acid *(2.5.34)*

3.0 per cent to 15.0 per cent.

Test solution Dissolve 7.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A, then dilute to 10.0 ml with the same mixture of mobile phases.

Water *(2.5.12)*

Maximum 8.0 per cent, determined on 10.0 mg.

Bacterial endotoxins *(2.6.14)*

Less than 10 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Reference solution Dissolve the contents of a vial of *somatostatin CRS* in *water R* and dilute with the same solvent to obtain a final concentration of 0.5 mg/ml.

Mobile phase mobile phase B, mobile phase A (25:75 *V/V*).

Run time 15 min.

Calculate the content of somastatin ($C_{76}H_{104}N_{18}O_{19}S_2$) from the declared content of $C_{76}H_{104}N_{18}O_{19}S_2$ in *somatostatin CRS*.

STORAGE

In an airtight container protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

$C_{990}H_{1528}N_{262}O_{300}S_{7}$ 22,125

Action and use

Growth hormone.

Preparation

Somatropin Injection

Ph Eur

DEFINITION

Solution containing a protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary. It may contain buffer salts and other auxiliary substances.

Content

91.0 per cent to 105.0 per cent of the amount of somatropin stated on the label.

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ($C_{990}H_{1528}N_{262}O_{300}S_{7}$) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin concentrated solution is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of at least 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin concentrated solution complies with the following additional requirements.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance: clear or slightly turbid, colourless solution.

IDENTIFICATION

A. Capillary electrophoresis *(2.2.47)* as described in the test for charged variants with the following modifications.

Injection Test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

Results In the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping *(2.2.55)* .

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Dilute the solution to be examined with *0.05 M tris-hydrochloride buffer solution pH 7.5 R* so that it contains 2.0 mg/ml of somatropin and transfer about 1.0 ml to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/ml solution of *trypsin for peptide mapping R* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* and add 30 µl to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

Note: If a 2 mg/ml somatropin concentration is not obtainable, a similar digest relationship (micrograms of trypsin per milligram of somatropin) may be used.

Reference solution Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION

Liquid chromatography (*2.2.29*).

Column:

— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octylsilyl silica gel for chromatography R* (5-10 µm) with a pore size of 30 nm;

— *temperature*: 30 °C.

Mobile phase:

— *mobile phase A*: dilute 1 ml of *trifluoroacetic acid R* to 1000 ml with *water R* ;

— *mobile phase B*: to 100 ml of *water R* , add 1 ml of *trifluoroacetic acid R* and dilute to 1000 ml with *acetonitrile for chromatography R* ;

71 - 85	100	0

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 100 µl.

System suitability The chromatograms obtained with the test solution and the reference solution are similar to the chromatogram of somatropin digest supplied with *somatropin CRS.*

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Related proteins

Liquid chromatography *(2.2.29)* : use the normalisation procedure. *Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain it at 2-8 °C.*

Test solution Dilute the solution to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, so as to contain 2.0 mg/ml of somatropin. A weaker solution may be prepared, in which case the injection volume is adjusted accordingly.

Reference solution Prepare a solution of *somatropin CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/ml of somatropin.

Resolution solution Dissolve the contents of a vial of *somatropin/desamidosomatropin resolution mixture CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a concentration of 2 mg/ml of somatropin.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: a suitable singly end-capped butylsilyl silica gel, with a granulometry of 5 µm and a porosity of 30 nm; a silica saturation column is placed between the pump and the injector valve;

— *temperature*: 45 °C.

Mobile phase *propanol R* , *0.05 M tris-hydrochloride buffer solution pH 7.5 R* (29:71 *V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 220 nm.

Preconditioning of the column Rinse with 200-500 ml of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* in a 50 per cent *V/V* solution of *acetonitrile R;* repeat as necessary, to improve column performance.

Injection 20 µl.

Relative retention With reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of *propanol R* in the mobile phase): desamidosomatropin = about 0.85.

System suitability Resolution solution:

— *resolution:* minimum 1.0 between the peaks due to desamidosomatropin and somatropin;

— *symmetry factor* : 0.9 to 1.8 for the peak due to somatropin.

Limit:

— *total*: maximum 6.0 per cent.

Dimer and related substances of higher molecular mass

Size-exclusion chromatography *(2.2.30)* : use the normalisation procedure.

Test solution Dilute the solution to be examined in *0.025 M phosphate buffer solution pH 7.0 R* , so as to contain 1.0 mg/ml of somatropin.

Reference solution Dissolve the contents of a vial of *somatropin CRS* in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/ml.

Resolution solution Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/ml.

Column:

— *size*: l = 0.30 m, Ø = 7.8 mm;

— *stationary phase*: *hydrophilic silica gel for chromatography R* of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

Mobile phase *2-propanol R*, *0.063 M phosphate buffer solution pH 7.0 R* (3:97 *V/V*); filter and degas.

Flow rate 0.6 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl.

Relative retention with reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

System suitability Resolution solution:

— *peak-to-valley ratio*: minimum 2.5, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limit:
— sum of the peaks with retention times less than that of the principal peak: maximum 4.0 per cent.

Charged variants

Capillary electrophoresis *(2.2.47)*.

Test solution (a) Dilute the solution to be examined so as to obtain a concentration of 1 mg/ml of somatropin.

Test solution (b) Mix equal volumes of test solution (a) and the reference solution.

Reference solution Dissolve the contents of a vial of *somatropin CRS* in *water R* and dilute with the same solvent to obtain a concentration of 1 mg/ml.

Capillary:
— *material*: uncoated fused silica;

— *size:* effective length = at least 70 cm, Ø = 50 µm.

Temperature 30 °C.

CZE buffer 13.2 g/l solution of *ammonium phosphate R* adjusted to pH 6.0 with *phosphoric acid R* and filtered.

Detection Spectrophotometer at 200 nm.

Set the autosampler to store the samples at 4 °C during analysis.

Preconditioning of the capillary Rinse with 1 M sodium hydroxide for 20 min, with *water R* for 10 min and with the CZE buffer for 20 min.

Between-run rinsing Rinse with *0.1 M sodium hydroxide* for 2 min and with the CZE buffer for 6 min.

Note: rinsing times may be adapted according to the length of the capillary and the equipment used.

Injection Test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s. The injection time and pressure may be adapted in order to meet the system suitability criteria.

Migration Apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

Relative migration With reference to somatropin

Deamidated forms = 1.02 to 1.11.

System suitability Reference solution:

— The electropherogram obtained is similar to the electropherogram of somatropin supplied with *somatropin CRS*; 2 peaks (I_1, I_2) eluting prior to the principal peak and at least 2 peaks (I_3, I_4) eluting after the principal peak are clearly visible.

Note: peak I_2 *corresponds to the cleaved form and peak* I_4 *corresponds to the deamidated forms, eluting as a doublet.*

Limits:

— *deamidated forms:* maximum 5.0 per cent;

— *any other impurity*: for each impurity, maximum 2.0 per cent;

— *total:* maximum 10.0 per cent.

Bacterial endotoxins ***(2.6.14)***

Less than 5 IU in the volume that contains 1 mg of somatropin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Size-exclusion chromatography *(2.2.30)* as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) from the declared content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in *somatropin CRS*.

STORAGE

In an airtight container at a temperature of - 20 °C. Avoid repeated freezing and thawing. If the solution is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

— the content of somatropin in milligrams per millilitre;

— the name and concentration of any auxiliary substance.

$C_{990}H_{1528}N_{262}O_{300}S_7$ 22,125 *12629-01-5*

Action and use

Growth hormone.

Preparation

Somatropin Injection

Ph Eur

DEFINITION

Protein having the structure (191 amino-acid residues) of the major component of growth hormone produced by the human pituitary.

Content

91.0 per cent to 105.0 per cent (anhydrous substance).

By convention, for the purpose of labelling somatropin preparations, 1 mg of anhydrous somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) is equivalent to 3.0 IU of biological activity.

PRODUCTION

Somatropin is produced by a method based on recombinant DNA (rDNA) technology. During the course of product development, it must be demonstrated that the manufacturing process produces a product having a biological activity of not less than 2.5 IU/mg, using a validated bioassay based on growth promotion and approved by the competent authority.

Somatropin complies with the following additional requirements.

Host-cell-derived proteins

The limit is approved by the competent authority.

Host-cell- and vector-derived DNA

The limit is approved by the competent authority.

CHARACTERS

Appearance: white or almost white powder.

IDENTIFICATION

A. Capillary electrophoresis *(2.2.47)* as described in the test for charged variants with the following modifications.

Injection Test solution (b); under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

Results In the electropherogram obtained, only 1 principal peak, corresponding to somatropin, is detected: no doubling of this peak is observed.

B. Examine the chromatograms obtained in the test for related proteins.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

C. Peptide mapping *(2.2.55)* .

SELECTIVE CLEAVAGE OF THE PEPTIDE BONDS

Test solution Prepare a solution of the substance to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a solution containing 2.0 mg/ml of somatropin and transfer about 1.0 ml to a tube made from a suitable material such as polypropylene. Prepare a 1 mg/ml solution of *trypsin for peptide mapping R* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* and add 30 µl to the solution of the substance to be examined. Cap the tube and place in a water-bath at 37 °C for 4 h. Remove from the water-bath and stop the reaction immediately, for example by freezing. If analysed immediately using an automatic injector, maintain at 2-8 °C.

Reference solution Prepare at the same time and in the same manner as for the test solution, but using *somatropin CRS* instead of the substance to be examined.

CHROMATOGRAPHIC SEPARATION

Liquid chromatography *(2.2.29)* .

Column:

— *size:* l = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octylsilyl silica gel for chromatography R* (5-10 µm) with a pore size of

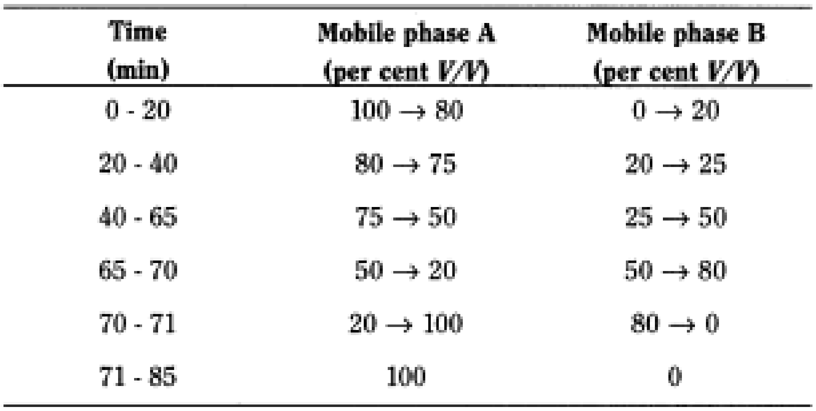
30 nm;

— *temperature*: 30 °C.

Mobile phase:

— *mobile phase A*: dilute 1 ml of *trifluoroacetic acid R* to 1000 ml with *water R;*

— *mobile phase B*: to 100 ml of *water R* , add 1 ml of *trifluoroacetic acid R* and dilute to 1000 ml with *acetonitrile for chromatography R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 20	100 → 80	0 → 20
20 - 40	80 → 75	20 → 25
40 - 65	75 → 50	25 → 50
65 - 70	50 → 20	50 → 80
70 - 71	20 → 100	80 → 0
71 - 85	100	0

Flow rate 1 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 100 µl.

System suitability The chromatograms obtained with the test solution and the reference solution are similar to the chromatogram of somatropin digest supplied with *somatropin CRS.*

Results The profile of the chromatogram obtained with the test solution corresponds to that of the chromatogram obtained with the reference solution.

D. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with the reference solution.

TESTS

Related proteins

Liquid chromatography (*2.2.29*): use the normalisation procedure. *Maintain the solutions at 2-8 °C and use within 24 h. If an automatic injector is used, maintain it at 2-8 °C*.

Test solution Prepare a solution of the substance to be examined in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/ml of somatropin.

Reference solution Prepare a solution of *somatropin CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R*, containing 2.0 mg/ml of somatropin.

Resolution solution Dissolve the contents of a vial of *somatropin/desamidosomatropin resolution mixture CRS* in *0.05 M tris-hydrochloride buffer solution pH 7.5 R* to obtain a concentration of 2 mg/ml of somatropin.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: a suitable singly end-capped butylsilyl silica gel, with a granulometry of 5 µm and a porosity of 30 nm; a silica saturation column is placed between the pump and the injector valve;

— *temperature:* 45 °C.

Mobile phase *propanol R*, *0.05 M tris-hydrochloride buffer solution pH 7.5* R (29:71 *V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 220 nm.

Preconditioning of the column Rinse with 200-500 ml of a 0.1 per cent *V/V* solution of *trifluoroacetic acid R* in a 50 per cent *V/V* solution of *acetonitrile R*; repeat as necessary, to improve column performance.

Injection 20 µl.

Relative retention With reference to somatropin (retention time = about 33 min; if necessary adjust the concentration of *propanol R* in the mobile phase): desamidosomatropin = about 0.85.

System suitability Resolution solution:

— *resolution*: minimum 1.0 between the peaks due to desamidosomatropin and somatropin;

— *symmetry factor*: 0.9 to 1.8 for the peak due to somatropin.

Limit:

— *total*: maximum 6.0 per cent.

Dimer and related substances of higher molecular mass

Size-exclusion chromatography *(2.2.30)*: use the normalisation procedure.

Test solution Prepare a solution of the substance to be examined in *0.025 M phosphate buffer solution pH 7.0 R*, containing 1.0 mg/ml of somatropin.

Reference solution Dissolve the contents of a vial of *somatropin CRS* in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/ml.

Resolution solution Place 1 vial of *somatropin CRS* in an oven at 50 °C for a period sufficient to generate 1-2 per cent of dimer (typically 12-24 h). Dissolve its contents in *0.025 M phosphate buffer solution pH 7.0 R* and dilute with the same solution to obtain a concentration of 1.0 mg/ml.

Column:

— *size: l* = 0.30 m, Ø = 7.8 mm;

— *stationary phase*: *hydrophilic silica gel for chromatography R* of a grade suitable for fractionation of globular proteins in the relative molecular mass range of 5000 to 150 000.

Mobile phase *2-propanol R, 0.063 M phosphate buffer solution pH 7.0 R* (3:97 *V/V*); filter and degas.

Flow rate 0.6 ml/min.

Detection Spectrophotometer at 214 nm.

Injection 20 µl.

Relative retention With reference to somatropin monomer (retention time = 12 min to 17 min): related substances of higher molecular mass = about 0.65; somatropin dimer = about 0.9.

System suitability Resolution solution:

— *peak-to-valley ratio* : minimum 2.5, where H_p = height above the baseline of the peak due to the dimer and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to the monomer.

Limit:

— *sum of the peaks with retention times less than that of the principal peak: maximum 4.0 per cent*.

Charged variants

Capillary electrophoresis *(2.2.47)* .

Test solution (a) Prepare a solution of the substance to be examined containing 1 mg/ml of somatropin.

Test solution (b) Mix equal volumes of test solution (a) and the reference solution.

Reference solution Dissolve the contents of a vial of *somatropin CRS* in *water R* and dilute with the same solvent to obtain a concentration of 1 mg/ml.

Capillary:

— *material*: uncoated fused silica;

— *size*: effective length = at least 70 cm, Ø = 50 µm.

Temperature 30 °C.

CZE buffer 13.2 g/l solution of *ammonium phosphate R* adjusted to pH 6.0 with *phosphoric acid R* and filtered.

Detection Spectrophotometer at 200 nm.

Set the autosampler to store the samples at 4 °C during analysis.

Preconditioning of the capillary Rinse with *1 M sodium hydroxide* for 20 min, with *water R* for 10 min and with the CZE buffer for 20 min.

Between-run rinsing Rinse with *0.1 M sodium hydroxide* for 2 min and with the CZE buffer for 6 min.

Note: rinsing times may be adapted according to the length of the capillary and the equipment used.

Injection Test solution (a) and the reference solution; under pressure or vacuum, using the following sequence: sample injection for at least 3 s then CZE buffer injection for 1 s.

The injection time and pressure may be adapted in order to meet the system suitability criteria.

Migration Apply a field strength of 217 V/cm (20 kV for capillaries of 92 cm total length) for 80 min, using the CZE buffer as the electrolyte in both buffer reservoirs.

Relative migration with reference to somatropin

deamidated forms = 1.02 to 1.11.

System suitability Reference solution:

— The electropherogram obtained is similar to the electropherogram of somatropin supplied with *somatropin CRS*; 2 peaks (I_1, I_2) eluting prior to the principal peak and at least 2 peaks (I_3, I_4) eluting after the principal peak are clearly visible.

Note: peak I_2 corresponds to the cleaved form and peak I_4 corresponds to the deamidated forms, eluting as a doublet.

Limits:

- *deamidated forms*: maximum 5.0 per cent;
- *any other impurity*: for each impurity, maximum 2.0 per cent;
- *total*: maximum 10.0 per cent.

Water ***(2.5.32)***

Maximum 10.0 per cent.

Bacterial endotoxins ***(2.6.14)***

Less than 5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Size-exclusion chromatography *(2.2.30)* as described in the test for dimer and related substances of higher molecular mass.

Calculate the content of somatropin ($C_{990}H_{1528}N_{262}O_{300}S_7$) from the declared content of $C_{990}H_{1528}N_{262}O_{300}S_7$ in *somatropin CRS*.

STORAGE

In an airtight container, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

Ph Eur

Sorbic Acid

General Notices

Action and use

Antimicrobial preservative.

Ph Eur

DEFINITION

(*E*,*E*)-Hexa-2,4-dienoic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

First identification A, C.

Second identification A, B, D.

A. Melting point *(2.2.14)* : 132 °C to 136 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 50.0 mg in *water R* and dilute to 250.0 ml with the same solvent. Dilute 2.0 ml of this solution to 200.0 ml with *0.1 M hydrochloric acid* .

Spectral range 230-350 nm.

Absorption maximum At 264 nm.

Specific absorbance at the absorption maximum 2150 to 2550.

C. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *sorbic acid CRS.*

D. Dissolve 0.2 g in 2 ml of *ethanol (96 per cent) R* and add 0.2 ml of *bromine water R.* The solution is decolorised.

TESTS

Solution S

Dissolve 1.25 g in *ethanol (96 per cent) R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Aldehydes

Maximum 0.15 per cent, calculated as C_2H_4O.

Dissolve 1.0 g in a mixture of 30 ml of *water R* and 50 ml of *2-propanol R* , adjust to pH 4 with *0.1 M hydrochloric acid* or *0.1 M sodium hydroxide* and dilute to 100 ml with *water R* . To 10 ml of this solution add 1 ml of *decolorised fuchsin solution R* and allow to stand for 30 min. Any colour in the solution is not more intense than that in a standard prepared at the same time by adding 1 ml of *decolorised fuchsin solution R* to a mixture of 1.5 ml of *acetaldehyde standard solution (100 ppm* C_2H_4O*) R*, 4 ml of *2-propanol R* and 4.5 ml of *water R* .

Heavy metals *(2.4.8)*

Maximum 10 ppm.

12 ml of solution S complies with test B. Prepare the reference solution using 5 ml of *lead standard solution (1 ppm Pb) R* and 5 ml of *ethanol (96 per cent) R.*

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 2.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.1000 g in 20 ml of *ethanol (96 per cent) R* . Using 0.2 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 11.21 mg of $C_6H_8O_2$.

STORAGE

Protected from light.

Ph Eur

Sorbitan Laurate

General Notices

(Ph Eur monograph 1040)

1338-39-2

Action and use

Non-ionic surfactant.

When sorbitan monolaurate is demanded, Sorbitan Laurate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with lauric (dodecanoic) acid.

CHARACTERS

Appearance

Brownish-yellow, viscous liquid.

Solubility

Practically insoluble, but dispersible in water, miscible with alcohol.

Relative density About 0.98.

IDENTIFICATION

A. It complies with the test for hydroxyl value (see Tests).

B. It complies with the test for iodine value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 7.0, determined on 5.0 g.

Hydroxyl value ***(2.5.3, Method A)***

330 to 358.

Iodine value ***(2.5.4)***

Maximum 10.

Peroxide value ***(2.5.5)***

Maximum 5.0.

Saponification value ***(2.5.6)***

158 to 170.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*.

Prepare reference solution (a) as indicated in tables 2.4.22.-1 and 2.4.22.-2.

Composition of the fatty acid fraction of the substance:
— *caproic acid* : maximum 1.0 per cent;
— *caprylic acid* : maximum 10.0 per cent;
— *capric acid*: maximum 10.0 per cent;
— *lauric acid* : 40.0 per cent to 60.0 per cent;
— *myristic acid* : 14.0 per cent to 25.0 per cent;
— *palmitic acid* : 7.0 per cent to 15.0 per cent;
— *stearic acid* : maximum 7.0 per cent;
— *oleic acid* : maximum 11.0 per cent;
— *linoleic acid* : maximum 3.0 per cent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 1.00 g.

Ph Eur

Sorbitan Oleate

General Notices

(Ph Eur monograph 1041)

1338-43-8

Action and use

Non-ionic surfactant.

When sorbitan mono-oleate is demanded, Sorbitan Oleate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by esterification of 1 mole of sorbitol and its mono-and di-anhydrides per mole of oleic (*cis*-9-octadecenoic) acid. A suitable antioxidant may be added.

CHARACTERS

Appearance

Brownish-yellow, viscous liquid.

Solubility

Practically insoluble but dispersible in water, soluble in fatty oils producing a hazy solution, miscible with alcohol.

Relative density

About 0.99.

IDENTIFICATION

A. It complies with the test for hydroxyl value (see Tests).

B. It complies with the test for iodine value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

Margaric acid Maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

Acid value *(2.5.1)*

Maximum 8.0, determined on 5.0 g.

Hydroxyl value *(2.5.3, Method A)*

190 to 210.

Iodine value *(2.5.4)*

62 to 76.

Peroxide value *(2.5.5)*

Maximum 10.0.

Saponification value *(2.5.6)*

145 to 160.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*.

Composition of the fatty acid fraction of the substance:

— *myristic acid* : maximum 5.0 per cent;

— *palmitic acid* : maximum 16.0 per cent;

— *palmitoleic acid* : maximum 8.0 per cent;

— *stearic acid* : maximum 6.0 per cent;

— *oleic acid* : 65.0 per cent to 88.0 per cent;

— *linoleic acid* : maximum 18.0 per cent;

— *linolenic acid* : maximum 4.0 per cent;

— *fatty acids with chain length greater than* C_{18} : maximum 4.0 per cent.

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water *(2.5.12)*

Maximum 1.5 per cent, determined on 1.000 g.

Total ash *(2.4.16)*

Maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

Sorbitan Palmitate

General Notices

(Ph Eur monograph 1042)

26266-57-9

Action and use

Non-ionic surfactant.

When sorbitan monopalmitate is demanded, Sorbitan Palmitate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with palmitic (hexadecanoic) acid.

CHARACTERS

Appearance

Yellow or yellowish powder, waxy flakes or hard masses.

Solubility

Practically insoluble in water, soluble in fatty oils, slightly soluble in alcohol.

IDENTIFICATION

A. Melting point *(2.2.15)* 44 °C to 51 °C.

Introduce the melted substance into the glass capillary tubes and allow to stand at a temperature below 10 °C for 24 h.

B. It complies with the test for hydroxyl value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 8.0, determined on 5.0 g.

Hydroxyl value ***(2.5.3, Method A)***

270 to 305.

Peroxide value ***(2.5.5)***

Maximum 5.0.

Saponification value ***(2.5.6)***

140 to 155.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*.

Composition of the fatty acid fraction of the substance:

— *palmitic acid* : minimum 92.0 per cent;

— *stearic acid* : maximum 6.0 per cent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 1.00 g.

Total ash ***(2.4.16)***

Maximum 0.5 per cent.

STORAGE

Protected from light.

Ph Eur

Sorbitan Sesquioleate

General Notices

(Ph Eur monograph 1916)

8007-43-0

Action and use

Non-ionic surfactant.

Ph Eur

DEFINITION

Mixture usually obtained by esterification of 2 moles of sorbitol and its mono- and di-anhydrides per 3 moles of oleic (*cis*-9-octadecenoic) acid. A suitable antioxidant may be added.

CHARACTERS

Appearance

Pale yellow or slightly brownish-yellow paste, which becomes a viscous, oily, brownish-yellow liquid at about 25 °C.

Solubility

Dispersible in water, soluble in fatty oils, slightly soluble in ethanol.

Relative density

About 0.99.

IDENTIFICATION

A. It complies with the test for hydroxyl value (see Tests).

B. It complies with the test for iodine value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

Margaric acid Maximum 0.2 per cent for oleic acid of vegetable origin and maximum 4.0 per cent for oleic acid of animal origin.

TESTS

Acid value ***(2.5.1)***

Maximum 16.0, determined on 5.0 g.

Hydroxyl value ***(2.5.3, Method A)***

180 to 215.

Iodine value ***(2.5.4)***

70 to 95.

Peroxide value ***(2.5.5)***

Maximum 10.0.

Saponification value ***(2.5.6)***

145 to 166.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*.

Composition of the fatty acid fraction of the substance:

— *myristic acid* : maximum 5.0 per cent;

— *palmitic acid* : maximum 16.0 per cent;

— *palmitoleic acid* : maximum 8.0 per cent;

— *stearic acid* : maximum 6.0 per cent;

— *oleic acid* : 65.0 per cent to 88.0 per cent;

— *linoleic acid* : maximum 18.0 per cent;

— *linolenic acid* : maximum 4.0 per cent;

— *fatty acids with chain length greater than* C_{18} : maximum 4.0 per cent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 1.000 g.

Total ash ***(2.4.16)***

Maximum 0.5 per cent, determined on 1.5 g.

STORAGE

Protected from light.

LABELLING

The label states the origin of the oleic acid used (animal or vegetable).

Ph Eur

Sorbitan Stearate

General Notices

(Ph Eur monograph 1043)

1338-41-6

Action and use

Non-ionic surfactant.

When sorbitan monostearate is demanded, Sorbitan Stearate shall be supplied.

Ph Eur

DEFINITION

Mixture usually obtained by partial esterification of sorbitol and its mono- and di-anhydrides with *Stearic acid 50 (1474)* or *Stearic acid 70 (1474).*

CHARACTERS

Appearance

Pale yellow, waxy solid.

Solubility

Practically insoluble, but dispersible in water, slightly soluble in alcohol.

IDENTIFICATION

A. Melting point *(2.2.15)* : 50 °C to 60 °C.

Introduce the melted substance into the capillary tubes and allow to stand at a temperature below 10 °C for 24 h.

B. It complies with the test for hydroxyl value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 10.0, determined on 5.0 g.

Hydroxyl value ***(2.5.3, Method A)***

235 to 260.

Peroxide value ***(2.5.5)***

Maximum 5.0.

Saponification value ***(2.5.6)***

147 to 157.

Carry out the saponification for 1 h.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*.

Composition of the fatty acid fraction of the subtance:

	Type of fatty acid used	Composition of fatty acids
Sorbitan stearate (type I)	Stearic acid 50	*Stearic acid*: 40.0 per cent to 60.0 per cent, *Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent.
Sorbitan stearate (type II)	Stearic acid 70	*Stearic acid*: 60.0 per cent to 80.0 per cent, *Sum of the contents of palmitic and stearic acids*: minimum 90.0 per cent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 1.00 g.

Total ash ***(2.4.16)***

Maximum 0.5 per cent.

STORAGE

Protected from light.

LABELLING

The label states the type of sorbitan stearate.

Sorbitan Trioleate

General Notices

(Ph Eur monograph 1044)

Ph Eur

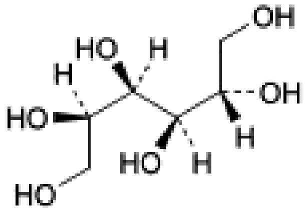
Sorbitol

General Notices

(Ph Eur monograph 0435)



$C_6H_{14}O_6$ 182.2 *50-70-4*

Action and use

Used for parenteral nutrition.

Ph Eur

DEFINITION

D-Glucitol (D-sorbitol).

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, practically insoluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification A.

Second identification B, C, D.

A. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

B. Dissolve 0.5 g with heating in a mixture of 0.5 ml of *pyridine R* and 5 ml of *acetic anhydride R* . After 10 min, pour the solution into 25 ml of *water R* and allow to stand in iced water for 2 h. The precipitate, recrystallised from a small volume of *ethanol (96 per cent) R* and dried *in vacuo*, melts *(2.2.14)* at 98 °C to 104 °C.

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *sorbitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *mannitol CRS* and 25 mg of *sorbitol CRS* in *water R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R* .

Mobile phase *water R* , *ethyl acetate R*, *propanol R* (10:20:70 *V/V/V*).

Application 2 µl.

Development Over a path of 17 cm.

Drying In air.

Detection Spray with *4-aminobenzoic acid solution R* ; dry in a current of cold air until the acetone is removed; heat at 100 °C for 15 min; allow to cool and spray with a 2 g/l solution of *sodium periodate R* ; dry in a current of cold air; heat at 100 °C for 15 min.

System suitability Reference solution (b):

— The chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Specific optical rotation *(2.2.7)* : + 4.0 to + 7.0 (anhydrous substance).

Dissolve 5.00 g of the substance to be examined and 6.4 g of *disodium tetraborate R* in 40 ml of *water R* . Allow to stand for 1 h, shaking occasionally, and dilute to 50.0 ml with *water R* . Filter if necessary.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Dissolve 5 g in *water R* and dilute to 50 ml with the same solvent.

Conductivity ***(2.2.38)***

Maximum 20 µS·cm^{-1}.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Reducing sugars

Maximum 0.2 per cent, expressed as glucose equivalent.

Dissolve 5.0 g in 6 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R,* added towards the end of the titration, as indicator. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required.

Related products

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 5.0 g of the substance to be examined in 20 ml of *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 0.50 g of *sorbitol CRS* in 2 ml of *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with *water R*.

Reference solution (c) Dilute 5.0 ml of reference solution (b) to 100.0 ml with *water R*.

Reference solution (d) Dissolve 0.5 g of *sorbitol R* and 0.5 g of *mannitol R* (impurity A) in 5 ml of *water R* and dilute to 10.0 ml with the same solvent.

Column:

- *size*: *l* = 0.3 m, Ø = 7.8 mm;
- *stationary phase:* strong cation exchange *resin (calcium form) R* (9 µm);
- *temperature*: 85 ± 1 °C.

Mobile phase Degassed *water R.*

Flow rate 0.5 ml/min.

Detection Refractometer maintained at a constant temperature.

Injection 20 µl of the test solution and reference solutions (b), (c) and (d).

Run time 3 times the retention time of sorbitol.

Relative retention With reference to sorbitol (retention time = about 27 min): impurity C = about 0.6; impurity A = about 0.8; impurity B = about 1.1.

System suitability Reference solution (d):

— *resolution*: minimum 2 between the peaks due to impurity A and sorbitol.

Limits:

— *any impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (2 per cent);

— *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (3 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent).

Lead ***(2.4.10)***

Maximum 0.5 ppm.

Nickel ***(2.4.15)***

Maximum 1 ppm.

Dissolve the substance to be examined in 150.0 ml of the prescribed mixture of solvents.

Water ***(2.5.12)***

Maximum 1.5 per cent, determined on 1.00 g.

Microbial contamination

If intended for use in the manufacture of parenteral dosage forms, the total viable aerobic count *(2.6.12)* is not more than 10^2 bacteria and 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)* .

Bacterial endotoxins ***(2.6.14)***

Less than 4 IU/g for parenteral dosage forms having a concentration of less than 100 g/l of sorbitol, and less than 2.5 IU/g for parenteral dosage forms having a concentration of 100 g/l or more of sorbitol, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related products with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of D-sorbitol from the declared content of *sorbitol CRS* .

LABELLING

The label states:

— where applicable, the maximum concentration of bacterial endotoxins;

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

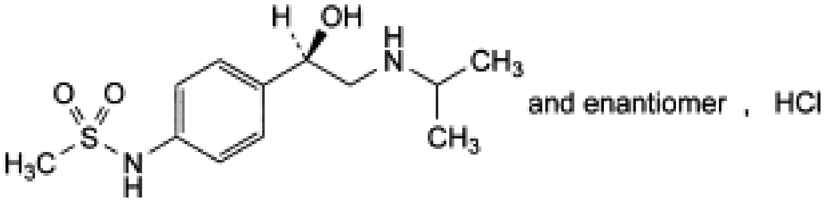
Ph Eur

Sotalol Hydrochloride

General Notices

(Ph Eur monograph 2004)



$C_{12}H_{20}N_2O_3S,HCl$ 308.8 *959-24-0*

Action and use

Beta-adrenoceptor antagonist; class II and class III antiarrhythmic.

Ph Eur

DEFINITION

N-[4-[(1*RS*)-1-hydroxy-2-[(1-methylethyl)amino]ethyl]phenyl]methanesulphonamide hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *sotalol hydrochloride CRS.*

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.0 to 5.0.

Dilute 5.0 ml of solution S to 10.0 ml with *carbon dioxide-free water R.*

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dilute 25.0 ml of solution S to 50.0 ml with *water R* .

Related substances

Liquid chromatography *(2.2.29).*

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 3.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 8.0 mg of *sotalol impurity B CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 100.0 ml with the mobile phase.

Reference solution (d) Dilute 1.5 ml of reference solution (b) to 100 ml with the mobile phase. To 1 ml of this solution add 1 ml of reference solution (a).

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 2 g of *sodium octanesulphonate R* in 790 ml of *water R.* Adjust to pH 3.0 with *phosphoric acid R* and add 210 ml of *acetonitrile R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 228 nm.

Injection 10 µl; inject the test solution and reference solutions (a), (c) and (d).

Run time 2.5 times the retention time of sotalol.

System suitability Reference solution (d):

- *resolution*: minimum 4.0 between the peaks due to sotalol and to impurity B.

Limits:

- *impurity B*: not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent), and not more than 1 such peak has an area greater than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total of other impurities*: not more than 1.65 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.17 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Palladium

Maximum 0.5 ppm.

Atomic absorption spectrometry *(2.2.23, Method I).*

Test solution Dissolve 1.00 g in a mixture of 0.25 volumes of *nitric acid R*, 0.75 volumes of *hydrochloric acid R* and 99.0 volumes of *water R* and dilute to 20.0 ml with the same mixture of solvents.

Reference solutions Use solutions containing 0.02 µg, 0.03 µg and 0.05 µg of palladium per millilitre, freshly prepared by dilution of *palladium standard solution (0.5 ppm Pd) R* with a mixture of 0.25 volumes of *nitric acid R*, 0.75 volumes of *hydrochloric acid R* and 99.0 volumes of *water R*.

Source Palladium hollow-cathode lamp.

Wavelength 247.6 nm.

Use a graphite tube.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

To 10 ml of solution S add 10 ml of *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

In order to avoid overheating during the titration, mix thoroughly throughout and stop the titration immediately after the end-point has been reached.

Dissolve 0.250 g in 10 ml of *anhydrous formic acid R*, if necessary with the aid of ultrasound. Add 40 ml of *acetic anhydride R* and titrate immediately with *0.1 M perchloric acid*. Determine the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 30.88 mg of $C_{12}H_{21}ClN_2O_3S$.

STORAGE

Protected from light.

IMPURITIES

Aminocyclotol antibacterial.

Ph Eur

DEFINITION

Mixture of (2*R*,4a*R*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)4a,7,9-trihydroxy-2-methyl-6,8-bis(methylamino)decahydro-4*H*-pyrano[2,3-*b*][1,4]benzodioxin-4-one dihydrochloride pentahydrate (spectinomycin dihydrochloride pentahydrate) and of (2*R*,4*R*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-4,4a,7,9-tetrol dihydrochloride pentahydrate ((4*R*)-dihydrospectinomycin dihydrochloride pentahydrate).

It is produced by *Streptomyces spectabilis* or by any other means.

Content:

— *(4R)-dihydrospectinomycin dihydrochloride*: maximum 9.0 per cent (anhydrous substance);

— *sum of the contents of spectinomycin dihydrochloride and (4R)-dihydrospectinomycin dihydrochloride*: 93.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *spectinomycin hydrochloride CRS.*

B. Dilute 1.0 ml of solution S (see Tests) to 10 ml with *water R* . The solution gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution.

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Dilute 2.0 ml of solution S to 20.0 ml with *water R* .

pH *(2.2.3)*

3.8 to 5.6 for solution S.

Specific optical rotation *(2.2.7)*

+ 15.0 to + 21.0 (anhydrous substance), determined on solution S within 20 min of preparation.

Related substances

Liquid chromatography *(2.2.29)*. *In order to avoid formation of anomers, prepare the solutions immediately before use*.

Test solution Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 3 mg of *spectinomycin for system suitability CRS* in the mobile phase and dilute to 20 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 3.0 ml of reference solution (b) to 10.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: ambient and constant.

Mobile phase Dissolve 4.2 g of *oxalic acid R* and 2.0 ml of *heptafluorobutyric acid R* in *water R* and dilute to 1000 ml with *water R*; adjust to pH 3.2 with *sodium hydroxide solution R,* add 105 ml of *acetonitrile R* and mix; filter through a 0.45 µm filter and degas with *helium for chromatography R* for 10 min.

Flow rate 1.0 ml/min.

Post-column solution *Carbonate-free sodium hydroxide solution R* diluted with *carbon dioxide-free water R* to obtain a final concentration of NaOH of 21 g/l. Degas the solution with *helium for chromatography R* for 10 min before use. Add it pulse-less to the column effluent using a 375 µl polymeric mixing coil.

Post-column flow rate 0.5 ml/min.

Detection Pulsed amperometric detection or equivalent with a gold indicator electrode having preferably a diameter of 1.4 mm or greater, a suitable reference electrode and a stainless steel counter electrode, held at + 0.12 V detection, + 0.70 V oxidation and - 0.60 V reduction potentials respectively, with pulse durations according to the instrument used. Keep the detection cell at ambient and constant temperature. Clean the gold indicator electrode with an eraser and damp precision wipe prior to start-up of the system to enhance the detector sensitivity and increase the signal-to-noise ratio.

Injection 20 µl.

Run time 1.5 times the retention time of spectinomycin.

Identification of impurities Use the chromatogram supplied with *spectinomycin for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, D and E.

Relative retention With reference to spectinomycin (retention time = 11 min to 20 min): impurity A = about 0.5; impurity F = about 0.53; impurity G = about 0.6; impurity D = about 0.7; impurity E = about 0.9; (4R)-dihydrospectinomycin = about 1.3; impurity C = about 1.4.

System suitability Reference solution (a):

- *resolution*: minimum 1.5 between the peaks due to impurity E and spectinomycin.

Limits:

- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.4;
- *impurities A, C, F, G*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *impurities D, E*: for each impurity, not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (4.0 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the

chromatogram obtained with reference solution (b) (1.0 per cent);

— *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (6.0 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent); disregard the peak due to (4*R*)-dihydrospectinomycin.

Water ***(2.5.12)***

16.0 per cent to 20.0 per cent, determined on 0.100 g.

Sulphated ash ***(2.4.14)***

Maximum 1.0 per cent, determined on 1.0 g.

Bacterial endotoxins ***(2.6.14)***

Less than 0.09 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins. Prepare the solutions using a 0.42 per cent *m/m* solution of *sodium hydrogen carbonate R* .

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Test solution Dissolve 40.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Allow to stand for not less than 15 h and not more than 72 h (formation of anomers). Dilute 5.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution Dissolve 40.0 mg of *spectinomycin hydrochloride CRS* (containing (4*R*)-dihydrospectinomycin) in *water R* and dilute to 50.0 ml with the same solvent. Allow to stand for the same period of time as the test solution (formation of anomers). Dilute 5.0 ml of this solution to 50.0 ml with the mobile phase.

System suitability:

— *repeatability*: maximum relative standard deviation of 3.0 per cent for the principal peak after 6 injections of the reference solution.

Calculate the sum of the percentage contents of spectinomycin dihydrochloride and (4*R*)-dihydrospectinomycin dihydrochloride from the declared contents of $C_{14}H_{26}Cl_2N_2O7$ and $C_{14}H_{28}Cl_2N_2O_7$ in *spectinomycin hydrochloride CRS* .

STORAGE

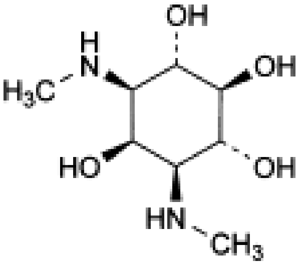
In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES

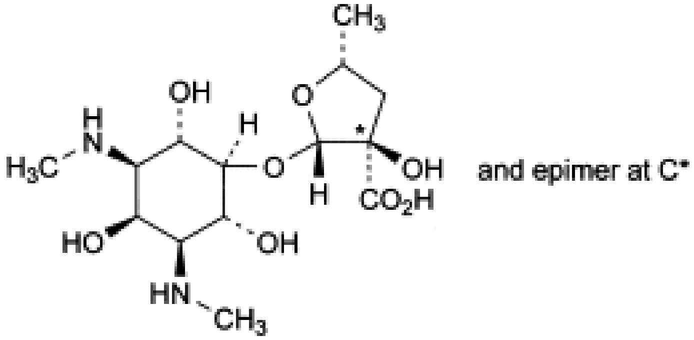
Specified impurities *A, C, D, E, F, G.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these

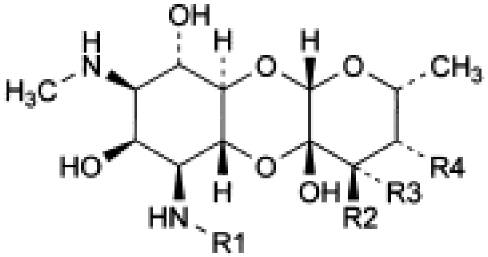
impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B.*



A. 1,3-dideoxy-1,3-bis(methylamino)-*myo*-inositol (actinamine),



B. (2*S*,3*RS*,5*R*)-3-hydroxy-5-methyl-2-[[(1*r*,2*R*,3*S*,4*r*,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis (methylamino)cyclohexyl]oxy]tetrahydrofuran-3-carboxylic acid (actinospectinoic acid),



C. R1 = CH_3, R2 = R4 = H, R3 = OH: (2*R*,4*S*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6, 8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-4,4a,7,9-tetrol ((4*S*)-dihydrospectinomycin),

D. R1 = CH_3, R2 = H, R3 = R4 = OH: (2*R*,3*R*,4*S*,4a*S*,5a*R*,6*S*,7*S*,8*R*,9*S*,9a*R*,10a*S*)-2-methyl-6,8-bis(methylamino)decahydro-2*H*-pyrano[2,3-*b*][1,4]benzodioxine-3,4,4a,7,9-pentol (dihydroxyspectinomycin),

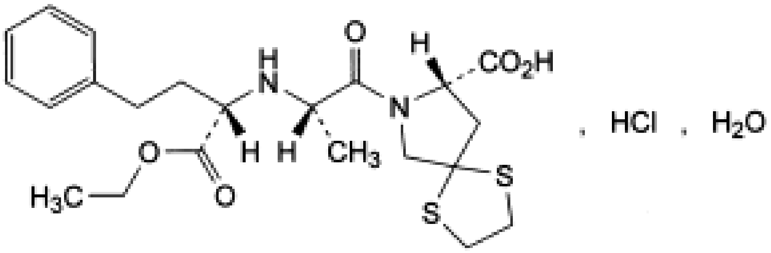
F. (2*S*,4*S*,6*R*)-4-hydroxy-6-methyl-2-[[(1r,2*R*,3*S*,4r,5*R*,6*S*)-2,4,6-trihydroxy-3,5-bis(methylamino)cyclohexyl]oxy]dihydro-2*H*-pyran-3(4*H*)-one (triol spectinomycin).

Spirapril Hydrochloride Monohydrate

General Notices

(Ph Eur monograph 1766)



$C_{22}H_{30}N_2O_5S_2,HCl,H_2O$ 521.1 *94841-17-5*

Action and use

Angiotensin-converting enzyme inhibitor.

Ph Eur

DEFINITION

(8*S*)-7-[(2*S*)-2-[[(1*S*)-1-(Ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid hydrochloride monohydrate.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, fine crystalline powder.

Solubility

Very slightly soluble in water, soluble in methanol, slightly soluble in acetonitrile, practically insoluble in methylene chloride.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs of *potassium bromide R.*

Comparison *Spirapril hydrochloride monohydrate CRS* .

C. It gives the reactions of chlorides *(2.3.1)* .

TESTS

Specific optical rotation *(2.2.7)*

- 11.0 to - 13.0 (anhydrous substance).

Dissolve 0.200 g in *dimethylformamide R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Solvent mixture *acetonitrile R1* , *water R* (2:8 *V/V*).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Reference solution (a) Dissolve 6.0 mg of *spirapril for system suitability CRS* (spirapril spiked with impurity B and impurity D) in the solvent mixture and dilute to 20 ml with the solvent mixture.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 5.0 ml of this solution to 50.0 ml with the solvent mixture.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.125 m, Ø = 4.6 mm;

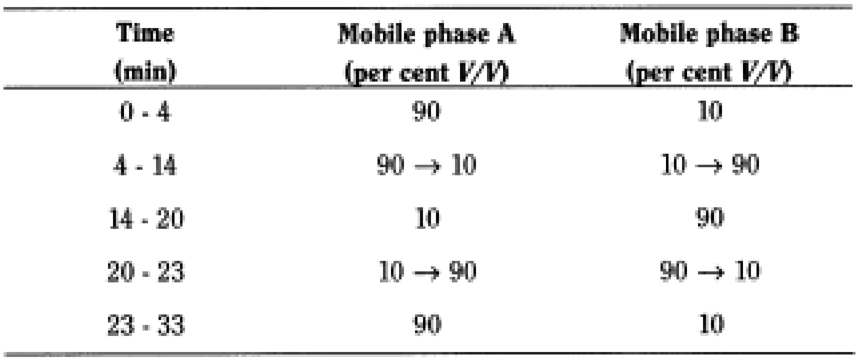
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 70 °C.

Mobile phase:

— *mobile phase A*: dissolve 4.5 g of *tetramethylammonium hydroxide R* in 900 ml of *water R* , add 100 ml of *acetonitrile R1* and adjust to pH 2.2 with *phosphoric acid R* ;

— *mobile phase B*: dissolve 4.5 g of *tetramethylammonium hydroxide R* in 400 ml of *water R* , add 600 ml of *acetonitrile R1* and adjust to pH 2.2 with *phosphoric acid R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 4	90	10
4 - 14	90 → 10	10 → 90
14 - 20	10	90
20 - 23	10 → 90	90 → 10
23 - 33	90	10

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Relative retention With reference to spirapril (retention time = about 10 min): impurity C = about 0.6; impurity B = about 0.7; impurity A = about 1.26; impurity D = about 1.38.

System suitability Reference solution (a):

— *resolution*: minimum 3.5 between the peaks due to impurity B and spirapril, and minimum 5.5 between the peaks due to spirapril and impurity D.

Limits:

— *impurities A, C*: for each impurity, not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *impurity B*: not more than 0.6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurity D*: not more than 0.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— *any other impurity:* for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent); disregard any peak due to the blank (solvent mixture).

Water ***(2.5.12)***

3.0 per cent to 4.0 per cent, determined on 0.200 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* .

Solvent mixture Mix equal volumes of *acetonitrile R1* and *water R* .

Test solution Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (a) Dissolve 20.0 mg of *spirapril hydrochloride monohydrate CRS* in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (b) Dissolve 6.0 mg of *spirapril for system suitability CRS* (spirapril spiked with impurity B and impurity D) in a mixture of 2 volumes of *acetonitrile R* and 8 volumes of *water R* and dilute to 20 ml with the same mixture of solvents.

Solution A Dissolve 4.5 g of *tetramethylammonium hydroxide R* in 900 ml of *water R* , adjust to pH 1.75 with *phosphoric acid R* and add 100 ml of *acetonitrile R1* .

Solution B Dissolve 4.5 *g of tetramethylammonium hydroxide R in 400 ml of water R, adjust to pH 1.75 with phosphoric acid R* and add 600 ml of *acetonitrile R1* .

Column:

- *size*: *l* = 0.125 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

Mobile phase Solution A, solution B (45:55 *V/V*).

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Retention time Spirapril = 1.6 min to 2.9 min; impurity D = about 13 min. Adjust the proportion of solution B in the mobile phase if necessary.

System suitability Reference solution (b):

- *resolution*: minimum 15 between the peaks due to spirapril and impurity D.

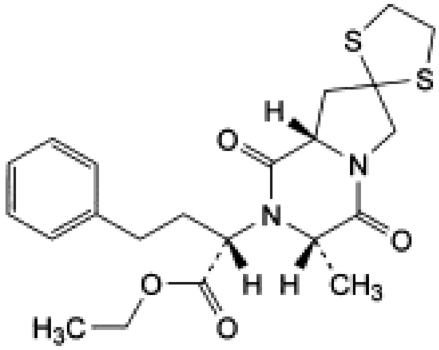
Calculate the percentage content of $C_{22}H_{31}ClN_2O_5S_2$ from the chromatograms obtained with the test solution and reference solution (a) and the declared content of *spirapril hydrochloride monohydrate CRS.*

STORAGE

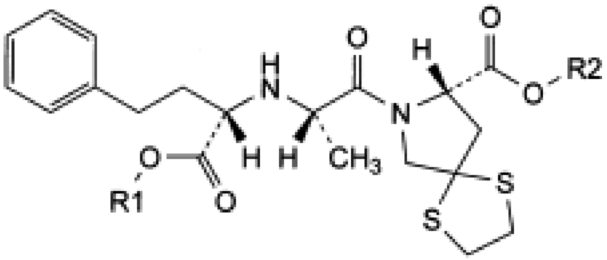
In an airtight container , protected from light.

IMPURITIES

Specified impurities A, B, C, D.

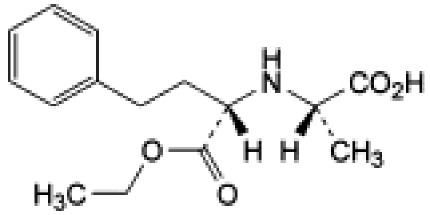


A. ethyl (2*S*)-2-[(3′*S*,8′a*S*)-3′-methyl-1′,4′-dioxo-hexahydrospiro[1,3-dithiolane-2,7′(6′*H*)-pyrrolo[1,2-*a*]pyrazin]-2′-yl]-4-phenylbutanoate,



B. R1 = R2 = H: (8*S*)-7-[(2*S*)-2-[[(1*S*)-1-carboxy-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylic acid (spiraprilat),

D. R1 = C_2H_5, R2 = $CH(CH_3)_2$: 1-methylethyl (8*S*)-7-[(2*S*)-2-[[(1*S*)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]-1,4-dithia-7-azaspiro[4.4]nonane-8-carboxylate,



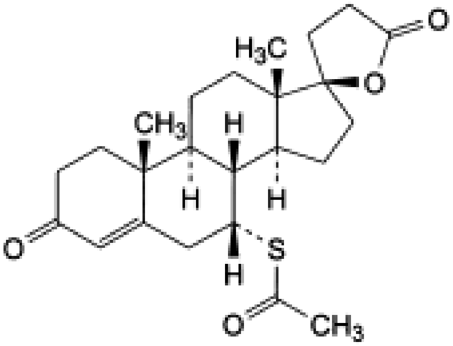
C. (2*S*)-2-[[(1*S*)-1-(ethoxycarbonyl)-3-phenylpropyl]amino]propanoic acid.

Ph Eur

Spironolactone

General Notices

(Ph Eur monograph 0688)



$C_{24}H_{32}O_4S$ 416.6 *52-01-7*

Action and use

Aldosterone receptor antagonist; potassium-sparing diuretic.

Preparation

Spironolactone Tablets

Ph Eur

DEFINITION

Spironolactone contains not less than 97.0 per cent and not more than the equivalent of 102.0 per cent of 7α-(acetylsulfanyl)-3′,4′-dihydrospiro[androst-4-ene-17,2′(5′*H*)-furan]-3,5′-dione, calculated with reference to the dried substance.

CHARACTERS

A white or yellowish-white powder, practically insoluble in water, soluble in alcohol.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *spironolactone CRS* . Examine the substances as 50 g/l solutions in *chloroform R* .

B. Examine by thin-layer chromatography *(2.2.27),* using *silica gel GF*$_{254}$ *R* as the coating substance.

Test solution Dissolve 20 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of *spironolactone CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *water R* , 24 volumes of *cyclohexane R* and 75 volumes of *ethyl acetate R* . Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

C. To about 10 mg add 2 ml of a 50 per cent *V/V* solution of *sulphuric acid R* and shake. An orange solution with an intense yellowish-green fluorescence is produced. Heat the solution gently; the colour becomes deep red and hydrogen sulphide, which blackens *lead acetate paper R,* is evolved. Add the solution to 10 ml of *water R* ; a greenish-yellow solution is produced which shows opalescence or a precipitate.

TESTS

Specific optical rotation *(2.2.7)*

Dissolve 0.100 g in *chloroform R* and dilute to 10.0 ml with the same solvent. The specific optical rotation is - 33 to - 37, calculated with reference to the dried substance.

Related substances

Examine by liquid chromatography *(2.2.29)* .

Test solution Dissolve 62.5 mg of the substance to be examined in 2.5 ml of *tetrahydrofuran R* and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 25.0 mg of *canrenone CRS* in 1 ml of *tetrahydrofuran R* and dilute to 10.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 100.0 ml with the mobile phase.

Reference solution (d) Mix 1 ml of the test solution with 1 ml of reference solution (b) and dilute to 100 ml with the mobile phase.

Reference solution (e) Dilute 0.50 ml of reference solution (a) to 10.0 ml with the mobile phase.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.15 m long and 4.6 mm in internal diameter packed with *octylsilyl silica gel for chromatography R* (5 µm);

— a mixture of 8 volumes of *acetonitrile R*, 18 volumes of *tetrahydrofuran R* and 74 volumes of *water R* as the mobile phase at a flow rate of 1.8 ml/min;

— a variable wavelength spectrophotometer capable of operating at 254 nm and at 283 nm as detector.

Inject separately 20 µl of the test solution and 20 µl of reference solution (a), 20 µl of reference solution (d) and 20 µl of reference solution (e) and record the chromatograms with the detector set for recording at 254 nm. Continue the chromatography for twice the retention time of spironolactone. In the chromatogram obtained with the test solution, the sum of the areas of the peaks, except those corresponding to spironolactone and canrenone, is not greater than the area of the peak corresponding to spironolactone in the chromatogram obtained with reference solution (a) (1.0 per cent). Disregard any peak whose area is less than that of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent). Inject 20 µl of the test solution and 20 µl of reference solution (c) and record the chromatogram with the detector set for recording at 283 nm. In the chromatogram obtained with the test solution, the area of any peak corresponding to canrenone is not greater than the area of the peak corresponding to canrenone in the chromatogram obtained with reference solution (c) (1.0 per cent). Calculate the percentage content of canrenone found when recording at 283 nm and the percentage content of the other related substances found when recording at 254 nm. Add together these percentages. The sum is not greater than 1.0 per cent. The test is not valid unless: the chromatogram obtained with reference solution (d) shows peaks, corresponding to canrenone and spironolactone, with a resolution greater than 1.4; the principal peak in the chromatogram obtained with reference solution (e) has a signal-to-noise ratio of at least 6.

Free mercapto compounds

To 2.0 g add 20 ml of *water R*, shake for 1 min and filter. To 10 ml of the filtrate add 0.05 ml of *0.01 M iodine* and 0.1 ml of *starch solution R* and mix. A blue colour develops.

Chromium

To 0.20 g in a platinum crucible add 1 g of *potassium carbonate R* and 0.3 g of *potassium nitrate R*. Heat gently until fused, and ignite at 600 °C to 650 °C until carbon is removed. Cool, dissolve the residue as completely as possible in 10 ml of *water R* with the aid of gentle heat, filter, and dilute to 20 ml with *water R*. To 10 ml of this solution add 0.5 g of *urea R*, and add a 14 per cent *V/V* solution of *sulphuric acid R* until the solution is just acid. When effervescence ceases, add a further 1 ml of the sulphuric acid, dilute to 20 ml with *water R* and add 0.5 ml of *diphenylcarbazide solution R*. The solution is not more intensely coloured than a standard prepared by adding 1 ml of a 14 per cent *V/V* solution of *sulphuric acid R* to 0.50 ml of a freshly prepared 28.3 mg/l solution of *potassium dichromate R*, diluting to 20 ml with *water R* and adding 0.5 ml of *diphenylcarbazide solution R* (50 ppm).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in *methanol R* and dilute to 250.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *methanol R*. Measure the absorbance *(2.2.25)* of the solution at the maximum at 238 nm.

Calculate the content of $C_{24}H_{32}O_4S$, taking the specific absorbance to be 470.

STORAGE

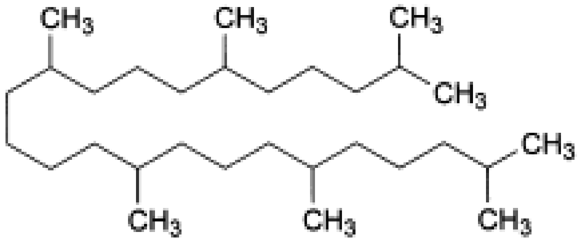
Store protected from light.

Ph Eur

Squalane

General Notices

(Ph Eur monograph 1630)



$C_{30}H_{62}$ 422.8 *111-01-3*

Action and use

Excipient; emollient.

Ph Eur

DEFINITION

2,6,10,15,19,23-Hexamethyltetracosane (perhydrosqualene). It may be of vegetable (unsaponifiable matter of olive oil) or animal (shark liver oil) origin.

Content

96.0 per cent to 103.0 per cent.

CHARACTERS

Appearance

Clear, colourless, oily liquid.

Solubility

Practically insoluble in water, miscible with most fats and oils, freely soluble in acetone and in cyclohexane, practically insoluble in ethanol (96 per cent).

Relative density

About 0.815.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison squalane CRS.

B. Refractive index (see Tests).

C. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

The chromatogram obtained with squalane of vegetable origin shows a peak corresponding to cyclosqualane (Figure 1630.-1 and Figure 1630.-2).

TESTS

Appearance

The substance to be examined is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Relative retentions With reference to squalane (retention time = about 41 min): internal standard = about 0.2; methyl erucate = about 0.9; cyclosqualane = 1.05.

System suitability Reference solution (b):

— *resolution*: minimum 5 between the peaks due to methyl erucate and squalane.

Calculate the percentage content of squalane from the declared content of *squalane CRS* .

LABELLING

The label states the origin of squalane (vegetable or animal).

Ph Eur

Stannous Chloride Dihydrate

General Notices

(Ph Eur monograph 1266)

$SnCl_2,2H_2O$ 225.6 *10025-69-1*

Ph Eur

DEFINITION

Content

98.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals, efflorescent in air.

Solubility

Freely soluble in water (the solution becomes cloudy after standing or on dilution), freely soluble in ethanol (96 per cent). It dissolves in dilute hydrochloric acid.

IDENTIFICATION

A. To 1 ml of solution S1 (see Tests) add 5 ml of *water R* and 0.05 ml of *mercuric chloride solution R* . A blackish-grey precipitate is formed.

B. Dissolve 1.0 g in 3.0 ml of *water R* . Add 0.5 ml of *dilute sodium hydroxide solution R* to the cloudy solution; a yellowish flocculent precipitate is formed. Add 6.5 ml of *water R* . To 1.0 ml of the previously shaken suspension add 1.0 ml of *strong sodium hydroxide solution R* ; the precipitate dissolves and the resulting solution is clear and colourless.

C. Dissolve 10 mg in 2 ml of *dilute nitric acid R* . The solution gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S1

To 0.40 g add 1 ml of *dilute hydrochloric acid R* and dilute to 20 ml with *distilled water R* .

Solution S2

Dissolve 1.0 g in *dilute hydrochloric acid R* and dilute to 30 ml with the same acid. Heat to boiling. Add 30 ml of *thioacetamide solution R* and boil for 15 min (solution A). Take 5 ml, filter and heat the filtrate to boiling. Add 5 ml of thioacetamide solution R and boil for 15 min. If a precipitate is formed, add the remainder of solution A (solution A′) to the mixture. Add 10 ml of *thioacetamide solution R* and boil. Repeat the series of operations from "Take 5 ml" until a precipitate is no longer formed on addition of *thioacetamide solution R* to the filtrate obtained from the 5 ml of solution A (solution A′, solution A″, etc. respectively). If no precipitate is formed or if no more precipitate is formed combine the solution obtained with the remainder of solution A (solution A′, solution A″, etc. respectively), filter and wash the precipitate with 10 ml of *water R* . Heat the filtrate until the resulting vapour no longer turns a moistened piece of *lead acetate paper R* blackish-grey. Allow to cool and dilute to 50 ml with *water R* .

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 10.0 g in *dilute hydrochloric acid R* and dilute to 20 ml with the same acid.

Substances not precipitated by thioacetamide

Maximum 0.2 per cent.

Evaporate 25 ml of solution S2 to dryness and ignite at 600 ± 50 °C. The residue weighs a maximum of 1 mg.

Sulphates ***(2.4.13)***

Maximum 500 ppm, determined on solution S1.

Iron ***(2.4.9)***

Maximum 100 ppm.

Dilute 5 ml of solution S2 to 10 ml with *water R* .

Heavy metals

Maximum 50 ppm.

Dissolve 1.0 g in 2 ml of a mixture of 1 volume of *nitric acid R* and 3 volumes of hydrochloric *acid R*. Heat on a water-bath until nitrous vapour is no longer evolved. Dissolve the residue in *water R* and dilute to 25 ml with the same solvent. To 5 ml of this solution add 3 ml of *strong sodium hydroxide solution R* and 2 ml of *water R* . Heat until a clear solution is obtained, then cool and add 0.5 ml of *thioacetamide reagent R* . After 2 min, any colour in the solution is not more intense than that of a mixture of 1.0 ml of *lead standard solution (10 ppm Pb) R* , 6 ml of *water R* , 3 ml of *strong sodium hydroxide solution R* and 0.5 ml of *thioacetamide reagent R* .

ASSAY

Dissolve 0.100 g in 50 ml of *water R* , freed from oxygen by purging with carbon dioxide or nitrogen for 15 min. Add 1.5 ml of *hydrochloric acid R1* , 5 g of *sodium potassium tartrate R* , 10 g of *sodium hydrogen carbonate R* and 1 ml of *starch solution R* . Titrate immediately with *0.05 M iodine* . Carry out a blank titration.

1 ml of *0.05 M iodine* is equivalent to 11.28 mg of $SnCl_2,2H_2O$.

STORAGE

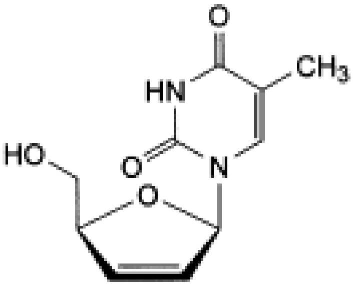
In an airtight container .

Ph Eur

Stavudine

General Notices

(Ph Eur monograph 2130)



$C_{10}H_{12}N_2O_4$ 224.2 *3056-17-5*

Action and use

Nucleoside reverse transciptase inhibitor; antiviral (HIV).

Ph Eur

DEFINITION

1-(2,3-Dideoxy-β-D-*glycero*-pent-2-enofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water, sparingly soluble in ethanol (96 per cent), slightly soluble in methylene chloride.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Specific optical rotation *(2.2.7)*

- 39.5 to - 45.9 (anhydrous substance).

Dissolve 0.100 g in *water R* and dilute to 10.0 ml with the same solvent.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *stavudine CRS* .

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *anhydrous ethanol R* , evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use or maintain at 2-8 ‘C until use.*

Test solution Dissolve 25.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dilute 0.5 ml of the test solution to 100.0 ml with *water R.*

Reference solution (b) Dilute 20 ml of reference solution (a) to 100.0 ml with *water R.*

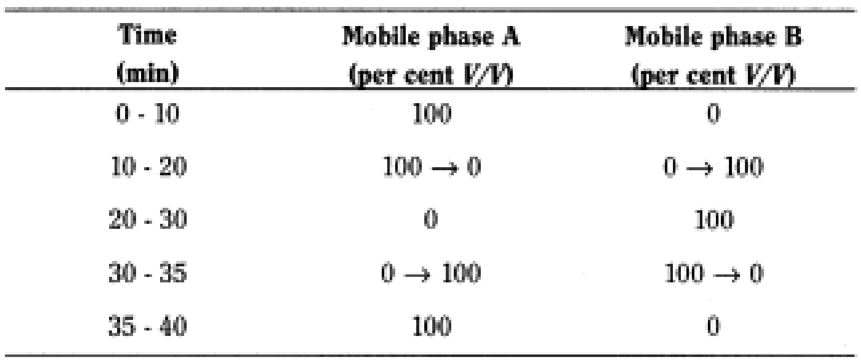
Reference solution (c) Dissolve 5.0 mg of *stavudine for system suitability CRS* (stavudine containing impurities A to H) in *water R* and dilute to 10.0 ml with the same solvent.

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
— *mobile phase A*: mix 35 volumes of *acetonitrile for chromatography* R and 965 volumes of a 0.77 g/l solution of *ammonium acetate R;*

— *mobile phase B*: mix 250 volumes of *acetonitrile for chromatography R* and 750 volumes of a 0.77 g/l solution of *ammonium acetate R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 20	100 → 0	0 → 100
20 - 30	0	100
30 - 35	0 → 100	100 → 0
35 - 40	100	0

Flow rate 2 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *stavudine for system suitability CRS* to identify the peaks due to impurities A to H.

Relative retention With reference to stavudine (retention time = 9.5-12.5 min): impurity A = about 0.3; impurity B = about 0.50; impurity C = about 0.53; impurity D = about 0.8; impurity E = about 1.1; impurity F = about 1.4; impurity G = about 1.8; impurity H = about 2.0.

System suitability Reference solution (c):

— *peak-to-valley ratio* : minimum 1.5, where H_p = height above the baseline of the peak due to impurity C and *Hv* = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; minimum 1.5, where H_p = height above the baseline of the peak due to impurity E and *Hv* = height above the baseline of the lowest point of the curve separating this peak from the peak due to stavudine.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.7;

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use or maintain at 2-8 °C until use.*

Test solution Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 50.0 ml with *water R* .

Reference solution (a) Dissolve 10.0 mg of *stavudine CRS* in *water R* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 50.0 ml with *water R* .

Reference solution (b) Dissolve 5 mg of *thymine R* and 7.5 mg of *thymidine R* in *water R* and dilute to 100 ml with the same solvent. Dilute 10 ml of the solution to 50 ml with *water R* .

Column:
- *size*: *l* = 0.033 m, Ø = 4.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase Mix 5 volumes of *acetonitrile for chromatography R* and 95 volumes of a 0.77 g/l solution of *ammonium acetate R* .

Flow rate 0.7 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 25 µl.

Retention time Stavudine = 2.8 min to 5.0 min.

System suitability:
- *symmetry factor* : maximum 1.6 for the peak due to stavudine in the chromatogram obtained with reference solution (a);
- *resolution:* minimum 3.5 between the peaks due to impurity A and impurity C in the chromatogram obtained with reference solution (b).

Calculate the percentage content of $C_{10}H_{12}N_2O_4$ using the chromatograms obtained with the test solution and reference solution (a) and the declared content of *stavudine CRS.*

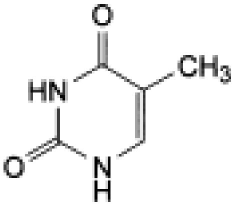
STORAGE

Protected from light and humidity.

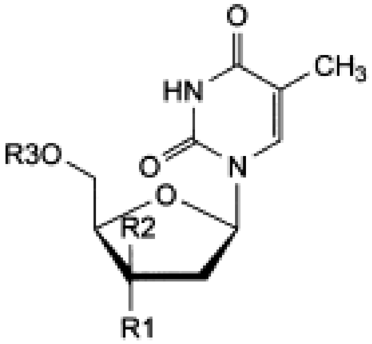
IMPURITIES

Specified impurities *A.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E, F, G, H.*



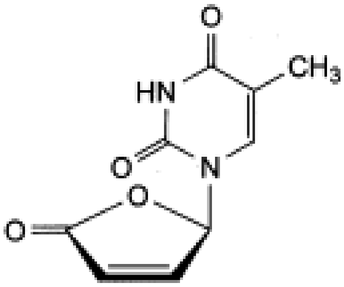
A. 5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymine),



B. R1 = R3 = H, R2 = OH: 1-(2-deoxy-β-D-*threo*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*, 3*H*)-dione (3′-epithymidine),

C. R1 = OH, R2 = R3 = H: 1-(2-deoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4 (1*H*,3*H*)-dione (thymidine),

H. R1 = H, R2 = OH, R3 = $CH(CH_3)_2$: 1-[2-deoxy-5-*C*-(1-methylethyl)-β-D-*erythro*-pentofuranosyl]-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



D. 1-[(2*R*)-5-oxo-2,5-dihydrofuran-2-yl]-5-methylpyrimidine2,4(1*H*,3*H*)-dione,

G. 5′-*O*-[[(2*S*,5*R*)-5-(5-methyl-2,4-dioxo-3,4-dihydropyrimidine-1(2*H*)-yl)-2,5-dihydrofuran-2-yl]methyl]-3′-epithymidine.

Ph Eur

Stearic Acid

General Notices

(Ph Eur monograph 1474)

Action and use

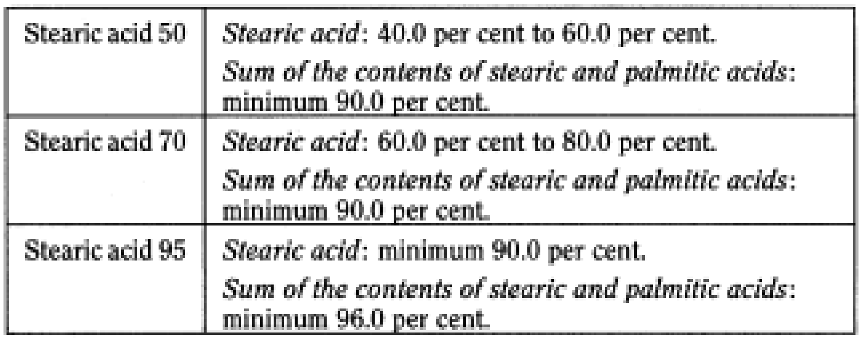
Excipient.

Ph Eur

DEFINITION

Mixture consisting mainly of stearic (octadecanoic) acid ($C_{18}H_{36}O_2$; M_r 284.5) and palmitic (hexadecanoic) acid ($C_{16}H_{32}O_2$; M_r 256.4) obtained from fats or oils of vegetable or animal origin.

Content



Stearic acid 50	*Stearic acid*: 40.0 per cent to 60.0 per cent. *Sum of the contents of stearic and palmitic acids*: minimum 90.0 per cent.
Stearic acid 70	*Stearic acid*: 60.0 per cent to 80.0 per cent. *Sum of the contents of stearic and palmitic acids*: minimum 90.0 per cent.
Stearic acid 95	*Stearic acid*: minimum 90.0 per cent. *Sum of the contents of stearic and palmitic acids*: minimum 96.0 per cent.

CHARACTERS

Appearance

White or almost white, waxy, flaky crystals, white or almost white hard masses or white or yellowish-white powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent) and in light petroleum (50-70 °C).

IDENTIFICATION

A. It complies with the test for freezing point (see Tests).

B. Acid value *(2.5.1)* : 194 to 212, determined on 0.5 g.

C. Examine the chromatograms obtained in the assay.

Results The retention times of the principal peaks in the chromatogram obtained with the test solution are approximately the same as those of the principal peaks in the chromatogram obtained with the reference solution.

TESTS

Appearance

Heat the substance to be examined to about 75 °C. The resulting liquid is not more intensely coloured than reference solution Y_7 or BY_7 *(2.2.2, Method I)*.

Acidity

Melt 5.0 g, shake for 2 min with 10 ml of hot *carbon dioxide-free water R* , cool slowly and filter. To the filtrate add 0.05 ml of *methyl orange solution R* . No red colour develops.

Iodine value *(2.5.4)*

See Table 1474.-1.

Freezing point *(2.2.18)*

See Table 1474.-1.

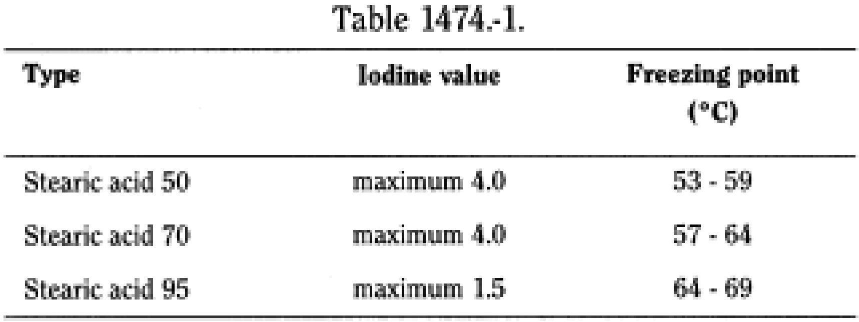


Table 1474.-1.

Type	Iodine value	Freezing point (°C)
Stearic acid 50	maximum 4.0	53 - 59
Stearic acid 70	maximum 4.0	57 - 64
Stearic acid 95	maximum 1.5	64 - 69

Nickel *(2.4.27)*

Maximum 1 ppm.

ASSAY

Gas chromatography *(2.2.28)* : use the normalisation procedure.

Test solution In a conical flask fitted with a reflux condenser, dissolve 0.100 g of the substance to be examined in 5 ml of *boron trifluoride-methanol solution R* . Boil under reflux for 10 min. Add 4.0 ml of *heptane R* through the condenser and boil again under reflux for 10 min. Allow to cool. Add 20 ml of a saturated solution of *sodium chloride R* . Shake and allow the layers to separate. Remove about 2 ml of the organic layer and dry it over 0.2 g of *anhydrous sodium sulphate R* . Dilute 1.0 ml of this solution to 10.0 ml with *heptane R* .

Reference solution Prepare the reference solution in the same manner as the test solution using 50 mg of *palmitic acid CRS* and 50 mg of *stearic acid CRS* instead of the substance to be examined.

Column:

— *material:* fused silica;

— *size:* *l* = 30 m, Ø = 0.32 mm;

— *stationary phase: macrogol 20 000 R* (film thickness 0.5 µm).

Carrier gas *helium for chromatography R* .

Flow rate 2.4 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	70
	2 - 36	70 → 240
	36 - 41	240
Injection port		220
Detector		260

Detection Flame ionisation.

Injection 1 µl.

Relative retention With reference to methyl stearate: methyl palmitate = about 0.88.

System suitability Reference solution:

— *resolution*: minimum 5.0 between the peaks due to methyl stearate and methyl palmitate.

LABELLING

The label states the type of stearic acid (50, 70, 95).

Ph Eur

Stearoyl Macrogolglycerides

General Notices

(Ph Eur monograph 1268)

Action and use

Excipient.

Ph Eur

DEFINITION

Mixtures of monoesters, diesters and triesters of glycerol and monoesters and diesters of macrogols with a mean relative molecular mass between 300 and 4000.

They are obtained by partial alcoholysis of saturated oils containing mainly triglycerides of stearic (octadecanoic) acid, using macrogol, or by esterification of glycerol and macrogol with saturated fatty acids, or by mixture of glycerol esters and condensates of ethylene oxide with the fatty acids of these hydrogenated oils.

The hydroxyl value is within 15 units of the nominal value. The saponification value is within 10 units of the nominal value.

CHARACTERS

Appearance

Pale yellow waxy solid.

Solubility

Dispersible in warm water and in warm liquid paraffin, freely soluble in methylene chloride, soluble in warm anhydrous ethanol.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 1.0 g of the substance to be examined in *methylene chloride R* and dilute to 20 ml with the same solvent.

Plate *TLC silica gel plate R* .

Mobile phase *hexane R, ether R* (30:70 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with a 0.1 g/l solution of *rhodamine B R* in *ethanol (96 per cent) R* and examine in ultraviolet light at 365 nm.

Results The chromatogram shows a spot due to triglycerides with an R_F value of about 0.9 (R_{st} 1) and spots due to 1,3-diglycerides (R_{st} 0.7), to 1,2-diglycerides (R_{st} 0.6), to monoglycerides (R_{st} 0.1) and to esters of macrogol (R_{st} 0).

B. Hydroxyl value (see Tests).

C. Saponification value (see Tests).

D. Fatty acid composition (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 2.0, determined on 2.0 g.

Hydroxyl value *(2.5.3, Method A)*

Within 15 units of the nominal value, determined on 1.0 g.

Peroxide value *(2.5.5, Method A)*

Maximum 6.0, determined on 2.0 g.

Saponification value *(2.5.6)*

Within 10 units of the nominal value, determined on 2.0 g.

Alkaline impurities

Into a test-tube introduce 5.0 g and carefully add a mixture, neutralised if necessary with *0.01 M hydrochloric acid* or with *0.01 M sodium hydroxide*, of 0.05 ml of a 0.4 g/l solution of *bromophenol blue R* in *ethanol (96 per cent) R*, 0.3 ml of *water R* and 10 ml of *ethanol (96 per cent) R*. Shake and allow to stand. Not more than 1.0 ml of *0.01 M hydrochloric acid* is required to change the colour of the upper layer to yellow.

Free glycerol

Maximum 3.0 per cent.

Dissolve 1.20 g in 25.0 ml of *methylene chloride R.* Heat if necessary. After cooling, add 100 ml of *water R*. Shake and add 25.0 ml of *periodic acetic acid solution R*. Shake and allow to stand for 30 min. Add 40 ml of a 75 g/l solution of *potassium iodide R*. Allow to stand for 1 min. Add 1 ml of *starch solution R*. Titrate the iodine with *0.1 M sodium thiosulphate*. Carry out a blank titration.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 2.3 mg of glycerol.

Composition of fatty acids

Gas chromatography *(2.4.22, Method A)*.

Composition of the fatty-acid fraction of the substance:

- *lauric acid* : maximum 5.0 per cent;
- *myristic acid* : maximum 5.0 per cent;
- stearic acid and palmitic acid: different nominal amounts and minimum 90.0 per cent for the sum of $C_{18}H_{36}O_2$ and $C_{16}H_{32}O_2$.

Ethylene oxide and dioxan ***(2.4.25)***

Maximum 1 ppm of ethylene oxide and maximum 10 ppm of dioxan.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R* .

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 1.0 g. Use a mixture of 30 volumes of *anhydrous methanol R* and 70 volumes of *methylene chloride R* as solvent.

Total ash ***(2.4.16)***

Maximum 0.2 per cent

LABELLING

The label states:

- The nominal hydroxyl value;
- The nominal saponification value;
- The type of the macrogol used (mean relative molecular mass) or the number of moles of ethylene oxide reacted per mole of substance (nominal value).

Ph Eur

Stearyl Alcohol

General Notices

(Ph Eur monograph 0753)

112-92-5

Action and use

Excipient.

Ph Eur

DEFINITION

Mixture of solid alcohols, mainly octadecan-1-ol ($C_{18}H_{38}O$; M_r 270.5), of animal or vegetable origin.

Content

Minimum 95.0 per cent of $C_{18}H_{38}O$.

CHARACTERS

Appearance

White or almost white, unctuous flakes, granules or mass.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent). When melted, it is miscible with fatty oils, with liquid paraffin and with melted wool fat.

IDENTIFICATION

Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time to the principal peak in the chromatogram obtained with reference solution (b).

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_6

(2.2.2, Method II).

Dissolve 0.50 g in 20 ml of boiling *ethanol (96 per cent) R* . Allow to cool.

Melting point ***(2.2.14)***

57 °C to 60 °C.

Acid value ***(2.5.1)***

Maximum 1.0.

Hydroxyl value ***(2.5.3, Method A)***

197 to 217.

Iodine value ***(2.5.4, Method A)***

Maximum 2.0.

Dissolve 2.00 g in *methylene chloride R* , warming if necessary and dilute to 25 ml with the same solvent.

Saponification value ***(2.5.6)***

Maximum 2.0.

ASSAY

Gas chromatography *(2.2.28)*

use the normalisation procedure.

Test solution Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 50 mg of *cetyl alcohol R* in *ethanol (96 per cent) R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 50 mg of *stearyl alcohol CRS* in *ethanol (96 per cent) R* and dilute to 5 ml with the same solvent.

Reference solution (c) Mix 1 ml of reference solution (a) and 1 ml of reference solution (b) and dilute to 10 ml with *ethanol (96 per cent) R.*

Column:

— *size: l* = 30 m, Ø = 0.32 mm;

— *stationary phase*: *poly(dimethyl)siloxane R* (1 µm).

Carrier gas *helium for chromatography R* .

Column	0 - 20	150 → 250
	20 - 40	250
Injection port		250
Detector		250

Detection Flame ionisation.

Injection 1 µl of the test solution and reference solutions (b) and (c).

System suitability Reference solution (c):

— *resolution*: minimum 5.0 between the peaks due to cetyl alcohol and stearyl alcohol.

Calculate the percentage content of $C_{18}H_{38}O$.

Ph Eur

Streptokinase Concentrated Solution

General Notices

Streptokinase Bulk Solution

(Ph Eur monograph 0356)

Action and use

Tissue-type plasminogen activator; fibrinolytic.

Preparation

Streptokinase Injection

Ph Eur

DEFINITION

Streptokinase concentrated solution is a preparation of a protein obtained from culture filtrates of certain strains of haemolytic *Streptococcus* group C; it has the property of combining with human plasminogen to form plasminogen activator. It may contain buffer salts and other excipients. The potency is not less than 510 IU per microgram of nitrogen.

PRODUCTION

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following test.

Abnormal toxicity *(2.6.9)*

Inject into each mouse a quantity of the preparation to be examined (if necessary, dilute with *water for injections R*) equivalent to 50 000 IU of streptokinase activity, the injection lasting 15-20 s.

CHARACTERS

Appearance

Clear, colourless liquid.

IDENTIFICATION

A. Place 0.5 ml of citrated human plasma in a polystyrene tube maintained in a water-bath at 37 °C. Add 0.1 ml of a dilution of the preparation to be examined containing 10 000 IU of streptokinase activity per millilitre in *phosphate buffer solution pH 7.2 R* and 0.1 ml of a solution of *human thrombin R* containing 20 IU/ml in *phosphate buffer solution pH 7.2 R*. Mix immediately. A clot forms and lyses within 30 min. Repeat the procedure using citrated bovine plasma. The clot does not lyse within 60 min.

B. Perform an immunochemical test using double immunodiffusion techniques *(2.7.1)*. Place in the central cavity about 80 µl of goat or rabbit antistreptokinase serum containing about 10 000 units of antistreptokinase activity per millilitre; place in each of the surrounding cavities about 80 µl of a dilution of the preparation to be examined containing 125 000 IU of streptokinase activity per millilitre. Allow the plates to stand in a humidified tank for 24 h. Only one precipitation arc appears and it is well defined.

TESTS

pH *(2.2.3)*

6.8 to 7.5.

Dilute the preparation to be examined in *carbon dioxide-free water R* to obtain a solution containing at least 1000 000 IU of streptokinase activity per millilitre.

Streptodornase

Maximum 10 IU of streptodornase activity per 100 000 IU of streptokinase activity.

Test solution Dilute the preparation to be examined in *imidazole buffer solution pH 6.5 R* to obtain a solution containing 150 000 IU of streptokinase activity per millilitre.

Reference solution Dissolve in *imidazole buffer solution pH 6.5 R* a reference preparation of streptodornase, calibrated in International Units against the International Standard of streptodornase, to obtain a solution containing 20 IU of streptodornase activity per millilitre. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

To each of 8 numbered centrifuge tubes, add 0.5 ml of a 1 g/l solution of *sodium deoxyribonucleate R* in *imidazole buffer solution pH 6.5 R*. To tube number 1 and tube number 2 add 0.25 ml of *imidazole buffer solution pH 6.5 R*, 0.25 ml of the test solution and, immediately, 3.0 ml of perchloric acid (25 g/l $HClO_4$). Mix, centrifuge at about 3000 g for 5 min and measure the absorbances *(2.2.25)* of the supernatant liquids at 260 nm, using as the compensation liquid a mixture of 1.0 ml of *imidazole buffer solution pH 6.5 R* and 3.0 ml of perchloric acid (25 g/l $HClO_4$) (absorbances A_1 and A_2). To the other 6 tubes (numbers 3 to 8) add 0.25 ml, 0.25 ml, 0.125 ml, 0.125 ml, 0 ml and 0 ml respectively of *imidazole buffer solution pH 6.5 R*; add to each tube 0.25 ml of the test solution and 0 ml, 0 ml, 0.125 ml, 0.125 ml, 0.25 ml and 0.25 ml respectively of the reference solution. Mix the contents of each tube and heat at 37 °C for 15 min. To each tube add 3.0 ml of perchloric acid (25 g/l $HClO_4$), mix and centrifuge. Measure the absorbances *(2.2.25)* of the supernatant liquids at 260 nm using the compensation liquid described above (absorbances A_3 to A_8). The absorbances comply with the following requirement:

$$(A_3 + A_4) - (A_1 + A_2) < \frac{(A_5 + A_6 + A_7 + A_8)}{2} - (A_3 + A_4)$$

Streptolysin

In a polystyrene tube, use a quantity of the preparation to be examined equivalent to 500 000 IU of streptokinase activity and dilute to 0.5 ml with a mixture of 1 volume of *phosphate buffer solution pH 7.2 R* and 9 volumes of a 9 g/l solution of *sodium chloride R*. Add 0.4 ml of a 23 g/l solution of *sodium thioglycollate R*. Heat in a water-bath at 37 °C for 10 min. Add 0.1 ml of a solution of a reference preparation of human antistreptolysin O containing 5 IU/ml. Heat at 37 °C for 5 min. Add 1 ml of *rabbit erythrocyte suspension R*. Heat at 37 °C for 30 min. Centrifuge at about 1000 *g*. In the same manner, prepare a polystyrene tube in which the solution of the preparation to be examined has been replaced by 0.5 ml of a mixture of 1 volume of *phosphate buffer solution pH 7.2 R* and 9 volumes of a 9 g/l solution of *sodium chloride R*. Measure the absorbances *(2.2.25)* of the supernatant liquids at 550 nm. The absorbance of the test solution is not more than 50 per cent greater than that of the reference solution.

Related substances

Liquid chromatography *(2.2.29)* : use the normalisation procedure.

Test solution Dilute the preparation to be examined with *water R* to obtain a concentration of about 0.5-1 g/l, depending on the chromatographic system used.

Reference solution Dilute 1 volume of *streptokinase for system suitability CRS* with 49 volumes of *water R*.

Column:

— *size: l* = 0.10 m, Ø = 4.6 mm;

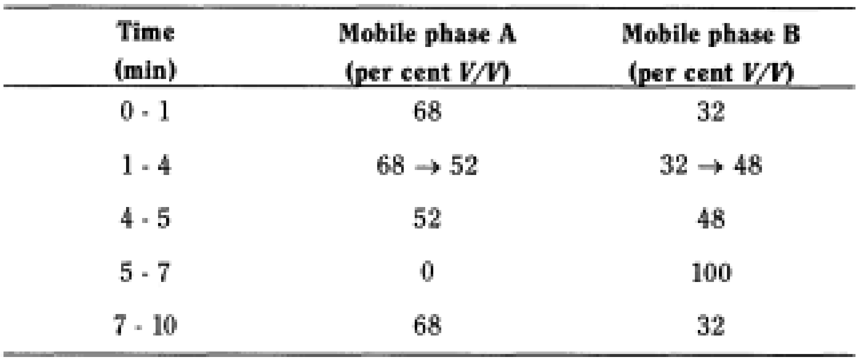
— *stationary phase: styrene-divinylbenzene copolymer R* (10 µm) with a pore size of 200 nm;

— *temperature*: 25 °C.

Mobile phase:

— *mobile phase A*: *trifluoroacetic acid R, water for injections R* (1:1000 *V/V*); degas;

— *mobile phase B*: *trifluoroacetic acid R, acetonitrile for chromatography R* (1:1000 *V/V*); degas;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 1	68	32
1 - 4	68 → 52	32 → 48
4 - 5	52	48
5 - 7	0	100
7 - 10	68	32

The above conditions may be modified to improve the separation efficiency of the chromatographic system.

Flow rate 5 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl.

Retention time Streptokinase = 2.3 min to 2.8 min.

System suitability Reference solution:

— *symmetry factor* : maximum 1.9 for the peak due to streptokinase;

— *peak-to-valley ratio* : minimum 2, where H_p = height above the baseline of the 1st peak eluting after the principal peak and H_v = height above the baseline of the lowest point of the curve separating this peak from the 2nd peak eluting after the principal peak;

— the chromatogram obtained with the reference solution is similar to the chromatogram supplied with *streptokinase for system suitability CRS*.

Limit:
— *total*: maximum 5 per cent.

Bacterial endotoxins ***(2.6.14)***

Less than 0.02 IU per 100 IU of streptokinase activity, if intended for use without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Nitrogen *(2.5.9)*.

Potency

The potency of streptokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of streptokinase calibrated in International Units; the formation of plasmin is determined using a suitable chromogenic substrate.

The International Unit is the activity of a stated amount of the International Standard for streptokinase. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Reference and test solutions Prepare 2 independent series of at least 3 dilutions of each of the preparation to be examined and of the reference preparation of streptokinase in *tris (hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1*, in the linear range of the assay (a range of 0.5-4.0 IU/ml has been found suitable). Prepare and maintain all solutions at 37 °C.

Substrate solution Mix 1.0 ml of *tris(hydroxymethyl)aminomethane buffer solution pH 7.4 R* with 1.0 ml of *chromophore substrate R3* . Add 5 µl of a 100 g/l solution of *polysorbate 20 R* . Keep at 37 °C in a water-bath. Immediately before commencing the activation assay, add 45 µl of a 1 mg/ml solution of *human plasminogen R* .

Method Analyse each streptokinase dilution, maintained at 37 °C, in duplicate. Initiate the activation reaction by adding 60 µl of each dilution to 40 µl of substrate solution. For blank wells, use 60 µl of *tris(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R1* instead of the reference and test solutions. Allow the reaction to proceed at 37 °C for 20 min and read the absorbance *(2.2.25)* at 405 nm. If a suitable thermostatted plate reader is available, this may be used to monitor the reaction. Alternatively, it may be necessary to stop the reaction after 20 min using 50 µl of a 50 per cent *V/V* solution of *glacial acetic acid R* .

Best results are obtained when the absorbance for the highest streptokinase concentration is between 0.1 and 0.2 (after blank subtraction). If necessary, adjust the time of incubation in order to reach this range of absorbances.

Calculate the regression of the absorbance on log concentrations of the solutions of the preparation to be examined and of the reference preparation of streptokinase and calculate the potency of the preparation to be examined using a suitable statistical method, for example the parallel-line assay *(5.3)*.

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

In an airtight container, protected from light and at a temperature of - 20 °C. If the preparation is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

— the number of International Units of streptokinase activity per milligram, calculated with reference to the dried preparation;

— the name and quantity of any added substance;

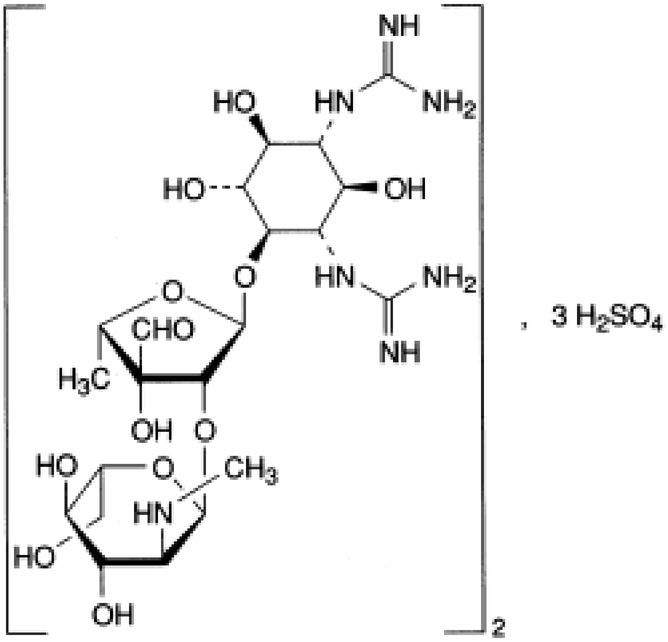
— that the preparation is suitable for use in the manufacture of parenteral preparations.

Ph Eur

Streptomycin Sulphate

General Notices

(Ph Eur monograph 0053)



$(C_{21}H_{39}N_7O_{12})_2,3H_2SO_4$ 1457 *3810-74-0*

Action and use

Aminoglycoside antibacterial; antituberculosis drug.

Preparation

Streptomycin Injection

Ph Eur

DEFINITION

Streptomycin sulphate is bis[*N*,*N*′-bis(aminoiminomethyl)-4-*O*-[5-deoxy-2-*O*-[2-deoxy-2-(methylamino)-α-L-glucopyranosyl]-3-*C*-formyl-α-L-lyxofuranosyl]-D-streptamine] trisulphate, a substance produced by the growth of certain strains of *Streptomyces griseus* or obtained by any other means. Stabilisers may be added. The potency is not less than 720 IU/mg, calculated with reference to the dried substance.

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

The method of manufacture is validated to demonstrate that the product if tested would comply with the following test:

Abnormal toxicity *(2.6.9)*

Inject into each mouse 1 mg of the substance to be examined dissolved in 0.5 ml of *water for injections R.*

CHARACTERS

A white or almost white powder, hygroscopic, very soluble in water, practically insoluble in ethanol.

IDENTIFICATION

A. Examine by thin-layer chromatography *(2.2.27),* using a plate coated with a 0.75 mm layer of the following mixture: mix 0.3 g of *carbomer R* with 240 ml of *water R* and allow to stand, with moderate shaking, for 1 h; adjust to pH 7 by the gradual addition, with continuous shaking, of *dilute sodium hydroxide solution R* and add 30 g of *silica gel H R* .

Heat the plate at 110 °C for 1 h, allow to cool and use immediately.

Test solution Dissolve 10 mg of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *streptomycin sulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *kanamycin monosulphate CRS* , 10 mg of *neomycin sulphate CRS* and 10 mg of *streptomycin sulphate CRS* in *water R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 10 µl of each solution. Develop over a path of 12 cm using a 70 g/l solution of *potassium dihydrogen phosphate R* . Dry the plate in a current of warm air, and spray with a mixture of equal volumes of a 2 g/l solution of *1,3-dihydroxynaphthalene R* in *alcohol R* and a 460 g/l solution of *sulphuric acid R* . Heat at 150 °C for 5 min to 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows three clearly separated spots.

B. Dissolve 5 mg to 10 mg in 4 ml of *water R* and add 1 ml of *1 M sodium hydroxide* . Heat in a water-bath for 4 min. Add a slight excess of *dilute hydrochloric acid R* and 0.1 ml of *ferric chloride solution R1* . A violet colour develops.

C. Dissolve 0.1 g in 2 ml of *water R* , add 1 ml of *α-naphthol solution R* and 2 ml of a mixture of equal volumes of *strong sodium hypochlorite solution R* and *water R.* A red colour develops.

D. Dissolve about 10 mg in 5 ml of *water R* and add 1 ml of *1 M hydrochloric acid* . Heat in a water-bath for 2 min. Add 2 ml of a 5 g/l solution of *α-naphthol R* in *1 M sodium hydroxide* and heat in a water-bath for 1 min. A faint yellow colour develops.

E. It gives the reactions of sulphates *(2.3.1)* .

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is not more intensely coloured than intensity 3 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II).* Allow to stand protected from light, at a temperature of about 20 °C for 24 h. Solution S is not more opalescent than reference suspension II *(2.2.1).*

pH *(2.2.3)*

The pH of solution S is 4.5 to 7.0.

Methanol

Examine by gas chromatography *(2.2.28)* .

Test solution Dissolve 1.00 g of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution Dilute 12.0 mg of *methanol R* to 100 ml with *water R* .

The chromatographic procedure may be carried out using:

— a column 1.5 m to 2.0 m long and 2 mm to 4 mm in internal diameter, packed with *ethylvinylbenzene-divinylbenzene copolymer R* (150 µm to 180 µm);

— *nitrogen for chromatography R* as the carrier gas at a constant flow rate of 30 ml to 40 ml per minute;

— a flame-ionisation detector.

Maintain the column at a constant temperature between 120 °C and 140 °C and the injection port and the detector at a temperature at least 50 °C higher than that of the column. Inject the test solution and the reference solution. The area of the peak corresponding to methanol in the chromatogram obtained with the test solution is not greater than the area of the peak in the chromatogram obtained with the reference solution (0.3 per cent).

Streptomycin B

Examine by thin-layer chromatography *(2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dissolve 0.2 g of the substance to be examined in a freshly prepared mixture of 3 volumes of *sulphuric acid R* and 97 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with *methanol R* and dilute to 20 ml with the same solvent (10 g/l solution).

Reference solution Dissolve 36 mg of *mannose R* in a freshly prepared mixture of 3 volumes of *sulphuric acid R* and 97 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents. Heat under a reflux condenser for 1 h, cool, rinse the condenser with *methanol R* and dilute to 50 ml with the same solvent. Dilute 5 ml of the solution to 50 ml with *methanol R* (0.3 g/l solution expressed as strepto-mycin B; 1 mg of *mannose R* is equivalent to 4.13 mg of streptomycin B).

Apply separately to the plate 10 µl of each solution. Develop over a path of 13 cm to 15 cm using a mixture of 25 volumes of *glacial acetic acid R,* 25 volumes of *methanol R* and 50 volumes of *toluene R* . Allow the plate to dry in air and spray with a freshly prepared mixture of equal volumes of a 2 g/l solution of *1,3-dihydroxynaphthalene R* in *alcohol R* and a 20 per cent *V/V* solution of *sulphuric acid R* and heat at 110 °C for 5 min. Any spot corresponding to streptomycin B in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (3.0 per cent).

Loss on drying *(2.2.32)*

Not more than 7.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 24 h.

Sulphated ash *(2.4.14)*

Not more than 1.0 per cent, determined on 1.000 g.

Sulphate

18.0 per cent to 21.5 per cent of sulphate (SO_4), calculated with reference to the dried substance. Dissolve 0.250 g in 100 ml of *water R* and adjust the solution to pH 11 using *concentrated ammonia R* . Add 10.0 ml of *0.1 M barium chloride* and about 0.5 mg of *phthalein purple R* . Titrate with *0.1 M sodium edetate* adding 50 ml of *alcohol R* when the colour of the solution begins to change and continue the titration until the violet-blue colour disappears.

1 ml of *0.1 M barium chloride* is equivalent to 9.606 mg of sulphate (SO_4).

Colorimetric test

Dry the substance to be examined and *streptomycin sulphate CRS* at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 0.1 kPa for 24 h. Dissolve 0.100 g of the dried substance to be examined in *water R* and dilute to 100.0 ml with the same solvent. Prepare a reference solution in the same manner using 0.100 g of the dried *streptomycin sulphate CRS* . Place 5.0 ml of each solution separately in two volumetric flasks and in a third flask place 5 ml of *water R.* To each flask add 5.0 ml of *0.2 M sodium hydroxide* and heat for exactly 10 min in a water-bath. Cool in ice for exactly 5 min, add 3 ml of a 15 g/l solution of *ferric ammonium sulphate R* in *0.5 M sulphuric acid* , dilute to 25.0 ml with *water R* and mix. Exactly 20 min after the addition of the ferric ammonium sulphate solution measure the absorbance *(2.2.25)* of the test solution and the reference solution in a 2 cm cell at the maximum at 525 nm, using as compensation liquid the solution prepared from 5 ml of *water R* . The absorbance of the test solution is not less than 90.0 per cent of that of the reference solution.

Bacterial endotoxins ***(2.6.14)***

Less than 0.25 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)* .

STORAGE

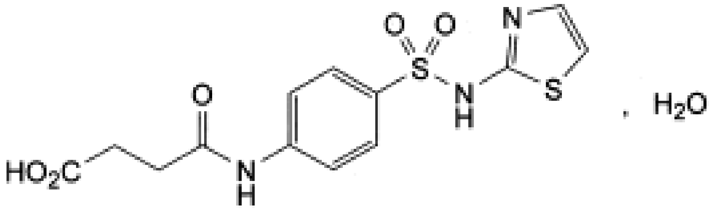
Store in an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

Ph Eur

Succinylsulfathiazole

General Notices

(Ph Eur monograph 0357)



$C_{13}H_{13}N_3O_5S_2,H_2O$ 373.4 *116-43-8*

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

4-Oxo-4-[[4-(thiazol-2-ylsulphamoyl)phenyl]amino]butanoic acid monohydrate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white, crystalline powder.

Solubility

Very slightly soluble in water, slightly soluble in acetone and in ethanol (96 per cent). It dissolves in solutions of alkali hydroxides and carbonates.

IDENTIFICATION

First identification A, D.

Second identification B, C, D, E.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison succinylsulfathiazole CRS .

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in hot *water R* , allow to crystallise, dry the crystals carefully between 2 sheets of filter paper and prepare new discs.

B. To 2 g add 10 ml of *water R* and 10 ml of *strong sodium hydroxide solution R* and boil for 10 min. Cool and adjust to pH 3.0 with *hydrochloric acid R1* . Cool, adjust to pH 7.0 with *sodium hydrogen carbonate solution R* and filter. The precipitate, washed with *water R* and dried at 100-105 °C, melts *(2.2.14)* at 196 °C to 204 °C. Introduce the capillary containing the precipitate into the bath at a temperature of 190 °C.

C. Heat 0.1 g in a test-tube over a small flame. Fumes are evolved which blacken *lead acetate paper R* .

D. Place 0.1 g in a borosilicate-glass tube of about 30 ml, add 0.5 g of *hydroquinone R* and 1 ml of *sulphuric acid R* . Heat in a glycerin bath at 135 °C for 10 min, mixing at the beginning of heating to obtain a homogeneous liquid phase. Allow to cool and place in iced water. Add carefully and with shaking 15 ml of *water R* . Add 5 ml of *toluene R* , shake for 5-10 s and allow to stand for 2 min; promote separation of the 2 layers using a stirrer. The upper layer (toluene) is intense pink.

E. Dissolve about 10 mg of the precipitate obtained in identification test B in 200 ml of *0.1 M hydrochloric acid* . 2 ml of this solution gives the reaction of primary aromatic amines *(2.3.1)* with formation of an orange precipitate.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_4 or BY_4 *(2.2.2, Method II)*.

Dissolve 1.0 g in a mixture of 5 ml of *dilute sodium hydroxide solution R* and 15 ml of *water R* .

Acidity

To 2.0 g add 20 ml of *water R* , shake continuously for 30 min and filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R* . Not more than 2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Sulfathiazole and other primary aromatic amines

Maximum 0.75 per cent.

Dissolve 20 mg in a mixture of 3.5 ml of *water R* , 6 ml of *dilute hydrochloric acid R* and 25 ml of *ethanol (96 per cent) R,* previously cooled to 15 °C. Place immediately in iced water and add 1 ml of a 2.5 g/l solution of *sodium nitrite R* . Allow to stand for 3 min, add 2.5 ml of a 40 g/l solution of *sulphamic acid R* and allow to stand for 5 min. Add 1 ml of a 4 g/l solution of *naphthylethylenediamine dihydrochloride R* and dilute to 50 ml with *water R* . The absorbance (*2.2.25*) measured at 550 nm is not greater than that of a standard prepared at

---

the same time and in the same manner using a mixture of 1.5 ml of a 100 ml aqueous solution containing 10 mg of *sulfathiazole R* and 0.5 ml of *hydrochloric acid R* ; 2 ml of *water R* ; 6 ml of *dilute hydrochloric acid R* ; and 25 ml of *ethanol (96 per cent) R* .

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

4.0 per cent to 5.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 100 ml of a mixture of 1 volume of *hydrochloric acid R* and 2 volumes of *water R* . Heat under a reflux condenser for 1 h. Carry out the determination of primary aromatic amino-nitrogen *(2.5.8*), determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 35.54 mg of $C_{13}H_{13}N_3O_5S_2$.

STORAGE

Protected from light.

Ph Eur

Sucrose Monopalmitate

General Notices

(Ph Eur monograph 2319)

Ph Eur

DEFINITION

Mixture of sucrose monoesters, mainly sucrose monopalmitate, obtained by transesterification of palmitic acid methyl esters of vegetable origin with *Sucrose (0204*). The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono- and diesters.

Content:

— *monoesters*: minimum 55.0 per cent;

— *diesters*: maximum 40.0 per cent;

— *sum of triesters and polyesters*: maximum 20.0 per cent.

CHARACTERS

Appearance

White or almost white, unctuous powder.

Solubility

Very slightly soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Composition of fatty acids (see Tests).

B. It complies with the limits of the assay.

TESTS

Acid value *(2.5.1)*

Maximum 6.0, determined on 3.00 g.

Use a freshly neutralised mixture of 1 volume of *water R* and 2 volumes of *2-propanol R* as solvent and heat gently.

Composition of fatty acids *(2.4.22, Method C)*

Use the mixture of calibrating substances in Table 2.4.22.-1.

Composition of the fatty-acid fraction of the substance:

- *lauric acid* : maximum 3.0 per cent;
- *myristic acid* : maximum 3.0 per cent;
- *palmitic acid* : 70.0 per cent to 85.0 per cent;
- *stearic acid* : 10.0 per cent to 25.0 per cent;
- *sum of the contents of palmitic acid and stearic acid* : minimum 90.0 per cent.

Free sucrose

Liquid chromatography *(2.2.29)* .

Solvent mixture *water for chromatography R* , *tetrahydrofuran for chromatography R* (12.5:87.5 *V/V*).

Test solution Dissolve 0.200 g of the substance to be examined in the solvent mixture and dilute to 4.0 ml with the solvent mixture.

Reference solution (a) Dissolve 5.0 mg of *sucrose CRS* in the solvent mixture and dilute to 50.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

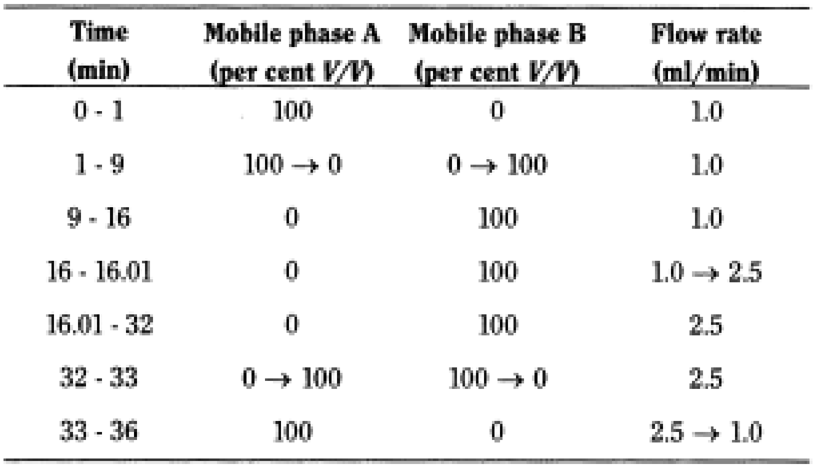
Reference solution (b) In 4 volumetric flasks, introduce respectively 5.0 mg, 10.0 mg, 20.0 mg and 25.0 mg of *sucrose CRS* , dissolve in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Column:

- *size: l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: spherical *aminopropylsilyl silica gel for chromatography R* (4 µm).

Mobile phase:

- *mobile phase A*: 0.01 g/l solution of *ammonium acetate R* in *acetonitrile for chromatography R ;*
- *mobile phase B*: 0.01 g/l solution of *ammonium acetate R* in a mixture of 10 volumes of *water for chromatography R* and 90 volumes of *tetrahydrofuran for chromatography R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)	Flow rate (ml/min)
0 - 1	100	0	1.0
1 - 9	100 → 0	0 → 100	1.0
9 - 16	0	100	1.0
16 - 16.01	0	100	1.0 → 2.5
16.01 - 32	0	100	2.5
32 - 33	0 → 100	100 → 0	2.5
33 - 36	100	0	2.5 → 1.0

Detection Evaporative light-scattering detector; the following settings have been found to be suitable; if the detector has different setting parameters, adjust the detector settings so as to comply with the system suitability criterion:

— *carrier gas*: *nitrogen R* ;

— *flow rate*: 1.0 ml/min;

— *evaporator temperature*: 45 °C;

— *nebuliser temperature*: 40 °C.

Injection 20 µl.

Retention time About 26 min.

System suitability Reference solution (a):

— *signal-to-noise ratio* : minimum 10.

Limit Maximum 4.0 per cent.

Water ***(2.5.12)***

Maximum 4.0 per cent, determined on 0.20 g.

Total ash ***(2.4.16)***

Maximum 1.5 per cent.

ASSAY

Size-exclusion chromatography *(2.2.30)* : use the normalisation procedure.

Test solution Dissolve 60.0 mg of the substance to be examined in *tetrahydrofuran R* and dilute to 4.0 ml with the same solvent.

Column:

— *size:* l = 0.6 m, Ø = 7 mm;

— *stationary phase*: *styrene-divinylbenzene copolymer R* (5 µm) with a pore size of 10 nm.

Mobile phase *tetrahydrofuran R* .

Flow rate 1.2 ml/min.

Detection Differential refractometer.

Injection 20 µl.

Relative retention With reference to monoesters (retention time = about 10 min): diesters = about 0.92; triesters and polyesters = about 0.90.

Calculations:

— *disregard limit*: disregard the peaks having a signal-to-noise ratio less than 10;

— *free fatty acids*: calculate the percentage content (*D*) of free fatty acids, using the following expression:

$$\frac{I_A \times 256}{561.1}$$

I_A = acid value.

— *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\frac{A \times (100 - D - S - E)}{100}$$

— *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{B \times (100 - D - S - E)}{100}$$

— *sum of triesters and polyesters*: calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{C \times (100 - D - S - E)}{100}$$

A = percentage content of monoesters determined by the normalisation procedure

S = percentage content of free sucrose (see Tests)

E = percentage content of water (see Tests)

B = percentage content of diesters determined by the normalisation procedure

C = sum of the percentage contents of triesters and polyesters determined by the normalisation procedure.

STORAGE

Protected from humidity.

Sucrose Stearate

General Notices

(Ph Eur monograph 2318)

Ph Eur

DEFINITION

Mixture of sucrose esters, mainly sucrose stearate, obtained by transesterification of stearic acid methyl esters of vegetable origin with *sucrose (0204).* The manufacture of the fatty acid methyl esters includes a distillation step.

It contains variable quantities of mono- and diesters.

Content:

Sucrose stearate type I:
— *monoesters*: minimum 50.0 per cent;
— *diesters*: maximum 40.0 per cent;
— *sum of triesters and polyesters*: maximum 25.0 per cent;

Sucrose stearate type II:
— *monoesters*: 20.0 per cent to 45.0 per cent;
— *diesters*: 30.0 per cent to 40.0 per cent;
— *sum of triesters and polyesters*: maximum 30.0 per cent.

Mobile phase *tetrahydrofuran R.*

Flow rate 1.2 ml/min.

Detection Differential refractometer.

Injection 20 µl.

Relative retention With reference to monoesters (retention time = about 10 min): diesters = about 0.92; triesters and polyesters = about 0.90.

Calculations:

— *disregard limit*: disregard the peaks having a signal-to-noise ratio less than 10;

— *free fatty acids*: calculate the percentage content (*D*) of free fatty acids, using the following expression:

$$\frac{I_A \times 284.5}{561.1}$$

I_A = acid value;

— *monoesters*: calculate the percentage content of monoesters using the following expression:

$$\frac{A \times (100 - D - S - E)}{100}$$

— *diesters*: calculate the percentage content of diesters using the following expression:

$$\frac{B \times (100 - D - S - E)}{100}$$

— *sum of triesters and polyesters*: calculate the sum of the percentage contents of triesters and polyesters using the following expression:

$$\frac{C \times (100 - D - S - E)}{100}$$

A = percentage content of monoesters determined by the normalisation procedure

S = percentage content of free sucrose (see Tests)

E = percentage content of water (see Tests)

B = percentage content of diesters determined by the normalisation procedure

C = sum of the percentage contents of triesters and polyesters determined by the normalisation procedure.

LABELLING

The label states the type of sucrose stearate (type I or II).

STORAGE

Protected from humidity.

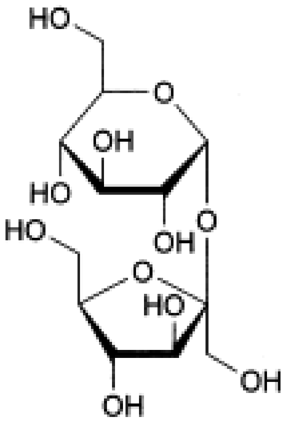
Ph Eur

Sucrose

General Notices

Refined Sugar

(Ph Eur monograph 0204)



$C_{12}H_{22}O_{11}$ 342.3 *57-30-1*

Action and use

Sweetening agent.

Preparation

Syrup

Ph Eur

DEFINITION

β-D-Fructofuranosyl α-D-glucopyranoside.

It contains no additives.

CHARACTERS

Appearance

White or almost white, crystalline powder, or lustrous, colourless or white or almost white crystals.

Solubility

Very soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in anhydrous ethanol.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24).*

Comparison *sucrose CRS.*

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 10 mg of the substance to be examined in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (a) Dissolve 10 mg of *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg each of *fructose CRS* , *glucose CRS* , *lactose CRS* and *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Plate *TLC silica gel G plate R* .

Mobile phase *Cold saturated boric acid solution R* , 60 per cent *V/V* solution of *glacial acetic acid R* , *ethanol R, acetone R, ethyl acetate R* (10:15:20:60:60 *V/V/V/V/V*).

Application 2 µl.

Development In an unsaturated tank over a path of 15 cm.

Drying In a current of warm air.

Detection Spray with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *alcohol R* . Heat the plate at 130 °C for 10 min.

System suitability The chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dilute 1 ml of solution S (see Tests) to 100 ml with *water R* . To 5 ml of the solution add 0.15 ml of freshly prepared *copper sulphate solution R* and 2 ml of freshly prepared *dilute sodium hydroxide solution R* . The solution is blue and clear and remains so after boiling. To the hot solution add 4 ml of *dilute hydrochloric acid R* and boil for 1 min. Add 4 ml of *dilute sodium hydroxide solution R .* An orange precipitate is formed immediately.

TESTS

Solution S

Dissolve 50.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)*.

Conductivity *(2.2.38)*

Maximum 35 µS·cm^{-1}.

Dissolve 31.3 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent. Measure the conductivity of the solution (C_1), while gently stirring with a magnetic stirrer, and that of the water used for preparing the solution (C_2). The readings must be stable within 1 per cent over a period of 30 s. Calculate the conductivity of the solution of the substance to be examined from the following expression:

$$C_1 - 0.35\,C_2$$

Specific optical rotation *(2.2.7)*

+ 66.3 to + 67.0.

Dissolve 26.0 g in *water R* and dilute to 100.0 ml with the same solvent.

Colour value

Maximum 45.

Dissolve 50.0 g in 50.0 ml of *water R*. Mix, filter (diameter of pores 0.45 µm) and degas. Measure the absorbance *(2.2.25)* at 420 nm, using a cell of minimum 4 cm (a cell length of 10 cm or more is preferred).

Calculate the colour value using the following expression:

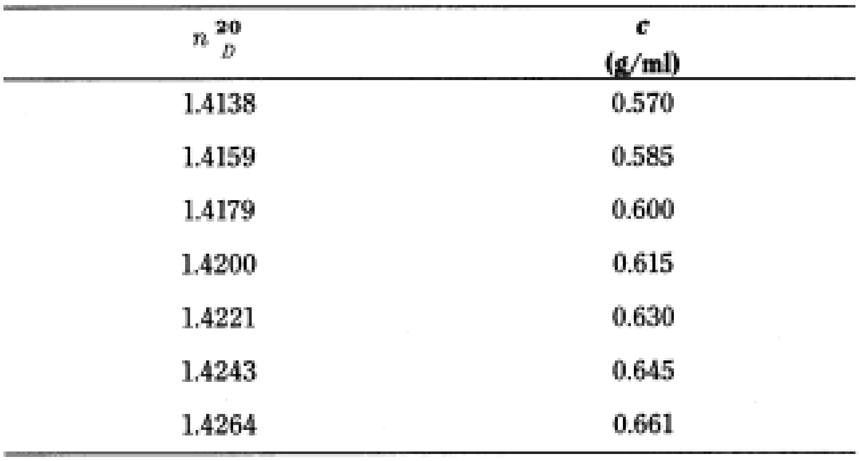
$$\frac{A \times 1000}{b \times c}$$

A = absorbance measured at 420 nm

b = path length in centimetres

c = concentration of the solution, in grams per millilitre, calculated from the refractive index *(2.2.6)* of the solution; use Table 0204.-1 and interpolate the values if necessary

Table 0204.-1



n_D^{20}	c (g/ml)
1.4138	0.570
1.4159	0.585
1.4179	0.600
1.4200	0.615
1.4221	0.630
1.4243	0.645
1.4264	0.661

System suitability:

— *repeatability*: the absolute difference between 2 results is not greater than 3.

Dextrins

If intended for use in the preparation of large-volume infusions, it complies with the test for dextrins. To 2 ml of solution S add 8 ml of *water R* , 0.05 ml of *dilute hydrochloric acid R* and 0.05 ml of *0.05 M iodine* . The solution remains yellow.

Reducing sugars

To 5 ml of solution S in a test-tube about 150 mm long and 16 mm in diameter add 5 ml of *water R* , 1.0 ml of *1 M sodium hydroxide* and 1.0 ml of a 1 g/l solution of *methylene blue R* . Mix and place in a water-bath. After exactly 2 min, take the tube out of the bath and examine the solution immediately. The blue colour does not disappear completely. Ignore any blue colour at the air/solution interface.

Sulphites

Maximum 10 ppm, calculated as SO_2.

Determine the sulphites content by a suitable enzymatic method based on the following reactions. Sulphite is oxidised by sulphite oxidase to sulphate and hydrogen peroxide which in turn is reduced by nicotinamide-adenine dinucleotide-peroxidase in the presence of reduced nicotinamide-adenine dinucleotide (NADH). The amount of NADH oxidised is proportional to the amount of sulphite.

Test solution Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R* and dilute to 10.0 ml with the same solvent.

Reference solution Dissolve 4.0 g of the substance to be examined in freshly prepared *distilled water R,* add 0.5 ml of *sulphite standard solution (80 ppm SO_2) R* and dilute to 10.0 ml with freshly prepared *distilled water R* .

Blank solution Freshly prepared *distilled water R* .

Separately introduce 2.0 ml each of the test solution, the reference solution and the blank in

10 mm cuvettes and add the reagents as described in the instructions in the kit for sulphite determination. Measure the absorbance *(2.2.25)* at the absorption maximum at about 340 nm before and at the end of the reaction time and subtract the value obtained with the blank.

The absorbance difference of the test solution is not greater than half the absorbance difference of the reference solution.

Lead

Maximum 0.5 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 1.5 g of the substance to be examined in 1.5 ml of *deionised distilled water R* in a digestion tube. Add 0.75 ml of *lead-free nitric acid R1* and slowly warm to 90-95 °C, avoiding spattering. Heat for about 60 min, add again 0.75 ml of *lead-free nitric acid R1*. Heat until all brown vapours have dissipated and any reddish tint is gone (about 60 min). Cool. Add 0.5 ml of *strong hydrogen peroxide solution R* dropwise and heat at 90-95 °C for 15 min. Cool. Add again 0.5 ml of *strong hydrogen peroxide solution R* dropwise, heat at 90-95 °C for 60 min and cool. Repeat these operations until a clear, light yellow solution is obtained. Dilute to 10.0 ml with deionised *distilled water R* . Store in capped plastic vials.

Reference solutions Prepare 3 reference solutions in the same manner as the test solution but adding 0.5 ml, 1.0 ml and 1.5 ml respectively of *lead standard solution (0.5 ppm Pb) R* in addition to the 1.5 g of the substance to be examined.

Blank solution Prepare a blank in the same manner as for the test solution but without the substance to be examined.

Zero-setting solution *Deionised distilled water R* .

Apparatus Suitable graphite furnace atomic absorption spectrometer equipped with a background compensation system, an autosampler and pyrolytically-coated tubes or with pyrolytic graphite platforms.

Source Hollow-cathode lamp or electrodeless discharge lamp.

Gas:

— *argon R* as the purge gas;

— air as alternate gas during the charring step.

Flow rate To be adapted according to the apparatus; usually between 200 ml/min and 300 ml/min.

Wavelength 283.3 nm.

Method Separately inject 20 µl each of the zero-setting solution, the blank solution, the test solution, the reference solutions, and add immediately 5 µl of *magnesium nitrate solution R1*, which is used as matrix modifier, to each of the solutions. Inject each solution in triplicate.

The ashing and atomisation temperatures and times vary according to the apparatus, the background compensation system, and the graphite tube etc. The following parameters are given for guidance and have to be adjusted.

Heat the furnace progressively to 200 °C and maintain the drying temperature at 200 °C for 30 s, the ashing temperature at 750 ± 50 °C for 40 s after a 40 s temperature rise, and the atomisation temperature at 1800 °C for 10 s (0 s temperature rise). Clean out at 2600 °C for 7 s after a 1 s temperature rise. Use the zero-setting solution to set the instrument zero. Calculate the mean readings of the test solution and of the reference solutions subtracting the mean blank. If necessary, dilute with the zero-setting solution to obtain a reading within the linear range.

System suitability:

— The relative standard deviation of the 3 readings obtained for the triplicate injections of the reference solutions from which the mean blank has been subtracted is not greater than 15 per cent.

Loss on drying *(2.2.32)*

Maximum 0.1 per cent, determined on 2.000 g by drying in an oven at 105 °C for 3 h.

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/mg, if intended for use in the preparation of large-volume infusions.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of large-volume parenteral dosage forms.

Opioid receptor agonist; analgesic.

Ph Eur

DEFINITION

N-[4-(Methoxymethyl)-1-[2-(thiophen-2-yl)ethyl]piperidin-4-yl]-*N*-phenylpropanamide citrate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Soluble in water and in ethanol (96 per cent), freely soluble in methanol.

mp

about 140 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of sufentanil citrate.*

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Dissolve 0.2 g in *water R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) In order to produce impurity E *in situ*, dissolve 10 mg of the substance to be examined in 10.0 ml of *dilute hydrochloric acid R* . Heat on a water-bath under a reflux condenser for 4 h. Add 10.0 ml of *dilute sodium hydroxide solution R* . Evaporate to dryness on a water-bath. Cool and take up the residue in 10 ml of *methanol R* . Filter.

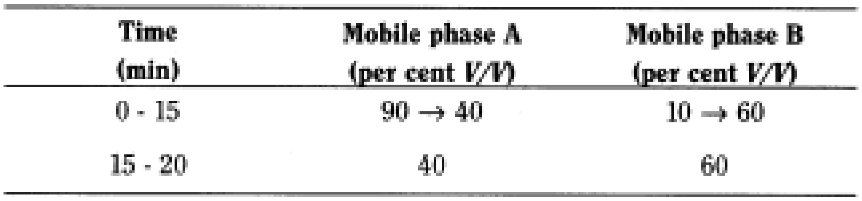
Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R* . Dilute 1.0 ml of this solution to 10.0 ml with *methanol R* .

Column:

- *size: l* = 0.1 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

- *mobile phase A*: 5 g/l solution of *ammonium carbonate R* in a mixture of 10 volumes of *tetrahydrofuran R* and 90 volumes of *water R;*
- *mobile phase B: acetonitrile R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	90 → 40	10 → 60
15 - 20	40	60

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 220 nm.

Equilibration With *acetonitrile R* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Impurity E = about 12 min; sufentanil = about 13 min.

System suitability Reference solution (a):

— *resolution*: minimum 4.0 between the peaks due to impurity E and sufentanil; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:

— *impurities A, B, C, D, E, F, G, H, I*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak with a retention time relative to sufentanil of 0.05 or less.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C.

ASSAY

Dissolve 0.400 g in 50 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R* and titrate with *0.1 M perchloric acid* , using 0.2 ml of *naphtholbenzein solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 57.87 mg of $C_{28}H_{38}N_2O_9S$.

Ph Eur

Sugar Spheres

General Notices

(Ph Eur monograph 1570)

Action and use

Excipient.

Ph Eur

DEFINITION

Sugar spheres contain not more than 92 per cent of sucrose, calculated on the dried basis. The remainder consists of maize starch and may also contain starch hydrolysates and colour additives. The diameter of sugar spheres varies usually from 200 µm to 2000 µm and the upper and lower limits of the size of the sugar spheres are stated on the label.

IDENTIFICATION

A. Examine by thin-layer chromatography *(2.2.27)* , using a *TLC silica gel G plate R* .

Test solution Mix 2 ml of solution S (see Tests) with 3 ml of *methanol R* . Dilute to 20 ml with a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* .

Reference solution (a) Dissolve 10 mg of *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg of *fructose CRS* , 10 mg of *glucose CRS* , 10 mg of *lactose CRS* and 10 mg of *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Apply to the plate 2 µl of each solution and thoroughly dry the starting points. Develop over a path of 15 cm using a mixture of 10 volumes of *water R* , 15 volumes of *methanol R* , 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R* , measured accurately as a slight excess of water causes cloudiness of the solution. Dry the plate in a current of warm air. Repeat the development immediately after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a 5 g/l solution of *thymol R* in a mixture of 5 volumes of *sulphuric acid R* and 95 volumes of *alcohol R* . Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To water slurry of the insoluble portion obtained (see Assay), add 0.05 ml of *iodine solution R1* . A dark-blue is produced which disappears on heating.

C. To 5 ml of solution S add 0.15 ml of freshly prepared *copper sulphate solution R* and 2 ml of freshly prepared *dilute sodium hydroxide solution R*. The solution is blue and clear and remains so after boiling. To the hot solution add 4 ml of *dilute hydrochloric acid R* and boil for 1 min. Add 4 ml of *dilute sodium hydroxide solution R*. An orange precipitate is formed immediately.

TESTS

Solution S

To 0.5 g in a 100 ml volumetric flask add 80 ml of *water R* and shake until the sucrose is dissolved. Dilute to 100.0 ml with *water R*. Filter under vacuum to obtain a clear solution.

Fineness *(2.9.12)*

Minimum of 90 per cent (*m/m*) of the sugar spheres are between the lower and the upper limits of the size of the sugar spheres stated on the label.

Heavy metals *(2.4.8)*

2.0 g complies with limit test C for heavy metals (5 ppm). Prepare the standard using 1.0 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Not more than 0.2 per cent, determined on 2 g.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and 10^2 fungi per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13)*.

ASSAY

Sucrose content

Weigh 10.000 g of ground sugar spheres in a 100 ml graduated flask and complete to 100.0 ml with *water R*. Stir and decant. Filter under vacuum to obtain a clear solution (the insoluble portion is used for the identification test B). Measure the angle of optical rotation *(2.2.7)* and calculate the sucrose percentage content as follows:

$$\frac{10^6 \times \alpha}{66.5 \times l \times m \times (100 - H)}$$

α = angle of rotation

l = length of the polarimeter tube, in decimetres

m = exact weight of the granules sample, in grams

H = loss on drying

LABELLING

The label states:

- — the upper and the lower limits of the size of the sugar spheres;
- — any added colour additives;
- — any added starch hydrolysates.

Appearance of solution

The solution is clear *(2.2.1)* .

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent.

Absorbance *(2.2.25)*

Maximum 0.10 at 430 nm.

Dissolve 1.0 g in *water R* and dilute to 100.0 ml with the same solvent.

pH *(2.2.3)*

4.5 to 7.2; if the substance is sterile: 5.2 to 7.2.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 219 to + 233 (anhydrous substance).

Dissolve 0.500 g in *water R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Solution A 2.72 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R* .

Solution B Dilute 2 ml of *acetonitrile R1* to 100.0 ml with solution A.

Test solution Suspend 77.0 mg of the substance to be examined in 2 ml of *acetonitrile R1* and sonicate for about 5 min. Dilute to 100.0 ml with solution A.

Reference solution (a) Suspend 70.0 mg of *sulbactam CRS* in 2 ml of *acetonitrile R1* and sonicate for about 5 min. Dilute to 100.0 ml with solution A.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with solution B. Dilute 1.0 ml of this solution to 10.0 ml with solution B.

Reference solution (c) Dissolve 15.0 mg of *6-aminopenicillanic acid R* in solution A and dilute to 50.0 ml with solution A.

Reference solution (d) Mix 1 ml of reference solution (a) and 1 ml of reference solution (c) and dilute to 25.0 ml with solution B.

Reference solution (e) Dissolve 8 mg of *sulbactam for peak identification CRS* (containing impurities A, C, D, E and F) in 1 ml of *acetonitrile R1*, sonicate for about 5 min and dilute to 10 ml with solution B.

Column:

— *size: l* = 0.10 m, Ø = 4.0 mm;

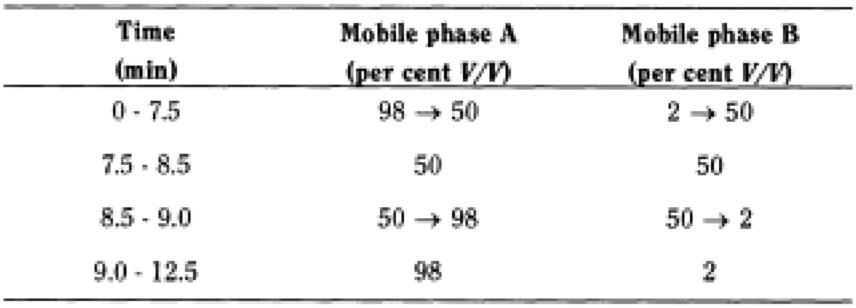
— *stationary phase: octadecylsilyl silica gel for chromatography R* (3.0 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: 5.44 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 4.0 with *dilute phosphoric acid R*;

— *mobile phase B: acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 7.5	98 → 50	2 → 50
7.5 - 8.5	50	50
8.5 - 9.0	50 → 98	50 → 2
9.0 - 12.5	98	2

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µl of the test solution, solution B and reference solutions (b), (d) and (e).

Relative retention With reference to sulbactam (retention time = about 2.5 min): impurity A = about 0.4; impurity B = about 0.6; impurity C = about 1.6; impurity D = about 2.0; impurity E = about 2.1; impurity F = about 2.5.

Identification of impurities Use the chromatogram supplied with *sulbactam for peak identification CRS* and the chromatogram obtained with reference solution (e) to identify the peaks due to impurities A, C, D, E and F.

System suitability Reference solution (d):

— *resolution*: minimum 7.0 between the peaks due to impurity B and sulbactam.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity B = 0.5; impurity D = 0.5; impurity F = 0.6;

— *impurity A*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *impurities B, D, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurities C, E*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

2-Ethylhexanoic acid *(2.4.28)*

Maximum 0.5 per cent *m/m.*

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.0 gin *water R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test A. Prepare the reference solution using 10.0 ml of *lead standard solution (2 ppm Pb) R* .

Water *(2.5.12)*

Maximum 1.0 per cent, determined on 1.00 g.

Bacterial endotoxins *(2.6.14, Method A)*

Less than 0.17 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of sulbactam sodium by multiplying the percentage content of sulbactam by 1.094 and using the declared content of *sulbactam CRS*.

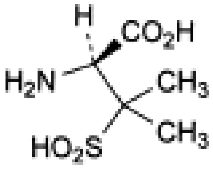
STORAGE

In an airtight container . If the substance is sterile, store in a sterile, airtight, tamper-proof container .

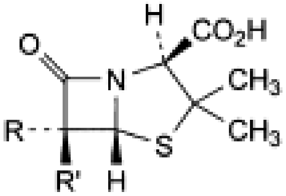
IMPURITIES

Specified impurities *A, B, C, D, E, F.*

Other detectable impurities (the following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): G*.



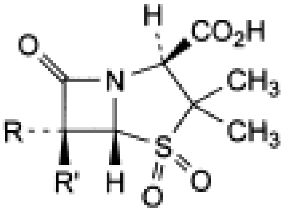
A. (2*S*)-2-amino-3-methyl-3-sulphinobutanoic acid,



B. R = NH_2, R′ = H: (2*S*,5*R*,6*R*)-6-amino-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0] heptane-2-carboxylic acid (6-aminopenicillanic acid),

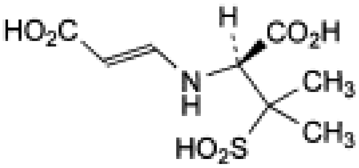
D. R = Br, R′ = H: (2*S*,5*R*,6*R*)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0] heptane-2-carboxylic acid (6-bromopenicillanic acid),

F. R = R′ = Br: (2*S*,5*R*)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid (6,6-dibromopenicillanic acid),



C. R = Br, R′ = H: (2*S*,5*R*,6*R*)-6-bromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0] heptane-2-carboxylic acid 4,4-dioxide (6-bromopenicillanic acid sulphone),

E. R = R′ = Br: (2*S*,5*R*)-6,6-dibromo-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylic acid 4,4-dioxide (6,6-dibromopenicillanic acid sulphone),



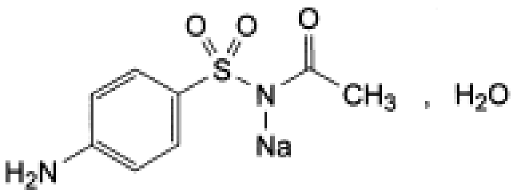
G. (2*E*)-3-[[(1*S*)-1-carboxy-2-methyl-2-sulphinopropyl]amino]prop-2-enoic acid.

Sulfacetamide Sodium

General Notices

Soluble Sulfacetamide

(Ph Eur monograph 0107)



$C_8H_9N_2NaO_3S,H_2O$ 254.2 *6209-17-2*

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sodium acetyl[(4-aminophenyl)sulphonyl]azanide.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or yellowish-white, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in anhydrous ethanol.

IDENTIFICATION

First identification B, F.

Second identification *A, C, E, F.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 0.1 g in *phosphate buffer solution pH 7.0 R* and dilute to 100.0 ml with the same buffer solution. Dilute 1.0 ml of this solution to 100.0 ml with *phosphate buffer solution pH 7.0 R* .

Spectral range 230-350 nm.

Absorption maximum At 255 nm.

Specific absorbance at the absorption maximum 660 to 720 (anhydrous substance).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *sulfacetamide sodium CRS.*

C. Melting point *(2.2.14)* : 181 °C to 185 °C.

Dissolve 1 g in 10 ml of *water R* , add 6 ml of *dilute acetic acid R* and filter. Wash the precipitate with a small quantity of *water R* and dry at 100-105 °C for 4 h.

E. Dissolve about 1 mg of the precipitate obtained in identification C, with heating, in 1 ml of *water R* . The solution gives the reaction of primary aromatic amines *(2.3.1)* with formation of an orange-red precipitate.

F. Solution S (see Tests) gives the reactions of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 1.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution GY_4 *(2.2.2, Method II)*.

pH *(2.2.3)*

8.0 to 9.5 for solution S.

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use and carry out the test protected from light.*

Test solution Dissolve 0.200 g of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *sulfacetamide sodium CRS* and 5 mg of *sulfanilamide R* (impurity A) in 1.0 ml of the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size:* *l* = 0.125 m, Ø = 4 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *glacial acetic acid R, methanol R, water for chromatography R* (1:10:89 *V/V/V*).

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 10 µl.

Run time 7 times the retention time of sulfacetamide.

Relative retention With reference to sulfacetamide (retention time = about 5 min): impurity A = about 0.5.

System suitability Reference solution (a):

— *resolution*: minimum 5.0 between the peaks due to impurity A and sulfacetamide.

Limits:

— *correction factor*: for the calculation of the content, multiply the peak area of impurity A by 0.5;

— *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Sulphates ***(2.4.13)***

Maximum 200 ppm.

Dissolve 2.5 g in *distilled water R* and dilute to 25 ml with the same solvent. Add 25 ml of *dilute acetic acid R* , shake for 30 min and filter. 15 ml of the filtrate complies with the limit test for sulphates.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of the filtrate obtained in the test for sulphates complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R* .

Water ***(2.5.12)***

6.0 per cent to 8.0 per cent, determined on 0.200 g.

ASSAY

Dissolve 0.500 g in a mixture of 50 ml of *water R* and 20 ml of *dilute hydrochloric acid R* .

Cool the solution in a bath of iced water and carry out the determination of primary aromatic amino-nitrogen *(2.5.8)*, determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 23.62 mg of $C_8H_9N_2NaO_3S$.

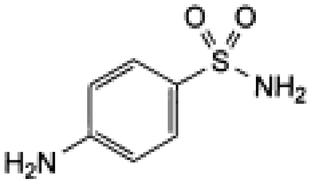
STORAGE

Protected from light.

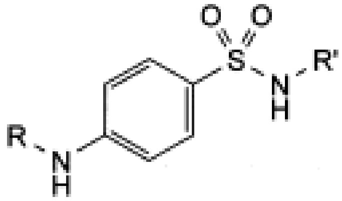
IMPURITIES

Specified impurities A.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use*): *B, C, D.*



A. sulfanilamide,



B. R = $CO\text{-}CH_3$, R′ = H: *N*-(4-sulphamoylphenyl)acetamide,

C. R = R′ = $CO\text{-}CH_3$: *N*-[[4-(acetylamino)phenyl]sulphonyl]acetamide,

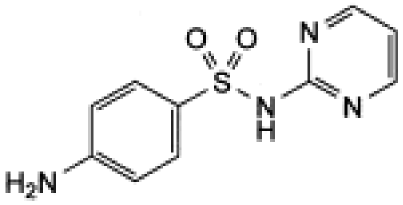
D. dapsone.

Ph Eur

Sulfadiazine

General Notices

(Ph Eur monograph 0294)



$C_{10}H_{10}N_4O_2S$ 250.3 *68-35-9*

Action and use

Sulfonamide antibacterial.

Preparation

Sulfadiazine Injection

Ph Eur

DEFINITION

Sulfadiazine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-pyrimidin-2-ylbenzenesulphonamide, calculated with reference to the dried substance.

CHARACTERS

White, yellowish-white or pinkish-white, crystalline powder or crystals, practically insoluble in water, slightly soluble in acetone, very slightly soluble in alcohol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 255 °C, with decomposition.

IDENTIFICATION

First identification A, B.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sulfadiazine CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (a) corresponds in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place 3 g in a dry tube. Immerse the lower part of the tube, inclined at 45°, in a silicone oil bath and heat to about 270 °C. The substance to be examined decomposes and a white or yellowish-white sublimate is formed which, after recrystallisation from *toluene R* and drying at 100 °C, melts *(2.2.14)* at 123 °C to 127 °C.

D. Dissolve about 5 mg in 10 ml of *1 M hydrochloric acid*. Dilute 1 ml of the solution to 10 ml with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines *(2.3.1).*

TESTS

Appearance of solution

Dissolve 0.8 g in a mixture of 5 ml of *dilute sodium hydroxide solution R* and 5 ml of *water R.* The solution is not more intensely coloured than reference solution Y_5, BY_5 or GY_5 *(2.2.2, Method II)*.

Acidity

To 1.25 g, finely powdered, add 25 ml of *carbon dioxide-free water R*. Heat at about 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF* $_{254}$ *R* as the coating substance.

Test solution (a) Dissolve 20 mg of the substance to be examined in 3 ml of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5.0 ml with the same mixture of solvents.

Test solution (b) Dissolve 0.10 g of the substance to be examined in 0.5 ml of *concentrated ammonia R* and dilute to 5.0 ml with *methanol R*. If the solution is not clear, heat gently until dissolution is complete.

Reference solution (a) Dissolve 20 mg of *sulfadiazine CRS* in 3 ml of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5.0 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.25 ml of test solution (a) to 50 ml with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (b), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals ***(2.4.8)***

1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.00 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in a mixture of 20 ml of *dilute hydrochloric acid R* and 50 ml of *water R* . Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen *(2.5.8)*, determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 25.03 mg of $C_{10}H_{10}N_4O_2S$.

STORAGE

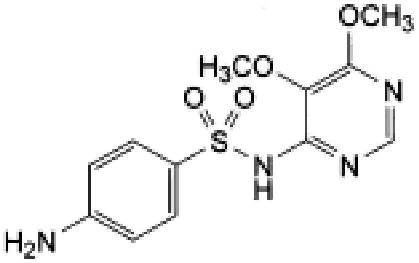
Store protected from light.

Ph Eur

Sulfadoxine

General Notices

(Ph Eur monograph 0740)



$C_{12}H_{14}N_4O_4S$ 310.3 *2447-57-6*

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfadoxine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5,6-dimethoxypyrimidin-4-yl)benzenesulphonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, slightly soluble in alcohol and in methanol. It dissolves in solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 198 °C, with decomposition.

IDENTIFICATION

First identification *A, C.*

Second identification *B, C, D.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *sulfadoxine CRS* . Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 0.5 g in 1 ml of a 40 per cent *V/V* solution of *sulphuric acid R*, heating gently. Continue heating until a crystalline precipitate appears (about 2 min). Allow to cool and add 10 ml of *dilute sodium hydroxide solution R.* Cool again. Add 25 ml of *ether R* and shake for 5 min. Separate the ether layer, dry over *anhydrous sodium sulphate R* and filter. Evaporate the solvent by heating in a water-bath. The residue melts *(2.2.14)* at 80 °C to 82 °C or at 90 °C to 92 °C.

D. Dissolve about 5 mg in 10 ml of *1 M hydrochloric acid*. Dilute 1 ml of the solution to 10 ml with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 5 ml of *dilute sodium hydroxide solution R* and 5 ml of *water R*. The solution is not more intensely coloured than reference solution Y_5, BY_5 or GY_5 *(2.2.2, Method II)*.

Acidity

To 1.25 g, finely powdered, add 25 ml of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in a bath of iced water for about 15 min and filter. Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfaguanidine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (4-aminophenylsulphonyl)guanidine, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, fine crystalline powder, very slightly soluble in water, slightly soluble in acetone, very slightly soluble in ethanol (96 per cent), practically insoluble in methylene chloride. It dissolves in dilute solutions of mineral acids.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D, E.*

A. Melting point *(2.2.14)* : 189 °C to 193 °C, determined on the dried substance.

B. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *sulfaguanidine CRS* .

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in 10 ml of *1 M hydrochloric acid* . Dilute 1 ml of the solution to 10 ml with *water R* . The solution, without further acidification, gives the reaction of primary aromatic amines *(2.3.1)* .

E. Suspend 0.1 g in 2 ml of *water R* , add 1 ml of *α-naphthol solution R* and 2 ml of a mixture of equal volumes of *water R* and *strong sodium hypochlorite solution R*. A red colour develops.

TESTS

Solution S

To 2.5 g, add 40 ml of *carbon dioxide-free water R* . Heat at about 70 °C for 5 min. Cool while stirring in iced water for about 15 min, filter and dilute to 50 ml with *carbon dioxide-free water R.*

Acidity

To 20 ml of solution S, add 0.1 ml of *bromothymol blue solution R1* . Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin layer chromatography *(2.2.27)* , using a *TLC silica gel GF$_{254}$ plate R*.

Test solution (a) Dissolve 50 mg of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 2 ml of test solution (a) to 10 ml with *acetone R.*

Reference solution (a) Dissolve 10 mg of *sulfaguanidine CRS* in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dilute 5 ml of test solution (b) to 200 ml with *acetone R.*

Reference solution (c) Dilute 5 ml of reference solution (b) to 10 ml with *acetone R* .

Reference solution (d) Dissolve 10 mg of *sulfanilamide R* in test solution (b) and dilute to 5 ml with the same solution.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *anhydrous formic acid R* , 20 volumes of *methanol R* and 70 volumes of *methylene chloride R* . Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent) and at most one such spot is more intense that the spot in the chromatogram obtained with reference solution (c) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated principal spots.

Heavy metals *(2.4.8)*

1.0 g complies with test F (20 ppm). Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R* .

Loss on drying ***(2.2.32)***

Not more than 8.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

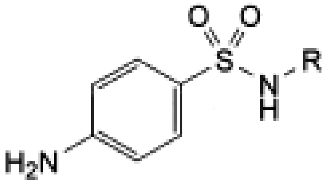
Dissolve 0.175 g in 50 ml of *dilute hydrochloric acid R*. Cool the solution in iced water. Carry out the determination of primary aromatic amino-nitrogen *(2.5.8),* determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 21.42 mg of $C_7H_{10}N_4O_2S$.

STORAGE

Store protected from light.

IMPURITIES



A. R = H: 4-aminobenzenesulphonamide (sulphanilamide),

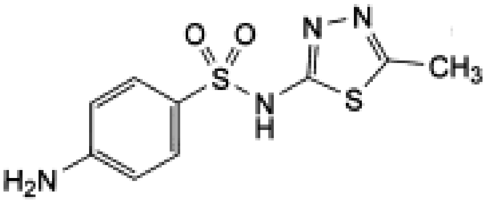
B. R = CO-NH_2: *N*-[(4-aminophenyl)sulphonyl]urea (sulphacarbamide).

Ph Eur

Sulfamethizole

General Notices

(Ph Eur monograph 0637)



$C_9H_{10}N_4O_2S_2$ 270.3 *144-82-1*

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfamethizole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(5-methyl-1,3,4-thiadiazol-2-yl)benzenesulphonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white crystalline powder or crystals, very slightly soluble in water, soluble in acetone, sparingly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

It melts at about 210 °C.

IDENTIFICATION

First identification A, B.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sulfamethizole CRS*. Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal

spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 4 ml of *methanol R* and add 0.2 ml of a 40 g/l solution of *copper acetate R*. A flocculent, yellowish-green precipitate is formed, changing to dark green.

D. Dissolve about 5 mg in *1 M hydrochloric acid* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 5 ml of *dilute sodium hydroxide solution R* and 5 ml of *water R*. The solution is not more intensely coloured than reference solution Y_5, BY_5 or GY_5 *(2.2.2, Method II).*

Acidity

To 1.25 g add 25 ml of *carbon dioxide-free water R* and heat at 70 °C for 5 min. Cool for about 15 min in iced water and filter. To 20 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1*. Not more than 0.5 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF $_{254}$ R* as the coating substance.

Test solution (a) Dissolve 0.30 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *acetone R.*

Reference solution (a) Dissolve 30 mg of *sulfamethizole CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 20 ml with *acetone R.*

Apply to the plate 2 µl of each solution. Develop over a path of 15 cm using a mixture of 15 volumes of *methanol R* and 80 volumes of *chloroform R.* Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino- nitrogen *(2.5.8)*, using 0.2500 g and determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 27.03 mg of $C_9H_{10}N_4O_2S_2$.

STORAGE

DEFINITION

4-Amino-*N*-(5-methylisoxazol-3-yl)benzenesulphonamide.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of sodium hydroxide and in dilute acids.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. Melting point *(2.2.14)*

169 °C to 172 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *sulfamethoxazole CRS.*

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in 3 ml of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution Dissolve 20 mg of *sulfamethoxazole CRS* in 3 ml of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *dilute ammonia R1, water R, nitromethane R, dioxan R* (3:5:41:51 *V/V/V/V*).

Application 5 µl.

Development Over 3/4 of the plate.

Drying At 100-105 °C.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 5 mg in 10 ml of *1 M hydrochloric acid* . Dilute 1 ml of the solution to 10 ml with *water R* . The solution, without further acidification, gives the reaction of primary aromatic amines *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 , BY_5 or GY_5 *(2.2.2, Method II)*.

Dissolve 1.0 g in a mixture of 5 ml of *dilute sodium hydroxide solution R* and 5 ml of *water R* .

Acidity

To 1.25 g, finely powdered, add 25 ml of *water R* . Heat at 70 °C for 5 min. Cool in iced water for about 15 min and filter. To 20 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1* . Not more than 0.3 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in 45 ml of the mobile phase, sonicate at about 45 °C for 10 min, cool and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve 1 mg of the substance to be examined and 1 mg of *sulfamethoxazole impurity A CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 1.0 mg of *sulfamethoxazole impurity F CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:
- — *size*: *l* = 0.25 m, Ø = 4.0 mm;
- — *stationary phase: octylsilyl silica gel for chromatography R* (5 µm);
- — *temperature*: 30 °C.

Mobile phase Mix 35 volumes of *methanol R2* and 65 volumes of a 13.6 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 5.3 with a 20 g/l solution of *potassium hydroxide R* .

Flow rate 0.9 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Run time 3 times the retention time of sulfamethoxazole.

Relative retention With reference to sulfamethoxazole (retention time = about 10 min): impurity D = about 0.3; impurity E = about 0.35; impurity F = about 0.45; impurity C = about 0.5; impurity A = about 1.2; impurity B = about 2.0.

System suitability Reference solution (b):

- — *resolution*: minimum 3.5 between the peaks due to sulfamethoxazole and impurity A.

Limits:
- — *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- — *impurity F:* not more than the area of the principal peak in the chromatogram obtained

with reference solution (c) (0.1 per cent);

— *any other impurity:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit:* 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

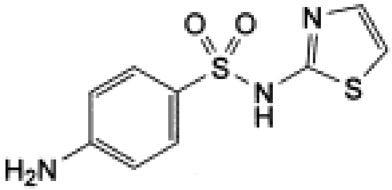
Sulfathiazole

General Notices

(Ph Eur monograph 0742)



$C_9H_9N_3O_2S_2$ 255.3 *72-14-0*

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfathiazole contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(thiazol-2-yl)benzenesulphonamide, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, practically insoluble in water, slightly soluble in alcohol, practically insoluble in methylene chloride. It dissolves in dilute solutions of alkali hydroxides and in dilute mineral acids.

IDENTIFICATION

First identification A, B.

Second identification A, C, D, E.

A. Melting point *(2.2.14)* : 200 °C to 203 °C. Melting may occur at about 175 °C, followed by solidification and a second melting between 200 °C and 203 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *sulfathiazole CRS* . Examine the substances prepared as discs. If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in *alcohol R* , evaporate to dryness in vacuo and record the spectra again using the residues.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in a mixture of 10 ml of *water R* and 2 ml of *0.1 M sodium hydroxide* and add 0.5 ml of *copper sulphate solution R* . A greyish-blue or purple precipitate is formed.

E. Dissolve about 5 mg in 10 ml of *1 M hydrochloric acid* . Dilute 1 ml of the solution to 10 ml with *water R* . The solution, without further addition of acid, gives the reaction of primary aromatic amines *(2.3.1)* .

TESTS

Appearance of solution

Dissolve 1.0 g in 10 ml of *1 M sodium hydroxide* . The solution is clear *(2.2.1)* and not more intensely coloured than reference solution GY_4 *(2.2.2, Method II)*.

Acidity

To 1.0 g add 50 ml of *carbon dioxide-free water R* . Heat to 70 °C for 5 min. Cool rapidly to 20 °C and filter. To 25 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1* . Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography *(2.2.27)* , using *silica gel H R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 10 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 5 ml with a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* .

Reference solution (a) Dissolve 20 mg of *sulfathiazole CRS* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 50 mg of *sulfanilamide R* in a mixture of 1 volume of *concentrated ammonia R* and 9 volumes of *alcohol R* and dilute to 100 ml with the same mixture of solvents. Dilute 1 ml of this solution to 10 ml with the same mixture of solvents.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 18 volumes of *ammonia R* and 90 volumes of *butanol R* . Dry the plate at 100 °C to 105 °C for 10 min and spray with a 1 g/l solution of *dimethylaminobenzaldehyde R* in *alcohol R* containing 1 per cent *V/V* of *hydrochloric acid R* . Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino- nitrogen *(2.5.8)*, using 0.200 g, determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 25.53 mg of $C_9H_9N_3O_2S_2$.

STORAGE

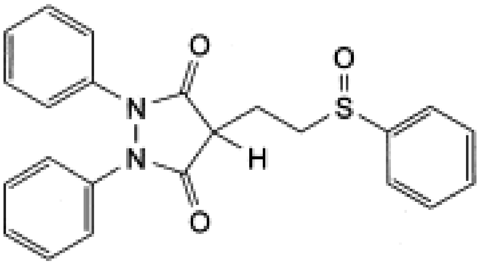
Store protected from light.

Ph Eur

Sulfinpyrazone

General Notices

(Ph Eur monograph 0790)



$C_{23}H_{20}N_2O_3S$ 404.5 *57-96-5*

Action and use

Uricosuric.

Preparation

Sulfinpyrazone Tablets

Ph Eur

DEFINITION

Sulfinpyrazone contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 1,2-diphenyl-4-[2-(phenylsulphinyl)ethyl]pyrazolidine-3,5-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water, sparingly soluble in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A, C.

Second identification A, B, D.

A. Melting point *(2.2.16)* : 131 °C to 135 °C.

B. Dissolve 30.0 mg in *0.01 M sodium hydroxide* and dilute to 100.0 ml with the same alkaline solution. Dilute 1.0 ml of this solution to 20.0 ml with *0.01 M sodium hydroxide*. Examined between 230 nm and 350 nm *(2.2.25)*, the solution shows an absorption maximum at 260 nm. The specific absorbance at the maximum is 530 to 580.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *sulfinpyrazone CRS*. Examine the substances prepared as discs.

D. Dissolve about 10 mg in 3 ml of *acetone R* and add a mixture of 0.2 ml of *ferric chloride solution R2* and 3 ml of *water R*. A red to violet colour develops.

TESTS

Appearance of solution in acetone

Dissolve 1.25 g in *acetone R* and dilute to 25 ml with the same solvent. The solution is clear *(2.2.1)*. The absorbance *(2.2.25)* of the solution, measured at 420 nm with a path-length of 4 cm, is not greater than 0.10.

Appearance of solution in *1 M sodium hydroxide*

Dissolve 1.25 g, heating gently if necessary, in 25 ml of *1 M sodium hydroxide*. The solution is clear *(2.2.1).* The absorbance *(2.2.25)* of the solution, measured at 420 nm with a path-length of 4 cm, is not greater than 0.15.

Related substances

Examine by thin-layer chromatography *(2.2.27),* using a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm. Expose the plate, in a tank, to the vapour from *glacial acetic acid R*. After 10 min, remove the plate and heat at 60 °C for 40 min. Cool and pass a current of nitrogen over the plate for 10 min.

Prepare the solutions immediately before use.

Test solution Dissolve 0.25 g of the substance to be examined in *acetone R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dilute 2 ml of the test solution to 100 ml with *acetone R.* Dilute 1 ml of this solution to 10 ml with *acetone R*.

Reference solution (b) Dissolve 10 mg of *sulfinpyrazone impurity A CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (c) Dilute 5 ml of reference solution (b) to 10 ml with *acetone R*.

Reference solution (d) Dissolve 10 mg of *sulfinpyrazone impurity B CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (e) Dilute 5 ml of reference solution (d) to 10 ml with *acetone R*.

Apply to the plate, under an atmosphere of nitrogen, 2 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R* and 80 volumes of *chloroform R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. In the chromatogram obtained with the test solution: any spots corresponding to sulfinpyrazone impurity A and sulfinpyrazone impurity B are not more intense than the spots in the chromatograms obtained with reference solutions (b) (2.0 per cent) and (d) (2.0 per cent), respectively, and at most one of the spots is more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (1.0 per cent) or (e) (1.0 per cent); any spot apart from the principal spot and the two spots previously cited is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.2 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

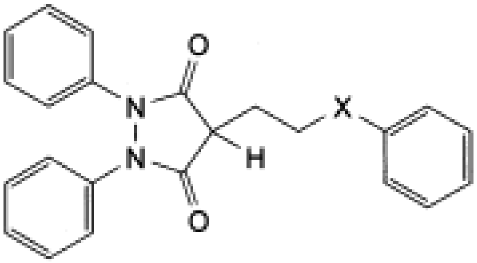
Dissolve 0.300 g in 25 ml of *acetone R*. Add 0.5 ml of *bromothymol blue solution R1.* Titrate with *0.1 M sodium hydroxide* until the colour changes from yellow to blue.

1 ml of *0.1 M sodium hydroxide* is equivalent to 40.45 mg of $C_{23}H_{20}N_2O_3S$.

STORAGE

Store protected from light.

IMPURITIES



A. X = SO_2: 1,2-diphenyl-4-[2-(phenylsulphonyl)ethyl]pyrazolidine-3,5-dione,

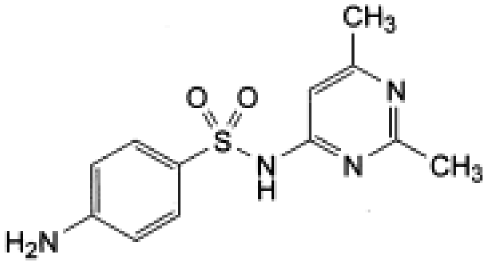
B. X = S: 1,2-diphenyl-4-[2-(phenylsulphanyl)ethyl]pyrazolidine-3,5-dione.

Ph Eur

Sulfisomidine

General Notices

(Ph Eur monograph 0639)



$C_{12}H_{14}N_4O_2S$ 278.3 *515-64-0*

Action and use

Sulfonamide antibacterial.

Ph Eur

DEFINITION

Sulfisomidine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-amino-*N*-(2,6-dimethylpyrimidin-4-yl)benzenesulphonamide, calculated with reference to the dried substance.

CHARACTERS

White or yellowish-white powder or crystals, very slightly soluble in water, slightly soluble in acetone and in alcohol. It dissolves in dilute solutions of the alkali hydroxides and in dilute mineral acids.

It melts at about 240 °C with decomposition.

IDENTIFICATION

First identification *A, B.*

Second identification *B, C, D.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *sulfisomidine CRS* . Examine the substances prepared as discs.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg with heating in 4 ml of *methanol R*. Cool and filter. Add to the filtrate 0.2 ml of a 40 g/l *solution of copper acetate R*. The solution becomes yellowish-green.

D. Dissolve about 5 mg in 10 ml of *1 M hydrochloric acid*. Dilute 1 ml of the solution to 10 ml with *water R*. The solution, without further acidification, gives the reaction of primary aromatic amines *(2.3.1)*.

TESTS

Appearance of solution

Dissolve 1.0 g in a mixture of 5 ml of dilute *sodium hydroxide solution R* and 5 ml of *water R*. The solution is not more intensely coloured than reference solution Y_5, BY_5 or GY_5 *(2.2.2, Method II)*.

Acidity

To 1.25 g, finely powdered, add 25 ml of *carbon dioxide-free water R*. Heat at 70 °C for 5 min. Cool in a bath of iced water for about 15 min and filter. To 20 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1.* Not more than 0.2 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF* $_{254}$ *R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in 3 ml of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 5 ml with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Reference solution (a) Dissolve 20 mg of *sulfisomidine CRS* in 3 ml of a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.25 ml of test solution (b) to 50 ml with a mixture of 2 volumes of *concentrated ammonia R* and 48 volumes of *methanol R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 3 volumes of *dilute ammonia R1*, 5 volumes of *water R*, 40 volumes of *nitromethane R* and 50 volumes of *dioxan R*. Dry the plate at 100 °C to 105 °C and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 ml of

lead standard solution (10 ppm Pb) R.

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Carry out the determination of primary aromatic amino- nitrogen *(2.5.8)*, using 0.2500 g and determining the end-point electrometrically.

1 ml of *0.1 M sodium nitrite* is equivalent to 27.83 mg of $C_{12}H_{14}N_4O_2S$.

STORAGE

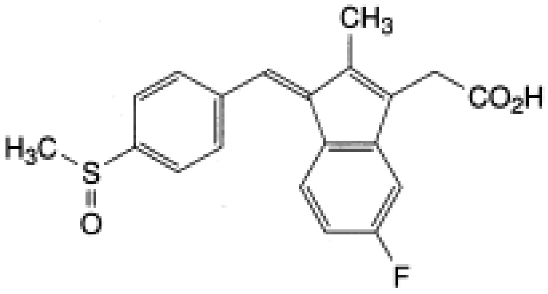
Store protected from light.

Ph Eur

Sulindac

General Notices

(Ph Eur monograph 0864)



$C_{20}H_{17}FO_3S$ 356.4 *38194-50-2*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparation

Sulindac Tablets

Ph Eur

DEFINITION

(*Z*)-[5-Fluoro-2-methyl-1-[4-(methylsulphinyl)benzylidene]-1*H*-inden-3-yl]acetic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Very slightly soluble in water, soluble in methylene chloride, sparingly soluble in ethanol (96 per cent). It dissolves in dilute solutions of alkali hydroxides.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification C.

Second identification A, B, D, E.

A. Melting point *(2.2.14)* : 182 °C to 186 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 50 mg in a 0.3 per cent *V/V* solution of *hydrochloric acid R* in *methanol R* and dilute to 100 ml with the same acid solution. Dilute 2 ml of this solution to 50 ml with a 0.3 per cent *V/V* solution of *hydrochloric acid R* in *methanol R* .

Spectral range 230-350 nm.

Absorption maxima At 284 nm and 327 nm.

Shoulder At about 258 nm.

Absorbance ratio A_{284}/A_{327} = 1.10 to 1.20.

C. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *sulindac CRS* .

If the spectra obtained show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of hot *methanol R* , evaporate to dryness and record new spectra using the residues.

D. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *sulindac CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *diflunisal CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 2 ml with reference solution (a).

Plate *TLC silica gel GF$_{254}$ plate R.*

Mobile phase *glacial acetic acid R, methylene chloride R, acetone R* (1:49:50 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In a current of warm air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— The chromatogram shows 2 clearly separated principal spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

E. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R* , 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. Add 1.0 ml of the filtrate to a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R* . Mix, allow to stand for 5 min and compare the colour of the solution with that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.10 g of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 20.0 mg of *sulindac CRS* (which has an assigned content of *E*-isomer) in the mobile phase and dilute to 10.0 ml with the mobile phase.

Column:
— *size*: *l* = 0.25 m, Ø = 4.6 mm;
— *stationary phase: silica gel for chromatography R* (10 µm).

Mobile phase *glacial acetic acid R, ethanol (96 per cent)* R, *ethyl acetate R, ethanol-free chloroform R* (1:4:100:400 *V/V/V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl.

Run time Twice the retention time of sulindac.

Identification of peaks The chromatogram obtained with reference solution (b) shows a principal peak due to sulindac and a peak due to the *E*-isomer.

Relative retention With reference to sulindac: *E*-isomer = about 1.75.

From the chromatograms obtained with the test solution and reference solution (b), determine the percentage content of *E*-isomer, taking into account the assigned content of this isomer in *sulindac CRS* .

Limits:
— *E-isomer*: maximum 0.5 per cent;
— *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *total:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

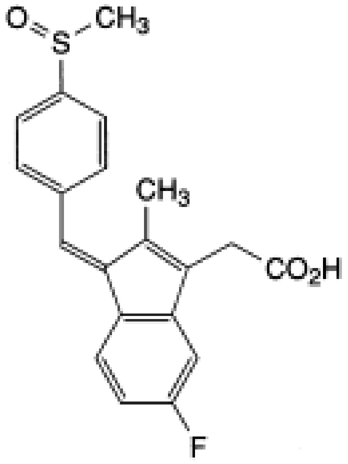
1 ml of *0.1 M sodium hydroxide* is equivalent to 35.64 mg of $C_{20}H_{17}FO_3S$.

STORAGE

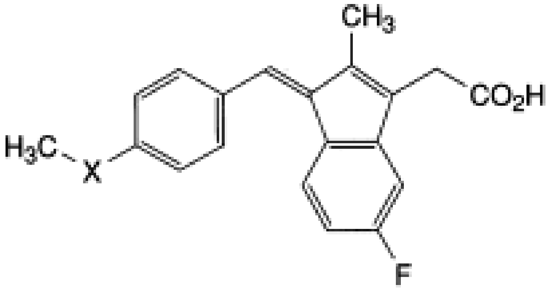
Protected from light.

IMPURITIES

Specified impurities *A, B, C.*



A. (*E*)-[5-fluoro-2-methyl-1-[4-(methylsulphinyl)benzylidene]-1*H*-inden-3-yl]acetic acid,



B. X = SO_2: (*Z*)-[5-fluoro-2-methyl-1-[4-(methylsulphonyl)benzylidene]-1*H*-inden-3-yl]acetic acid,

C. X = S: (*Z*)-[5-fluoro-2-methyl-1-[4-methylsulphanyl)benzylidene]-1*H*-inden-3-yl]acetic acid.

Ph Eur

Sulphur for External Use

General Notices

(Ph Eur monograph 0953)

S 32.07 *7704-34-9*

Action and use

Keratolytic.

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

Yellow powder.

Solubility

Practically insoluble in water, soluble in carbon disulphide, slightly soluble in vegetable oils.

mp: about 120 °C.

The size of most of the particles is not greater than 20 µm and that of almost all the particles is not greater than 40 µm.

IDENTIFICATION

A. Heated in the presence of air, it burns with a blue flame, emitting sulphur dioxide which changes the colour of moistened *blue litmus paper R* to red.

B. Heat 0.1 g with 0.5 ml of *bromine water R* until decolourised. Add 5 ml of *water R* and filter. The solution gives reaction (a) of sulphates *(2.3.1).*

TESTS

Solution S

To 5 g add 50 ml of *carbon dioxide-free water R* prepared from *distilled water R.* Allow to stand for 30 min with frequent shaking and filter.

Appearance of solution

Solution S is colourless *(2.2.2, Method II)*.

Odour *(2.3.4)*

It has no perceptible odour of hydrogen sulphide.

Acidity or alkalinity

To 5 ml of solution S add 0.1 ml of *phenolphthalein solution R1.* The solution is colourless. Add 0.2 ml of *0.01 M sodium hydroxide*. The solution is red. Add 0.3 ml of *0.01 M hydrochloric acid*. The solution is colourless. Add 0.15 ml of *methyl red solution R*. The solution is orange-red.

Chlorides *(2.4.4)*

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R*.

Sulphates *(2.4.13)*

Maximum 100 ppm, determined on solution S.

Sulphides

To 10 ml of solution S add 2 ml of *buffer solution pH 3.5 R* and 1 ml of a freshly prepared 1.6 g/l solution of *lead nitrate R* in *carbon dioxide-free water R*. Shake. After 1 min any colour in the solution is not more intense than that in a reference solution prepared at the same time using 1 ml of *lead standard solution (10 ppm Pb) R*, 9 ml of *carbon dioxide-free water R*, 2 ml of *buffer solution pH 3.5 R* and 1.2 ml of *thioacetamide reagent R*.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Carry out the oxygen-flask method *(2.5.10)*, using 60.0 mg in a 1000 ml combustion flask. Absorb the combustion products in a mixture of 5 ml of *dilute hydrogen peroxide solution R* and 10 ml of *water R.* Heat to boiling, boil gently for 2 min and cool. Using 0.2 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until the colour changes from colourless to red. Carry out a blank titration under the same conditions.

1 ml of *0.1 M sodium hydroxide* is equivalent to 1.603 mg of S.

STORAGE

Protected from light.

Ph Eur

Sulphuric Acid

General Notices

(Ph Eur monograph 1572)

H_2SO_4 98.1 *7664-93-9*

Preparation

Dilute Sulphuric Acid

Ph Eur

DEFINITION

Content

95.0 per cent *m/m* to 100.5 per cent *m/m*.

CHARACTERS

Appearance

Colourless, oily liquid, very hygroscopic.

Solubility

Miscible with water and with ethanol (96 per cent) producing intense heat.

Relative density

About 1.84.

IDENTIFICATION

A. Carefully add 1 ml to 100 ml of *water R*. The solution is strongly acid *(2.2.4)*.

B. The solution obtained in identification test A gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Carefully pour, while cooling, 5 ml into 30 ml of *water R* and dilute to 50 ml with the same solvent.

Chlorides ***(2.4.4)***

Maximum 50 ppm.

Mix carefully, while cooling, 3.3 g with 30 ml of *water R*. Neutralise with *ammonia R* and dilute to 50 ml with *water R*.

Nitrates

Add 5 ml to 5 ml of *water R*. Cool to room temperature and add 0.5 ml of *indigo carmine solution R*. The blue colour persists for at least 1 min.

Arsenic ***(2.4.2, Method A)***

Maximum 1 ppm.

Mix, while cooling, 1 g with 20 ml of *water R* and dilute to 25 ml with the same solvent.

Iron ***(2.4.9)***

Maximum 25 ppm.

Cautiously evaporate 10.0 g and ignite to dull redness. Dissolve the ignition residue in 1 ml of *dilute hydrochloric acid R* with gentle heating and dilute to 25 ml with *water R*. Dilute 1 ml of this solution to 10 ml with *water R.*

Heavy metals ***(2.4.8)***

Maximum 5 ppm.

4.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

ASSAY

Weigh accurately a ground-glass-stoppered flask containing 30 ml of *water R*. Introduce 0.2 ml, cool and weigh again. Titrate with *1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *1 M sodium hydroxide* is equivalent to 49.04 mg of H_2SO_4.

STORAGE

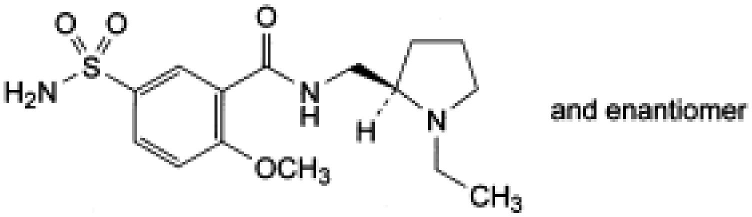
In an airtight container.

Ph Eur

Sulpiride

General Notices

(Ph Eur monograph 1045)



$C_{15}H_{23}N_3O_4S$ 341.4 *15676-16-1*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Sulpiride Tablets

Ph Eur

DEFINITION

(*RS*)-*N*-[(1-Ethylpyrrolidin-2-yl)methyl]-2-methoxy-5-sulphamoylbenzamide.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in methanol, slightly soluble in ethanol (96 per cent) and in methylene chloride. It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

First identification *A, B*.

Second identification *A, C, D*.

A. Melting point *(2.2.14)* : 177 °C to 181 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *Sulpiride CRS* .

C. Examine the chromatograms obtained in test A for related substances.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 1 mg in a porcelain dish, add 0.5 ml of *sulphuric acid R* and 0.05 ml of *formaldehyde solution R* . Examined in ultraviolet light at 365 nm, the solution shows blue fluorescence.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method I)*.

Dissolve 1.0 g in *dilute acetic acid R* and dilute to 10 ml with the same acid.

Related substances

A. Thin-layer chromatography *(2.2.27)* .

Test solution (a) Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent. Sonicate until complete dissolution.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R* .

Reference solution (a) Dissolve 20 mg of *sulpiride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *sulpiride impurity A CRS* in *methanol R* and dilute to 25 ml with the same solvent.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10 ml with *methanol R* .

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *Concentrated ammonia R, dioxan R, methanol R, methylene chloride R* (2:10:14:90 *V/V/V/V*).

Application 10 µl.

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm for identification test C and then spray with *ninhydrin solution R* ; heat at 100-105 °C for 15 min and examine in daylight.

Limit Test solution (a):

- *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (c) (0.1 per cent).

B. Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.100 g of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 3.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 10 mg of *sulpiride CRS* and 10 mg of *sulpiride impurity B CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm) in spherical microparticles.

Mobile phase Mix 10 volumes of *acetonitrile R* , 10 volumes of *methanol R* and 80 volumes of a solution containing 6.8 g/l of *potassium dihydrogen phosphate R* and 1 g/l of *sodium octanesulphonate R* , adjusted to pH 3.3 using *phosphoric acid R* .

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 10 µl.

Run time 2.5 times the retention time of sulpiride.

System suitability Reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to impurity B and sulpiride.

Limit:

- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent).

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Shake 1.0 g with 20 ml of *water R* . Filter through a sintered-glass filter (40) *(2.1.2)* . To 10 ml of the filtrate add 5 ml of *water R* .

Iron ***(2.4.9)***

Maximum 10 ppm.

Ignite 1.0 g in a silica crucible. To the residue add 1 ml of *1 M hydrochloric acid* , 3 ml of *water R* and 0.1 ml of *nitric acid R*. Heat on a water-bath for a few minutes. Place the solution in a test-tube. Rinse the crucible with 4 ml of *water R*. Collect the rinsings in the test-tube and dilute to 10 ml with *water R*.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

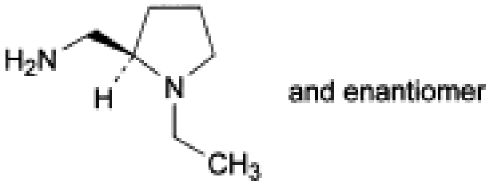
Dissolve 0.250 g in 80 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 34.14 mg of $C_{15}H_{23}N_3O_4S$.

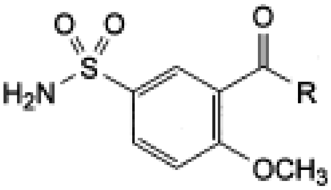
IMPURITIES

Specified impurities A.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E, F, G.*



A. [(2*RS*)-1-ethylpyrrolidin-2-yl]methanamine,

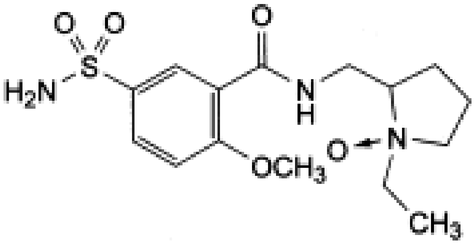


B. R = $O-CH_3$: methyl 2-methoxy-5-sulphamoylbenzoate,

C. R = $O-C_2H_5$: ethyl 2-methoxy-5-sulphamoylbenzoate,

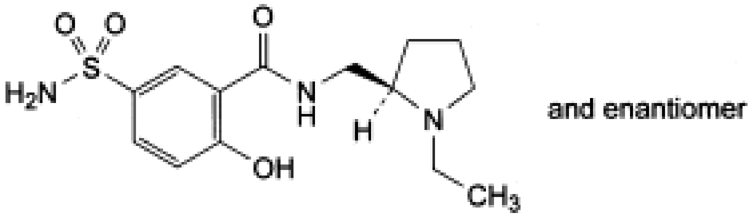
D. R = OH: 2-methoxy-5-sulphamoylbenzoic acid,

E. R = NH_2: 2-methoxy-5-sulphamoylbenzamide,



H2N
OCH3
CH3

F. 1-ethyl-2-[[(2-methoxy-5-sulphamoylbenzoyl)amino]methyl]pyrrolidine 1-oxide,



H2N
OH
CH3
and enantiomer

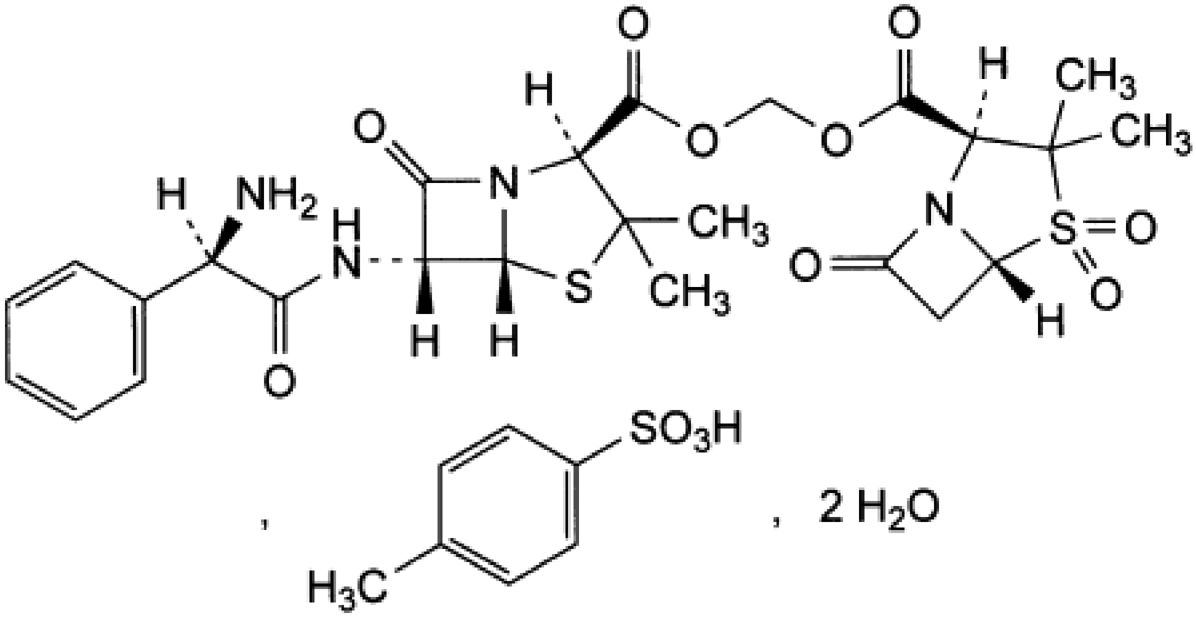
G. (*RS*)-*N*-[(1-ethylpyrrolidin-2-yl)methyl]-2-hydroxy-5-sulphamoylbenzamide.

Ph Eur

Sultamicillin Tosilate Dihydrate

General Notices

(Ph Eur monograph 2212)



$C_{25}H_{30}N_4O_9S_2,C_7H_8O_3S,2H_2O$ 803 *83105-70-8*

Action and use

Beta-lactamase inhibitor.

Ph Eur

DEFINITION

4-Methylbenzenesulphonate of methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-$4\lambda^6$-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate dihydrate.

Semi-synthetic product derived from a fermentation product.

Content

95.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison sultamicillin tosilate CRS.

TESTS

Specific optical rotation *(2.2.7)*

+ 178 to + 195 (anhydrous substance).

Dissolve 1.000 g in *dimethylformamide R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use or keep at 2-8 ‘C for not more than 6 h.*

Solution A methanol R1, acetonitrile R1 (20:80 *V/V*).

Solution B Dissolve 1.56 g of *sodium dihydrogen phosphate R* in 900 ml of *water R* . Add 7.0 ml of *phosphoric acid R* and dilute to 1000 ml with *water R* .

Blank solution Solution B, solution A (30:70 *V/V*).

Test solution Dissolve 70.0 mg of the substance to be examined in 35 ml of solution A and sonicate for about 1 min. Add 13 ml of solution B, mix and sonicate for about 1 min. Dilute to 50.0 ml with solution B and mix.

Reference solution (a) Dissolve 70.0 mg of *sultamicillin tosilate CRS* in 35 ml of solution A and sonicate for about 1 min. Add 13 ml of solution B, mix and sonicate for about 1 min. Dilute to 50.0 ml with solution B and mix.

Reference solution (b) Suspend 15 mg of the substance to be examined in 20 ml of a 0.4 g/l solution of *sodium hydroxide R* and sonicate in an ultrasonic bath for about 5 min. Add 20 ml of a 0.36 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with *water R* .

Reference solution (c) Dissolve 0.200 g of the substance to be examined in 70.0 ml of solution A and sonicate for about 1 min. Add 25.0 ml of solution B, mix and sonicate for about 1 min. Dilute to 100.0 ml with solution B and mix. Dilute 1.0 ml of this solution to 100.0 ml with the blank solution.

Reference solution (d) Dissolve 32.3 mg of *ampicillin trihydrate CRS* (impurity B) and 7.0 mg of *sulbactam CRS* (impurity A) in *water R* and dilute to 1000 ml with the same solvent.

Column:

— *size: l* = 0.10 m, Ø = 4.6 mm;

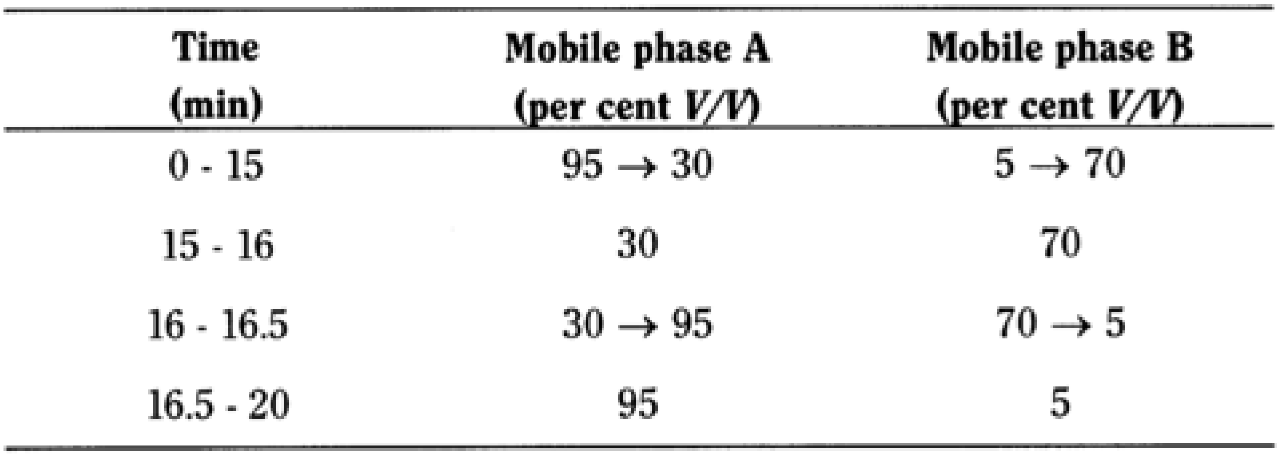
— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3.5 µm);

— *temperature*: 25 °C.

Mobile phase:

— *mobile phase A*: 4.68 g/l solution of *sodium dihydrogen phosphate* R adjusted to pH 3.0 with *phosphoric acid R* ;

— *mobile phase B: acetonitrile R1* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 15	95 → 30	5 → 70
15 - 16	30	70
16 - 16.5	30 → 95	70 → 5
16.5 - 20	95	5

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 5 µl of the blank solution, the test solution and reference solutions (b), (c) and (d).

Relative retention With reference to sultamicillin (retention time = about 9.3 min): impurity A = about 0.41; ampicillin penicilloic acid = about 0.47; tosilate = about 0.50; impurity B = about 0.55; impurity C = about 0.94; impurity D = about 1.09; impurity E = about 1.23; impurity F = about 1.26; impurity G = about 1.42.

System suitability Reference solution (b):

— *resolution*: minimum 2.5 between the peaks due to ampicillin penicilloic acid and tosilate and minimum 2.5 between the peaks due to tosilate and impurity B.

Limits:

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (2.0 per cent);

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (0.5 per cent);

— *impurities C, D, E, F, G*: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *any other impurity*: for each impurity, not more than 0.5 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *total*: not more than 4 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (4.0 per cent);

— *disregard limit*: 0.1 times the area of the peak due to sultamicillin in the chromatogram obtained with reference solution (c) (0.1 per cent).

Ethyl acetate

Head space gas chromatography *(2.2.28)* .

Test solution Dissolve 0.200 g in 7.0 ml of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* .

Reference solution Dissolve 0.200 g of *ethyl acetate R* in 240 ml of a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* and dilute to 250.0 ml with the same mixture of solvents. Dilute 5.0 ml of this solution to 7.0 ml with a mixture of 1 volume of *water R* and 99 volumes of *dimethylformamide R* .

Immediately close the vials with a tight rubber membrane stopper coated with polytetrafluoroethylene and secure with an aluminium crimped cap. Shake to obtain a homogeneous solution.

Column:

— *material*: fused silica;

— *size*: *l* = 50 m, Ø = 0.32 mm;

— *stationary phase*: *poly(dimethyl)siloxane R* (film thickness: 1.8 µm or 3 µm).

Carrier gas *helium for chromatography R.*

Linear velocity 35 cm/s.

Split ratio 1:5.

Static head-space conditions that may be used:

— *equilibration temperature*: 105 °C;

— *equilibration time*: 45 min;

— *transfer-line temperature*: 110 °C;

— *pressurisation time*: 30 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 6	70
	6 - 16	70 → 220
	16 - 18	220
Injection port		140
Detector		250

Detection Flame ionisation.

Injection 1 ml.

Relative retention With reference to dimethylformamide (retention time = about 14 min): ethyl acetate = about 0.7.

Limit:

- — *ethyl acetate* : maximum 2.0 per cent.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.0 g in a mixture of 40 volumes of *methanol R* and 60 volumes of *acetonitrile R* and dilute to 20.0 ml with the same mixture of solvents. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 40 volumes of *methanol R* and 60 volumes of *acetonitrile R* .

Water *(2.5.12)*

4.0 per cent to 6.0 per cent, determined on 0.200 g.

Sulphated ash *(2.4.14)*

Maximum 0.2 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of sultamicillin tosilate ($C_{32}H_{38}N_4O_{12}S_3$) from the declared content of *sultamicillin tosilate CRS*.

STORAGE

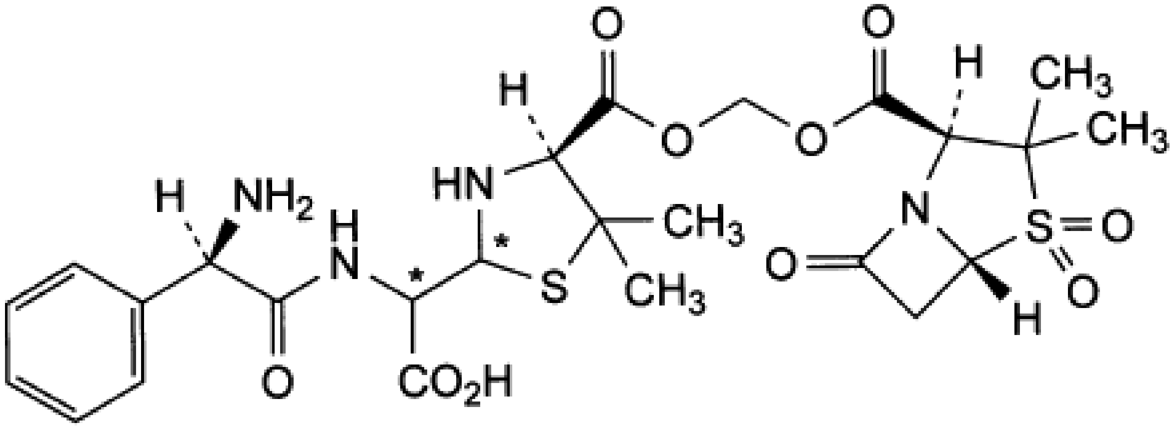
In an airtight container .

IMPURITIES

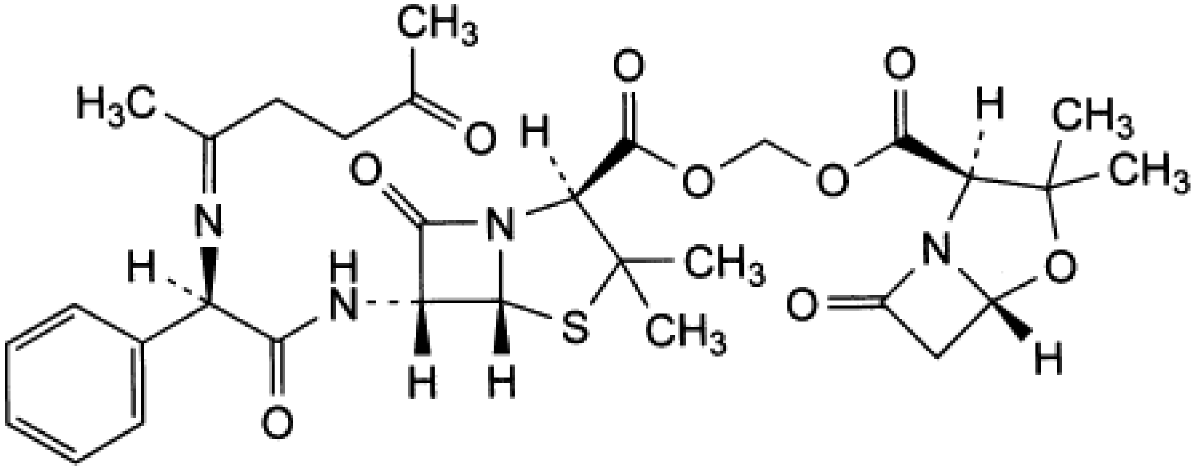
Specified impurities *A, B, C, D, E, F, G.*

A. sulbactam,

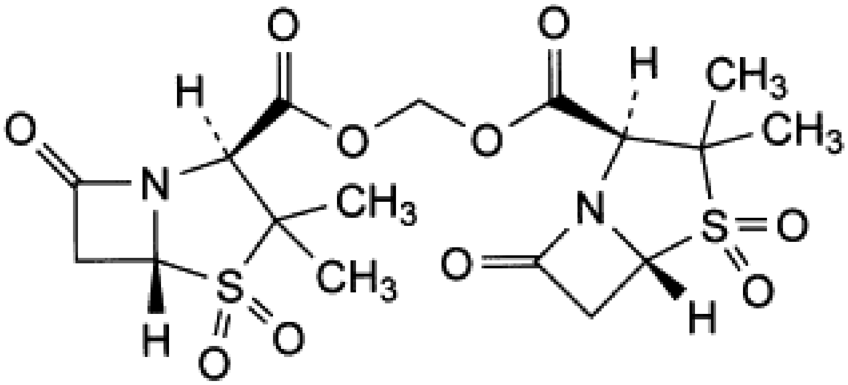
B. ampicillin,



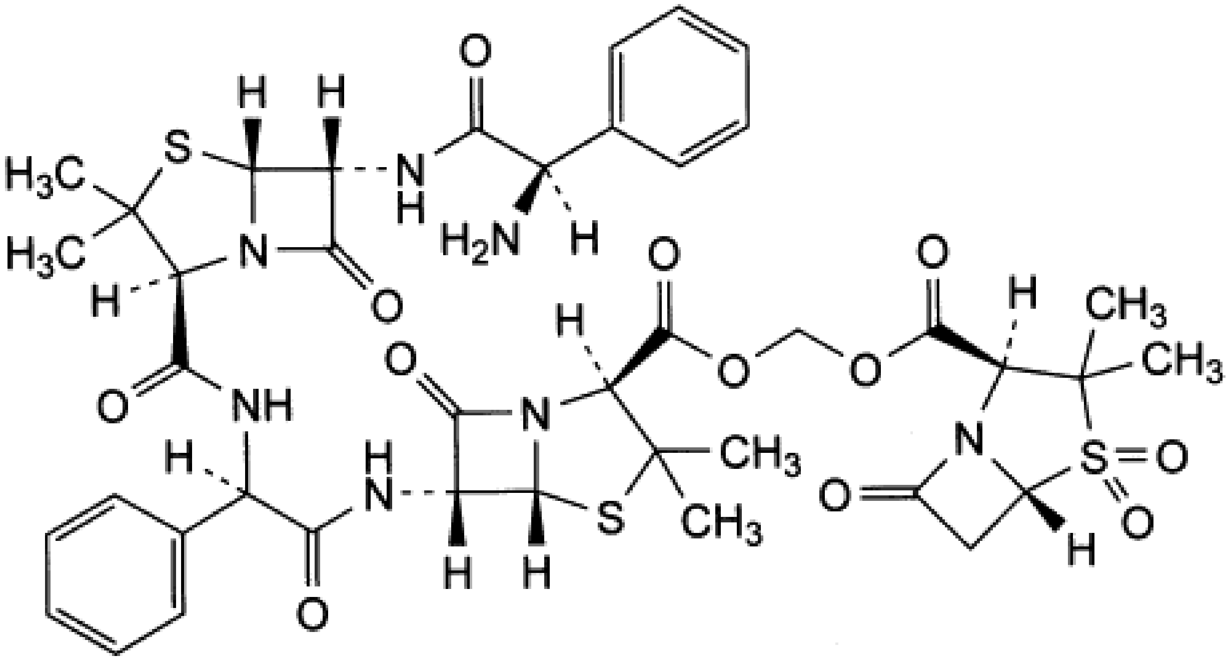
C. [[(*2R*)-aminophenylacetyl]amino][(*4S*)-4-[[[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ^6-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetic acid (penicilloic acids of sultamicillin),



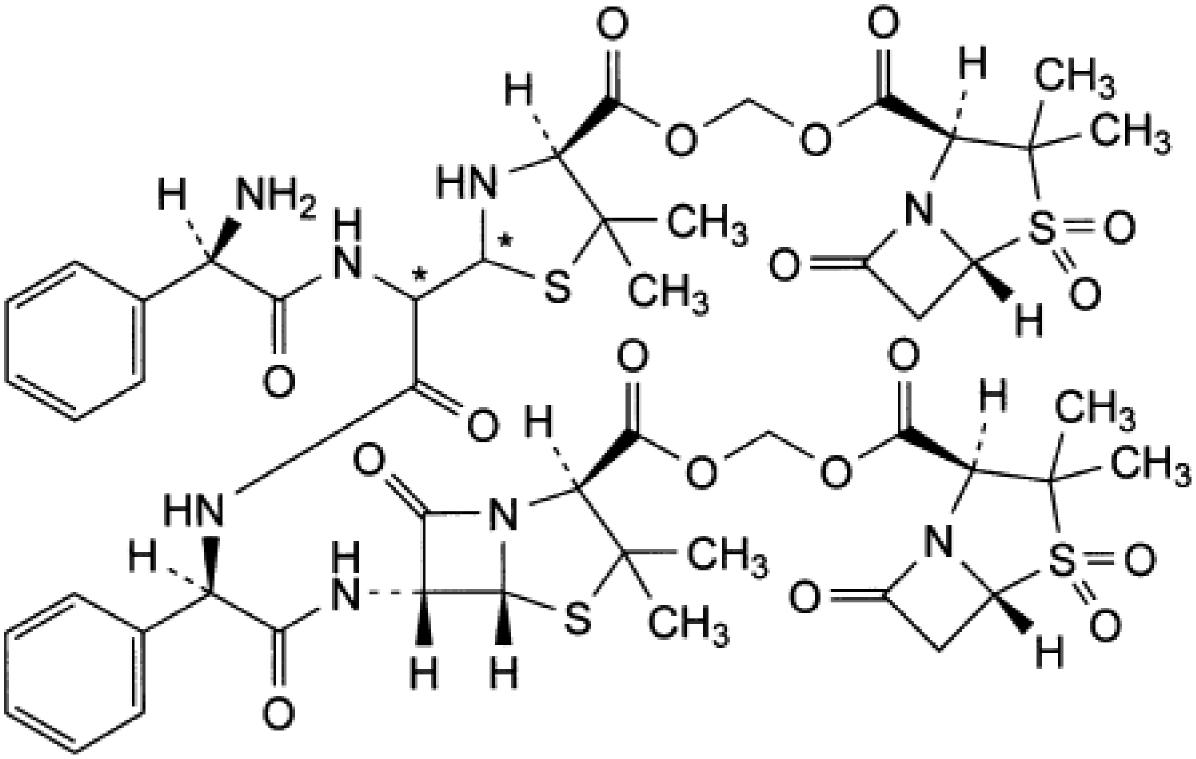
D. methylene (2*S*,5*R*,6*R*)-3,3-dimethyl-6-[[(2*R*)-[(1-methyl-4-oxopentylidene)amino] phenylacetyl]amino]-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-7-oxo-4-oxa-1-azabicyclo[3.2.0]heptane-2-carboxylate,



E. methylene bis[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ6-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate] (sulbactam methylene ester),



F. methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-[[[(2*S*,5*R*,6*R*)-6-[[(2*R*)-aminophenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ6-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (ampicillin sultamicillin amide),



G. methylene (2*S*,5*R*,6*R*)-6-[[(2*R*)-[[[[(2*R*)-aminophenylacetyl]amino][(4*S*)-4-[[[[[(2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ^6-thia-1-azabicyclo[3.2.0]hept-2-yl]carbonyl]oxy]methoxy]carbonyl]-5,5-dimethylthiazolidin-2-yl]acetyl]amino]phenylacetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (2*S*,5*R*)-3,3-dimethyl-4,4,7-trioxo-4λ^6-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate (sultamicillin dimer).

Ph Eur

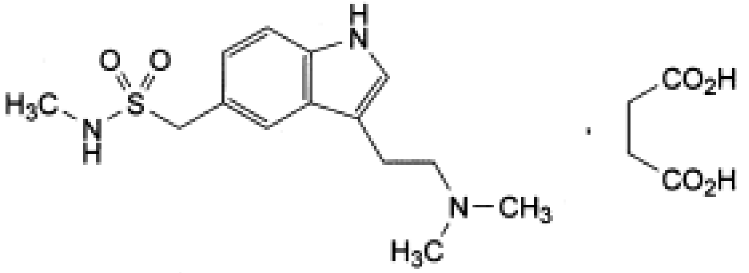
Sumatriptan Succinate

General Notices

(Ph Eur monograph 1573)



$C_{18}H_{27}N_3O_6S$ 413.5   *103628-48-4*

Action and use

Serotonin $5HT_1$ receptor agonist; treatment of migraine.

Preparations

Sumatriptan Injection

Sumatriptan Tablets

Ph Eur

DEFINITION

[3-[2-(Dimethylamino)ethyl]-1*H*-indol-5-yl]-*N*-methylmethanesulphonamide hydrogen butanedioate.

Content

97.5 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *sumatriptan succinate CRS.*

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

pH *(2.2.3)*

4.5 to 5.3.

Dilute 2.5 ml of solution S to 10 ml with *carbon dioxide-free water R* .

Absorbance *(2.2.25)*

Maximum 0.10, measured at 440 nm on solution S.

Impurities A and H

Liquid chromatography *(2.2.29).*

Test solution Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *sumatriptan for system suitability CRS* (containing impurities A and H) in the mobile phase and dilute to 1 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: silica gel for chromatography R* (5 µm).

Mobile phase Mix 10 volumes of a 771 g/l solution of *ammonium acetate R* and 90 volumes of *methanol R* .

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 282 nm.

Injection 20 µl.

Run time 5 times the retention time of sumatriptan.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to sumatriptan and impurity A;

— the chromatogram is similar to the chromatogram supplied with *sumatriptan for system suitability CRS.*

Limits:

— *impurity A*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);

— *impurity H*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent).

Related substances

Liquid chromatography *(2.2.29)* .

Solution A Dissolve 2.925 g of *sodium dihydrogen phosphate R* in 600 ml of *water R* , adjust to pH 6.5 with strong sodium *hydroxide solution R*, dilute to 750 ml with *water R* , add 250 ml of *acetonitrile R* and mix.

Test solution (a) Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Test solution (b) Dissolve 15.0 mg of the substance to be examined in solution A and dilute to 100.0 ml with solution A.

Reference solution (a) Dilute 1.0 ml of test solution (a) to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *sumatriptan impurity mixture CRS* (containing impurities B, C, D and E) in the mobile phase and dilute to 1 ml with the mobile phase.

Reference solution (c) Dissolve 15.0 mg of *sumatriptan succinate CRS* in solution A and dilute to 100.0 ml with solution A.

Column:

— *size*: *l* = 0.25 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography* R (5 µm).

Mobile phase Mix 25 volumes of *acetonitrile R* with 75 volumes of a solution prepared as follows: dissolve 0.970 g of *dibutylamine R* , 0.735 g of *phosphoric acid R* and 2.93 g of *sodium dihydrogen phosphate R* in 750 ml of *water R* , adjust to pH 6.5 with *strong sodium hydroxide solution R* and dilute to 1000 ml with *water R* .

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 282 nm.

Injection 10 µl of test solution (a) and reference solutions (a) and (b).

Run time 4 times the retention time of sumatriptan.

Identification of impurities Use the chromatogram obtained with reference solution (b) and the chromatogram supplied with *sumatriptan impurity mixture CRS* to identify the peaks due to impurities B, C, D and E.

System suitability Reference solution (b):

— *resolution:* minimum 1.5 between the peaks due to sumatriptan and impurity C;

— The chromatogram shows 5 clearly separated peaks.

Limits:

— *impurities B, C, D*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurity E*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total:* not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.6 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Water ***(2.5.12)***

Maximum 1.0 per cent, determined on 0.500 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (c).

Calculate the percentage content of $C_{18}H_{27}N_3O_6S$ from the declared content of *sumatriptan succinate CRS.*

STORAGE

Protected from light.

IMPURITIES

Specified impurities A, B, C, D, E, H.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): F, G.*

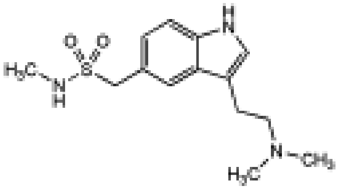
Ph Eur

Sumatriptan

General Notices



$C_{14}H_{21}N_3O_2S$ 295.4 *103628-46-2*

Serotonin $5HT_1$ receptor agonist; treatment of migraine.

Preparation

Sumatriptan Nasal Spray

DEFINITION

Sumatriptan is 3-(2-dimethylaminoethyl)indol-5-yl-*N*-methylmethanesulfonamide. It contains not less than 97.5% and not more than 102.0% of $C_{14}H_{21}N_3O_2S$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white to pale yellow powder. Very slightly soluble in *water*.

IDENTIFICATION

The *infrared absorption spectrum* , Appendix II A, is concordant with the *reference spectrum* of sumatriptan *(RS 414)* .

TESTS

Impurities A and H

Carry out the method for *liquid chromatography* , Appendix III D. Prepare the solutions in a mixture containing 3 volumes of 0.025M *sodium dihydrogen orthophosphate* , the pH of which has been adjusted to 6.5, and 1 volume of *acetonitrile* (solution A).

(1) 0.2% w/v of the substance being examined in solution A.

(2) Dilute 1 volume of solution (1) to 100 volumes with solution A.

(3) Dilute the contents of a vial of *sumatriptan for system suitability EPCRS* to 1 ml with 1M *hydrochloric acid*.

CHROMATOGRAPHIC CONDITIONS

(a) Use a stainless steel column (25 cm × 4.6 mm) packed with *silica gel for chromatography* (5 µm) (Spherisorb silica S5W is suitable).

(b) Use isocratic elution using the mobile phase below.

(c) Use a flow rate of 2.0 ml per minute.

(d) Use ambient column temperature.

(e) Use a detection wavelength of 282 nm.

(f) Inject 20 µl of each solution.

(g) For solution (1) allow the chromatography to proceed for 5 times the retention time of the principal peak.

MOBILE PHASE

A mixture of 10 volumes of 10M *ammonium acetate* and 90 volumes of *methanol*.

SYSTEM SUITABILITY

The test is not valid unless the chromatogram obtained with solution (3) resembles that supplied with *sumatriptan for system suitability EPCRS* and the *resolution factor* between impurity A and sumatriptan is at least 1.5.

LIMITS

In the chromatogram obtained with solution (1):

— the area of any peak corresponding to impurity A is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.6%; taking into account the correction factor of 0.6 for impurity A);

— the area of any peak due to impurity H is not greater than 0.3 times the area of the principal peak in the chromatogram obtained with solution (2) (0.3%).

Related substances

Carry out the method for *liquid chromatography*, Appendix III D. Prepare the solutions in a mixture containing 3 volumes of 0.025M *sodium dihydrogen orthophosphate*, the pH of which has been adjusted to 6.5, and 1 volume of *acetonitrile* (solution A).

(1) 0.2% w/v of the substance being examined in solution A.

(2) Dilute 1 volume of solution (1) to 100 volumes with solution A and further dilute 1 volume of the resulting solution to 10 volumes with solution A.

(3) Dilute the contents of a vial of *sumatriptan impurity mixture EPCRS* to 1 ml with 0.1M

hydrochloric acid .

CHROMATOGRAPHIC CONDITIONS

(a) Use a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 µm) (Spherisorb ODS 1 is suitable).

(b) Use isocratic elution using the mobile phase below.

(c) Use a flow rate of 1.5 ml per minute.

(d) Use ambient column temperature.

(e) Use a detection wavelength of 282 nm.

(f) Inject 20 µl of each solution.

MOBILE PHASE

A mixture of 75 volumes of a solution containing 0.97 g of *dibutylamine,* 0.735 g of *orthophosphoric acid* and 2.93 g of *sodium dihydrogen orthophosphate* in 750 ml *water,* adjusted to pH 6.5 with 10M *sodium hydroxide* and diluted to 1000 ml with *water.*

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the peaks due to impurity C and sumatriptan is at least 1.5.

LIMITS

In the chromatogram obtained with solution (1):

— the areas of any peaks corresponding to impurities B, C and D are not greater than 5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.5%);

— the area of any peak corresponding to impurity E is not greater than the principal peak in the chromatogram obtained with solution (2) (0.1%);

— the area of any other *secondary peak* is not greater than the principal peak in the chromatogram obtained with solution (2) (0.1%).

The total impurity content in the test for Impurities A and H and the test for Related substances is not greater than 1.5%.

Disregard any peak with an area less than 0.5 times the area of the peak in the chromatogram obtained with solution (2) (0.05%).

Water

Not more than 1.0% w/w, Appendix IX C. Use 1.0 g.

ASSAY

Carry out the method for *liquid chromatography* , Appendix III D. Prepare the solutions in a mixture containing 3 volumes of 0.025M *sodium dihydrogen orthophosphate* , the pH of which has been adjusted to 6.5, and 1 volume of *acetonitrile* (solution A).

(1) 0.01% w/v of the substance being examined in solution A.

(2) 0.014% w/v of *sumatriptan succinate EPCRS* in solution A.

(3) Dilute the contents of a vial of *sumatriptan impurity mixture EPCRS* to 1 ml with 0.1M *hydrochloric acid* .

CHROMATOGRAPHIC CONDITIONS

The chromatographic conditions described under Related substances may be used.

SYSTEM SUITABILITY

The test is not valid unless, in the chromatogram obtained with solution (3), the *resolution factor* between the peaks due to sumatriptan and impurity C is at least 1.5.

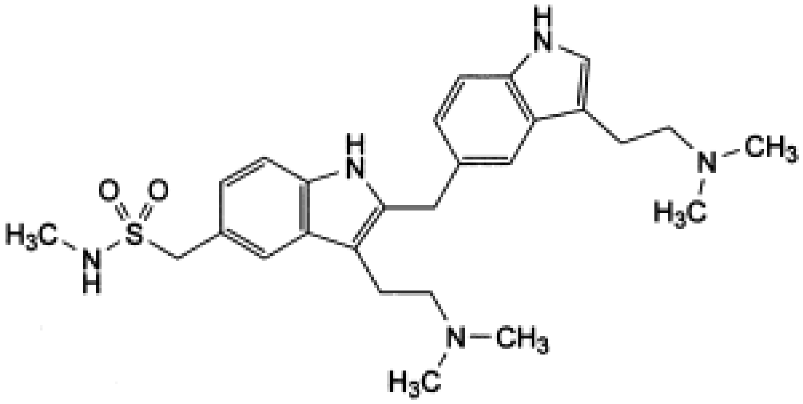
DETERMINATION OF CONTENT

Calculate the content of $C_{14}H_{21}N_3O_2S$ using the declared content of $C_{14}H_{21}N_3O_2S,C_4H_6O_4$ in *sumatriptan succinate EPCRS*. 1 mg of $C_{14}H_{21}N_3O_2S$ is equivalent to 1.4 mg of $C_{14}H_{21}N_3O_2S$, $C_4H_6O_4$.

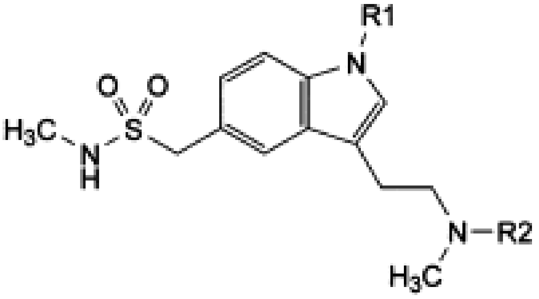
STORAGE

Sumatriptan should be protected from light.

IMPURITIES

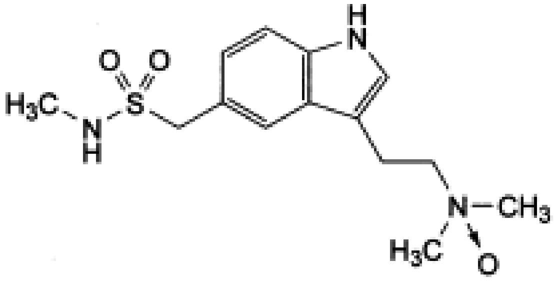


A. [3-[2-(dimethylamino)ethyl]-2-[[3-[2-(dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-1*H*-indol-5-yl]-*N*-methylmethanesulphonamide,

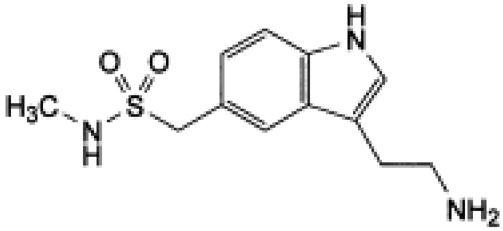


B. R1 = R2 = H: *N*-methyl[3-[2-(methylamino)ethyl]-1*H*-indol-5-yl]methanesulphonamide,

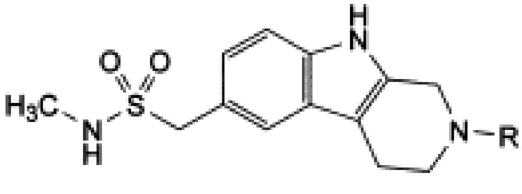
C. R1 = CH_2-OH, R2 = CH_3: [3-[2-(dimethylamino)ethyl]-1-(hydroxymethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulphonamide,



D. *N*,*N*-dimethyl-2-[5-[(methylsulphamoyl)methyl]-1*H*-indol-3-yl]ethanamine *N*-oxide,

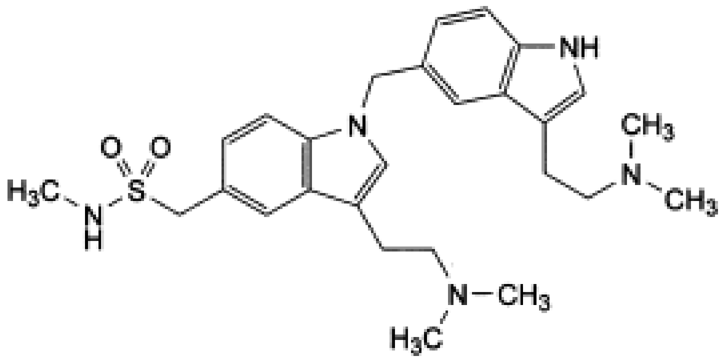


E. [3-(2-aminoethyl)-1*H*-indol-5-yl]-*N*-methylmethanesulphonamide,



F. R = H: *N*-methyl(2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl)methanesulphonamide,

G. R = CH_3: *N*-methyl(2-methyl-2,3,4,9-tetrahydro-1*H*-pyrido[3,4-*b*]indol-6-yl) methanesulphonamide,

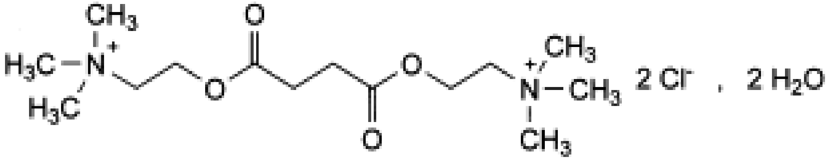


H. [3-[2-(dimethylamino)ethyl]-1-[[3-[2-(dimethylamino)ethyl]-1*H*-indol-5-yl]methyl]-1*H*-indol-5-yl]-*N*-methylmethanesulphonamide.

Suxamethonium Chloride

General Notices

(Ph Eur monograph 0248)



$C_{14}H_{30}Cl_2N_2O_4,2H_2O$ 397.3 *6101-15-1*

Action and use

Depolarizing neuromuscular blocker.

Preparation

Suxamethonium Chloride Injection

Ph Eur

DEFINITION

Suxamethonium chloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of 2,2′-[butanedioylbis(oxy)]bis(*N*,*N*,*N*-trimethylethanaminium) dichloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, hygroscopic, freely soluble in water, slightly soluble in alcohol.

It melts at about 160 °C, determined without previous drying.

IDENTIFICATION

First identification A, D.

Second identification B, C, D.

A. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *suxamethonium chloride CRS* . Examine the substances prepared as discs.

B. To 1 ml of solution S (see Tests) add 9 ml of *water R* , 10 ml of *dilute sulphuric acid R* and 30 ml of *ammonium reineckate solution R.* A pink precipitate is formed. Allow to stand for 30 min, filter, wash with *water R* , with *alcohol R* and then with *ether R* and dry at 80 °C. The melting point *(2.2.14)* of the precipitate is 180 °C to 185 °C.

C. Dissolve about 25 mg in 1 ml of *water R* and add 0.1 ml of a 10 g/l solution of cobalt *chloride R* and 0.1 ml of *potassium ferrocyanide solution R*. A green colour is produced.

D. About 20 mg gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* . Dilute 4 ml of solution S to 10 ml with *water R* . The solution is colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R* . The pH of the solution is 4.0 to 5.0.

Choline chloride

Examine by thin-layer chromatography *(2.2.27)* , using *cellulose for chromatography R1* as the coating substance.

Test solution Dissolve 0.4 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 0.4 g of *suxamethonium chloride CRS* and 2 mg of *choline chloride R* in *methanol R* and dilute to 10 ml with the same solvent.

Apply to the plate 5 µl of each solution. Prepare the mobile phase as follows: shake together for 10 min, 10 volumes of *anhydrous formic acid R* , 40 volumes of *water R* and 50 volumes of *butanol R* ; allow to stand and use the upper layer. Develop over a path of 15 cm. Dry the plate in a current of air and spray with *potassium iodobismuthate solution R.* Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot corresponding to choline chloride in the chromatogram obtained with the reference solution (0.5 per cent). The test is not valid unless the chromatogram obtained with the reference solution shows two clearly separated spots.

Water *(2.5.12)*

8.0 per cent to 10.0 per cent, determined on 0.30 g by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 50 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 18.07 mg of $C_{14}H_{30}Cl_2N_2O_4$.

STORAGE

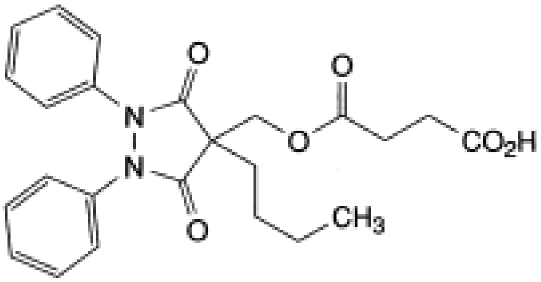
Store in an airtight container, protected from light.

Ph Eur

Suxibuzone

General Notices

(Ph Eur monograph 1574)



$C_{24}H_{26}N_2O_6$ 438.5 *27470-51-5*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

4-[(4-Butyl-3,5-dioxo-1,2-diphenylpyrazolidin-4-yl)methoxy]-4-oxobutanoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder.

Solubility

Practically insoluble in water, freely soluble in acetone, soluble in alcohol, practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *suxibuzone CRS.*

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1 g in *ethanol R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.10 g of the substance to be examined in *acetonitrile R* and dilute to 25.0 ml with the same solvent.

Reference solution (a) Dissolve 2.8 mg of *phenylbutazone CRS* (impurity A of suxibuzone), 2.8 mg of *suxibuzone impurity B CRS* and 2.8 mg of *suxibuzone impurity C CRS* in *acetonitrile R* and dilute to 10.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *acetonitrile R* .

Reference solution (b) Dissolve 4 mg of *phenylbutazone CRS* (impurity A of suxibuzone) in *acetonitrile R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *acetonitrile R.*

Reference solution (c) Dissolve 10 mg of *phenylbutazone CRS* (impurity A of suxibuzone) in *acetonitrile R* and dilute to 25.0 ml with the same solvent. Mix 10.0 ml of this solution with 1.0 ml of the test solution and dilute the mixture to 25.0 ml with *acetonitrile R* .

Column:

- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 44 volumes of *acetonitrile R* and 56 volumes of a solution prepared as follows: dissolve 6.7 g of *citric acid R* and 2.4 g of *tris(hydroxymethyl)aminomethane R* in 950 ml of *water R* , adjust to pH 3.0 with *citric acid R* and dilute to 1000 ml with *water R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 250 nm.

Injection 10 µl.

Relative retention With reference to suxibuzone (retention time = about 7 min): impurity C = 0.7; impurity A = 1.4; impurity B = 3.3.

System suitability Reference solution (c):

- *resolution*: minimum of 2.0 between the peaks due to suxibuzone and to impurity A.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);
- *impurity B*: not more than the area of the corresponding peak in the chromatogram

obtained with reference solution (a) (0.7 per cent);

— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.7 per cent);

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.07 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven *in vacuo* at 60 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in previously *neutralised ethanol R* and dilute to 10 ml with the same solvent. Carry out a potentiometric titration *(2.2.20)* using *0.1 M sodium hydroxide* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 43.85 mg of $C_{24}H_{26}N_2O_6$.

STORAGE

Protected from light.

IMPURITIES

A. phenylbutazone,

Tapioca Starch

General Notices

Cassava Starch

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical and sub-tropical countries where these are not available, Tapioca Starch may be supplied or used.

DEFINITION

Tapioca Starch is obtained from the rhizomes of *Manihot utilissima* Pohl.

CHARACTERISTICS

Very fine powder which creaks when pressed between the fingers.

Practically insoluble in cold *water* and in *ethanol (96%).*

IDENTIFICATION

A. Principally simple granules, subspherical, muller-shaped or rounded polyhedral; smaller granules 5 to 10 µm, larger granules 20 to 35 µm in diameter; hilum, central, punctate, linear or triradiate; striations, faint, concentric; compound granules, few, of two to three unequal components.

B. Heat to boiling a suspension of 1 g in 50 ml of *water* for 1 minute and cool. A thin, cloudy mucilage is formed.

C. Mix 0.05 ml of *iodine solution R1* with 1 ml of the mucilage obtained in test B. A dark blue colour is produced which disappears on heating and reappears on cooling.

TESTS

Acidity

Add 10 g of the starch to 100 ml of *ethanol (70%)* previously neutralised to 0.5 ml of *phenolphthalein solution* , shake for 1 hour, filter and titrate 50 ml of the filtrate with 0.1M *sodium hydroxide VS* . Not more than 2.0 ml is required to change the colour of the solution.

Foreign matter

Not more than traces of cell membranes and protoplasm are present.

Loss on drying

When dried to constant weight at 100° to 105°, loses not more than 15.0% of its weight. Use 1 g.

Sulphated ash

Not more than 0.6%, Appendix IX A, Method II. Use 1 g.

Microbial contamination

1.0 g is free from *Escherichia coli,* Appendix XVI B1.

STORAGE

Tapioca Starch should be kept in an airtight container.

Wheat Starch

General Notices

(Ph Eur monograph 0359)

Action and use

Excipient.

When Starch is specified and the type is not indicated, Maize Starch, Potato Starch, Rice Starch, Wheat Starch or, in tropical countries where these are not available, Tapioca Starch may be supplied or used.

Ph Eur

DEFINITION

Wheat starch is obtained from the caryopsis of *Triticum aestivum* L. (*T. vulgare* Vill.).

CHARACTERS

Appearance

Very fine, white or almost white powder which creaks when pressed between the fingers.

Solubility

Practically insoluble in cold water and in alcohol.

Wheat starch does not contain starch grains of any other origin. It may contain a minute quantity, if any, of tissue fragments of the original plant.

IDENTIFICATION

A. Examined under a microscope using equal volumes of *glycerol R* and *water R* , it presents large and small granules, and, very rarely, intermediate sizes. The large granules, 10 µm to 60 µm in diameter, are discoid or, more rarely, reniform when seen face-on. The central hilum and striations are invisible or barely visible and the granules sometimes show cracks on the edges. Seen in profile, the granules are elliptical and fusiform and the hilum appears as a slit along the main axis. The small granules, rounded or polyhedral, are 2 µm to 10 µm in diameter. Between crossed nicol prisms, the granules show a distinct black cross intersecting at the hilum.

B. Suspend 1 g in 50 ml of *water R* , boil for 1 min and cool. A thin, cloudy mucilage is formed.

C. To 1 ml of the mucilage obtained in identification test B, add 0.05 ml of *iodine solution R1*. A dark blue colour is produced which disappears on heating.

TESTS

pH *(2.2.3)*

4.5 to 7.0.

Shake 5.0 g with 25.0 ml of *carbon dioxide-free water R* for 60 s. Allow to stand for 15 min.

Foreign matter

Examined under a microscope using a mixture of equal volumes of *glycerol R* and *water R*, not more than traces of matter other than starch granules are present. No starch grains of any other origin are present.

Total protein

Maximum 0.3 per cent of total protein (corresponding to 0.048 per cent N_2, conversion factor: 6.25), determined on 6.0 g by sulphuric acid digestion *(2.5.9)* modified as follows: wash any adhering particles from the neck into the flask with 25 ml of *sulphuric acid R*; continue the heating until a clear solution is obtained; add 45 ml of *strong sodium hydroxide solution R*.

Oxidising substances *(2.5.30)*

Maximum 20 ppm, calculated as H_2O_2.

Sulphur dioxide *(2.5.29)*

Maximum 50 ppm.

Iron *(2.4.9)*

Maximum 10 ppm.

Shake 1.5 g with 15 ml of *dilute hydrochloric acid R*. Filter. The filtrate complies with the limit test for iron.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 130 °C for 90 min.

Sulphated ash *(2.4.14)*

Maximum 0.6 per cent, determined on 1.0 g.

MICROBIAL CONTAMINATION

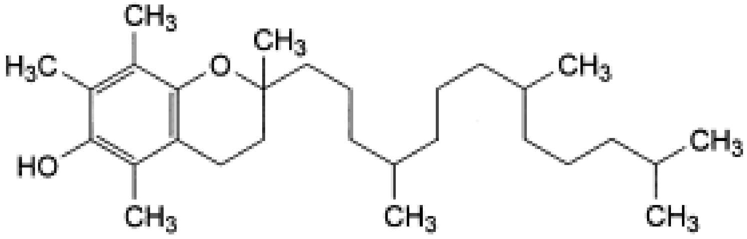
Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and not more than 10^2 fungi per gram, determined by plate count. It complies with the test for *Escherichia coli (2.6.13)*.

Ph Eur

all-*rac* -Alpha-Tocopherol

General Notices

(all-rac-α-Tocopherol, Ph Eur monograph 0692)



$C_{29}H_{50}O_2$ 430.7 *59-02-9*

Action and use

Used in prevention and treatment of vitamin E deficiencies.

DEFINITION

all-*rac*-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2*H*-1-benzopyran-6-ol.

Content

96.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

Clear, colourless or yellowish-brown, viscous, oily liquid.

Solubility

Practically insoluble in water, freely soluble in acetone, in anhydrous ethanol, in methylene chloride and in fatty oils.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. Optical rotation *(2.2.7)* : - 0.01° to + 0.01°.

Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *α-tocopherol CRS* .

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 10 mg of the substance to be examined in 2 ml of *cyclohexane R* .

Reference solution Dissolve 10 mg of *α-tocopherol CRS* in 2 ml of *cyclohexane R* .

Plate *TLC silica gel F254 plate R.*

Mobile phase *ether R, cyclohexane R* (20:80 V/V).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Gas chromatography *(2.2.28)* : use the normalisation procedure.

Internal standard solution Dissolve 1.0 g of *squalane R* in *cyclohexane R* and dilute to 100.0 ml with the same solvent.

Test solution (a) Dissolve 0.100 g of the substance to be examined in 10.0 ml of the internal standard solution.

Test solution (b) Dissolve 0.100 g of the substance to be examined in 10 ml of *cyclohexane R.*

Reference solution (a) Dissolve 0.100 g of *α-tocopherol CRS* in 10.0 ml of the internal standard solution.

Reference solution (b) Dissolve 10 mg of the substance to be examined and 10 mg of *α-tocopheryl acetate R* in *cyclohexane R* and dilute to 100.0 ml with the same solvent.

Reference solution (c) Dissolve 10 mg of *all-rac-α-tocopherol for peak identification CRS* (containing impurities A and B) in *cyclohexane R* and dilute to 1 ml with the same solvent.

Reference solution (d) Dilute 1.0 ml of test solution (b) to 100.0 ml with *cyclohexane R* . Dilute 1.0 ml of this solution to 10.0 ml with *cyclohexane R.*

Column:

— *material*: fused silica;

— *size*: *l* = 30 m, Ø = 0.25 mm;

— *stationary phase: poly(dimethyl)siloxane R* (film thickness 0.25 µm).

Carrier gas *helium for chromatography R.*

Flow rate 1 ml/min.

Split ratio 1:100.

Temperature:

— column: 280 °C;

— injection port and detector: 290 °C.

Detection Flame ionisation.

Injection 1 µl of test solution (b) and reference solutions (b), (c) and (d).

Run time Twice the retention time of all-*rac*-α-tocopherol.

Identification of impurities Use the chromatogram supplied with *all-rac-α-tocophero l for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A and B.

Relative retention With reference to all-*rac*-α-tocopherol (retention time = about 13 min): squalane = about 0.5; impurity A = about 0.7; impurity B = about 0.8; impurities C and D = about 1.05 (eluting immediately after the all-*rac*-α-tocopherol peak).

System suitability reference solution (b):

— *resolution*: minimum 3.5 between the peaks due to all-rac-α-tocopherol and α-tocopheryl acetate.

Limits:

— *impurity A*: maximum 0.5 per cent;

— *impurity B*: maximum 1.5 per cent;

— *sum of impurities C and D*: maximum 1.0 per cent;

— *any other impurity*: for each impurity, maximum 0.25 per cent;

— *total*: maximum 2.5 per cent;

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography *(2.2.28)* as described in the test for related substances with the following modification.

Injection Test solution (a) and reference solution (a).

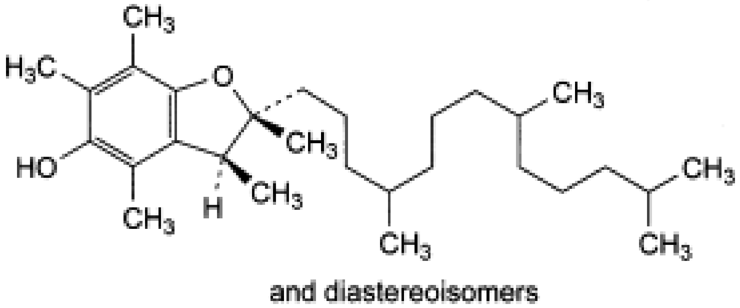
Calculate the percentage content of $C_{29}H_{50}O_2$ from the declared content of α-*tocopherol CRS*.

STORAGE

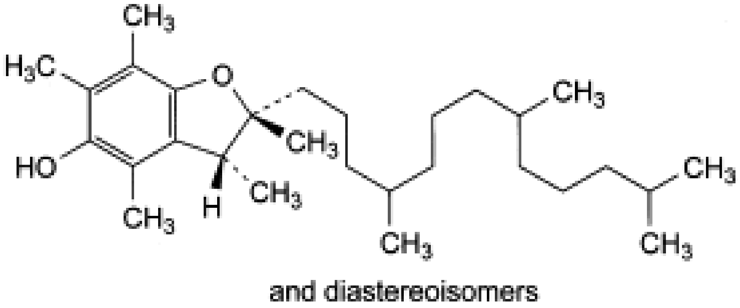
Under an inert gas, protected from light.

IMPURITIES

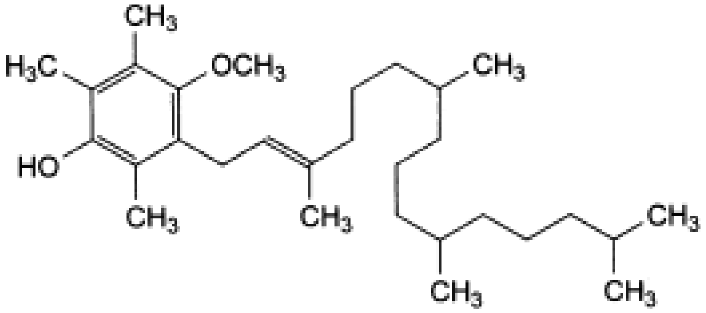
Specified impurities A, B, C, D.



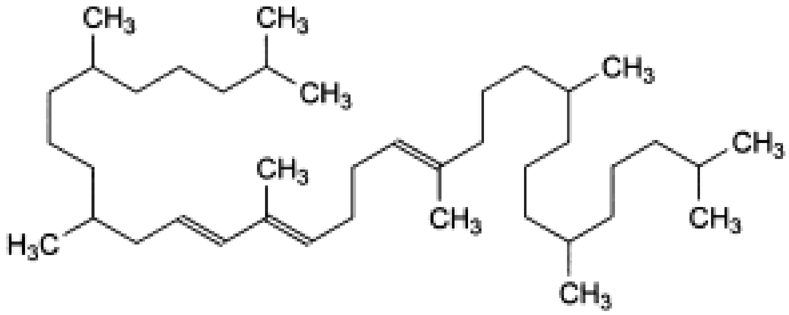
A. all-*rac-trans*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol,



B. all-*rac-cis*-2,3,4,6,7-pentamethyl-2-(4,8,12-trimethyltridecyl)-2,3-dihydrobenzofuran-5-ol.



C. 4-methoxy-2,3,6-trimethyl-5-[(all-*RS*,*E*)-3,7,11,15-tetramethylhexadec-2-enyl]phenol,



D. (all-*RS*,all-*E*)-2,6,10,14,19,23,27,31-octamethyldotriaconta-12,14,18-triene.

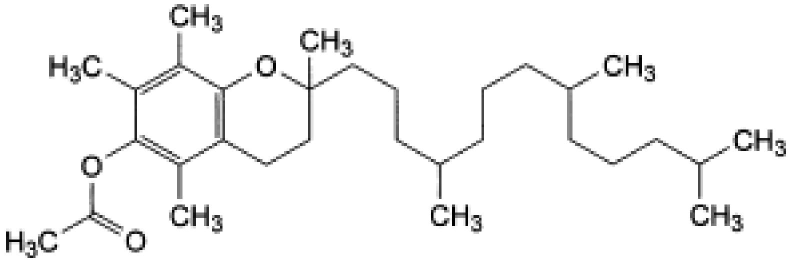
General Notices

(all-rac-α-Tocopheryl Acetate, Ph Eur monograph 0439)



$C_{31}H_{52}O_3$ 472.7 *7695-91-2*

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

all-*rac*-2,5,7,8-Tetramethyl-2-(4,8,12-trimethyltridecyl)-3,4-dihydro-2*H*-1-benzopyran-6-yl acetate.

Content

96.5 per cent to 102.0 per cent.

CHARACTERS

Appearance

Clear, colourless or slightly greenish-yellow, viscous, oily liquid.

Solubility

Practically insoluble in water, freely soluble in acetone, in anhydrous ethanol and in fatty oils.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. Optical rotation *(2.2.7)* - 0.01 ° to + 0.01 °.

Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison α*-tocopheryl acetate CRS* .

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve about 10 mg of the substance to be examined in 2 ml of *cyclohexane R.*

Reference solution Dissolve about 10 mg of α*-tocopheryl acetate CRS* in 2 ml of *cyclohexane R.*

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *ether R, cyclohexane R* (20:80 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Ph Eur

Alpha Tocopheryl Acetate Concentrate (Powder Form)

General Notices

(α-Tocopheryl Acetate Concentrate (Powder Form), Ph Eur monograph 0691)

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

Preparation obtained either by finely dispersing *all-rac-α-Tocopheryl acetate (0439*) in a suitable carrier of suitable quality (for example gelatin, acacia, carbohydrates, lactoproteins or a mixture thereof) or by adsorbing *all-rac-α-Tocopheryl acetat e (0439)* on silicic acid of suitable quality.

Content

90.0 per cent to 115.0 per cent of the α-tocopheryl acetate content stated on the label, which is not less than 25 g per 100 g of concentrate.

CHARACTERS

Appearance

Almost white, yellowish or light brown, small particles.

Solubility

Practically insoluble or swells or forms a dispersion in water, depending on the formulation.

IDENTIFICATION

Thin-layer chromatography (*2.2.27*).

Test solution To a quantity of the preparation to be examined corresponding to 50 mg of α-tocopheryl acetate add 5 ml of *0.01 M hydrochloric acid* and treat with ultrasound at 60 °C. Add 5 ml of *anhydrous ethanol R* and 10 ml of *cyclohexane R,* shake for 1 min and centrifuge for 5 min. Use the upper layer.

Reference solution Dissolve 50 mg of α-*tocopheryl acetate CRS* in *cyclohexane R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel F $_{254}$ plate R* .

Mobile phase *ether R, cyclohexane R* (20:80 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ASSAY

Gas chromatography *(2.2.28)* .

Internal standard solution Dissolve 0.20 g of *dotriacontane R* in *hexane R* and dilute to 100.0 ml with the same solvent.

Test solution Weigh accurately a quantity of the preparation to be examined corresponding to about 0.100 g of α-tocopheryl acetate in a 250 ml conical flask. Add 20 ml of *1 M hydrochloric acid* and treat with ultrasound at 70 °C for 20 min. Add 50 ml of *anhydrous ethanol R* and 50.0 ml of the internal standard solution and thoroughly mix the 2 layers for 30 min. Allow to separate, and use the upper layer.

Reference solution Dissolve 0.100 g of *α-tocophery l acetate CRS* in the internal standard solution and dilute to 50.0 ml with the same solution.

Column:
- *material*: silanised glass;
- *size*: *l* = 2.0-3.0 m, Ø = 2.2-4.0 mm;
- *stationary phase*: *diatomaceous earth for gas chromatography R* (125-150 µm or 150-180 µm), silanised with dimethyldichlorosilane and impregnated with 1-5 per cent m/m of *poly(dimethyl)siloxane R;*
- *plug:* silanised glass wool placed at each end of the column.

Carrier gas *nitrogen for chromatography R* .

Flow rate 25-90 ml/min.

Temperature:
- *column*: constant between 245 °C and 280 °C;

— *injection port and detector*: constant between 270 °C and 320 °C.

Detection Flame ionisation.

Injection 1 µl; inject directly onto the column or via an injection port (preferably glass-lined) using an automatic injection device or other reproducible injection method.

System suitability Reference solution:

— *resolution*: minimum 1.4 between the peaks due to dotriacontane and α-tocopheryl acetate. Set the temperature of the column and the flow rate of the carrier gas in such a manner that the required resolution is achieved. Repeat the injection until the response factor (R_F) determined as described below is constant to within ± 2 per cent.

Interference test Weigh accurately a quantity of the substance to be examined corresponding to about 0.100 g of α-tocopheryl acetate in a 250 ml conical flask. Add 20 ml of *1 M hydrochloric acid* and treat with ultrasound at 70 °C for 20 min. Add 50 ml of *anhydrous ethanol R* and 50 ml of *hexane R* and thoroughly mix the 2 layers for 30 min. Allow to separate. Inject 1 µl of the upper layer and record the chromatogram, choosing an attenuation such that the height of the peak due to α-tocopheryl acetate is greater than 50 per cent of the maximum recorder response; during the recording, change the attenuation so that any peak appearing with the same retention time as that of the peak due to dotriacontane is recorded with a sensitivity at least 8 times greater than for the peak due to α-tocopheryl acetate. If a peak with a height of at least 5 mm for a recorder paper width of 250 mm is detected with the same retention time as that of dotriacontane, use the corrected peak area $S'_{D(corr)}$ for the final calculation.

$$S'_{\mathrm{D(corr)}} = S'_{\mathrm{D}} - \frac{S_{\mathrm{I}} \times S'_{\mathrm{T}}}{f \times S_{\mathrm{TI}}}$$

S'_D = area of the peak due to dotriacontane in the chromatogram obtained with the test solution

S_I = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test

S'_T = area of the peak due to α-tocopheryl acetate in the chromatogram obtained with the test solution

S_{TI} = area of the peak due to α-tocopheryl acetate in the chromatogram obtained in the interference test

f = factor by which the attenuation was changed

Record the chromatograms choosing an attenuation such that the peak due to α-tocopheryl acetate is greater than 50 per cent of the maximum recorder response.

Measure the areas of the peaks due to α-*tocopheryl acetate CRS* (S_T) and to dotriacontane

(S_D) in the chromatogram obtained with the reference solution and the areas of the peaks due to α-tocopheryl acetate (S'_T) and to dotriacontane (S'_D) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for α-tocopheryl acetate from the areas of the peak due to α-tocopheryl acetate and the peak due to dotriacontane in the chromatogram obtained with the reference solution using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of α-tocopheryl acetate using the following expression:

$$\frac{100 \times S'_T \times m_D \times \mathrm{RF}}{S'_{D(\mathrm{corr.})} \times m}$$

S_D = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution

$S'_{D(\mathrm{corr.})}$ = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution

S_T = area of the peak due to α-*tocopheryl acetate CRS* in the chromatogram obtained with the reference solution

S'_T = area of the peak due to α-tocopheryl acetate in the chromatogram obtained with the test solution

m_D = mass of dotriacontane in the test solution and in the reference solution, in milligrams

m_T = mass of α-*tocopheryl acetate CRS* in the reference solution, in milligrams

m = mass of the substance to be examined in the test solution, in milligrams

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states the content of α-tocopheryl acetate, expressed in grams per 100 g of concentrate.

$C_{33}H_{54}O_5$ 530.8

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Ph Eur

DEFINITION

(2*RS*)-2,5,7,8-Tetramethyl-2-[(4*RS*,8*RS*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl hydrogen succinate.

Content

96.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *RRR-α-tocopheryl hydrogen succinate CRS.*

C. Thin-layer chromatography *(2.2.27)* .

Test solution (a) Dissolve 10 mg of the substance to be examined in 2 ml of *cyclohexane R* .

Test solution (b) In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 ml of *2.5 M alcoholic sulphuric acid R* . Heat on a water-bath for 5 min. Cool and add 2 ml of *water R* and 2 ml of *cyclohexane R* . Shake for 1 min. Use the upper layer.

Reference solution (a) Dissolve 10 mg of *RRR-α-tocopheryl hydrogen succinate CRS* in 2 ml of *cyclohexane R* .

Reference solution (b) Prepare as described for test solution (b), using *RRR-α-tocopheryl hydrogen succinate CRS* instead of the substance to be examined.

Plate *TLC silica gel F_{254} plate R* .

Mobile phase *glacial acetic acid R, ether R, cyclohexane R* (0.2:20:80 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher R_F value is due to α-tocopherol, the spot with the lower R_F value is due to DL-α-tocopheryl hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

Detection B Spray with a mixture of 10 volumes of *hydrochloric acid R*, 40 volumes of a 2.5 g/l solution of *ferric chloride R* in *ethanol (96 per cent) R* and 40 volumes of a 10 g/l solution of *phenanthroline hydrochloride R* in *ethanol (96 per cent) R*.

Results B In the chromatograms obtained with test solution (b) and reference solution (b), the spot due to α-tocopherol is orange.

D. Optical rotation (see Tests).

TESTS

Optical rotation *(2.2.7)*

- 0.01 ° to + 0.01 °.

Dissolve 2.50 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

Absorbance *(2.2.25)*.

Solution A Dissolve 0.150 g in *anhydrous ethanol R* and dilute to 100 ml with the same solvent.

Test solution (a) Dilute 10.0 ml of solution A to 100.0 ml with *anhydrous ethanol R*.

Test solution (b) Dilute 20.0 ml of solution A to 50.0 ml with *anhydrous ethanol R*.

Absorption maximum At 284 nm for test solution (a).

Absorption minimum At 254 nm for test solution (b).

Specific absorbance at the absorption maximum 35 to 38 for test solution (a).

Specific absorbance at the absorption minimum 6.0 to 8.0 for test solution (b).

Acid value *(2.5.1)*

101 to 108, determined on 1.00 g.

Free tocopherol

Maximum 1.0 per cent.

Dissolve 0.500 g in 100 ml of *0.25 M alcoholic sulphuric acid R*. Add 20 ml of *water R* and 0.1 ml of a 2.5 g/l solution of *diphenylamine R* in *sulphuric acid R*. Titrate with *0.01 M ammonium and cerium sulphate* until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 ml of *0.01 M ammonium and cerium sulphate* is equivalent to 2.154 mg of free tocopherol.

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

0.50 g complies with test D. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography *(2.2.28)* .

Internal standard solution Dissolve 0.300 g of *dotriacontane R* in *hexane R* and dilute to 100.0 ml with the same solvent.

Test solution Weigh 30.0 mg of the substance to be examined into a 20 ml vial. Add 2.0 ml of *methanol R* , 1.0 ml of *dimethoxypropane R* and 0.1 ml of *hydrochloric acid R* . Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 ml of the internal standard solution. Vortex into solution.

Reference solution Weigh 30.0 mg of *RRR-α-tocopheryl hydrogen succinate CRS* into a 20 ml vial. Add 2.0 ml of *methanol R* , 1.0 ml of *dimethoxypropane R* and 0.1 ml of *hydrochloric acid R* . Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 ml of the internal standard solution. Vortex into solution.

Column:

— *material*: fused silica;

— *size*: *l* = 15 m, Ø = 0.32 mm;

— *stationary phase*: *poly(dimethyl)siloxane R* (film thickness 0.25 µm).

Carrier gas *helium for chromatography R* .

Flow rate 3-6 ml/min.

Split ratio 1:10 to 1:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	200 → 250
	10 - 20	250
Injection port		300
Detector		330

	Time (min)	Temperature (°C)
Column	0 - 10	200 → 250
	10 - 20	250
Injection port		300
Detector		330

Detection Flame ionisation.

Injection 1 µl; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

System suitability Reference solution:

— *resolution*: minimum 12.0 between the peaks due to dotriacontane and DL-α-tocopheryl hydrogen succinate.

Interference test Dissolve 0.100 g of the substance to be examined in *hexane R* and dilute to 50.0 ml with the same solvent. Inject 1 µl of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area $S'_{D(corr)}$ for the final calculation.

$$S'_{\mathrm{D(corr)}} = S'_{\mathrm{D}} - \frac{S_{\mathrm{I}} \times S'_{\mathrm{T}}}{S_{\mathrm{TI}}}$$

$$S'_{\mathrm{D(corr)}} = S'_{\mathrm{D}} - \frac{S_{\mathrm{I}} \times S'_{\mathrm{T}}}{S_{\mathrm{TI}}}$$

S'_D = area of the peak due to dotriacontane in the chromatogram obtained with the test solution

S_I = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test

S'_T = area of the peak due to DL-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution

S_{TI} = area of the peak due to DL-α-tocopheryl hydrogen succinate in the chromatogram obtained in the interference test

Measure the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* (S_T) and dotriacontane (S_D) in the chromatogram obtained with the reference solution and the areas of the peaks due to DL-α-tocopheryl hydrogen succinate (S'_T) and dotriacontane (S'_D) in the chromatogram obtained with the test solution.

Determine the response factor (R_F) for DL-α-tocopheryl hydrogen succinate from the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_D \times m_T}{S_T \times m_D}$$

$$\frac{S_D \times m_T}{S_T \times m_D}$$

Calculate the percentage content of dl-α-tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_T \times m_D \times \mathrm{RF}}{S'_{D(corr)} \times m}$$

$$\frac{100 \times S'_T \times m_D \times \mathrm{RF}}{S'_{D(corr)} \times m}$$

S_D = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution

$S'_{D(corr)}$ = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution

S_T = area of the peak due to *RRR-α-tocopheryl hydrogen succinate CRS* in the chromatogram obtained with the reference solution

S'_T = area of the peak due to DL-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution

m_D = mass of dotriacontane in the test solution and in the reference solution, in milligrams

m_T = mass of *RRR-α-tocopheryl hydrogen succinate CRS* in the reference solution, in milligrams

m = mass of the substance to be examined in the test solution, in milligrams

STORAGE

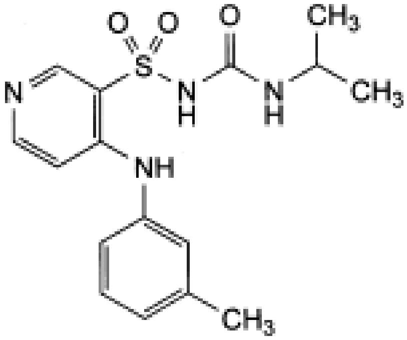
Protected from light.

Ph Eur

Anhydrous Torasemide

General Notices

(Ph Eur monograph 2132)



$C_{16}H_{20}N_4O_3S$ 348.4 *56211-40-6*

Action and use

Thiazide-like diuretic.

Ph Eur

DEFINITION

1-(1-Methylethyl)-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulphonyl]urea.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, slightly soluble in ethanol (96 per cent). It is sparingly soluble in dilute solutions of alkali hydroxides and slightly soluble in dilute acids.

It shows polymorphism (5.9).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *anhydrous torasemide CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *methanol R* , evaporate to dryness and record new spectra using the residues.

TESTS

Related substances

Liquid chromatography *(2.2.29)* .

Solution A Dissolve 2.7 g of *potassium dihydrogen phosphate R* in 950 ml of *water R* , adjust to pH 3.5 with *phosphoric acid R* and dilute to 1000 ml with *water R* .

Test solution Dissolve 20.0 mg of the substance to be examined in 15 ml of *methanol R* , sonicate for 15 min. Add 22.5 ml of solution A, cool to room temperature and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve the contents of a vial of *torasemide* for *system suitability CRS* (containing impurities A, B, C and D) in 0.5 ml of *methanol R* . Add 0.5 ml of solution A.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:
- *size*: *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

Mobile phase *methanol R* , solution A (40:60 *V/V*).

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 288 nm.

Injection 20 µl.

Run time 2.5 times the retention time of torasemide.

Relative retention With reference to torasemide (retention time = about 10 min): impurity A = about 0.3; impurity B = about 0.4; impurity C = about 0.5; impurity D = about 2.3.

System suitability Reference solution (a):

- *resolution*: minimum 3.0 between the peaks due to impurity B and impurity C;
- the chromatogram obtained is similar to the chromatogram supplied with *torasemide for system suitability CRS.*

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 5.1; impurity B = 0.76;

— *impurities A, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurity B*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than 6 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with limit test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

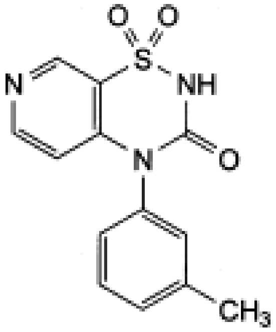
1 ml of *0.1 M perchloric acid* is equivalent to 34.84 mg of $C_{16}H_{20}N_4O_3S$.

STORAGE

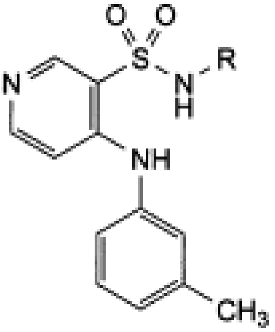
Protected from light.

IMPURITIES

Specified impurities A, B, C, D.



A. 4-(3-methylphenyl)-2*H*-pyrido[4,3-*e*]-1,2,4-thiadiazin-3(4*H*)-one 1,1-dioxide,



B. R = H: 4-[(3-methylphenyl)amino]pyridine-3-sulphonamide,

C. R = CO-NH-C_2H_5: 1-ethyl-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulphonyl]urea,

D. R = CO-NH-$[CH_2]_3$-CH_3: 1-butyl-3-[[4-[(3-methylphenyl)amino]pyridin-3-yl]sulphonyl]urea.

Ph Eur

Coal Tar

General Notices

Action and use

Used in treatment of psoriasis.

Preparations

Coal Tar and Salicylic Acid Ointment

Coal Tar Solution

Strong Coal Tar Solution

Zinc and Coal Tar Paste

DEFINITION

Coal Tar is a product obtained from bituminous coal by destructive distillation at about 1000°.

CHARACTERISTICS

A nearly black, viscous liquid. On exposure to air, the viscosity gradually increases. It burns in air with a luminous, sooty flame. It has a weight per ml of about 1.15 g.

Slightly soluble in *water*; partly soluble in *ethanol*, in *ether* and in volatile oils.

IDENTIFICATION

A. A saturated solution is alkaline to *litmus solution*.

B. Carefully add 0.5 g to 10 ml of *petroleum spirit (boiling range, 40° to 60°)* and allow to stand for 30 minutes. When examined in daylight, the supernatant liquid has a blue fluorescence which becomes more intense when viewed under *ultraviolet light (365 nm)*.

TESTS

Ash

Not more than 2.0%, Appendix XI J.

Medium-chain Triglycerides

General Notices

Fractionated Coconut Oil

(Ph Eur monograph 0868)

Action and use

Excipient.

When Medium-chain Triglycerides are prepared from the endosperm of *Cocos nucifera* L., the title Fractionated Coconut Oil may be used.

Ph Eur

DEFINITION

Mixture of triglycerides of saturated fatty acids, mainly of caprylic (octanoic) acid and of capric (decanoic) acid. Medium-chain triglycerides are obtained from the oil extracted from the hard, dried fraction of the endosperm of *Cocos nucifera* L. or from the dried endosperm of *Elaeis guineensis* Jacq.

Content

Minimum 95.0 per cent of saturated fatty acids with 8 and 10 carbon atoms.

CHARACTERS

Appearance

Colourless or slightly yellowish, oily liquid.

Solubility

Practically insoluble in water, miscible with alcohol, with methylene chloride, with light petroleum and with fatty oils.

IDENTIFICATION

First identification B, C.

Second identification A, D.

A. Heat 3.0 g under a reflux condenser for 30 min with 50 ml of a mixture of equal volumes of *alcohol R* and *2 M alcoholic potassium hydroxide R* . Reserve 10 ml of the mixture for identification test D. To 40 ml of the mixture add 30 ml of *water R* , evaporate the alcohol and acidify the hot solution with 25 ml of *dilute hydrochloric acid R*. After cooling, shake with 50 ml of *peroxide-free ether R*. Wash the ether layer with 3 quantities, each of 10 ml, of *sodium chloride solution R*, dry over *anhydrous sodium sulphate R* and filter. Evaporate the ether and determine the acid value (*2.5.1*) of the residue, using 0.300 g. The acid value is 350 to 390.

B. It complies with the test for saponification value (see Tests).

C. It complies with the test for composition of fatty acids (see Tests).

D. Evaporate 10 ml of the alcoholic mixture obtained in identification test A to dryness on a water-bath. Transfer the residue into a test-tube, add 0.3 ml of *sulphuric acid R* and close the test-tube with a stopper through which a U-shaped glass tube is inserted. One end of the U-tube is dipped into 3 ml of a 10 g/l solution of *tryptophan R* in a mixture of equal volumes of *sulphuric acid R* and *water R*. Heat the test-tube in a silicone-oil bath at 180 °C for 10 min and collect the liberated fumes in the tryptophan reagent. Heat the tryptophan reagent on a water-bath for 1 min. A violet colour develops.

TESTS

Appearance

The substance to be examined is clear *(2.2.1)* and not more intensely coloured than reference solution Y_3 *(2.2.2, Method I)*.

Alkaline impurities

Dissolve 2.00 g in a mixture of 1.5 ml of *alcohol R* and 3.0 ml of *ether R*. Add 0.05 ml of *bromophenol blue solution R*. Not more than 0.15 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to yellow.

Relative density *(2.2.5)*

0.93 to 0.96.

Refractive index *(2.2.6)*

1.440 to 1.452.

Viscosity *(2.2.9)*

25 mPa·s to 33 mPa·s.

Acid value *(2.5.1)*

Maximum 0.2.

Hydroxyl value *(2.5.3, Method A)*

Maximum 10.

Iodine value *(2.5.4)*

Maximum 1.0.

Peroxide value *(2.5.5, Method A)*

Maximum 1.0.

Saponification value ***(2.5.6)***

310 to 360.

Unsaponifiable matter ***(2.5.7)***

Maximum 0.5 per cent, determined on 5.0 g.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*

Column:
- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.32 mm;
- *stationary phase: macrogol 20 000 R* (film thickness 0.5 µm),

Carrier gas *helium for chromatography R.*

Flow rate 1.3 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 1	70
	1 - 35	70 → 240
	35 - 50	240
Injection port		250
Detector		250

Detection Flame ionisation.

Split ratio 1:100.

Composition of the fatty acid fraction of the substance:
- *caproic acid* : maximum 2.0 per cent;
- *caprylic acid* : 50.0 per cent to 80.0 per cent;
- *capric acid*: 20.0 per cent to 50.0 per cent;
- *lauric acid* : maximum 3.0 per cent;
- *myristic acid* : maximum 1.0 per cent.

Chromium

Maximum 0.05 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 2.0 g of the substance to be examined in *methyl isobutyl ketone R3* and dilute to 10.0 ml with the same solvent.

Solution A Dilute 0.100 ml of *chromium liposoluble standard solution (1000 ppm Cr) R* to 10.0 ml with *methyl isobutyl ketone R3.*

Stock solution Dilute 0.100 ml of solution A to 10.0 ml with *methyl isobutyl ketone R3* .

Reference solutions Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of *methyl isobutyl ketone R3* , adding 0.5 ml, 1.0 ml and 2.0 ml, respectively, of stock solution and diluting to 10.0 ml with *methyl isobutyl ketone R3* .

Source Chromium hollow-cathode lamp.

Wavelength 357.8 nm.

Atomic generator Graphite furnace.

Carrier gas *argon R.*

Copper

Maximum 0.1 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 2.0 g of the substance to be examined in *methyl isobutyl ketone R3* and dilute to 10.0 ml with the same solvent.

Solution A Dilute 0.100 ml of *copper liposoluble standard solution (1000 ppm Cu) R* to 10.0 ml with *methyl isobutyl ketone R3* .

Stock solution Dilute 0.100 ml of solution A to 10.0 ml with *methyl isobutyl ketone R3* .

Reference solutions Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of *methyl isobutyl ketone R3* , adding 1.0 ml, 2.0 ml and 4.0 ml, respectively, of stock solution and diluting to 10.0 ml with *methyl isobutyl ketone R3* .

Source Copper hollow-cathode lamp.

Wavelength 324.7 nm.

Atomic generator Graphite furnace.

Carrier gas *argon R* .

Lead

Maximum 0.1 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 2.0 g of the substance to be examined in *methyl isobutyl ketone R3* and dilute to 10.0 ml with the same solvent.

Solution A Dilute 0.100 ml of *lead liposoluble standard solution (1000 ppm Pb) R* to 10.0 ml with *methyl isobutyl ketone R3* .

Stock solution Dilute 0.100 ml of solution A to 10.0 ml with *methyl isobutyl ketone R3* .

Reference solutions Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of *methyl isobutyl ketone R3* , adding 1.0 ml, 2.0 ml and 4.0 ml, respectively, of stock solution and diluting to 10.0 ml with *methyl isobutyl ketone R3.*

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm.

Atomic generator Graphite furnace coated inside with palladium carbide; calcination is carried out in the presence of oxygen at a temperature below 800 °C.

Carrier gas *argon R* .

Nickel

Maximum 0.2 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 2.0 g of the substance to be examined in *methyl isobutyl ketone R3* and dilute to 10.0 ml with the same solvent.

Solution A Dilute 0.100 ml of *nickel liposoluble standard solution (1000 ppm Ni) R* to 10.0 ml with *methyl isobutyl ketone R3* .

Stock solution Dilute 0.100 ml of solution A to 10.0 ml with *methyl isobutyl ketone R3* .

Reference solutions Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of *methyl isobutyl ketone R3* , adding 1.0 ml, 2.0 ml and 4.0 ml, respectively, of stock solution and diluting to 10.0 ml with *methyl isobutyl ketone R3* .

Source Nickel hollow-cathode lamp.

Wavelength 232 nm.

Atomic generator Graphite furnace.

Carrier gas *argon R.*

Tin

Maximum 0.1 ppm, if intended for use in parenteral nutrition.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 2.0 g of the substance to be examined in *methyl isobutyl ketone R3* and dilute to 10.0 ml with the same solvent.

Solution A Dilute 0.100 ml of *tin liposoluble standard solution (1000 ppm Sn) R* to 10.0 ml with *methyl isobutyl ketone R3.*

Stock solution Dilute 0.100 ml of solution A to 10.0 ml with *methyl isobutyl ketone R3.*

Reference solutions Prepare 3 reference solutions by dissolving for each 2.0 g of the substance to be examined in the minimum volume of *methyl isobutyl ketone R3* , adding 1.0 ml, 2.0 ml and 4.0 ml, respectively, of stock solution and diluting to 10.0 ml with *methyl isobutyl ketone R3* .

Source Tin hollow-cathode lamp.

Wavelength 286.3 nm.

Atomic generator Graphite furnace coated inside with palladium carbide.

Carrier gas *argon R.*

Heavy metals (*2.4.8*)

Maximum 10 ppm, if intended for use other than parenteral nutrition.

2.0 g complies with limit test D. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 0.2 per cent, determined on 10.00 g.

Total ash *(2.4.16)*

Maximum 0.1 per cent, determined on 2.0 g.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, that the substance is intended for use in parenteral nutrition.

Ph Eur

Purified Talc

General Notices

(Talc, Ph Eur monograph 0438)

14807-96-6

Preparation

Talc Dusting Powder

Ph Eur

DEFINITION

Powdered, selected, natural, hydrated magnesium silicate. Pure talc has the formula $Mg_3Si_4O_{10}(OH)_2$ (M_r 379.3). It may contain variable amounts of associated minerals among which chlorites (hydrated aluminium and magnesium silicates), magnesite (magnesium carbonate), calcite (calcium carbonate) and dolomite (calcium and magnesium carbonate) are predominant.

PRODUCTION

Talc derived from deposits that are known to contain associated asbestos is not suitable for pharmaceutical use. The manufacturer is responsible for demonstrating by the test for amphiboles and serpentines that the product is free from asbestos. The presence of amphiboles and of serpentines is revealed by X-ray diffraction or by infrared spectrophotometry (see A and B). If detected, the specific morphological criteria of asbestos are investigated by a suitable method of optical microscopy to determine whether tremolite asbestos or chrysotile is present, as described below.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs of *potassium bromide R* .

In the range 740 cm^{-1} to 760 cm^{-1} using scale expansion, any absorption band at 758 ± 1 cm^{-1} may indicate the presence of tremolite or of chlorite. If the absorption band remains after ignition of the substance to be examined at 850 ± 50 °C for at least 30 min, it indicates the presence of the tremolite. In the range 600 cm^{-1} to 650 cm^{-1} using scale expansion, any absorption band or shoulder may indicate the presence of serpentines.

B. X-ray diffraction.

Preparation Place the sample on the sample holder; pack and smooth its surface with a polished glass microscope slide.

Radiation Cu Kα monochromatic, 40 kV, 24-30 mA.

Incident slit 1°.

Detection slit 0.2°.

Goniometer speed 1/10° 2θ/min.

Scanning range 10-13° 2θ and 24-26° 2θ.

Sample Not oriented.

Results The presence of amphiboles is detected by a diffraction peak at 10.5 ± 0.1° 2θ, the presence of serpentines is detected by diffraction peaks at 24.3 ± 0.1° 2θ and at 12.1 ± 0.1° 2θ.

If, by one of the 2 methods, amphiboles and/or serpentine are detected, examine by a suitable method of optical microscopy to determine the asbestos character.

The presence of asbestos is shown if the following 2 criteria are met:

— a range of length to width ratios of 20:1 to 100:1, or higher for fibres longer than 5 µm;

— capability of splitting into very thin fibrils;

And if at least 2 of the following 4 criteria are met:

— parallel fibres occurring in bundles;

— fibre bundles displaying frayed ends;

— fibres in the form of thin needles;

— matted masses of individual fibres and/or fibres showing curvature.

CHARACTERS

Appearance

Light, homogeneous, white or almost white powder, greasy to the touch (non abrasive).

Solubility

Practically insoluble in water, in ethanol (96 per cent) and in dilute solutions of acids and alkali hydroxides.

IDENTIFICATION

First identification *A*.

Second identification *B, C*.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs of *potassium bromide R* .

Absorption bands At 3677 ± 2 cm-1, 1018 ± 2 cm-1 and 669 ± 2 cm-1.

B. In a platinum crucible, melt a mixture of 0.2 g of *anhydrous sodium carbonate R* and 2.0 g of *potassium carbonate R* . To the melted mass add 0.1 g of the substance to be examined and heat until the mixture is completely melted. Allow to cool and transfer the melted mass into an evaporating dish with 50 ml of hot *water R.* Add *hydrochloric acid R* until effervescence ceases. Add 10 ml of *hydrochloric acid R* and evaporate to dryness on a water-bath. Allow to cool. Add 20 ml of *water R,* heat to boiling and filter (the residue is used for identification test C). To 5 ml of the filtrate add 1 ml of *ammonia R* and 1 ml of *ammonium chloride solution R* and filter. To the filtrate add *1 ml of disodium hydrogen phosphate solution R* . A white, crystalline precipitate is formed.

C. The residue obtained in identification test B gives the reaction of silicates *(2.3.1)* .

TESTS

Solution S1

Weigh 10.0 g into a conical flask fitted with a reflux condenser, add 50 ml of *0.5 M hydrochloric acid* gradually while stirring and heat on a water-bath for 30 min. Allow to cool. Transfer the mixture to a beaker and allow the undissolved material to settle. Filter the supernatant through medium-speed filter paper into a 100 ml volumetric flask, retaining as much as possible of the insoluble material in the beaker. Wash the residue and the beaker with 3 quantities, each of 10 ml, of hot *water R* . Wash the filter with 15 ml of hot *water R,* allow the filtrate to cool and dilute to 100.0 ml with the same solvent.

Solution S2

Perchlorates mixed with heavy metals are known to be explosive. Take proper precautions while performing this procedure. Weigh 0.5 g in a 100 ml polytetrafluoroethylene dish, add 5 ml of *hydrochloric acid R* , 5 ml of *lead-free nitric acid R* and 5 ml of *perchloric acid R .* Stir gently then add 35 ml of *hydrofluoric acid R* and evaporate slowly to dryness on a hot plate. To the residue, add 5 ml of *hydrochloric acid R* , cover with a watch-glass, heat to boiling and allow to cool. Rinse the watch-glass and the dish with *water R* . Transfer into a volumetric flask, rinse the dish with *water R* and dilute to 50.0 ml with the same solvent.

Acidity or alkalinity

Boil 2.5 g with 50 ml of *carbon dioxide-free water R* under reflux. Filter *in vacuo*. To 10 ml of the filtrate add 0.1 ml of *bromothymol blue solution R1* ; not more than 0.4 ml of *0.01 M hydrochloric acid* is required to change the colour of the indicator to green. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R1* ; not more than 0.3 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to pink.

Water-soluble substances

Maximum 0.2 per cent.

To 10.0 g add 50 ml of *carbon dioxide-free water R* , heat to boiling and maintain boiling under a reflux condenser for 30 min. Allow to cool, filter through a medium-speed filter paper and dilute to 50.0 ml with *carbon dioxide-free water R.* Take 25.0 ml of the filtrate, evaporate to dryness and heat at 105 °C for 1 h. The residue weighs a maximum of 10 mg.

Aluminium

Maximum 2.0 per cent.

Atomic absorption spectrometry *(2.2.23, Method I).*

Test solution To 5.0 ml of solution S2 add 10 ml of a 25.34 g/l solution of *caesium chloride R* , 10.0 ml of *hydrochloric acid R* and dilute to 100.0 ml with *water R* .

Reference solutions Into 4 identical volumetric flasks, each containing 10.0 ml of hydrochloric acid R and 10 ml of a 25.34 g/l solution of *caesium chloride R* , introduce respectively 5.0 ml, 10.0 ml, 15.0 ml and 20.0 ml of *aluminium standard solution (100 ppm Al) R* and dilute to 100.0 ml with *water R.*

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device Nitrous oxide-acetylene flame.

Calcium

Maximum 0.90 per cent.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution To 5.0 ml of solution S2 add 10.0 ml of *hydrochloric acid R* , 10 ml of *lanthanum chloride solution R* and dilute to 100.0 ml with *water R* .

Reference solutions Into 4 identical volumetric flasks, each containing 10.0 ml of *hydrochloric acid R* and 10 ml of *lanthanum chloride solution R,* introduce respectively 1.0 ml, 2.0 ml, 3.0 ml and 4.0 ml of *calcium standard solution (100 ppm Ca) R1* and dilute to 100.0 ml with *water R.*

Source Calcium hollow-cathode lamp.

Wavelength 422.7 nm.

Atomisation device Nitrous oxide-acetylene flame.

Iron

Maximum 0.25 per cent.

Atomic absorption spectrometry *(2.2.23, Method I).*

Test solution To 2.5 ml of solution S1, add 50.0 ml of *0.5 M hydrochloric acid* and dilute to 100.0 ml with *water R.*

Reference solutions Into 4 identical volumetric flasks, each containing 50.0 ml of *0.5 M hydrochloric acid* , introduce respectively 2.0 ml, 2.5 ml, 3.0 ml and 4.0 ml of *iron standard solution (250 ppm Fe) R* and dilute to 100.0 ml with *water R* .

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device Air-acetylene flame.

Correction Deuterium lamp.

Lead

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Use solution S1.

Reference solutions Into 4 identical volumetric flasks, each containing 50.0 ml of *0.5 M hydrochloric acid*, introduce respectively 5.0 ml, 7.5 ml, 10.0 ml and 12.5 ml of *lead standard solution (10 ppm Pb) R1* and dilute to 100.0 ml with *water R*.

Source Lead hollow-cathode lamp.

Wavelength 217.0 nm.

Atomisation device Air-acetylene flame.

Magnesium

17.0 per cent to 19.5 per cent.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dilute 0.5 ml of solution S2 to 100.0 ml with *water R*. To 4.0 ml of the solution, add 10.0 ml of *hydrochloric acid R*, 10 ml of *lanthanum chloride solution R* and dilute to 100.0 ml with *water R.*

Reference solutions Into 4 identical volumetric flasks, each containing 10.0 ml of *hydrochloric acid R* and 10 ml of *lanthanum chloride solution R*, introduce respectively 2.5 ml, 3.0 ml, 4.0 ml and 5.0 ml of *magnesium standard solution (10 ppm Mg) R1* and dilute to 100.0 ml with *water R*.

Source Magnesium hollow-cathode lamp.

Wavelength 285.2 nm.

Atomisation device Air-acetylene flame.

Loss on ignition

Maximum 7.0 per cent, determined on 1.00 g by ignition to constant weight at 1050-1100 °C.

Microbial contamination

If intended for topical administration, the total viable aerobic count *(2.6.12)* is not more than a total of 10^2 bacteria and fungi per gram.

If intended for oral administration, the total viable aerobic count *(2.6.12)* is not more than 10^3 bacteria and not more than 10^2 fungi per gram.

LABELLING

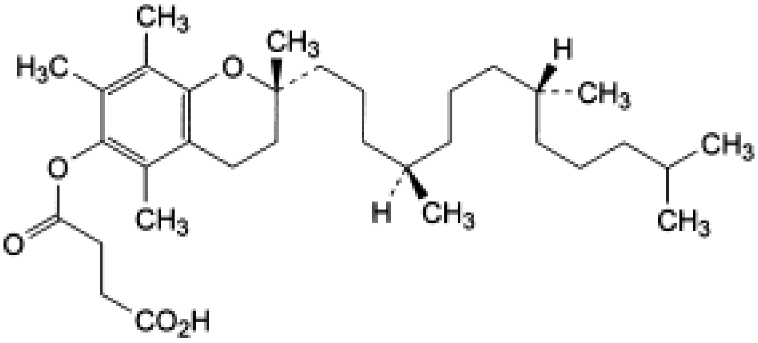
The label states, where applicable, that the substance is suitable for oral or topical administration.

Ph Eur

RRR -Alpha Tocopheryl Hydrogen Succinate

General Notices

(RRR-α-Tocopheryl Hydrogen Succinate, Ph Eur monograph 1259)



$C_{33}H_{54}O_5$ 530.8 *4345-03-3*

Action and use

Used in prevention and treatment of vitamin E deficiencies.

Preparation

Alpha Tocopheryl Succinate Tablets

Ph Eur

DEFINITION

(2*R*)-2,5,7,8-Tetramethyl-2-[(4*R*,8*R*)-4,8,12-trimethyltridecyl]-3,4-dihydro-2*H*-1-benzopyran-6-yl hydrogen succinate.

Content

96.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Practically insoluble in water, very soluble in methylene chloride, soluble in acetone and in anhydrous ethanol.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Absorbance (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24).*

Comparison *RRR*-α-*tocopheryl hydrogen succinate CRS* .

C. Thin-layer chromatography *(2.2.27).*

Test solution (a) Dissolve 10 mg of the substance to be examined in 2 ml of *cyclohexane R* .

Test solution (b) In a ground-glass-stoppered tube, dissolve 10 mg of the substance to be examined in 2 ml of *2.5 M alcoholic sulphuric acid R* . Heat on a water-bath for 5 min. Cool and add 2 ml of *water R* and 2 ml of *cyclohexane R* . Shake for 1 min. Use the upper layer.

Reference solution (a) Dissolve 10 mg of *RRR*-α-*tocopheryl hydrogen succinate CRS* in 2 ml of *cyclohexane R* .

Reference solution (b) Prepare as described for test solution (b), using *RRR*-α-*tocopheryl hydrogen succinate CRS* instead of the substance to be examined.

Plate *TLC silica gel F_{254} plate R* .

Mobile phase *glacial acetic acid R, ether R, cyclohexane R* (0.2:20:80 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In a current of air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with test solution (a) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a). In the chromatograms obtained with test solution (b) and reference solution (b), there are 2 spots: the spot with the higher R_F value is due to α-tocopherol, the spot with the lower R_F value is due to *RRR*-α-tocopheryl hydrogen succinate and corresponds to the spot obtained with reference solution (a). Depending on the degree of hydrolysis, the lower spot may be weak or even absent.

Detection B Spray with a mixture of 10 volumes of *hydrochloric acid R* , 40 volumes of a 2.5 g/l solution of *ferric chloride R* in *ethanol (96 per cent) R* and 40 volumes of a 10 g/l solution of *phenanthroline hydrochloride R* in *ethanol (96 per cent) R* .

Results B In the chromatograms obtained with test solution (b) and reference solution (b), the spot due to α-tocopherol is orange.

D. After saponification, the resulting *RRR*-α-tocopherol is dextrorotatory *(2.2.7)*. The specific optical rotation after oxidation to the quinone form is not less than + 24.

Carry out the test avoiding exposure to actinic light. Transfer 1.0 g to a round bottomed, ground-glass-stoppered, 250 ml flask, dissolve in 30 ml of *anhydrous ethanol R* and heat under reflux for 3 min. While the solution is boiling, add, through the condenser, 20 ml of *2 M alcoholic potassium hydroxide solution R*. Continue heating under reflux for 20 min and, without cooling, add 4.0 ml of *hydrochloric acid R* dropwise through the condenser. Cool, rinse the condenser with 10 ml of *anhydrous ethanol R*, transfer the contents of the flask to a 500 ml separating funnel, and rinse the flask with 4 quantities, each of 25 ml, of *water R* and 4 quantities, each of 25 ml, of *ether R*. Add the rinsings to the separating funnel. Shake vigorously for 2 min, allow the layers to separate and collect each of the 2 layers in individual separating funnels. Shake the aqueous layer with 2 quantities, each of 50 ml, of *ether R* and add these extracts to the main ether extract. Wash the combined ether extracts with 4 quantities, each of 100 ml, of *water R* and discard the washings.

To the ether solution add 40 ml of a 100 g/l solution of *potassium ferricyanide R* in an 8 g/l solution of *sodium hydroxide R* and shake for 3 min. Wash the ether solution with 4 quantities, each of 50 ml, of *water R,* discard the washings and dry the ether layer over *anhydrous sodium sulphate R .* Evaporate the ether on a water-bath under reduced pressure or in an atmosphere of nitrogen until a few millilitres remain, then complete the evaporation removing the last traces of ether without the application of heat. Immediately dissolve the residue in 25.0 ml of *trimethylpentane R* and determine the optical rotation.

Calculate the specific optical rotation of the substance in the test solution using as *c* the number of grams equivalent to α-tocopherol (factor 0.811) in 1000 ml.

TESTS

Absorbance *(2.2.25).*

Solution A Dissolve 0.150 g in *anhydrous ethanol R* and dilute to 100 ml with the same solvent.

Test solution (a) Dilute 10.0 ml of solution A to 100.0 ml with *anhydrous ethanol R*.

Test solution (b) Dilute 20.0 ml of solution A to 50.0 ml with *anhydrous ethanol R*.

Absorption maximum At 284 nm for test solution (a).

Absorption minimum At 254 nm for test solution (b).

Specific absorbance at the absorption maximum 35 to 38 for test solution (a).

Specific absorbance at the absorption minimum 6.0 to 8.0 for test solution (b).

Acid value *(2.5.1)*

101 to 108, determined on 1.00 g.

Free tocopherol

Maximum 1.0 per cent.

Dissolve 0.500 g in 100 ml of *0.25 M alcoholic sulphuric acid R*. Add 20 ml of *water R* and 0.1 ml of a 2.5 g/l solution of *diphenylamine R* in *sulphuric acid R*. Titrate with *0.01 M* *ammonium and cerium sulphate* until a blue colour is obtained that persists for at least 5 s. Carry out a blank titration.

1 ml of *0.01 M ammonium and cerium sulphate* is equivalent to 2.154 mg of free tocopherol.

Related substances

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

0.50 g complies with test D. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography *(2.2.28)* .

Internal standard solution Dissolve 0.300 g of *dotriacontane R* in *hexane R* and dilute to 100.0 ml with the same solvent.

Test solution Weigh 30.0 mg of the substance to be examined into a 20 ml vial. Add 2.0 ml of *methanol R*, 1.0 ml of *dimethoxypropane R* and 0.1 ml of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 ml of the internal standard solution. Vortex into solution.

Reference solution Weigh 30.0 mg of *RRR-α-tocopheryl hydrogen succinate CRS* into a 20 ml vial. Add 2.0 ml of *methanol R*, 1.0 ml of *dimethoxypropane R* and 0.1 ml of *hydrochloric acid R*. Cap tightly and sonicate. Allow to stand in the dark for 1 h ± 5 min. Remove from the dark, uncap and evaporate just to dryness on a steam bath with the aid of a stream of nitrogen. Add 10.0 ml of the internal standard solution. Vortex into solution.

Column:

— *material:* fused silica;

— *size*: *l* = 15 m, Ø = 0.32 mm;

— *stationary phase: poly(dimethyl)siloxane R* (film thickness 0.25 µm).

Carrier gas *Helium for chromatography R*.

Flow rate 3-6 ml/min.

Split ratio 1:10 to 1:20.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	200 → 250
	10 - 20	250
Injection port		300
Detector		330

Detection Flame ionisation.

Injection 1 µl; inject directly onto the column or via a glass-lined injection port using an automatic injection device or some other reproducible injection method.

System suitability Reference solution:

— *resolution*: minimum 12.0 between the peaks due to dotriacontane and *RRR*-α-tocopheryl hydrogen succinate.

Interference test Dissolve 0.100 g of the substance to be examined in *hexane R* and dilute to 50.0 ml with the same solvent. Inject 1 µl of the solution and record the chromatogram. If a peak is detected with the same retention time as that of the peak due to dotriacontane, calculate the area of this peak relative to the peak area of the substance to be examined. If the relative peak area is greater than 0.5 per cent, use the corrected peak area $S'_{D(corr)}$ for the final calculation.

$$S'_{\mathrm{D(corr)}} = S'_{\mathrm{D}} - \frac{S_{\mathrm{I}} \times S'_{\mathrm{T}}}{S_{\mathrm{TI}}}$$

S'_D = area of the peak due to dotriacontane in the chromatogram obtained with the test solution

S_I = area of the peak with the same retention time as that of the peak due to dotriacontane in the chromatogram obtained in the interference test

S'_T = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution

S_{TI} = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained in the interference test

Measure the areas of the peaks due to *RRR-α-tocopheryl hydrogen succinate CRS* (S_T) and dotriacontane (S_D) in the chromatogram obtained with the reference solution and the areas of the peaks due to *RRR*-α-tocopheryl hydrogen succinate (S'_T) and dotriacontane (S'_D) in the chromatogram obtained with the test solution.

Determine the response factor (RF) for *RRR*-α-tocopheryl hydrogen succinate from the areas of the peaks due to *RRR*-α-*tocopheryl hydrogen succinate CRS* and dotriacontane in the chromatogram obtained with the reference solution, using the following expression:

$$\frac{S_{\mathrm{D}} \times m_{\mathrm{T}}}{S_{\mathrm{T}} \times m_{\mathrm{D}}}$$

Calculate the percentage content of *RRR*-α-tocopheryl hydrogen succinate using the following expression:

$$\frac{100 \times S'_{\mathrm{T}} \times m_{\mathrm{D}} \times \mathrm{RF}}{S'_{\mathrm{D(corr)}} \times m}$$

S_D = area of the peak due to dotriacontane in the chromatogram obtained with the reference solution

$S'_{D(corr)}$ = corrected area of the peak due to dotriacontane in the chromatogram obtained with the test solution

S_T = area of the peak due to *R RR*-α-*tocopheryl hydrogen succinate CRS* in the chromatogram obtained with the reference solution

S'_T = area of the peak due to *RRR*-α-tocopheryl hydrogen succinate in the chromatogram obtained with the test solution

m_D = mass of dotriacontane in the test solution and in the reference solution, in milligrams

m_T = mass of *RRR*-α-*tocopheryl hydrogen succinate CRS* in the reference solution, in milligrams

m = mass of the substance to be examined in the test solution, in milligrams

Ph Eur

DEFINITION

2-[4-[(*Z*)-1,2-Diphenylbut-1-enyl]phenoxy]-*N,N*-dimethylethanamine dihydrogen 2-hydroxypropane-1,2,3-tricarboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, soluble in methanol, slightly soluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

First identification *B.*

Second identification *A, C, D.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 20 mg in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *methanol R* .

Spectral range 220-350 nm.

Absorption maxima At 237 nm and 275 nm.

Absorption ratio A_{237}/A_{275} = 1.45 to 1.65.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *tamoxifen citrate CRS* .

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *acetone R* , evaporate to dryness and record new spectra using the residues.

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *tamoxifen citrate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *tamoxifen citrate CRS* and 10 mg of *clomifene citrate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *triethylamine R, toluene R* (10:90 *V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in

---

position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 10 mg in 4 ml of *pyridine R* with shaking and add 2 ml of *acetic anhydride R* ; a yellow colour is produced. Heat on a water-bath for 2 min; a pink or red colour is produced.

TESTS

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use and protect from light.*

Test solution Dissolve 15.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 15.0 mg of *tamoxifen citrate* for *performance test CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 40 volumes of *acetonitrile R* and 60 volumes of *water R* containing 0.9 g/l of *sodium dihydrogen phosphate R* and 4.8 g/l of *N,N-dimethyloctylamine R*; adjust to pH 3.0 with *phosphoric acid R* .

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 240 nm.

Equilibration With the mobile phase for about 30 min.

Injection 10 µl.

Run time Twice the retention time of tamoxifen.

System suitability Reference solution (a):

— the chromatogram obtained is similar to the chromatogram supplied with *tamoxifen citrate for performance test CRS* ; there is baseline separation of the peak due to impurity F from the following peak of the principal component;

— *resolution*: minimum 3 between the peaks due to impurities A and F.

Limits:

— *impurities A, B, C, D, E, F, G, H*: for each impurity, not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *sum of impurities other than A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *disregard limit:* 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent); disregard any peak due to the citrate (retention time = about 2.5 min).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 65 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 75 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* using 0.1 ml of *naphtholbenzein solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 56.36 mg of $C_{32}H_{37}NO_8$.

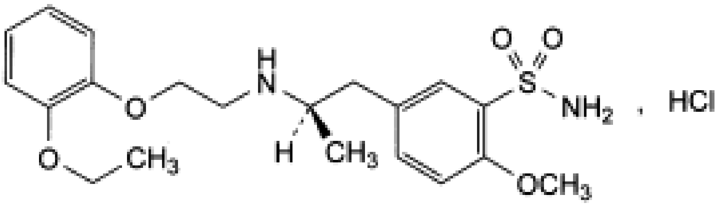
General Notices

(Ph Eur monograph 2131)



$C_{20}H_{28}N_2O_5S,HCl$ 445.0 *106463-17-6*

Action and use

Alpha-1-adrenoceptor antagonist.

Ph Eur

DEFINITION

5-[(2*R*)-2-[[2-(2-Ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide hydrochloride.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Slightly soluble in water, freely soluble in formic acid, slightly soluble in anhydrous ethanol.

mp

About 230 °C.

IDENTIFICATION

Carry out either tests A, C, D or tests A, B, D.

A. Infrared absorption spectrophotometry *(2.2.24).*

Comparison *tamsulosin hydrochloride CRS*.

B. Specific optical rotation *(2.2.7)* : - 17.5 to - 20.5 (dried substance).

Dissolve with heating 0.15 g in *water R* and dilute to 20.0 ml with the same solvent.

C. Enantiomeric purity (see Tests).

D. Dissolve with heating 0.75 g in *water R* and dilute to 100.0 ml with the same solvent. Take 5 ml of the solution and cool in an ice-bath. Add 3 ml of *dilute nitric acid R* and shake. Allow to stand at room temperature for 30 min and filter. The filtrate gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Related substances.

A. Impurities eluting before tamsulosin. Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 4 mg of *tamsulosin impurity D CRS* and 4 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (c) Dissolve 4 mg of *tamsulosin impurity H CRS* and 4 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Dissolve 3.0 g of *sodium hydroxide R* in a mixture of 8.7 ml of *perchloric acid R* and 1.9 litres of *water R* ; adjust to pH 2.0 with *0.5 M sodium hydroxide* and dilute to 2 litres with *water R* ; to 1.4 litres of this solution, add 600 ml of *acetonitrile R* .

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 10 µl of the test solution and reference solutions (a) and (b).

Run time 1.5 times the retention time of tamsulosin (retention time = about 6 min).

System suitability Reference solution (b):

— *resolution*: minimum 6 between the peaks due to impurity D and tamsulosin.

Limits:

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

B. Impurities eluting after tamsulosin. Liquid chromatography *(2.2.29)* as described in test A with the following modifications.

Mobile phase Dissolve 3.0 g of *sodium hydroxide R* in a mixture of 8.7 ml of *perchloric acid R* and 1.9 litres of *water R* ; adjust to pH 2.0 with *0.5 M sodium hydroxide* and dilute to 2 litres with *water R* ; add 2 litres of *acetonitrile R* .

Flow rate 1.0 ml/min.

Injection 10 µl of the test solution and reference solutions (a) and (c).

Run time 5 times the retention time of tamsulosin (retention time = about 2.5 min).

System suitability Reference solution (c):

— *resolution*: minimum 2 between the peaks due to tamsulosin and impurity H.

Limits:

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *sum of impurities eluting before tamsulosin in test A and after tamsulosin in test B*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Enantiomeric purity

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in *methanol R* and dilute to 25.0 ml with the same solvent.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R* . Dilute 1.0 ml of this solution to 10.0 ml with *methanol R* .

Reference solution (b) Dissolve 5.0 mg of *tamsulosin racemate CRS* in *methanol R* and dilute to 25.0 ml with the same solvent. Dilute 2.0 ml of this solution to 10.0 ml with *methanol R* .

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *silica gel OD for chiral separations R*;

— *temperature*: 40 °C.

Mobile phase d*iethylamine R, methanol R, anhydrous ethanol R, hexane R* (1:150:200:650 *V/V/V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 10 µl.

Relative retention With reference to tamsulosin (retention time = about 14 min): impurity G = about 0.8.

System suitability Reference solution (b):

— *resolution*: minimum 2 between the peaks due to impurity G and tamsulosin.

Limit:

— *impurity G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R* .

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

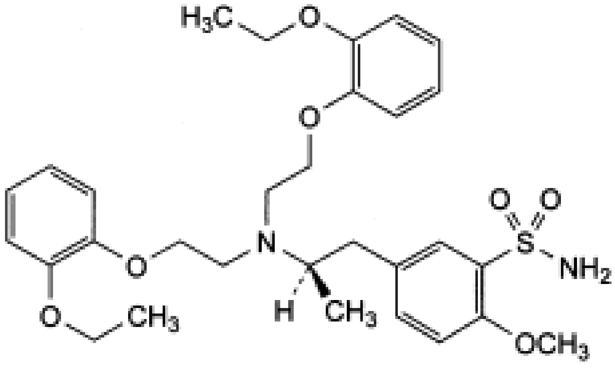
Dissolve 0.350 g in 5.0 ml of *anhydrous formic acid R* , add 75 ml of a mixture of 2 volumes of *acetic anhydride R* and 3 volumes of *glacial acetic acid R* . Titrate immediately with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* . Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 44.50 mg of $C_{20}H_{29}ClN_2O_5S$.

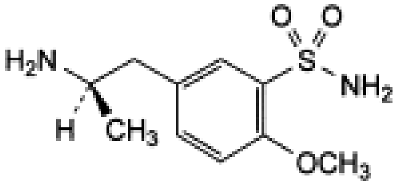
IMPURITIES

Specified impurities G.

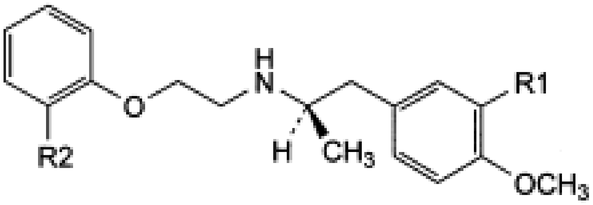
Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A, B, C, D, E, F, H, I.*



A. 5-[(2*R*)-2-[bis[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide,



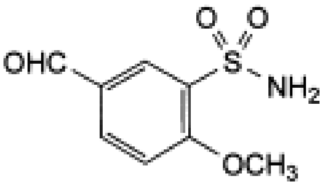
B. 5-[(2*R*)-2-aminopropyl]-2-methoxybenzenesulfonamide,



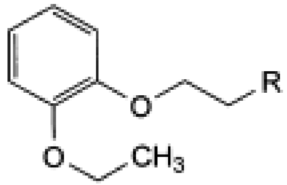
C. R1 = SO_2-NH_2, R2 = H: 2-methoxy-5-[(2*R*)-2-[(2-phenoxyethyl)amino]propyl] benzenesulfonamide,

D. R1 = SO_2-NH_2, R2 = OCH_3: 2-methoxy-5-[(2*R*)-2-[[2-(2-methoxyphenoxy)ethyl]amino] propyl]benzenesulfonamide,

H. R1 = H, R2 = OC_2H_5: (2*R*)-*N*-[2-(2-ethoxyphenoxy)ethyl]-1-(4-methoxyphenyl)propan-2-amine,

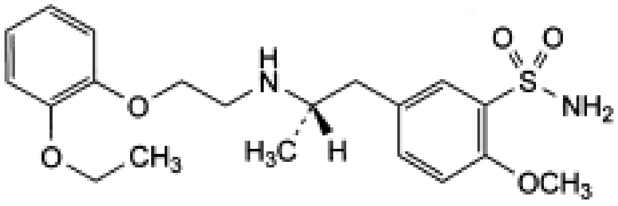


E. 5-formyl-2-methoxybenzenesulfonamide,



F. R = NH_2: 2-(2-ethoxyphenoxy)ethanamine,

I. R = Br: 1-(2-bromoethoxy)-2-ethoxybenzene,



G. 5-[(2*S*)-2-[[2-(2-ethoxyphenoxy)ethyl]amino]propyl]-2-methoxybenzenesulfonamide.

Ph Eur

Tannic Acid

General Notices

(Ph Eur monograph 1477)

1401-55-4

Action and use

Astringent.

Ph Eur

DEFINITION

Mixture of esters of glucose with gallic acid and 3-galloylgallic acid.

CHARACTERS

Appearance

Yellowish-white or slightly brown amorphous light powder or shiny plates.

Solubility

Very soluble in water, freely soluble in acetone, in ethanol (96 per cent) and in glycerol (85 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

A. Dilute 0.1 ml of solution S (see Tests) to 5 ml with *water R* . Add 0.1 ml of *ferric chloride solution R1* . A blackish-blue colour is produced which becomes green on the addition of 1 ml of *dilute sulphuric acid R* .

B. To 1 ml of solution S, add 3 ml of a 1 g/l solution of *gelatin R* . The mixture becomes turbid and a flocculent precipitate is formed.

C. Dilute 0.1 ml of solution S to 5 ml with *water R.* Add 0.3 ml of *barium hydroxide solution R* . A greenish-blue precipitate is formed.

TESTS

Solution S

Dissolve 4.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* .

Dextrins, gum, salts, sugars

To 2 ml of solution S, add 2 ml of *ethanol (96 per cent) R* . The solution is clear. Add 1 ml of *ether R* . The solution remains clear for at least 10 min.

Resins

To 5 ml of solution S, add 5 ml of *water R.* The mixture remains clear *(2.2.1)* for at least 15 min.

Loss on drying *(2.2.32)*

Maximum 12.0 per cent, determined on 0.200 g by drying at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

STORAGE

Protected from light.

Ph Eur

Tar

General Notices

Action and use

Used in treatment of psoriasis.

DEFINITION

Tar is bituminous liquid obtained from the wood of various trees of the family Pinaceae by destructive distillation and is known in commerce as Stockholm Tar.

CHARACTERISTICS

Dark brown or nearly black, semi-liquid; denser than water.

Soluble in *ethanol (90%)*, in *ether* and in fixed and volatile oils.

IDENTIFICATION

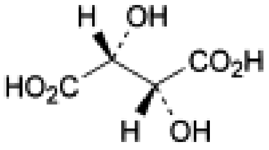
A. The aqueous liquid obtained by shaking 1 g with 20 ml of *water* for 5 minutes is acidic to *litmus paper* .

B. Carefully add 0.5 g to 10 ml of *petroleum spirit (boiling range, 40° to 60°)* and allow to stand for 30 minutes. When examined in daylight no fluorescence is produced.

Tartaric Acid

General Notices

(Ph Eur monograph 0460)



$C_4H_6O_6$ 150.1 *87-69-4*

Ph Eur

DEFINITION

(2*R*,3*R*)-2,3-Dihydroxybutanedioic acid.

Content

99.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless crystals.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) is strongly acid *(2.2.4)* .

B. It gives the reactions of tartrates *(2.3.1)* .

TESTS

Solution S

Dissolve 5.0 g in *distilled water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

+ 12.0 to + 12.8 (dried substance)

Dissolve 5.00 g in *water R* and dilute to 25.0 ml with the same solvent.

Oxalic acid

Maximum 350 ppm, calculated as anhydrous oxalic acid.

Dissolve 0.80 g in 4 ml of *water R* . Add 3 ml of *hydrochloric acid R* and 1 g of *zinc R* in granules and boil for 1 min. Allow to stand for 2 min. Collect the liquid in a test-tube containing 0.25 ml of a 10 g/l solution of *phenylhydrazine hydrochloride R* and heat to boiling. Cool rapidly, transfer to a graduated cylinder and add an equal volume of *hydrochloric acid R* and 0.25 ml of a 50 g/l solution of *potassium ferricyanide R* . Shake and allow to stand for 30 min. Any pink colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 4 ml of a 0.1 g/l solution of *oxalic acid R* .

Chlorides *(2.4.4)*

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R* .

Sulphates *(2.4.13)*

Maximum 150 ppm.

Dilute 10 ml of solution S to 15 ml with *distilled water R* .

Calcium *(2.4.3)*

Maximum 200 ppm.

To 5 ml of solution S add 10 ml of a 50 g/l solution of *sodium acetate R* in distilled *water R* .

Heavy metals *(2.4.8)*

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.2 per cent, determined on 1.000 g by drying in an oven at 105 °C

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.650 g in 25 ml of *water R*. Titrate with *1 M sodium hydroxide* using 0.5 ml of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

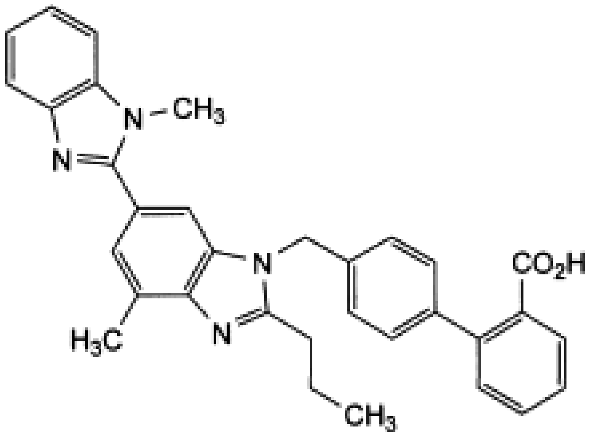
1 ml of *1 M sodium hydroxide* is equivalent to 75.05 mg of $C_4H_6O_6$.

Ph Eur

Telmisartan

General Notices

(Ph Eur monograph 2154)



$C_{33}H_{30}N_4O_2$ 514.6 *144701-48-4*

Action and use

Angiotensin II (AT_1) receptor antagonist.

Ph Eur

DEFINITION

4′-[[4-Methyl-6-(1-methyl-1*H*-benzimidazol-2-yl)-2-propyl-1*H*-benzimidazol-1-yl]methyl] biphenyl-2-carboxylic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Practically insoluble in water, slightly soluble in methanol, sparingly soluble in methylene chloride. It dissolves in 1 M sodium hydroxide.

It shows polymorphism *(5.9)* .

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *telmisartan CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in hot *anhydrous ethanol R* , evaporate to dryness and record new spectra using the residues.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution Y_4 *(2.2.2, Method II)*.

Dissolve 0.5 g in *1 M sodium hydroxide* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution To 25 mg of the substance to be examined add about 5 ml of *methanol R* and 100 µl of a 40 g/l solution of *sodium hydroxide R* . Dissolve with the aid of ultrasound and dilute to 50 ml with *methanol R* .

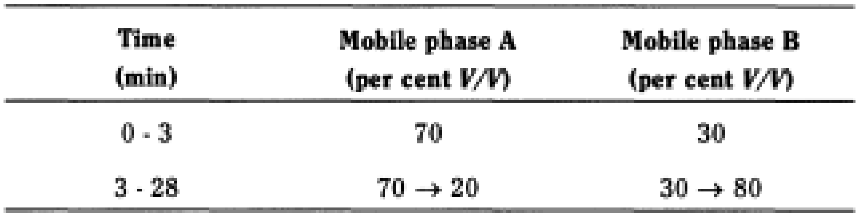
Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with *methanol R* . Dilute 1.0 ml of this solution to 100.0 ml with *methanol R* .

Reference solution (b) Dissolve the contents of a vial of *telmisartan for system suitability CRS* (containing impurities A, B, C, E and F) in 2 ml of *methanol R* .

Reference solution (c) To 5 mg of *telmisartan for peak identification CRS* (containing impurity D) add about 5 ml of *methanol R* and 100 µl of a 40 g/l solution of *sodium hydroxide R* . Dissolve with the aid of ultrasound and dilute to 10 ml with *methanol R* .

Column:
- *size:* *l* = 0.125 m, Ø = 4.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm;
- *temperature*: 40 °C.

Mobile phase:
- *mobile phase A*: dissolve 2.0 g of *potassium dihydrogen phosphate R* and 3.8 g of *sodium pentanesulphonate monohydrate R1* in *water R* , adjust to pH 3.0 with *dilute phosphoric acid R* and dilute to 1000 ml with *water R* ;
- *mobile phase B*: *methanol R2* , *acetonitrile R1* (20:80 *V/V*);



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 3	70	30
3 - 28	70 → 20	30 → 80

Flow rate 1 ml/min.

Detection Spectrophotometer at 230 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *telmisartan for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, E and F; use the chromatogram supplied with *telmisartan for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

Relative retention With reference to telmisartan (retention time = about 12 min): impurity A = about 0.2; impurity E = about 0.6; impurity F = about 0.7; impurity B = about 0.9; impurity C = about 1.5; impurity D = about 1.6.

System suitability Reference solution (b):

— the chromatogram obtained with reference solution (b) is similar to the chromatogram supplied with *telmisartan for system suitability CRS*;

— *resolution*: minimum 3.0 between the peaks due to impurity B and telmisartan.

Limits:

— *impurities C, D*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurities A, B*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.15 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.190 g in 5 ml of *anhydrous formic acid R* . Add 75 ml of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 25.73 mg of $C_{33}H_{30}N_4O_2$.

IMPURITIES

Specified impurities *A, B, C, D.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. $C_{13}H_{11}N_3O_4S_2$ 337.4 *59804-37-4*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Preparations

Tenoxicam Injection

Tenoxicam Tablets

Ph Eur

DEFINITION

Tenoxicam contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-hydroxy-2-methyl-*N*-(pyridin-2-yl)-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxamide 1,1-dioxide, calculated with reference to the anhydrous substance.

CHARACTERS

A yellow, crystalline powder, practically insoluble in water, sparingly soluble in methylene chloride, very slightly soluble in ethanol. It dissolves in solutions of acids and alkalis.

It shows polymorphism (*5.9*).

IDENTIFICATION

Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *tenoxicam CRS* . If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum quantity of *methylene chloride R,* evaporate to dryness on a water-bath and record new spectra using the residues.

TESTS

Appearance of solution

Dissolve 0.10 g in 20 ml of *methylene chloride R*. The solution is clear *(2.2.1)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF* $_{254}$ *R* as the coating substance.

Test solution Dissolve 0.4 g in a mixture of 4 volumes of *concentrated ammonia R* and 96 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (a) Dilute 1 ml of the test solution to 20 ml with a mixture of 4 volumes of *concentrated ammonia R* and 96 volumes of *methanol R*. Dilute 1 ml of the solution to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 20 mg of *tenoxicam CRS* and 20 mg of *salicylic acid CRS* in a mixture of 4 volumes of *concentrated ammonia R* and 96 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents.

Reference solution (c) Dissolve 20 mg of *pyridin-2-amine R* in a mixture of 4 volumes of *concentrated ammonia R* and 96 volumes of *methanol R* and dilute to 5 ml with the same mixture of solvents. Dilute 2 ml of the solution to 50 ml with the same mixture of solvents.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm with a mixture of 5 volumes of *anhydrous formic acid R,* 5 volumes of *methanol R,* 20 volumes of *acetone R* and 70 volumes of *methylene chloride R*. Allow the plate to dry in air. Examine in ultraviolet light at 254 nm. Any spot corresponding to pyridin-2-amine in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent). Any spot in the chromatogram obtained with the test solution apart from the principal spot and any spot corresponding to pyridin-2-amine, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

Heavy metals *(2.4.8)*

0.5 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 5 ml of *lead standard solution (2 ppm Pb) R*.

Water *(2.5.12)*

Not more than 0.5 per cent, determined on 1.000 g by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

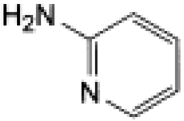
Dissolve 0.250 g in 5 ml of *anhydrous formic acid R* . Add 70 ml of *anhydrous acetic acid R* . Titrate with *0.1 M perchloric acid ,* determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 33.74 mg of $C_{13}H_{11}N_3O_4S_2$.

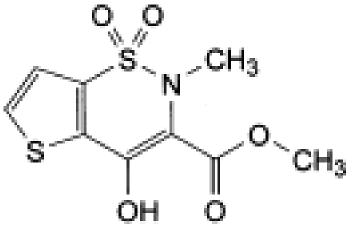
STORAGE

Store protected from light.

IMPURITIES



A. pyridin-2-amine,



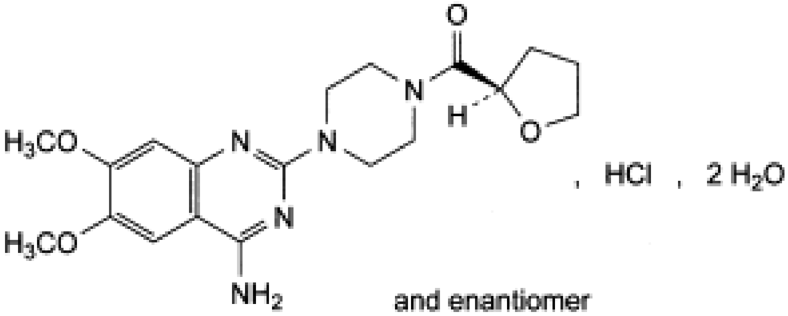
B. methyl 4-hydroxy-2-methyl-2*H*-thieno[2,3-*e*]1,2-thiazine-3-carboxylate 1,1-dioxide.

Ph Eur

Terazosin Hydrochloride Dihydrate

General Notices

(Ph Eur monograph 2021)



$C_{19}H_{25}N_5O_4,HCl,2H_2O$ 459.9 *70024-40-7*

Action and use

Alpha$_1$-adrenoceptor antagonist.

Ph Eur

DEFINITION

1-(4-Amino-6,7-dimethoxyquinazolin-2-yl)-4-[[(2*RS*)-tetrahydrofuran-2-yl]carbonyl]piperazine hydrochloride dihydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Sparingly soluble in water, slightly soluble in methanol, very slightly soluble in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *terazosin hydrochloride dihydrate CRS*.

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 1.00 g in *carbon dioxide-free water R* and dilute to 50.0 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Dilute 10 ml of solution S to 20 ml with *water R* .

pH *(2.2.3)*

3.0 to 5.0 for solution S.

Impurities N and O

Liquid chromatography *(2.2.29)* .

Solvent mixture *acetonitrile R1, water R* (20:80 *V/V*).

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a) Dissolve 5 mg of *terazosin impurity A CRS* and 5.0 mg of *terazosin impurity N CRS* in *acetonitrile R1* using sonication, add 5.0 ml of the test solution and dilute to 50.0 ml with *acetonitrile R1* . Dilute 10.0 ml of this solution to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 10.0 ml of reference solution (a) to 100.0 ml with the solvent mixture.

Column:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 25 °C.

Mobile phase Dissolve 2.80 g of *sodium laurilsulfate R* in 1000.0 ml of *water R* and add 11.0 ml of a solution containing 202.4 g/l of *triethylamine R* and 230.0 g/l of *phosphoric acid R* ; adjust to pH 2.5 with *phosphoric acid R* ; mix 600 volumes of this solution with 400 volumes of *acetonitrile R1* .

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Run time 4 times the retention time of terazosin.

Relative retention With reference to terazosin (retention time = about 10 min): impurity O = about 0.2; impurity N = about 0.3; impurity A = about 0.4.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to impurities A and N.

Limits:

— *impurity N*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurity O*: not more than the area of the peak due to terazosin in the chromatogram obtained with reference solution (b) (0.1 per cent).

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 5.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *terazosin for system suitability CRS* (containing impurities A, B, C, J, K and M) in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (c) Dissolve 5.0 mg of *terazosin impurity L CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (d) To 5 mg of *terazosin impurity E CRS*, add 70 ml of *methanol R* and 30 ml of *water R* . Allow to stand for at least 1 h to dissolve the substance. Use sonication if necessary.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase Mix 2 volumes of *triethylamine R* , 350 volumes of *acetonitrile R* , and 1650 volumes of a solution containing 6 g/l of *sodium citrate R* and 14.25 g/l of *anhydrous citric acid R* .

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 245 nm.

Injection 20 µl.

Run time 4 times the retention time of terazosin.

Identification of impurities Use the chromatogram supplied with *terazosin for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B, C, J, K and M; use the chromatograms obtained with reference solutions (c) and (d) to identify the peaks due to impurities L and E respectively.

Retention time Terazosin = about 11 min.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to impurities B and J; if necessary, adjust the proportion of the aqueous component in the mobile phase (an increase in the proportion of the aqueous component increases the retention times);

— the chromatogram obtained is similar to the chromatogram supplied with *terazosin for system suitability CRS*; in case of insufficient separation of the impurities, reduce the amount of triethylamine in the mobile phase.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity C = 0.7; impurity M = 1.6;

— *impurities A, C, E, K*: for each impurity, not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurity L*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *impurities B, J, M*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm) Pb R*.

Water *(2.5.12)*

7.0 per cent to 8.6 per cent, determined on 0.200 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *methanol R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 42.39 mg of $C_{19}H_{26}ClN_5O_4$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, E, J, K, L, M, N, O*.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): D, F, G, H, I.*

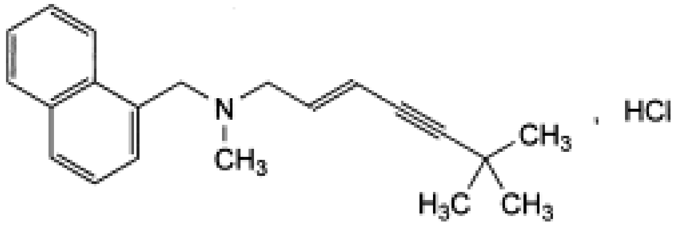
Ph Eur

Terbinafine Hydrochloride

General Notices

(Ph Eur monograph 1734)



$C_{21}H_{25}N,HCl$ 327.9 *78628-80-5*

Action and use

Antifungal.

Ph Eur

DEFINITION

(2*E*)-*N*,6,6-Trimethyl-*N*-(naphthalen-1-ylmethyl)hept-2-en-4-yn-1-amine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Very slightly or slightly soluble in water, freely soluble in anhydrous ethanol and in methanol, slightly soluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *terbinafine hydrochloride CRS.*

B. It gives reaction (a) of chlorides *(2.3.1)* using *anhydrous ethanol R* as solvent.

TESTS

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions protected from light.*

Solvent mixture *methanol R1, water R, acetonitrile R1* (25:25:50 *V/V/V*).

Test solution Dissolve 20.0 mg of the substance to be examined in the solvent mixture and dilute to 20.0 ml with the solvent mixture.

Reference solution (a) Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase. Expose to ultraviolet light at 254 nm for 1 h.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 50.0 ml with the solvent mixture.

Column:

— *size:* *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase:* spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 300 ± 60 m2/g and a pore size of 12 nm.

Mobile phase Mix 50 volumes of *acetonitrile R1* , 25 volumes of *methanol R1* and 25 volumes of a 1.74 g/l solution of *dipotassium hydrogen phosphate R* previously adjusted to pH 7.5 with *phosphoric acid R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 224 nm.

Injection 20 µl.

Run time Twice the retention time of terbinafine.

Relative retention With reference to terbinafine (retention time = about 31 min): impurity A = about 0.15; impurity C = about 0.8; impurity B = about 0.9; impurity D = about 1.5.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to impurity B and terbinafine.

Limits:

— *impurity B:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *ethanol (96 per cent) R*, add 5 ml of *0.01 M hydrochloric acid*. Titrate with *0.1 M sodium hydroxide* determining the end-point potentiometrically *(2.2.20).* Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 32.79 mg of $C_{21}H_{26}ClN$.

STORAGE

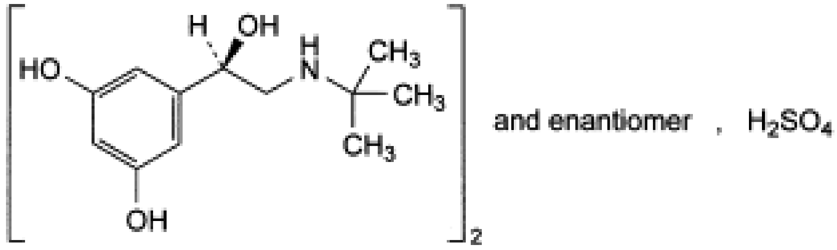
Ph Eur

Terbutaline Sulphate

General Notices

(Ph Eur monograph 0690)



$C_{24}H_{40}N_2O_{10}S$ 548.7 *23031-32-5*

Action and use

Beta$_2$-adrenoceptor agonist; bronchodilator.

Preparation

Terbutaline Tablets

Ph Eur

DEFINITION

Bis[(1*RS*)-1-(3,5-dihydroxyphenyl)-2-[(1,1-dimethylethyl)amino]ethanol] sulphate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24).*

Comparison terbutaline sulphate CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *aldehyde-free methanol R*, evaporate to dryness and record new spectra using the residues.

B. 5 ml of solution S (see Tests) gives reaction (a) of sulphates *(2.3.1)*.

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 400 nm in a 2 cm cell is not greater than 0.11.

Acidity

To 10 ml of solution S add 0.05 ml of *methyl red solution R*. Not more than 1.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Optical rotation *(2.2.7)*

- 0.10 ° to + 0.10 °, determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 75.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 7.5 mg of *terbutaline impurity C CRS* and 22.5 mg of *terbutaline sulphate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 20.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm) .

Mobile phase Dissolve 4.23 g of *sodium hexanesulphonate R* in 770 ml of *0.050 M ammonium formate solution* prepared as follows: dissolve 3.15 g of *ammonium formate R* in about 980 ml of *water R*; adjust to pH 3.0 by adding about 8 ml of *anhydrous formic acid R* and dilute to 1000 ml with *water R;* then add 230 ml of *methanol R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 276 nm.

Injection 20 µl.

Run time 6 times the retention time of terbutaline.

Retention time Impurity C = about 9 min; terbutaline = about 11 min.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to impurity C and terbutaline; if necessary adjust the composition of the mobile phase, decrease the content of methanol to increase the retention time.

Limits:

— *impurity C:* not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurities A, B, D:* for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *sum of impurities other than C:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.02 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

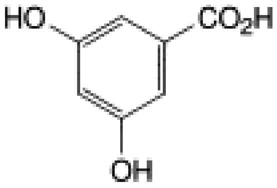
ASSAY

Dissolve 0.400 g in 70 ml of *anhydrous acetic acid R* with heating. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20).*

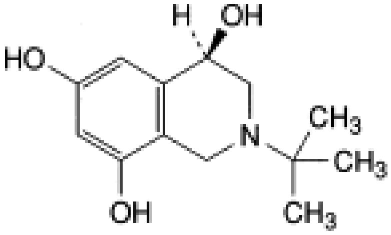
1 ml of *0.1 M perchloric acid* is equivalent to 54.87 mg of $C_{24}H_{40}N_2O_{10}S$.

IMPURITIES

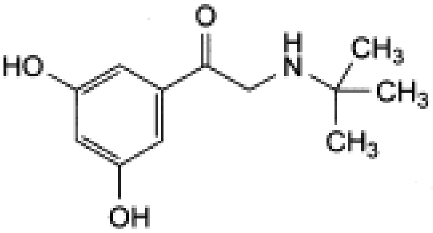
Specified impurities A, B, C, D.



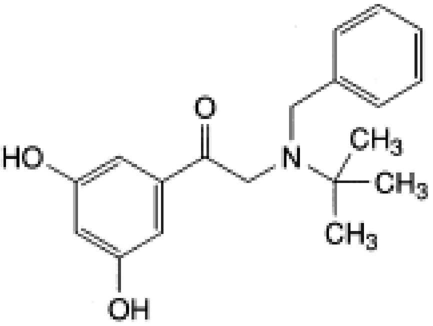
A. 3,5-dihydroxybenzoic acid (α-resorcylic acid),



B. (4*RS*)-2-(1,1-dimethylethyl)-1,2,3,4-tetrahydroisoquinoline-4,6,8-triol,



C. 1-(3,5-dihydroxyphenyl)-2-[(1,1-dimethylethyl)amino]ethanone,



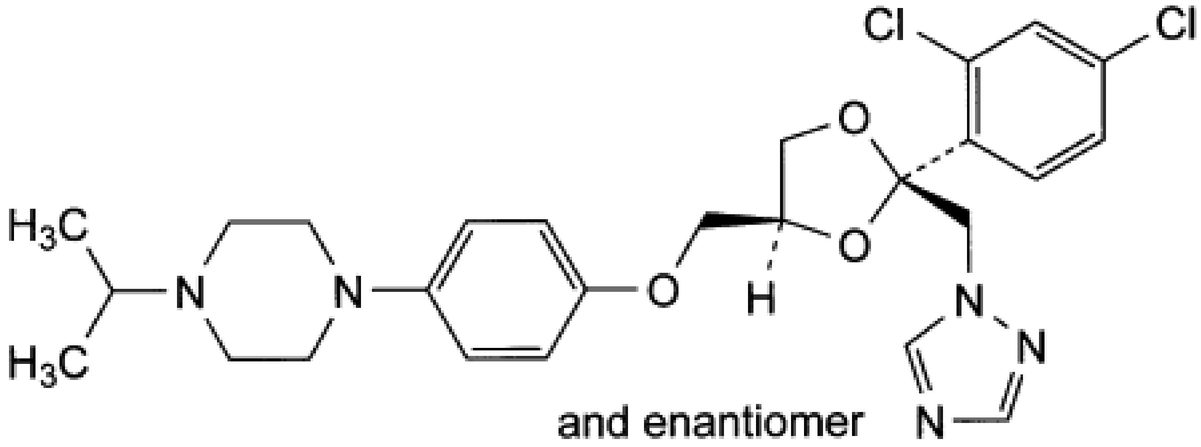
D. 2-[benzyl-(1,1-dimethylethyl)amino]-1-(3,5-dihydroxyphenyl)ethanone.

Ph Eur

Terconazole

General Notices

(Ph Eur monograph 1270)



$C_{26}H_{31}Cl_2N_5O_3$ 532.5 *67915-31-5*

Action and use

Antifungal.

Ph Eur

DEFINITION

1-[4-[[(2*RS*,4*SR*)-2-(2,4-Dichlorophenyl)-2-[(1*H*-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl] methoxy]phenyl]-4-(1-methylethyl)piperazine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, soluble in acetone, sparingly soluble in ethanol (96 per cent).

It shows polymorphism *(5.9)* .

IDENTIFICATION

First identification A.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison terconazole CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *acetone R* , evaporate to dryness in a current of air and record new spectra using the residues.

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 30 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 30 mg of *terconazole CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 30 mg of *terconazole CRS* and 30 mg of *ketoconazole CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate TLC octadecylsilyl silica gel plate R.

Mobile phase ammonium acetate solution R, dioxan R, methanol R (20:40:40 *V/V/V*).

Application 5 µl.

Development In an unsaturated tank over a path of 10 cm.

Drying In a current of warm air for 15 min.

Detection Expose to iodine vapour until the spots appear and examine in daylight.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. To 30 mg in a porcelain crucible add 0.3 g of *anhydrous sodium carbonate R* . Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R* . The solution gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 1.0 g in *methylene chloride R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

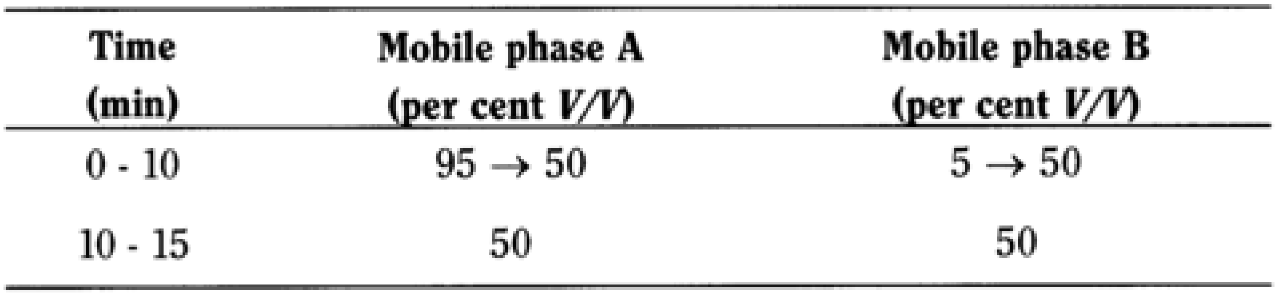
Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 2.5 mg of *terconazole CRS* and 2.0 mg of *ketoconazole CRS* in *methanol R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R*. Dilute 5.0 ml of this solution to 20.0 ml with *methanol R*.

Column:
— *size: l* = 0.1 m, Ø = 4.6 mm;
— *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:
— *mobile phase A*: 3.4 g/l solution of *tetrabutylammonium hydrogen sulphate R*;
— *mobile phase B*: *acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	95 → 50	5 → 50
10 - 15	50	50

Flow rate 2 ml/min.

Detection Spectrophotometer at 220 nm.

Equilibration With *acetonitrile R1* for at least 30 min and then with the mobile phase at the initial composition for at least 5 min.

Injection 10 µl; inject *methanol R* as a blank.

Retention time Ketoconazole = about 6 min; terconazole = about 7.5 min.

System suitability Reference solution (a):

— *resolution*: minimum 13 between the peaks due to ketoconazole and terconazole; if necessary, adjust the concentration of acetonitrile in the mobile phase or adjust the time programme for the linear gradient elution.

Limits:
— *impurities A, B*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained

with reference solution (b) (0.5 per cent);

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 70 ml of a mixture of 1 volume of *anhydrous acetic acid R* and 7 volumes of *methyl ethyl ketone R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically at the 2nd point of inflexion *(2.2.20)*.

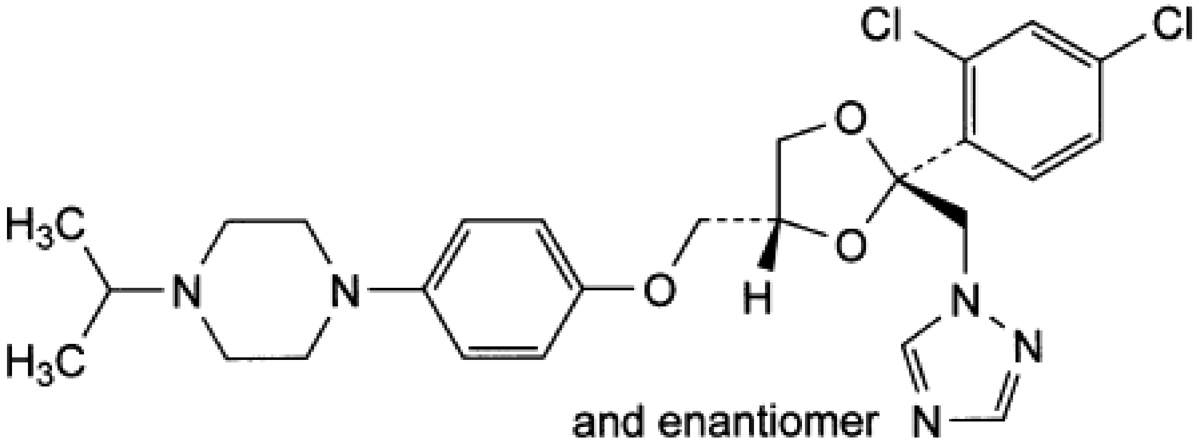
1 ml of *0.1 M perchloric acid* is equivalent to 17.75 mg of $C_{26}H_{31}Cl_2N_5O_3$.

STORAGE

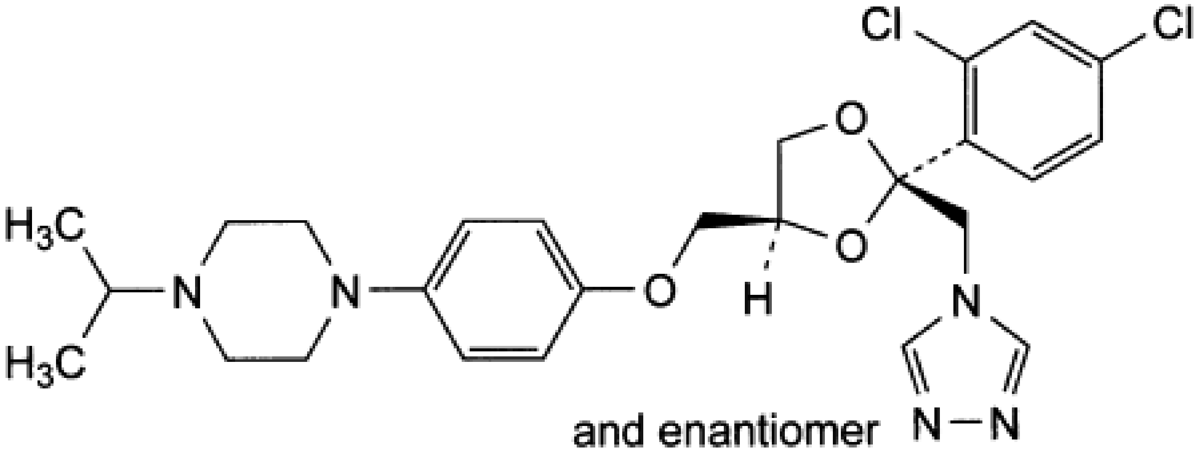
Protected from light.

IMPURITIES

Specified impurities A, B.



A. 1-[4-[[(2*RS*,4*RS*)2-(2,4-dichlorophenyl)-2-[(1*H*-1,2,4-triazol-1-yl)methyl]-1,3-dioxolan-4-yl] methoxy]phenyl]-4-(1-methylethyl)piperazine,



and enantiomer

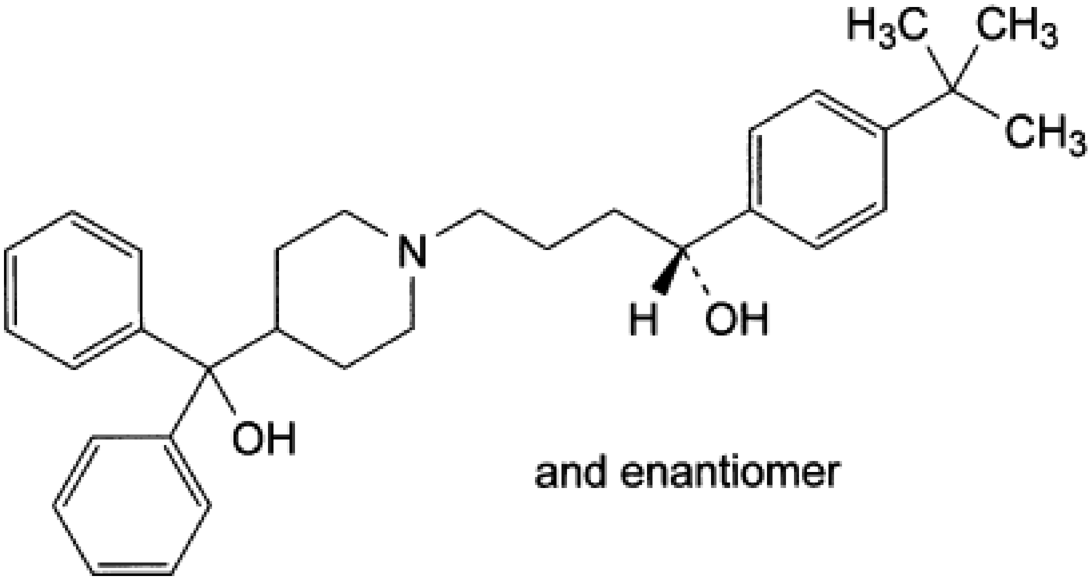
B. 1-[4-[[(2*RS*,4*SR*)-2-(2,4-dichlorophenyl)-2-[(4*H*-1,2,4-triazol-4-yl)methyl]-1,3-dioxolan-4-yl] methoxy]phenyl]-4-(1-methylethyl)piperazine.

Ph Eur

Terfenadine

General Notices

(Ph Eur monograph 0955)



$C_{32}H_{41}NO_2$ 471.7 *50679-08-8*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Preparations

Terfenadine Oral Suspension

Terfenadine Tablets

Ph Eur

DEFINITION

(1*RS*)-1-[4-(1,1-Dimethylethyl)phenyl]-4-[4-(hydroxydiphenylmethyl)piperidin-1-yl]butan-1-ol.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very slightly soluble in water, freely soluble in methylene chloride, soluble in methanol. It is very slightly soluble in dilute hydrochloric acid.

It shows polymorphism *(5.9)* .

IDENTIFICATION

First identification *C.*

Second identification *A, B, D.*

A. Melting point *(2.2.14)* : 146 °C to 152 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 50.0 mg in *methanol R* and dilute to 100.0 ml with the same solvent.

Spectral range 230-350 nm.

Absorption maximum At 259 nm.

Shoulders At 253 nm and 270 nm.

Specific absorbance at the absorption maximum 13.5 to 14.9.

C. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *terfenadine CRS.*

D. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 50 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 50 mg of *terfenadine CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* F_{254} *plate R .*

Mobile phase *methanol R, methylene chloride R* (10:90 *V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 15 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 15 mg of *terfenadine impurity A CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase. To 5.0 ml of this solution, add 5.0 ml of the test solution and dilute to 50.0 ml with the mobile phase.

Reference solution (c) Dilute 10.0 ml of reference solution (a) to 25.0 ml with the mobile phase.

Reference solution (d) Dissolve 0.1 g of *potassium iodide R* in the mobile phase and dilute to 100 ml with the mobile phase. Dilute 1 ml of this solution to 100 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dilute 600 ml of *acetonitrile R1* to 1 litre with *diethylammonium phosphate buffer solution pH 6.0 R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 217 nm.

Injection 20 µl.

Run time 5 times the retention time of terfenadine.

System suitability Reference solution (b):

- *resolution*: minimum 5.0 between the peaks due to terfenadine and impurity A;
- *mass distribution ratio* : minimum 2.0 for the peak due to terfenadine; use *potassium iodide R* as the unretained compound (reference solution (d)).

Limits:

- *impurities A, B, C, D, E, F, G, H, I, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.025 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.005 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding

0.5 kPa.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.400 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 47.17 mg of $C_{32}H_{41}NO_2$.

STORAGE

Protected from light.

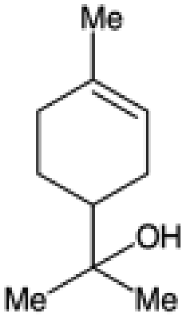
Ph Eur

Terpineol

General Notices



$C_{10}H_{18}O$ 154.3 *98-55-5*

DEFINITION

Terpineol is a mixture of structural isomers in which α-terpineol predominates.

CHARACTERISTICS

A colourless, slightly viscous, liquid which may deposit crystals; odour, pleasant and characteristic.

Very slightly soluble in *water*; freely soluble in *ethanol (70%);* soluble in *ether* .

TESTS

Refractive index

1.4800 to 1.4855, Appendix V E.

Weight per ml

0.931 to 0.935 g, Appendix V G.

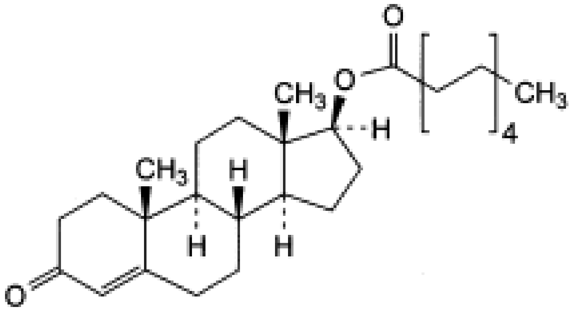
Low-boiling substances

Not more than 4.0% v/v distils below 214°, Appendix V C.

Testosterone Decanoate

General Notices

(Ph Eur monograph 1736)



$C_{29}H_{46}O_3$ 442.7 *5721-91-5*

Action and use

Androgen.

Ph Eur

DEFINITION

3-Oxoandrost-4-en-17β-yl decanoate.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, very soluble in acetone, in methylene chloride and in anhydrous ethanol, freely soluble in fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *testosterone decanoate CRS* .

B. Examine the chromatograms obtained in the assay.

Results The principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (c).

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Dissolve 0.20 g in 20 ml of *methanol R* .

Specific optical rotation *(2.2.7)*

+ 75.0 to + 80.0 (dried substance).

Dissolve 0.200 g in *anhydrous ethanol R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve the contents of a vial of *testosterone decanoate for system suitability CRS* (containing impurities A, B, C, D, E and F) in 1 ml of the mobile phase.

Reference solution (b) Dilute 10.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 20.0 ml with the mobile phase.

Reference solution (c) Dissolve 20.0 mg of *testosterone decanoate CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase *water R, acetonitrile R* (5:95 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 20 µl of the test solution and reference solutions (a) and (b).

Run time Twice the retention time of testosterone decanoate.

Identification of impurities Use the chromatogram supplied with *testosterone decanoate for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D, E and F.

Relative retention With reference to testosterone decanoate (retention time = about 20 min): impurity A = about 0.2; impurity B = about 0.6; impurities C and G = about 0.79; impurity D = about 0.83; impurity E = about 1.3; impurity F = about 1.7.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to impurities C and D.

Limits:

— *correction factors*: for the calculation of content, multiply the peak area of impurity A by 0.7;

— *impurities A, B, D, E, F*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *sum of impurities C and G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Free acid

Dissolve 0.65 g in 10 ml of *ethanol (96 per cent) R*, previously neutralised to *bromothymol blue solution R3*, and titrate immediately with *0.01 M sodium hydroxide*, using 0.1 ml of *bromothymol blue solution R3* as indicator. Not more than 0.6 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection 20 µl of the test solution and reference solution (c).

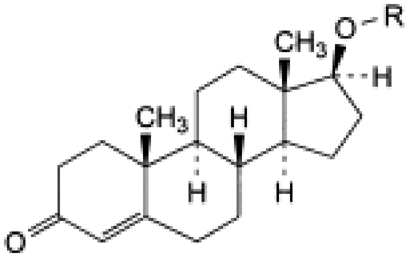
Calculate the percentage content of $C_{29}H_{46}O_3$ from the declared content of *testosterone decanoate CRS*.

STORAGE

At a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities *A, B, C, D, E, F, G*.



A. R = H: testosterone,

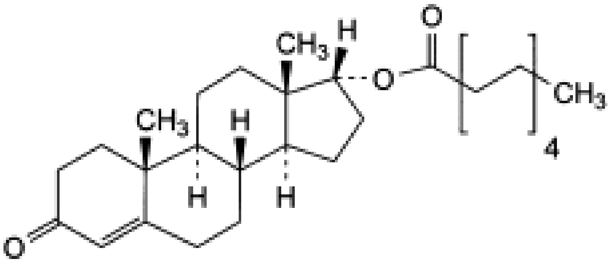
B. R = CO-[CH$_2$]$_6$-CH$_3$: 3-oxoandrost-4-en-17β-yl octanoate (testosterone octanoate),

C. R = CO-[CH$_2$]$_7$-CH$_3$: 3-oxoandrost-4-en-17β-yl nonanoate (testosterone nonanoate),

D. R = CO-[CH$_2$]$_8$-CH=CH$_2$: 3-oxoandrost-4-en-17β-yl undec-10-enoate (testosterone undecylenate),

E. R = CO-[CH$_2$]$_9$-CH$_3$: 3-oxoandrost-4-en-17β-yl undecanoate (testosterone undecanoate),

F. R = CO-[CH$_2$]$_{10}$-CH$_3$: 3-oxoandrost-4-en-17β-yl dodecanoate (testosterone laurate),



G. 3-oxoandrost-4-en-17α-yl decanoate (epitestosterone decanoate).

Ph Eur

Testosterone Enantate

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *testosterone enantate CRS.*

C. Thin-layer chromatography *(2.2.27)* .

Solvent mixture *methanol R, methylene chloride R* (10:90 *V/V*).

Test solution Dissolve 5 mg of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dissolve 5 mg of *testosterone enantate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (b) Dissolve 5 mg of *testosterone enantate CRS* , 5 mg of *testosterone decanoate CRS* and 5 mg of *testosterone isocaproate CRS* in the solvent mixture and dilute to 10 ml with the solvent mixture.

Plate *TLC octadecylsilyl silica gel F_{254} plate R.*

Mobile phase *water R, acetonitrile R, 2-propanol R* (20:40:60 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air, then at 100 °C for 10 min; allow to cool.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

Detection B Spray with *alcoholic solution of sulphuric acid R* ; heat at 120 °C for 10 min; allow to cool and examine in daylight.

Results B The principal spot in the chromatogram obtained with the test solution is green and is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

System suitability Reference solution (b):

— The chromatogram shows 3 clearly separated principal spots by each method of visualisation.

D. To about 25 mg add 2 ml of a 10 g/l solution of *potassium hydroxide R* in *methanol R* and boil under a reflux condenser for 1 h. Cool. Add 10 ml of *water R* . Acidify with dilute *hydrochloric acid R* until *blue litmus paper R* turns red. Filter and wash the precipitate with a small quantity of *water R.* The residue, after drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h, melts *(2.2.14)* at 150 °C to 153 °C.

TESTS

Specific optical rotation ***(2.2.7)***

+ 77 to + 82 (dried substance).

Dissolve 0.250 g in *dioxan R* and dilute to 25.0 ml with the same solvent.

Impurity A

Maximum 0.16 per cent.

Dissolve 0.50 g in 10 ml of *ethanol (96 per cent) R* previously neutralised to *bromothymol blue solution R3*. Titrate immediately with *0.01 M sodium hydroxide*. Not more than 0.6 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Impurities C and D

Thin-layer chromatography *(2.2.27).*

Solvent mixture *methanol R, methylene chloride R* (10:90 *V/V*).

Test solution Dissolve 0.20 g of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Reference solution (a) Dilute 1 ml of the test solution to 100 ml with the solvent mixture.

Reference solution (b) Dissolve 20 mg of *testosterone propionate CRS* in the solvent mixture, add 1 ml of the test solution and dilute to 100 ml with the solvent mixture.

Plate *TLC silica gel G plate R*.

Mobile phase *ethyl acetate R, toluene R* (20:80 *V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with alcoholic solution of *sulphuric acid R* and heat at 120 °C for 10 min.

System suitability Reference solution (b):

— The chromatogram shows 2 clearly separated principal spots.

Limit:

— *impurities C, D*: any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (a) (1.0 per cent).

Impurity B

Liquid chromatography (2.2.29).

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of *testosterone caproate CRS* (impurity B) in the mobile phase and dilute to 20.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. To 1 ml of this solution add 1 ml of reference solution (a).

Column:
- *size:* *l* = 0.12 m, Ø = 4 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *water R, acetonitrile R* (30:70 *V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 240 nm.

Injection 20 µl.

System suitability Reference solution (b):

- *relative retention with reference to testosterone enantate*: impurity B = about 0.7.

Limit:
- *impurity B:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (1.0 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa.

ASSAY

Dissolve 50.0 mg in *anhydrous ethanol R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *anhydrous ethanol R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 241 nm.

Calculate the content of $C_{26}H_{40}O_3$ taking the specific absorbance to be 422.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

General Notices

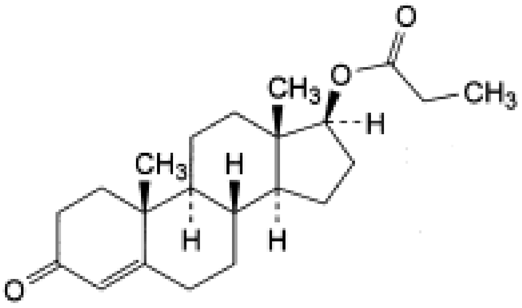
(Ph Eur monograph 0297)



$C_{22}H_{32}O_3$ 344.5 *57-85-2*

Action and use

Androgen.

Preparations

Testosterone Propionate Injection

Ph Eur

DEFINITION

3-Oxoandrost-4-en-17β-yl propanoate.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder or colourless crystals.

Solubility

Practically insoluble in water, freely soluble in acetone and in alcohol, soluble in fatty oils.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of testosterone propionate.*

TESTS

Specific optical rotation *(2.2.7)*

+ 84 to + 90 (dried substance).

Dissolve 0.250 g in *ethanol R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29).*

Test solution Dissolve 50.0 mg of the substance to be examined in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 2 mg of the substance to be examined and 2 mg of *testosterone acetate CRS* in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R* .

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography* R (5 µm).

Mobile phase *water R, methanol R* (20:80 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Run time Twice the retention time of testosterone propionate.

Relative retention With reference to testosterone propionate (retention time = about 9 min): impurity C = about 0.5; impurity A = about 0.7; impurity D = about 0.8; impurity B = about 1.4.

System suitability Reference solution (a):

— *resolution*: minimum 4.0 between the peaks due to testosterone propionate and to impurity A.

Limits:

— *any impurity*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

ASSAY

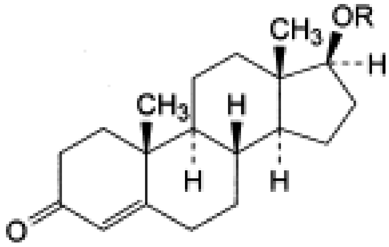
Dissolve 25.0 mg in *ethanol R* and dilute to 250.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *ethanol R* . Measure the absorbance *(2.2.25)* at the maximum at 240 nm.

Calculate the content of $C_{22}H_{32}O_3$ taking the specific absorbance to be 490.

IMPURITIES

Specified impurities A, B, C, D.

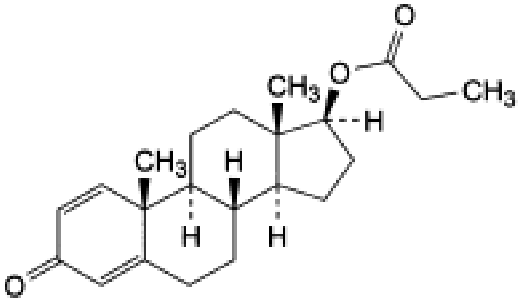
Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): E.*



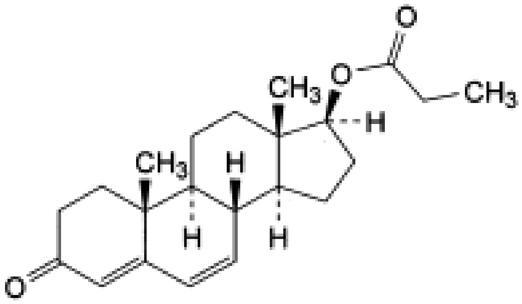
A. R = CO-CH_3: 3-oxoandrost-4-en-17β-yl acetate (testosterone acetate),

B. R = CO-$CH(CH_3)_2$: 3-oxoandrost-4-en-17β-yl 2-methylpropanoate (testosterone isobutyrate),

C. R = H: testosterone,



D. 3-oxoandrosta-1,4-dien-17β-yl propanoate,



E. 3-oxoandrosta-4,6-dien-17β-yl propanoate.

$C_{19}H_{28}O_2$ 288.4 *58-22-0*

Action and use

Androgen.

Preparation

Testosterone Implants

Ph Eur

DEFINITION

17β-Hydroxyandrost-4-en-3-one.

Content

97.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white crystalline powder, or colourless or yellowish-white crystals.

Solubility

Practically insoluble in water, freely soluble in alcohol and in methylene chloride, practically insoluble in fatty oils.

mp

About 155 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *testosterone CRS.*

TESTS

Specific optical rotation *(2.2.7)*

+ 106 to + 114 (dried substance).

Dissolve 0.250 g in *ethanol R* and dilute to 25.0 ml with the same solvent.

Impurities D and F

Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 1 mg of *stanolone R* in *methanol R* and dilute to 10 ml with the same solvent. In 1 ml of this solution, dissolve 10 mg of testosterone for *impurity D identification CRS* (testosterone spiked with about 1 per cent of impurity D).

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *methanol R* .

Reference solution (c) Dilute 2.0 ml of reference solution (b) to 10.0 ml with *methanol R* .

Reference solution (d) Dilute 1.0 ml of reference solution (b) to 10.0 ml with *methanol R* .

Plate *TLC silica gel F_{254} plate R* (6-8 µm).

Preconditioning (in the dark)

Add about 5 g of powdered *silver nitrate R* to 100 ml of *methanol R.* Stir the suspension for 30 min. Filter or decant the suspension and immerse the plate in the silver nitrate solution for at least 30 min. Dry at 75 °C for 30 min.

A pre-conditioned plate can be stored in the dark for 5-7 days.

Mobile phase *acetic acid R, ethanol R, dioxan R, methylene chloride R* (1:2:10:90 *V/V/V/V*).

Application 2 µl.

Development In a saturated tank over 3/4 of the plate.

Drying Allow to stand at room temperature and protected from light for 30 min.

Detection Spray with a 200 g/l solution of *toluenesulphonic acid R* in *ethanol R* and heat at 105 °C for 10 min. Examine in ultraviolet light at 365 nm.

System suitability The chromatogram obtained with reference solution (a) shows 3 clearly separated spots; impurity D R_F = about 0.5; testosterone R_F = about 0.65; impurity F R_F = about 0.7.

Limits:

- *impurity D*: any spot due to impurity D is not more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent);
- *impurity F*: any spot due to impurity F is not more intense than the spot in the chromatogram obtained with reference solution (d) (0.1 per cent).

Related substances

Liquid chromatography (*2.2.29*).

Test solution Dissolve 0.100 g of the substance to be examined in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve 10 mg of *testosterone for system suitability CRS* (containing impurities C and I) in 1 ml of *methanol R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R*.

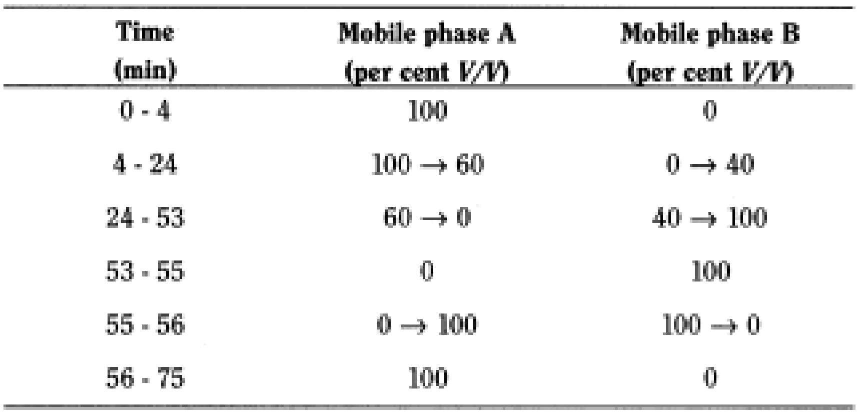
Reference solution (c) Dilute 2.0 ml of reference solution (b) to 10.0 ml with *methanol R*.

Column

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: spherical end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 15 nm;
- *temperature*: 40 °C.

Mobile phase:

- *mobile phase A: water for chromatography R, methanol R* (45:55 *V/V*);
- *mobile phase B: methanol R*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 4	100	0
4 - 24	100 → 60	0 → 40
24 - 53	60 → 0	40 → 100
53 - 55	0	100
55 - 56	0 → 100	100 → 0
56 - 75	100	0

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

Relative retention With reference to testosterone (retention time = about 18 min): impurity G = about 0.6; impurity H = about 0.8; impurity A = about 0.9; impurity I = about 0.95; impurity C = about 1.2; impurity E = about 1.7; impurity J = about 2.1; impurity B = about 2.5.

System suitability Reference solution (a):

— *resolution*: minimum baseline separation between the peaks due to impurity I and testosterone.

Limits Use the chromatogram obtained with reference solution (a) to identify the peaks due to impurities C and I:

— *correction factor*: for the calculation of content, multiply the peak area of impurity I by 2.9;

— *impurity C:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *impurity I:* not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *impurities A, B, E, G, H, J*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *total*: not more than 1.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.6 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 0.500 g by drying in an oven at 105 °C for 2 h.

ASSAY

Dissolve 50.0 mg in *alcohol R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml to 100.0 ml with *alcohol R*. Measure the absorbance *(2.2.25)* at the absorption maximum at 241 nm.

Calculate the content of $C_{19}H_{28}O_2$ taking the specific absorbance to be 569.

STORAGE

Protected from light.

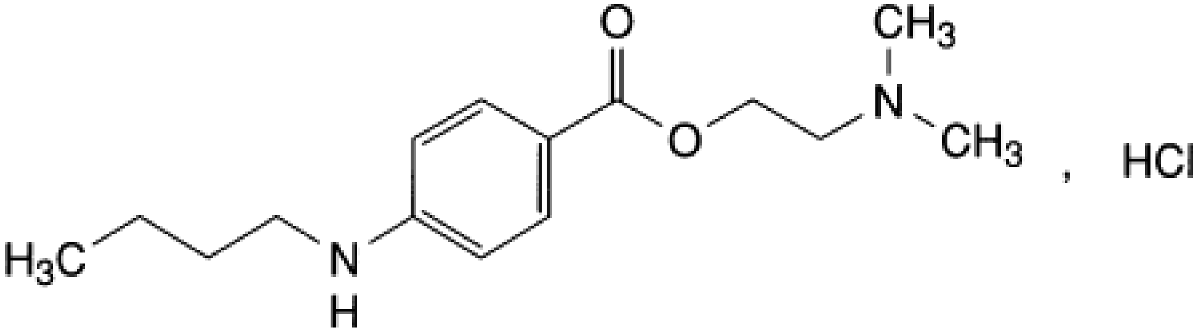
Ph Eur

Tetracaine Hydrochloride

General Notices

(Ph Eur monograph 0057)



$C_{15}H_{24}N_2O_2,HCl$ 300.8 *136-47-0*

Action and use

Local anaesthetic.

Preparation

Tetracaine Eye Drops

Ph Eur

DEFINITION

2-(Dimethylamino)ethyl 4-(butylamino)benzoate hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, slightly hygroscopic, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

It melts at about 148 °C or it may occur in either of 2 other crystalline forms which melt respectively at about 134 °C and 139 °C. Mixtures of these forms melt within the range 134 °C to 147 °C.

IDENTIFICATION

First identification   A, B, D.

Second identification   B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison   tetracaine hydrochloride CRS.

B. To 10 ml of solution S (see Tests) add 1 ml of *ammonium thiocyanate solution R* . A white, crystalline precipitate is formed which, after recrystallisation from *water R* and drying at 80 °C for 2 h, melts *(2.2.14)* at about 131 °C.

C. To about 5 mg add 0.5 ml of *fuming nitric acid R* . Evaporate to dryness on a water-bath, allow to cool and dissolve the residue in 5 ml of *acetone R* . Add 1 ml of *0.1 M alcoholic potassium hydroxide* . A violet colour develops.

D. Solution S gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dilute 2 ml of solution S to 10 ml with *water R.*

pH *(2.2.3)* : 4.5 to 6.5.

Dilute 1 ml of solution S to 10 ml with *carbon dioxide-free water R.*

Related substances

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use or store them at a temperature of 2 ‘C to 8 ‘C.*

Solvent mixture   *acetonitrile R* , *water R* (20:80 *V/V*).

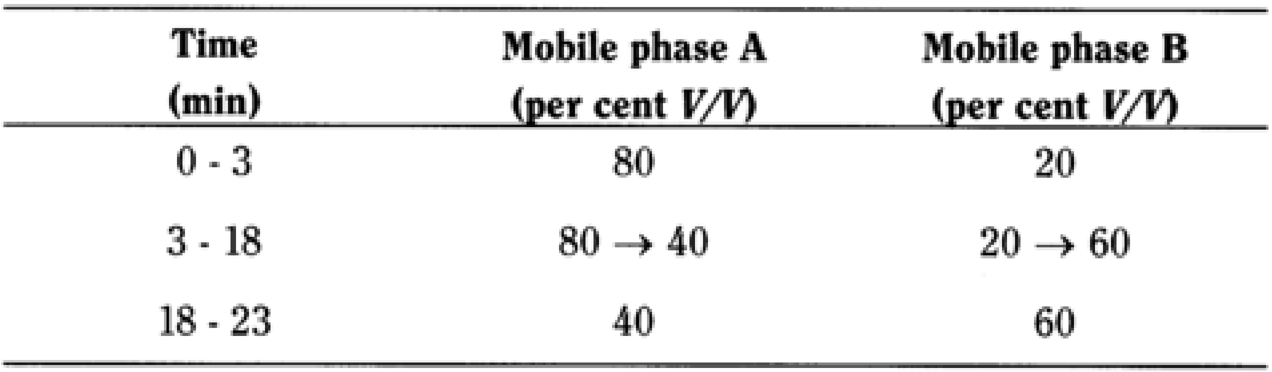
Test solution   Dissolve 50 mg of the substance to be examined in the solvent mixture and dilute to 50 ml with the solvent mixture.

Reference solution (a)   Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (b) Dissolve the contents of a vial of *tetracaine for system suitability CRS* (containing impurities A, B and C) in 2 ml of the solvent mixture.

Column:
- — *size:* *l* = 0.15 m, Ø = 4.6 mm;
- — *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- — *temperature*: 30 °C.

Mobile phase:
- — *mobile phase A*: dissolve 1.36 g of *potassium dihydrogen phosphate R* in *water R* , add 0.5 ml of *phosphoric acid R* and dilute to 1000 ml with *water* R;
- — *mobile phase B: acetonitrile R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 3	80	20
3 - 18	80 → 40	20 → 60
18 - 23	40	60

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 300 nm.

Injection 10 µl.

Identification of impurities Use the chromatogram supplied with *tetracaine for system suitability CRS* and the chromatogram obtained with reference solution (b) to identify the peaks due to impurities A, B and C.

Relative retention With reference to tetracaine (retention time = about 8 min): impurity A = about 0.3; impurity B = about 1.7; impurity C = about 2.1.

System suitability Reference solution (b):

- — *resolution*: minimum 5.0 between the peaks due to tetracaine and impurity B.

Limits:
- — *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.6; impurity C = 0.7;
- — *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- — *impurities B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- — *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);
- — *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *ethanol (96 per cent) R* and add 5.0 ml of *0.01 M hydrochloric* acid. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide.* Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 30.08 mg of $C_{15}H_{25}ClN_2O_2$.

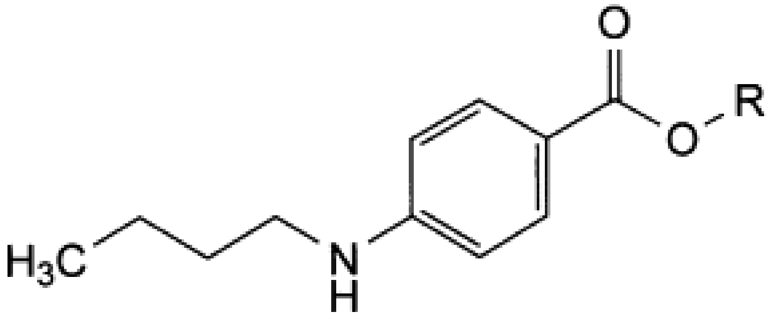
STORAGE

In an airtight container, protected from light.

IMPURITIES

Specified impurities *A, B, C.*

A. 4-aminobenzoic acid,



B. R = H: 4-(butylamino)benzoic acid,

C. R = CH_3: methyl 4-(butylamino)benzoate.

Action and use

Corticotrophic peptide.

Preparations

Tetracosactide Injection

Tetracosactide Zinc Injection

Ph Eur

DEFINITION

Tetracosactide is a synthetic tetracosapeptide in which the sequence of amino acids is the same as that of the first twenty-four residues of human corticotropin. It is available as an acetate and contains water. It increases the rate at which corticoid hormones are secreted by the adrenal glands. The potency is not less than 800 International Units per milligram, calculated with reference to the anhydrous, acetic acid-free substance.

CHARACTERS

A white or yellow, amorphous powder, sparingly soluble in water.

IDENTIFICATION

A. It increases the amount of corticosterone produced by isolated rat adrenal cells in the conditions of the assay.

B. Examine by electrophoresis *(2.2.31)* and thin-layer chromatography *(2.2.27)* to obtain a two-dimensional separation using two plates with *cellulose for chromatography R1* as the coating substance.

Test solution Dissolve 1 mg of the substance to be examined in 0.2 ml of a 15.4 g/l solution of *ammonium acetate R* adjusted to pH 8.2 with *dilute ammonia R2*. Add 10 µl of a 2 g/l solution of *trypsin R*, maintain the mixture at 37 °C to 38 °C for 40 min, heat on a water-bath for 3 min and add 5 µl of *glacial acetic acid R*. Evaporate to dryness at 40 °C at a pressure not exceeding 3 kPa, dry the glassy residue at 40 °C for 1 h and dissolve in 0.1 ml of *glacial acetic acid R*. Dry the solution from the frozen state, dissolve the residue in 0.1 ml of *water R* and dry again from the frozen state. Dry the final residue at 45 °C for 1 h at a pressure not exceeding 3 kPa and dissolve in 50 µl of *water R*.

Reference solution Prepare at the same time and in the same manner as the test solution, using *tetracosactide CRS* instead of the substance to be examined.

Spray the plates with the electrolyte solution which consists of a solution containing 0.2 per cent *V/V* of *glacial acetic acid R* and 0.2 per cent *V/V* of *pyridine R*. Place the filter paper tongues to connect the plates with the appropriate compartment of each trough so that each tongue covers an area 1.5 cm wide at one end of the plate. Close the tank and allow to stand for 30 min. Apply the solutions on the anodic side. Apply to the first plate, at a point about 2.5 cm from each of two adjacent edges, 4 µl of the test solution. Apply to the second plate, at a similar position, 4 µl of the reference solution. Apply to both plates a potential of 280 V for a plate 200 mm long and allow electrophoresis to proceed for 90 min. Allow the plates to dry in air for 30 min and then dry in a current of air at 30 °C for 30 min. Carry out a second separation on each plate by thin-layer chromatography. Develop at right angles to the direction of electrophoresis over a path of 15 cm using a mixture of 8 volumes of *glacial acetic acid R*, 24 volumes of *pyridine R*, 30 volumes of *water R* and 38 volumes of *butanol R*. Dry the plates in a current of air and spray with *ninhydrin solution R1*. The principal spots in the chromatogram obtained with the test solution are similar in position to those in the chromatogram obtained with the reference solution, but their intensity may differ.

TESTS

Specific optical rotation (*2.2.7*)

Dissolve 10.0 mg in 1.0 ml of a mixture of 1 volume of *glacial acetic acid R* and 99 volumes of *water R.* The specific optical rotation is - 99 to - 109, calculated with reference to the anhydrous, acetic acid-free substance.

Absorbance *(2.2.25)*

Dissolve 1.0 mg in *0.1 M hydrochloric acid* and dilute to 5.0 ml with the same acid. Examined between 240 nm and 280 nm, the solution shows an absorption maximum at 276 nm. The absorbance at the maximum is 0.51 to 0.61, calculated with reference to the anhydrous, acetic acid-free substance. The ratio of the absorbance at the maximum at 276 nm to the absorbance at 248 nm is 2.4 to 2.9.

Amino acids

Examine by means of an amino-acid analyser. Standardise the apparatus with a mixture containing equimolar amounts of ammonia, glycine and the L-form of the following amino acids:

Lysine
Histidine
Threonine
Serine
Alanine
Valine
Leucine
Tyrosine

Arginine
Aspartic acid
Glutamic acid
Proline
Methionine
Isoleucine
Phenylalanine

together with half the equimolar amount of L-cystine. For the validation of the method, an appropriate internal standard, such as *DL-norleucine R*, is used.

Test solution Place 1.0 mg of the substance to be examined in a rigorously cleaned hard-glass tube, 100 mm long and 6 mm in internal diameter. Add a suitable amount of a 50 per cent *V/V* solution of *hydrochloric acid R*. Immerse the tube in a freezing mixture at - 5 °C, reduce the pressure to below 133 Pa and seal. Heat at 110 °C to 115 °C for 16 h. Cool, open the tube, transfer the contents to a 10 ml flask with the aid of five quantities, each of 0.2 ml, of *water R* and evaporate to dryness over *potassium hydroxide R* under reduced pressure. Take up the residue in *water R* and evaporate to dryness over *potassium hydroxide R* under reduced pressure; repeat these operations once. Take up the residue in a buffer solution suitable for the amino-acid analyser used and dilute to a suitable volume with the same buffer solution. Apply a suitable volume to the amino-acid analyser.

Express the content of each amino acid in moles. Calculate the relative proportions of the amino acids, taking that for valine to be equivalent to three. The values fall within the following limits: lysine 3.5 to 4.7; histidine 0.9 to 1.1; arginine 2.7 to 3.3; serine 1.1 to 2.2; glutamic acid 0.9 to 1.1; proline 2.5 to 3.5; glycine 1.8 to 2.2; methionine 0.9 to 1.1; tyrosine 1.7 to 2.2; phenylalanine 0.9 to 1.1. Not more than traces of other amino acids are present, with the exception of tryptophan.

Related peptides

A. Examine by liquid chromatography *(2.2.29)*. Use degassed solvents.

Test solution Dissolve 1.0 mg of the substance to be examined in 1 ml of *water R*.

Reference solution (a) Dissolve 1.0 mg of the substance to be examined in 1 ml of a 1 per cent *V/V* solution of *glacial acetic acid R* and add 50 µl of a mixture of 1 volume of *strong hydrogen peroxide solution R* and 999 volumes of *water R*. Allow to stand for 2 h.

Reference solution (b) Dissolve 1.0 mg of *tetracosactide CRS* in 1 ml of *water R*.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (10 µm);

— as mobile phase at a flow rate of 2.0 ml/min, a mixture of 365 ml of *acetonitrile R*, 10.0 ml of *glacial acetic acid R* and 10.0 g of *ammonium sulphate R*, diluted to 2000 ml with *water R;*

— as detector a spectrophotometer set at 280 nm.

Inject 20 µl of each solution ensuring that the syringe used to inject the test solution is not contaminated with peroxide. The chromatogram obtained with reference solution (a) shows a peak due to tetracosactide corresponding to the principal peak in the chromatogram obtained with the test solution and a peak with a lower retention time, due to tetracosactide sulphoxide, of significantly greater area than any corresponding peak in the chromatogram obtained with the test solution. The test is not valid unless in the chromatogram obtained with reference solution (a), the resolution between the peaks corresponding to tetracosactide and tetracosactide sulphoxide is at least 7. In the chromatogram obtained with the test solution, the area of the peak corresponding to tetracosactide sulphoxide is not greater than 4 per cent of the sum of the areas of all the peaks, disregarding any peaks due to the solvent and the mobile phase.

B. Examine by thin-layer chromatography *(2.2.27)* , using *cellulose for chromatography R* as the coating substance.

Test solution Dissolve 3.0 mg of the substance to be examined in 1.5 ml of a mixture of equal volumes of *dilute acetic acid R* and *water R.*

Reference solution (a) Dilute 0.5 ml of the test solution to 10 ml with a mixture of equal volumes of *dilute acetic acid R* and *water R* .

Reference solution (b) Dilute 5 ml of reference solution (a) to 10 ml with a mixture of equal volumes of *dilute acetic acid R* and *water R.*

Reference solution (c) To 0.5 ml of the test solution add 50 µl of a mixture of 1 volume of *strong hydrogen peroxide solution R* and 999 volumes of *water R* . Allow to stand for 2 h.

Apply to the plate as 1 cm bands 10 µl of each solution. Develop over a path of 15 cm using a mixture of 4 volumes of *glacial acetic acid R* , 24 volumes of *pyridine R* , 30 volumes of *water R* and 42 volumes of *butanol R* . Dry the plate in a current of air and spray with *ninhydrin solution R1* . In the chromatogram obtained with reference solution (c), the band corresponding in position to the principal band in the chromatogram obtained with the test solution is reduced in intensity, and a prominent band, due to tetracosactide sulphoxide, of lower R_F is present. In the chromatogram obtained with the test solution, any band, apart from the principal band and any band due to tetracosactide sulphoxide, is not more intense than the band in the chromatogram obtained with reference solution (a) (5.0 per cent) and at most one such band is more intense than the band in the chromatogram obtained with reference solution (b) (2.5 per cent).

Peptide

Not less than 85.0 per cent of peptide, expressed as $C_{136}H_{21}0N_{40}O_{31}S$, calculated with reference to the anhydrous, acetic acid-free substance.

Examine the chromatograms obtained in test A for related peptides. Calculate the content of $C_{136}H_{210}N_{40}O_{31}S$ from the peak heights or areas in the chromatograms obtained with the test solution and reference solution (b), and the declared content of $C_{136}H_{210}N_{40}O_{31}S$ in *tetracosactide CRS* .

Acetic acid ***(2.5.34)***

8.0 per cent to 13.0 per cent.

Test solution. Dissolve 10.0 mg of the substance to be examined in a mixture of 5 volumes of mobile phase B and 95 volumes of mobile phase A and dilute to 10.0 ml with the same mixture of solvents.

Water ***(2.5.12)***

5.0 per cent to 16.0 per cent, determined on 80.0 mg by the semi-micro determination of water.

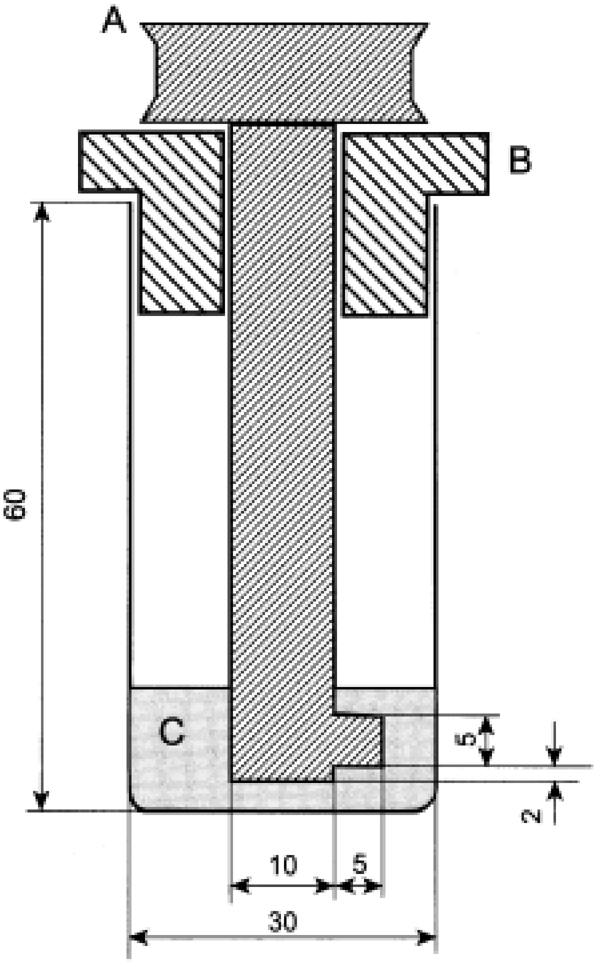
ASSAY

The potency of tetracosactide is estimated by comparing in given conditions its activity in increasing the amount of corticosterone produced by isolated rat adrenal cells with that of the International Reference Preparation of tetracosactide or a reference preparation calibrated in International Units.

The International Unit is the activity contained in a stated amount of the International Reference Preparation which consists of a quantity of synthetic tetracosactide with mannitol. The equivalence in International Units of the International Reference Preparation is stated by the World Health Organisation.

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P = 0.95$) of the estimated potency are not less than 64 per cent and not more than 156 per cent of the stated potency.

Use siliconised glassware and rinse well with *water R* before use. Euthanise four male rats, each weighing between 200 g and 400 g, by exsanguination. Remove the adrenal glands, carefully free them of adhering fat and immerse in solution B maintained at 4 °C. Cut each gland into four equal pieces and transfer to a suitable plastic stirring apparatus (see Figure 0644.-1) containing 5 ml of solution C maintained at 37 °C. Disperse the adrenal cells by stirring the mixture at 500 r/min. After 20 min, remove the supernatant liquid, cool to 4 °C, add 5 ml of solution C and repeat the dispersal procedure. Repeat the operation a further three times. Combine the five supernatant liquids, centrifuge at 4 °C in a polyethylene test-tube for 30 min after slow acceleration to 100 g. Suspend the resulting pellet in 8 ml of solution D and centrifuge for 30 min at 100 g. Again suspend the residue in 8 ml of solution D and filter the mixture through nylon gauze with 100 µm pores into a polyethylene beaker and add a suitable volume of solution D to the filtrate (a total volume of 65 ml to 105 ml has been found suitable). Maintain the resulting suspension at 4 °C.



A - pulley and stirring paddle,

B - bearing,

C - incubation medium.

Figure 0644.-1. – *Stirring Apparatus*

DIMENSIONS IN MILLIMETRES

Prepare four independent dilutions, with two-fold dose intervals, from solutions of suitable concentrations of the substance to be examined and of the reference preparation using solution E as diluent. Pipette 0.1 ml of each dilution into each of four polystyrene test-tubes and add 1.0 ml of the cell suspension prepared above to each tube. Incubate at 37 °C for 2 h and then cool to 4 °C. Transfer 1 ml of the contents of each tube to a glass tube containing 1.4 ml of *methylene chloride R* , mix in a vortex mixer for 10 s and centrifuge at 3000 g for 5 min. Transfer 1 ml of each of the methylene chloride layers, avoiding taking up aqueous phase, to a glass tube containing 0.6 ml of a mixture of 15 volumes of *alcohol R* and 35 volumes of *sulphuric acid R* . Mix in a vortex mixer for 10 s and centrifuge at 1500 g for 5 min. Allow each tube to stand for 30 min. Examine by fluorimetry *(2.2.21)* , irradiating the lower layer with an excitant beam of suitable wavelength such as 436 nm or 470 nm and measuring the fluorescence at the maximum between 530 nm and 545 nm. If the solutions are not transferred to spectrophotometric measurement cells, select glass tubes that give fluorescence values for a standard corticosterone which do not differ from each other by more than 5 per cent. Calculate the result of the assay by the usual statistical methods using the linear portion of the log dose-response curve.

Solution A

Sodium chloride R	6.60 g
Potassium chloride R	0.353 g
Sodium hydrogen carbonate R	0.840 g
Potassium dihydrogen phosphate	0.161 g
Magnesium sulphate R	0.291 g
Calcium chloride R	0.373 g
2-[4-(2-Hydroxyethyl)piperazin-1-yl]ethane sulphonic acid R	4.77 g

Dissolve the above ingredients in about 950 ml of *water R*, adjust to pH 7.4 with *1 M sodium hydroxide* and add 60 mg of *benzylpenicillin sodium R* and a quantity of *streptomycin sulphate R* equivalent to 100 mg of streptomycin. Dilute to 1000 ml with *water R.*

Solution B Add 2 g/l of *glucose R* to solution A.

Solution C To solution B add 1 g/l of a preparation of collagenase obtained from Clostridium histolyticum and of a grade suitable for the preparation of dispersed cells.

Solution D Add 5 g/l of *bovine albumin R* to solution B.

Solution E A 9 g/l sterile solution of *sodium chloride R* containing 1 g/l of *bovine albumin R* and adjusted to pH 2.0 with *1 M hydrochloric acid* .

STORAGE

Store under nitrogen, protected from light, at a temperature between 2 °C and 8 °C.

LABELLING

The label states:

— the potency in International Units per milligram;

— the peptide content per container;

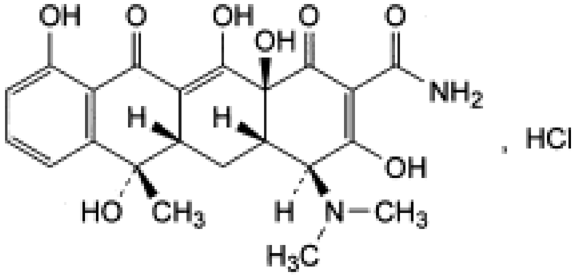
— the storage conditions.

Ph Eur

Tetracycline Hydrochloride

General Notices

(Ph Eur monograph 0210)



$C_{22}H_{24}N_2O_8$,HCl 480.9 *64-75-5*

Action and use

Tetracycline antibacterial.

Preparations

Tetracycline Capsules

Tetracycline Tablets

Ph Eur

DEFINITION

(4*S*,4a*S*,5a*S*,6*S*,12a*S*)-4-(Dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide hydrochloride.

Substance produced by certain strains of *Streptomyces aerofaciens* or obtained by any other means.

Content

95.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Soluble in water, slightly soluble in ethanol (96 per cent), practically insoluble in acetone. It dissolves in solutions of alkali hydroxides and carbonates. Solutions in water become turbid on standing, owing to the precipitation of tetracycline.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 5 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *tetracycline hydrochloride CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *tetracycline hydrochloride CRS* , 5 mg of *demeclocycline hydrochloride R* and 5 mg of *oxytetracycline hydrochloride R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC octadecylsilyl silica gel F* $_{254}$ *plate R.*

Mobile phase Mix 20 volumes of *acetonitrile R,* 20 volumes of *methanol R* and 60 volumes of a 63 g/l solution of *oxalic acid R* previously adjusted to pH 2 with *concentrated ammonia R* .

Application 1 µl.

Development Over 3/4 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (b) shows 3 clearly separated spots.

Results the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

B. To about 2 mg add 5 ml of *sulphuric acid R* . A violet-red colour develops. Add the solution to 2.5 ml of *water R* . The colour becomes yellow.

C. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

pH *(2.2.3)*

1.8 to 2.8.

Dissolve 0.1 g in 10 ml of *carbon dioxide-free water R* .

Specific optical rotation *(2.2.7)*

- 240 to - 255 (dried substance).

Dissolve 0.250 g in *0.1 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use*.

Test solution Dissolve 25.0 mg of the substance to be examined in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (a) Dissolve 25.0 mg of *tetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solution (b) Dissolve 15.0 mg of *4-epitetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Reference solution (c) Dissolve 10.0 mg of *anhydrotetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid.

Reference solution (d) Dissolve 10.0 mg of *4-epianhydrotetracycline hydrochloride CRS* in *0.01 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Reference solution (e) Mix 1.0 ml of reference solution (a), 2.0 ml of reference solution (b) and 5.0 ml of reference solution (d) and dilute to 25.0 ml with *0.01 M hydrochloric acid*.

Reference solution (f) Mix 20.0 ml of reference solution (b), 10.0 ml of reference solution (c) and 5.0 ml of reference solution (d) and dilute to 200.0 ml using *0.01 M hydrochloric acid*.

Reference solution (g) Dilute 1.0 ml of reference solution (c) to 50.0 ml with *0.01 M hydrochloric acid*.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: styrene-divinylbenzene copolymer R* (8 µm);

— *temperature*: 60 °C.

Mobile phase Weigh 80.0 g of *2-methyl-2-propanol R* and transfer to a 1000 ml volumetric flask with the aid of 200 ml of *water R;* add 100 ml of a 35 g/l solution of *dipotassium hydrogen phosphate R* adjusted to pH 9.0 with *dilute phosphoric acid R*, 200 ml of a 10 g/l solution of *tetrabutylammonium hydrogen sulphate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R* and 10 ml of a 40 g/l solution of *sodium edetate R* adjusted to pH 9.0 with *dilute sodium hydroxide solution R*; dilute to 1000.0 ml with *water R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl; inject the test solution and reference solutions (e), (f) and (g).

System suitability

— *resolution*: minimum 2.5 between the peaks due to impurity A (1st peak) and tetracycline (2nd peak) and minimum 8.0 between the peaks due to tetracycline and impurity D (3rd peak) in the chromatogram obtained with reference solution (e); if necessary, adjust the concentration of 2-methyl-2-propanol in the mobile phase;

— *signal-to-noise ratio:* minimum 3 for the principal peak in the chromatogram obtained with reference solution (g);

— *symmetry factor:* maximum 1.25 for the peak due to tetracycline in the chromatogram obtained with reference solution (e).

Limits:

— *impurity A:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (3.0 per cent);

— *impurity B* (eluting on the tail of the principal peak): not more than 0.5 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (f) (1.5 per cent);

— *impurity C:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent);

— *impurity D*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.5 per cent).

Heavy metals (*2.4.8*)

Maximum 50 ppm.

0.5 g complies with test C. Prepare the reference solution using 2.5 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 2.0 per cent, determined on 1.000 g by drying at 60 °C over *diphosphorus pentoxide R* at a pressure not exceeding 670 Pa for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.5 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.5 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

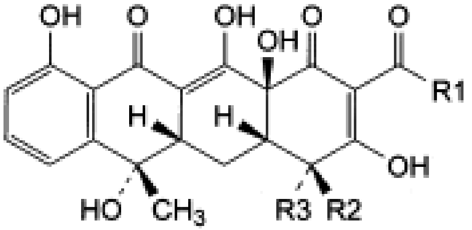
Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{22}H_{25}ClN_2O_8$.

STORAGE

Protected from light. If the substance is sterile, store in a sterile, tamper-proof container.

IMPURITIES



A. R1 = NH_2, R2 = H, R3 = $N(CH_3)_2$: (4*R*,4a*S*,5a*S*,6*S*,12a*S*)-4-(dimethylamino)-3,6,10,12,12a-pentahydroxy-6-methyl-1,11-dioxo-1,4,4a,5,5a,6,11,12a-octahydrotetracene-2-carboxamide (4-epitetracycline),

Ph Eur

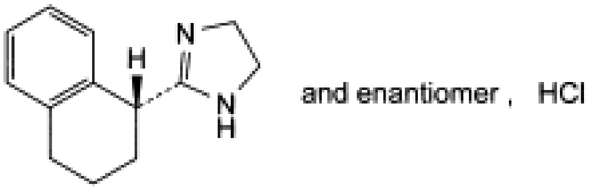
Tetryzoline Hydrochloride

General Notices

(Ph Eur monograph 2101)



$C_{13}H_{17}ClN_2$ 236.7 *522-48-5*

Action and use

Adrenoceptor agonist; decongestant.

Ph Eur

DEFINITION

2-[(1*RS*)-1,2,3,4-Tetrahydronaphthalen-1-yl]-4,5-dihydro-1*H*-imidazole hydrochloride.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, in anhydrous ethanol and in ethanol (96 per cent), practically insoluble in acetone.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison tetryzoline hydrochloride CRS.

B. Dissolve 50 mg in 10 ml of *water R*. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution.

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 1.0 g in *water R* and dilute to 10 ml with the same solvent.

Related substances

Gas chromatography *(2.2.28)*.

Test solution Dissolve 1.0 g of the substance to be examined in a mixture of 25 volumes of *1 M sodium hydroxide* and 75 volumes of *methanol R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of 25 volumes of *1 M sodium hydroxide* and 75 volumes of *methanol R*. Dilute 1.0 ml of this solution to 10.0 ml with a mixture of 25 volumes of *1 M sodium hydroxide* and 75 volumes of *methanol R*.

Column:
- *material:* fused silica;
- *size*: *l* = 25 m, Ø = 0.32 mm;
- *stationary phase*: *poly(dimethyl)siloxane R* (1 µm).

Carrier gas *helium for chromatography R*.

Split ratio 1:40.

Flow rate 2.5 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 8	160
	8 - 11	160 → 220
	11 - 15	220
Injection port		220
Detector		220

Detection Flame ionisation.

Injection 1 µl.

Relative retention With reference to tetryzoline (retention time = about 12 min): impurity A = about 0.5.

System suitability Reference solution:

— *signal-to-noise ratio* : minimum 50 for the principal peak.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with the reference solution (0.1 per cent);

— *total:* not more than twice the area of the principal peak in the chromatogram obtained with the reference solution (0.2 per cent);

— *disregard limit:* 0.5 times the area of the principal peak in the chromatogram obtained with the reference solution (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

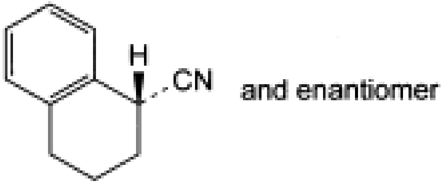
ASSAY

Dissolve 0.200 g in 100 ml of a mixture of 3 volumes of *anhydrous acetic acid R* and 7 volumes of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* . Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 23.67 mg of $C_{13}H_{17}ClN_2$.

IMPURITIES

Specified impurities *A.*



A. (1*RS*)-1,2,3,4-tetrahydronaphthalene-1-carbonitrile (α-cyanotetraline).

Ph Eur

Theobroma Oil

General Notices

Cocoa Butter

DEFINITION

Theobroma Oil is the solid fat obtained from the roasted seeds of *Theobroma cacao* L.

CHARACTERISTICS

A yellowish white, solid fat; odour, slight, agreeable and resembling that of cocoa. Somewhat brittle.

Freely soluble in *ether* and in *petroleum spirit (boiling range, 40° to 60°)*; slightly soluble in *ethanol (96%)* .

TESTS

Acid value

Not more than 4.0, Appendix X B.

Iodine value

35 to 40 (*iodine monochloride method*), Appendix X E.

Melting point

31° to 34°, Appendix V A, Method IV. Prepare the substance being examined in the following manner. Melt about 30 g in an oven at a temperature of 55° to 60° and filter through a suitable dry filter paper, maintaining the temperature between 53° and 60°. Cool with occasional stirring until the temperature falls to between 32° and 34°, stir continuously with a mechanical stirrer until the first signs of cloudiness appear and continue to stir by hand until the substance has the consistence of a paste. Immediately transfer to a vessel previously kept at a temperature of 15° to 22° and allow to stand at this temperature for 24 hours before carrying out the test.

Refractive index

At 40°, 1.456 to 1.458, Appendix V E.

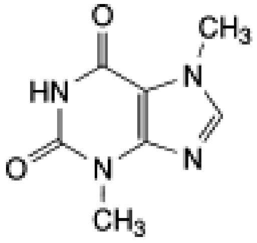
Saponification value

188 to 196, Appendix X G.

Theobromine

General Notices

(Ph Eur monograph 0298)



$C_7H_8N_4O_2$ 180.2 *83-67-0*

Action and use

Non-selective phosphodiesterase inhibitor (xanthine); treatment of reversible airways obstruction.

Ph Eur

DEFINITION

Theobromine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 3,7-dimethyl-3,7-dihydro-1*H*-purine-2,6-dione, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, very slightly soluble in water and in ethanol, slightly soluble in ammonia. It dissolves in dilute solutions of alkali hydroxides and in mineral acids.

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *theobromine CRS*.

B. Dissolve about 20 mg in 2 ml of *dilute ammonia R1*, warming slightly, and cool. Add 2 ml of *silver nitrate solution R2*. The solution remains clear. Boil the solution for a few minutes. A white, crystalline precipitate is formed.

C. It gives the reaction of xanthines *(2.3.1)* .

TESTS

Acidity

To 0.4 g add 20 ml of boiling *water R* and boil for 1 min. Allow to cool and filter. Add 0.05 ml of *bromothymol blue solution R1* . The solution is yellow or yellowish-green. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to blue.

Related substance

Examine by thin-layer chromatography *(2.2.27)* , using *silica gel GF* $_{254}$ *R* as the coating substance.

Test solution To 0.2 g of the finely powdered substance to be examined add 10 ml of a mixture of 4 volumes of *methanol R* and 6 volumes of *chloroform R* . Heat under a reflux condenser on a water-bath for 15 min, shaking occasionally. Cool and filter.

Reference solution Dissolve 5 mg of *theobromine CRS* in a mixture of 4 volumes of *methanol R* and 6 volumes of *chloroform R* and dilute to 50 ml with the same mixture of solvents.

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 10 volumes of *concentrated ammonia R* , 30 volumes of *acetone R,* 30 volumes of *chloroform R* and 40 volumes of *butanol R* . Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R* .

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 125 ml of boiling *water R* , cool to 50 °C to 60 °C and add 25 ml of *0.1 M silver nitrate* . Using 1 ml of *phenolphthalein solution R* as indicator, titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

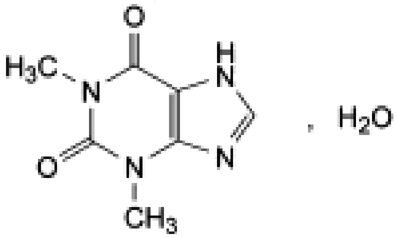
1 ml of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

Ph Eur

Theophylline Hydrate

General Notices

(Theophylline Monohydrate, Ph Eur monograph 0302)



$C_7H_8N_4O_2,H_2O$ 198.2 *5967-84-0*

Action and use

Non-selective phosphodiesterase inhibitor (xanthine); treatment of reversible airways obstruction.

Preparations

Aminophylline Injection

Prolonged-release Theophylline Tablets

Ph Eur

DEFINITION

1,3-Dimethyl-3,7-dihydro-1*H*-purine-2,6-dione monohydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, sparingly soluble in ethanol. It dissolves in solutions of alkali hydroxides, in ammonia and in mineral acids.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D, E.*

A. Melting point *(2.2.14)* : 270 °C to 274 °C, determined after drying at 100-105 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Dry the substance to be examined at 100-105 °C before use.

Comparison *Ph. Eur. reference spectrum of theophylline.*

C. Heat 10 mg with 1.0 ml of a 360 g/l solution of *potassium hydroxide R* in a water-bath at 90 °C for 3 min, then add 1.0 ml of *diazotised sulphanilic acid solution R* . A red colour slowly develops. Carry out a blank test.

D. It complies with the test for water (see Tests).

E. It gives the reaction of xanthines *(2.3.1)* .

TESTS

Solution S

Dissolve 0.5 g with heating in *carbon dioxide-free water R* , cool and dilute to 75 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity

To 50 ml of solution S add 0.1 ml of *methyl red solution R* . The solution is red. Not more than 1.0 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 10 mg of *theobromine R* in the mobile phase, add 5 ml of the test solution and dilute to 100 ml with the mobile phase. Dilute 5 ml of this solution to 50 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (7 µm).

Mobile phase Mix 7 volumes of *acetonitrile for chromatography R* and 93 volumes of a 1.36 g/l solution of *sodium acetate R* containing 5.0 ml/l of *glacial acetic acid R* .

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 272 nm.

Injection 20 µl.

Run time 3.5 times the retention time of theophylline.

Relative retention With reference to theophylline (retention time = about 6 min): impurity C = about 0.3; impurity B = about 0.4; impurity D = about 0.5; impurity A = about 2.5.

System suitability Reference solution (b):

- *resolution:* minimum 2.0 between the peaks due to theobromine and theophylline.

Limits:

- *impurities A, B, C, D*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

8.0 per cent to 9.5 per cent, determined on 0.20 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.160 g in 100 ml of *water R* , add 20 ml of *0.1 M silver nitrate* and shake. Add 1 ml of *bromothymol blue solution R1* . Titrate with *0.1 M sodium hydroxide* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 18.02 mg of $C_7H_8N_4O_2$.

B. Dissolve about 20 mg in 10 ml of *water R,* add 1 ml of *dilute acetic acid R* and 1.6 ml of *1 M sodium hydroxide* , heat on a water-bath for 30 min and allow to cool. Add 5 ml of *dilute sodium hydroxide solution R* , 10 ml of *potassium ferricyanide solution R* and 10 ml of *butanol R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 ml of *1 M sodium hydroxide* and 0.2 g of *sodium sulphite R* instead of 1.6 ml of *1 M sodium hydroxide* . Practically no fluorescence is seen.

C. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 2.5 g in *distilled water R* and dilute to 25 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 or GY_7 *(2.2.2, Method II)*.

Dilute 2.5 ml of solution S to 5 ml with *water R* .

pH *(2.2.3)*

2.7 to 3.3.

Dilute 2.5 ml of solution S to 10 ml with *water R* .

Related substances

Liquid chromatography *(2.2.29)* .

Solution A Add 5 volumes of *glacial acetic acid R* to 95 volumes of *water R* and mix.

Test solution Dissolve 0.35 g of the substance to be examined in 15.0 ml of solution A and dilute to 100.0 ml with *water R* .

Reference solution (a) Dissolve 5 mg of the substance to be examined and 5 mg of *thiamine impurity E CRS* in 4 ml of solution A and dilute to 25.0 ml with *water R* . Dilute 5.0 ml of the solution to 25.0 ml with *water R* .

Reference solution (b) Dilute 1.0 ml of the test solution to 50.0 ml with *water R* . Dilute 5.0

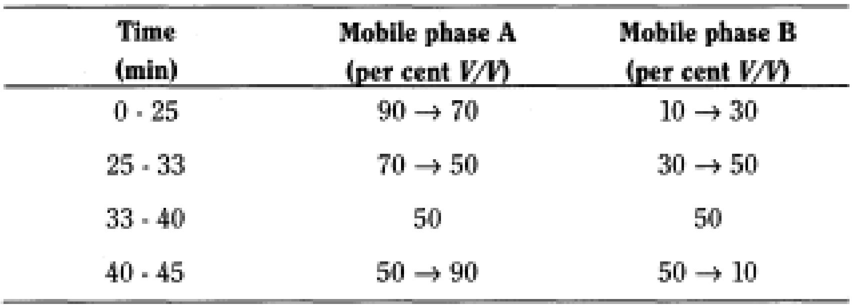
ml of this solution to 25.0 ml with *water R* .

Column:

- *size*: *l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase:* spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 350 m2/g and a pore size of 10 nm;
- *temperature*: 45 °C.

Mobile phase:

- *mobile phase A*: 3.764 g/l solution of *sodium hexanesulphonate R* adjusted to pH 3.1 with *phosphoric acid R;*
- *mobile phase B: methanol R2* ,



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 25	90 → 70	10 → 30
25 - 33	70 → 50	30 → 50
33 - 40	50	50
40 - 45	50 → 90	50 → 10

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 248 nm.

Injection 25 µl.

Relative retention With reference to thiamine (retention time = about 30 min): impurity A = about 0.3; impurity B = about 0.9; impurity C = about 1.2.

System suitability Reference solution (a):

- *resolution*: minimum 1.6 between the peaks due to impurity E and to thiamine.

Limits:

- *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);
- *total:* not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);
- *disregard limit*: 0.125 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Sulphates ***(2.4.13)***

Maximum 300 ppm.

5 ml of solution S diluted to 15 ml with *distilled water R* complies with the limit test for sulphates.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

12 ml of solution S complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R.*

Water ***(2.5.12)***

Maximum 5.0 per cent, determined on 0.40 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.110 g in 5 ml of *anhydrous formic acid R* and add 50 ml of *acetic anhydride R* . Titrate immediately with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* and carrying out the titration within 2 min. Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 16.86 mg of $C_{12}H_{18}Cl_2N_4OS$.

STORAGE

In a non-metallic container, protected from light.

IMPURITIES

Specified impurities *A, B, C.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. Thiamine Nitrate

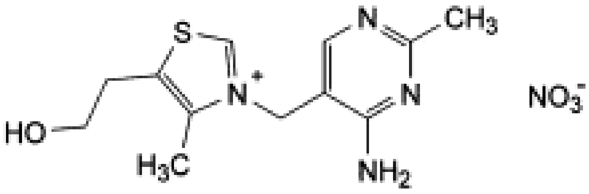
General Notices

(Ph Eur monograph 0531)



$C_{12}H_{17}N_5O_4S$ 327.4 *532-43-4*

Action and use

Vitamin B_1.

Ph Eur

DEFINITION

3-[(4-Amino-2-methylpyrimidin-5-yl)methyl]-5-(2-hydroxyethyl)-4-methylthiazolium nitrate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or small, colourless crystals.

Solubility

Sparingly soluble in water, freely soluble in boiling water, slightly soluble in alcohol and in methanol.

IDENTIFICATION

First identification *A, C.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of thiamine nitrate.*

B. Dissolve about 20 mg in 10 ml of *water R,* add 1 ml of *dilute acetic acid R* and 1.6 ml of *1 M sodium hydroxide* , heat on a water-bath for 30 min and allow to cool. Add 5 ml of dilute *sodium hydroxide solution R* , 10 ml of *potassium ferricyanide solution R* and 10 ml of *butanol R* and shake vigorously for 2 min. The upper alcoholic layer shows an intense light-blue fluorescence, especially in ultraviolet light at 365 nm. Repeat the test using 0.9 ml of *1 M sodium hydroxide* and 0.2 g of *sodium sulphite R* instead of 1.6 ml of *1 M sodium hydroxide* . Practically no fluorescence is produced.

C. About 5 mg gives the reaction of nitrates *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.8 to 7.6 for solution S.

Related substances

Liquid chromatography *(2.2.29)* .

Solution A Add 5 volumes of *glacial acetic acid R* to 95 volumes of *water R* and mix.

Test solution Dissolve 0.35 g of the substance to be examined in 15.0 ml of solution A and dilute to 100.0 ml with *water R* .

Reference solution (a) Dissolve 5 mg of the substance to be examined and 5 mg of *thiamine impurity E CRS* in 4 ml of solution A and dilute to 25.0 ml with *water R* . Dilute 5.0 ml of the solution to 25.0 ml with *water R* .

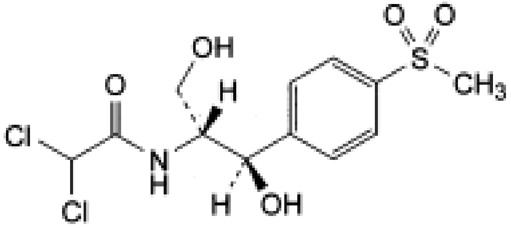
Thiamphenicol

General Notices

(Ph Eur monograph 0109)



$C_{12}H_{15}Cl_2NO_5S$ 356.2 *15318-45-3*

Action and use

Antibacterial.

Ph Eur

DEFINITION

2,2-Dichloro-*N*-[(1*R*,2*R*)-2-hydroxy-1-(hydroxymethyl)-2-[4- (methylsulphonyl)phenyl]ethyl] acetamide.

Content

98.0 per cent to 100.5 per cent (dried substance).

CHARACTERS

Appearance

Fine, white or yellowish-white, crystalline powder or crystals.

Solubility

Slightly soluble in water, very soluble in dimethylacetamide, freely soluble in acetonitrile and in dimethylformamide, soluble in methanol, sparingly soluble in acetone and in anhydrous ethanol, slightly soluble in ethyl acetate.

A solution in anhydrous ethanol is dextrorotatory and a solution in dimethylformamide is laevorotatory.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Dry the substance to be examined and the reference substance at 100-105 °C for 2 h; examine as discs of *potassium bromide R.*

Comparison *thiamphenicol CRS.*

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 0.1 g of *thiamphenicol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *silica gel* GF_{254} *R* as the coating substance.

Mobile phase *methanol R, ethyl acetate R* (3:97 *V/V*).

Application 5 µl.

Development Over a path of 10 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the spot in the chromatogram obtained with the reference solution.

C. To 50 mg in a porcelain crucible add 0.5 g of *anhydrous sodium carbonate R* . Heat over an open flame for 10 min. Allow to cool. Take up the residue with 5 ml of *dilute nitric acid R* and filter. To 1 ml of the filtrate add 1 ml of *water R.* The solution gives reaction (a) of chlorides (*2.3.1*).

TESTS

Acidity or alkalinity

Shake 0.1 g with 20 ml of *carbon dioxide-free water R* and add 0.1 ml of *bromothymol blue solution R1 .* Not more than 0.1 ml of *0.02 M hydrochloric acid* or *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Specific optical rotation *(2.2.7)*

- 21 to - 24 (dried substance).

Dissolve 1.25 g in *dimethylformamide R* and dilute to 25.0 ml with the same solvent.

Melting point *(2.2.14)*

163 °C to 167 °C.

Absorbance *(2.2.25)* .

Test solution (a) Dissolve 20 mg in *water R*, heating to about 40 °C, and dilute to 100.0 ml with the same solvent.

Test solution (b) Dilute 2.5 ml of test solution (a) to 50.0 ml with *water R*.

Spectral range 240-300 nm for test solution (a); 200-240 nm for test solution (b).

Absorption maxima At 266 nm and 273 nm for test solution (a); at 224 nm for test solution (b).

Specific absorbances at the absorption maxima:

— at 266 nm: 25 to 28 for test solution (a);

— at 273 nm: 21.5 to 23.5 for test solution (a);

— at 224 nm: 370 to 400 for test solution (b).

Chlorides ***(2.4.4)***

Maximum 200 ppm.

Shake 0.5 g with 30 ml of *water R* for 5 min and filter.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

1.0 g complies with test C. Prepare the reference solution using 1 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.300 g in 30 ml of *ethanol (96 per cent) R*, add 20 ml of a 500 g/l solution of *potassium hydroxide R,* mix and heat under a reflux condenser for 4 h. Cool, add 100 ml of *water R*, neutralise with *dilute nitric acid R* and add 5 ml of the same acid in excess. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*, using a silver indicator electrode and a mercurous sulphate reference electrode or any other appropriate electrode. Carry out a blank test.

1 ml of *0.1 M silver nitrate* is equivalent to 17.81 mg of $C_{12}H_{15}Cl_2NO_5S$.

STORAGE

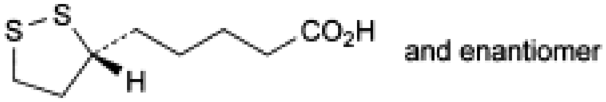
In an airtight container, protected from light.

Ph Eur

Thioctic Acid

General Notices

(Ph Eur monograph 1648)



$C_8H_{14}O_2S_2$ 206.3 *62-46-4*

Action and use

Antioxidant.

Ph Eur

DEFINITION

5-[(3*RS*)-1,2-Dithiolan-3-yl]pentanoic acid.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Very slightly soluble in water, very soluble in dimethylformamide, freely soluble in methanol.

mp

About 61 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *thioctic acid CRS.*

TESTS

Appearance of solution

The solution is clear *(2.2.1)* .

Dissolve 0.50 g in a 20 g/l solution of *sodium hydroxide R* and dilute to 10 ml with the same solution.

Impurity B

Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.20 g of the substance to be examined in *dimethylformamide R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of thioctic acid containing *impurity B CRS* in *dimethylformamide R* and dilute to 1.0 ml with the same solvent (1.0 per cent impurity B solution).

Plate *TLC silica gel plate R.*

Mobile phase 25 per cent *V/V* solution of *ammonia R, water R, ethyl acetate R, propanol R* (5:10:40:40 *V/V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying At 50 °C for 20 min.

Detection Expose to iodine vapour for 30 min or until the spots appear.

System suitability Reference solution:

— the chromatogram shows 2 clearly separated principal spots due to impurity B (R_F = 0.0) and thioctic acid (R_F = about 0.3).

Limit:

— *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (1.0 per cent).

Related substances

Liquid chromatography *(2.2.29)* . *Protect the solutions from light.*

Solvent mixture a mixture of equal volumes of *acetonitrile R1* and a 0.7 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.6 with *phosphoric acid R* .

Test solution Dissolve 50.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a) Dissolve 5 mg of *thioctic acid for system suitability CRS* (containing impurity A) in the solvent mixture and dilute to 5 ml with the solvent mixture.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Reference solution (c) Dissolve 50.0 mg of *thioctic acid CRS* in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Blank solution Solvent mixture.

Column:
- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 35 °C.

Mobile phase Mix 8 volumes of *acetonitrile R1*, 41 volumes of a 0.7 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *phosphoric acid R*, and 51 volumes of *methanol R*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µl.

Run time 2.5 times the retention time of thioctic acid.

Relative retention With reference to thioctic acid (retention time = about 6 min): impurity A = about 2.2.

System suitability:
- *resolution:* minimum 6.0 between the peaks due to thioctic acid and impurity A in the chromatogram obtained with reference solution (a);
- *symmetry factor*: maximum 2.0 for the peak due to thioctic acid in the chromatogram obtained with reference solution (c).

Limits:
- *correction factor*: for the calculation of content, multiply the peak area of impurity A by 0.6;
- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);
- *total:* not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.2 per cent, determined on 1.000 g by drying *in vacuo* at 40 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (c).

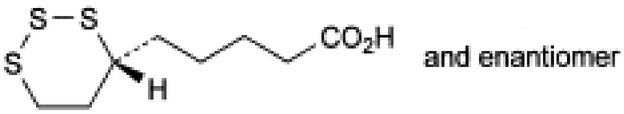
Calculate the percentage content of $C_8H_{14}O_2S_2$ from the peak areas and the declared content of *thioctic acid CRS*.

STORAGE

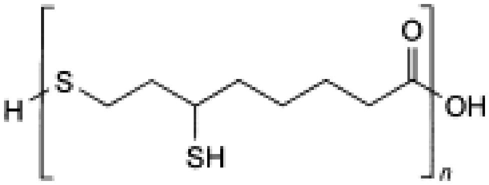
Protected from light.

IMPURITIES

Specified impurities A, B.



A. 5-[(4*RS*)-1,2,3-trithian-4-yl]pentanoic acid,



B. α-hydro-ω-hydroxypoly[sulphanediyl(3-sulphanyl-8-oxooctane-1,8-diyl)] (mixture of thioctic acid polymers).

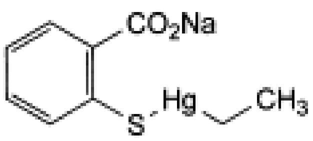
Ph Eur

Thiomersal

General Notices

Thimerosal

(Ph Eur monograph 1625)



$C_9H_9HgNaO_2S$ 404.8 *54-64-8*

Action and use

Antiseptic; adjuvant in vaccine formulations.

Ph Eur

DEFINITION

Sodium ethyl[2-sulphanylbenzoato(2-)-*C*,*S*]mercurate(1-).

Content

97.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, sparingly soluble or soluble in ethanol (96 per cent), practically insoluble in methylene chloride.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Melting point *(2.2.14)* : 103 °C to 115 °C.

Dissolve 0.5 g in *water R* and dilute to 10 ml with the same solvent. Add 2 ml of *dilute hydrochloric acid R* . A white precipitate is formed. Wash the precipitate with *water R* and dry over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison thiomersal CRS.

C. Treat 50 mg by the oxygen-flask method *(2.5.10)* . Use a mixture of 1 ml of *strong hydrogen peroxide solution R* and 50 ml of *water R* to absorb the combustion products. To the solution add 5 ml of *dilute nitric acid R* . 0.1 ml of this solution gives reaction (a) of mercury *(2.3.1)* . To the remaining part of the solution add 10 ml of *dilute hydrochloric acid R* and filter. 5 ml of the filtrate, without further addition of acid, gives reaction (a) of sulphates *(2.3.1)* .

D. Solution S (see Tests) gives reaction (a) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than reference solution B_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

6.0 to 8.0.

Dilute 5 ml of solution S to 50 ml with *carbon dioxide-free water R* .

Inorganic mercury compounds

Maximum 0.70 per cent.

Protect the solutions from light throughout the procedure.

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 25.0 ml with the same solvent.

Reference solution Dissolve 95.0 mg of *mercuric chloride R* in *water R* and dilute to 50.0 ml with the same solvent. Dilute 1.0 ml of the solution to 20.0 ml with *water R* .

Test, reference and blank preparations Label five 10 ml volumetric flasks A, B, C, D and E. Place 5 ml of the test solution in flasks A, B, C and D. To each of the flasks C and D add 0.5 ml of the reference solution. Dilute the contents of flasks A and C to 10 ml with *water R* (blank preparations A and C). Dilute the contents of flasks B and D to 10 ml with a freshly prepared 332 g/l solution of *potassium iodide R* (test preparation B and reference preparation D). Place 5 ml of a 332 g/l solution of *potassium iodide R* in flask E. Dilute to 10 ml with *water R* (blank preparation E).

Measure the absorbance *(2.2.25)* of each solution (A_a, A_b, A_c, A_d and A_e) at 323 nm using *water R* as the compensation liquid. Calculate the content of inorganic mercury compounds, expressed as Hg from the expression:

$$\frac{(A_b - A_a - A_e) \times m_R \times 0.1847}{(A_d - A_c - A_b + A_a) \times m_T}$$

m_R = mass of mercuric chloride in the reference solution in milligrams

m_T = mass of the substance to be examined in milligrams.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator over *diphosphorus pentoxide R* at a pressure not exceeding 0.7 kPa for 24 h.

ASSAY

Place 0.5 g in a 100 ml long-necked combustion flask, add 5 ml of *sulphuric acid R* and heat gently until charring occurs, continue to heat and add dropwise *strong hydrogen peroxide solution R* until the mixture is colourless. Dilute with *water R*, evaporate until slight fuming occurs, dilute to 10 ml with *water R*, cool down and titrate with *0.1 M ammonium thiocyanate* using *ferric ammonium sulphate solution R2 as indicator.*

1 ml of *0.1 M ammonium thiocyanate* is equivalent to 20.24 mg of $C_9H_9HgNaO_2S$.

STORAGE

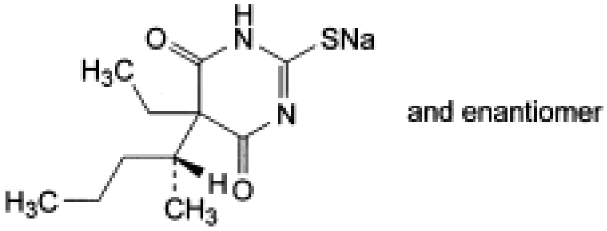
Protected from light.

Ph Eur

Thiopental Sodium

General Notices

(Thiopental Sodium and Sodium Carbonate, Ph Eur monograph 0212)



71-73-8

Action and use

Intravenous barbiturate; general anaesthetic.

Preparation

Thiopental Injection

Ph Eur

DEFINITION

Thiopental sodium and sodium carbonate is a mixture of the sodium derivative of 5-ethyl-5-[(1*RS*)-1-methylbutyl]-2-thioxo-2,3-dihydropyrimidine-4,6(1*H*,5*H*)-dione ($C_{11}H_{17}N_2NaO_2S$; M_r 264.3) and anhydrous sodium carbonate, containing the equivalent of not less than 84.0 per cent and not more than 87.0 per cent of thiopental and not less than 10.2 per cent and not more than 11.2 per cent of Na, both calculated with reference to the dried substance.

CHARACTERS

A yellowish-white powder, hygroscopic, freely soluble in water, partly soluble in ethanol.

IDENTIFICATION

First identification A, B, E.

Second identification A, C, D, E.

A. Acidify 10 ml of solution S (see Tests) with *dilute hydrochloric acid R* . An effervescence is produced. Shake with 20 ml of *ether R*. Separate the ether layer, wash with 10 ml of *water R*, dry over *anhydrous sodium sulphate R* and filter. Evaporate the filtrate to dryness and dry the residue at 100 °C to 105 °C (test residue). Determine the melting point *(2.2.14)* of the test residue. Mix equal parts of the test residue and *thiopental CRS* and determine the melting point of the mixture. The difference between the melting points (which are about 160 °C) is not greater than 2 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing the test residue (see identification test A) with the spectrum obtained with *thiopental CRS*.

C. Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF$_{254}$ R* as the coating substance.

Test solution Dissolve 0.1 g of the substance to be examined in *water R* and dilute to 100 ml with the same solvent.

Reference solution Dissolve 85 mg of *thiopental CRS* in 10 ml of *dilute sodium hydroxide solution R* and dilute to 100 ml with *water R*.

Apply separately to the plate 10 µl of each solution. Develop over a path of 18 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R.* Examine immediately in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives the reaction of non-nitrogen substituted barbiturates *(2.3.1)*.

E. It gives reaction (a) of sodium *(2.3.1)*.

TESTS

Solution S

Dissolve 5.0 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution GY_3 *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel GF$_{254}$ R* as the coating substance.

Test solution Dissolve 1.0 g of the substance to be examined in *water R* and dilute to 100 ml with the same solvent. Disregard any slight residue.

Reference solution Dilute 0.5 ml of the test solution to 100 ml with *water R*.

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using the lower layer of a mixture of 5 volumes of *concentrated ammonia R*, 15 volumes of *alcohol R* and 80 volumes of *chloroform R*. Examine immediately in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent). Disregard any spot at the starting-point.

Chlorides *(2.4.4)*

To 5 ml of solution S add 35 ml of *water R* and 10 ml of *dilute nitric acid R*. Shake with three quantities, each of 25 ml, of *ether R* and discard the ether layers. Eliminate the ether from the aqueous layer by heating on a water-bath.15 ml of the aqueous layer complies with the limit test for chlorides (330 ppm).

Loss on drying *(2.2.32)*

Not more than 2.5 per cent, determined on 0.50 g by drying *in vacuo* at 100 °C for 4 h.

ASSAY

Sodium

Dissolve 0.400 g in 30 ml of *water R*. Add 0.1 ml of *methyl red solution R* and titrate with *0.1 M hydrochloric acid* until a red colour is obtained. Boil gently for 2 min. Cool and, if necessary, continue the titration with *0.1 M hydrochloric acid* until the red colour is again obtained.

1 ml of *0.1 M hydrochloric acid* is equivalent to 2.299 mg of Na.

Thiopental

Dissolve 0.150 g in 5 ml of *water R*. Add 2 ml of *dilute sulphuric acid R* and shake with four quantities, each of 10 ml, of *chloroform R*. Combine the chloroform layers, filter and evaporate the filtrate to dryness on a water-bath. Dissolve the residue in 30 ml of previously neutralised *dimethylformamide R* and add 0.1 ml of a 2 g/l solution of *thymol blue R* in *methanol R*. Titrate immediately with *0.1 M lithium methoxide* until a blue colour is obtained. Protect the solution from atmospheric carbon dioxide during the titration.

1 ml of *0.1 M lithium methoxide* is equivalent to 24.23 mg of $C_{11}H_{18}N_2O_2S$.

STORAGE

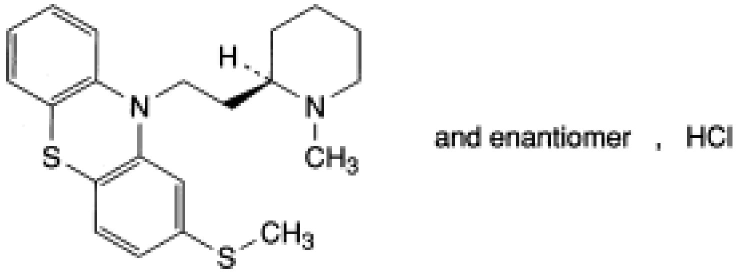
Store in an airtight container, protected from light.

Ph Eur

Thioridazine Hydrochloride

General Notices

(Ph Eur monograph 0586)



$C_{21}H_{26}N_2S_2$,HCl 407.0 *130-61-0*

Action and use

Dopamine receptor antagonist; neuroleptic.

Ph Eur

DEFINITION

10-[2-[(2*RS*)-1-Methylpiperidin-2-yl]ethyl]-2-(methylsulphanyl)-10*H*-phenothiazine hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, soluble in ethanol 96 per cent.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison thioridazine hydrochloride CRS.

B. 0.2 g gives reaction (b) of chlorides *(2.3.1)* .

TESTS

Carry out all operations protected from light.

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than intensity 6 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II).*

Dissolve 1.0 g in *methanol R* and dilute to 20 ml with the same solvent.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 1.0 g in *methanol R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* . *Carry out the test as quickly as possible and protected from light.*

Test solution Dissolve 20.0 mg of the substance to be examined in *methanol R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with *methanol R* . Dilute 2.0 ml of this solution to 100.0 ml with *methanol R* .

Reference solution (b) Dissolve the content of a vial of *thioridazine for system suitability CRS* (containing impurities A, B, C, D and E) in 1.0 ml of *methanol R* .

Column:

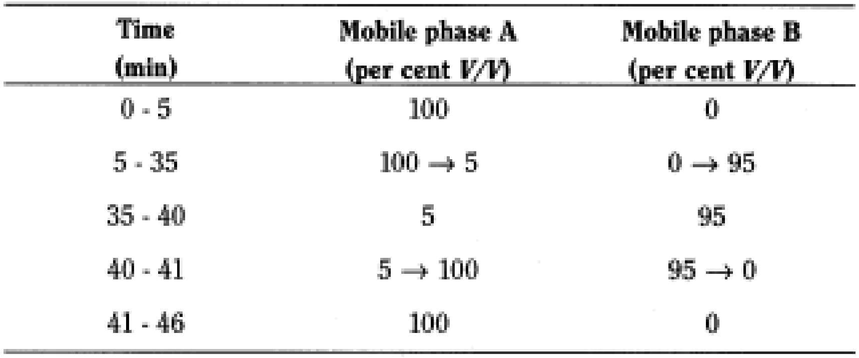
— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) resistant to bases up to pH 11.

Mobile phase:

— *mobile phase A: triethylamine R1, acetonitrile R, water R* (2:400:600 *V/V/V*);

— *mobile phase B: triethylamine R1, acetonitrile R* (2:1000 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	100	0
5 - 35	100 → 5	0 → 95
35 - 40	5	95
40 - 41	5 → 100	95 → 0
41 - 46	100	0

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 25 µl.

Identification of impurities Use the chromatogram supplied with *thioridazine for system suitability CRS* to identify the peaks due to impurities A, B, C, D and E .

Relative retention With reference to thioridazine (retention time = about 30 min): impurity D = about 0.1; impurity A = about 0.3; impurity C = about 0.4; impurity B = about 0.5; impurity E = about 0.6; impurity F = about 0.9.

System suitability Reference solution (b):

— *resolution*: minimum 3.5 between the peaks due to impurities C and B.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.9; impurity B = 2.4; impurity C = 0.5; impurity D = 1.5;

— *impurities A, B, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.0 g in 20 ml of *water R* . 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R* .

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 10 ml of *anhydrous acetic acid R* and 60 ml of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 40.70 mg of $C_{21}H_{27}ClN_2S_2$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities *A, B, C, D, E.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): F.*

Ph Eur

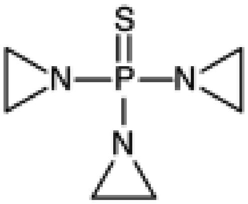
Thiotepa

General Notices



$C_6H_{12}N_3PS$ 189.2 *52-24-4*

Action and use

Cytotoxic alkylating agent.

Preparation

Thiotepa Injection

DEFINITION

Thiotepa is phosphorothioic tri(ethyleneamide). It contains not less than 97.0% and not more than 102.0% of $C_6H_{12}N_3PS$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

Fine, white crystalline flakes.

Freely soluble in *water*, in *chloroform* and in *ethanol (96%)*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of thiotepa *(RS 337)*.

B. Burn 20 mg by the method for *oxygen-flask combustion*, Appendix VIII C, using 5 ml of 1.25M *sodium hydroxide* as the absorbing liquid. When the process is complete, dilute to 25 ml with *water*. To 5 ml of the resulting solution add 0.1 ml of *hydrogen peroxide solution (100 vol)* and 1 ml of 1M *hydrochloric acid*, mix and add 0.05 ml of *barium chloride solution*. The solution becomes turbid.

C. To 2 ml of the solution obtained in test B add 40 ml of *water* and 4 ml of *ammonium molybdate-sulphuric acid solution*, mix, add 0.1 g of L- *ascorbic acid* and boil for 1 minute. A blue colour is produced.

TESTS

Melting point

52° to 57°, Appendix V A.

Clarity of solution

A 2.0% w/v solution is *clear*, Appendix IV A.

Related substances

Carry out the method for *liquid chromatography*, Appendix III D, using the following freshly prepared solutions. Solutions (1) and (2) are solutions of the substance being examined in *water* containing 0.350% w/v and 0.00035% w/v, respectively. For solution (3) dissolve 10 mg of the substance being examined in 2 ml of *methanol* in a ground-glass-stoppered tube, add 50 µl of a 0.1% v/v solution of *orthophosphoric acid*, stopper the tube and heat in a water bath at 65° for 50 seconds (generation of methoxythiotepa). Allow the solution to cool and add 1 ml of *methanol*. For solution (4) dissolve 15 mg of the substance being examined in 10 ml of *water*, add 1 g of *sodium chloride*, boil in a water bath for 10 minutes and cool (generation of chloro-adduct).

The chromatographic procedure may be carried out using (a) a stainless steel column (15 cm × 4.6 mm) packed with *end-capped octadecylsilyl silica gel for chromatography* (5 µm) (Nucleosil C18 is suitable), (b) 15 volumes of *acetonitrile* and 85 volumes of 0.1M *mixed phosphate buffer pH 7.0* as the mobile phase with a flow rate of 1 ml per minute and (c) a detection wavelength of 215 nm.

The chromatogram obtained with solution (3) shows a peak corresponding to methoxythiotepa with a retention time relative to thiotepa of about 1.3 and the chromatogram obtained with solution (4) shows a peak due to the chloro-adduct with a retention time relative to thiotepa of about 3.75. The test is not valid unless the *resolution factor* between the two principal peaks in the chromatogram obtained with solution (3) is at least 3.

For solution (1) allow the chromatography to proceed for 4 times the retention time of the principal peak. In the chromatogram obtained with solution (1) the area of any peak corresponding to the 'chloro-adduct' (identified from the peak in the chromatogram obtained with solution (4)) is not greater than 1.5 times the area of the principal peak in the chromatogram obtained with solution (2) (0.15%), the area of any other *secondary peak* is not greater than the area of the principal peak in the chromatogram obtained with solution (2) (0.1%) and the sum of the areas of all the *secondary peaks* is not greater than twice the area of the principal peak in the chromatogram obtained with solution (2) (0.2%).

Water

Not more than 0.5% w/w, Appendix IX C. Cool the reagents and titration vessel in ice throughout the procedure and use 1.2 g. Complete the procedure as quickly as possible.

ASSAY

Transfer 0.2 g to an iodine flask with the aid of 50 ml of a 20% w/v solution of *sodium thiosulphate* and titrate immediately with 0.1M *hydrochloric acid VS*, using 0.05 ml of *methyl orange solution* as indicator, until a faint red colour persists for 10 seconds. Stopper the flask, allow to stand for 30 minutes and titrate with 0.1M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Subtract the volume of 0.1M *sodium hydroxide VS* used from the volume of 0.1M *hydrochloric acid VS* used. Repeat the operation without the substance being examined. The difference between the titrations represents the amount of hydrochloric acid required. Each ml of 0.1M *hydrochloric acid VS* is equivalent to 6.307 mg of $C_6H_{12}N_3PS$.

STORAGE

Thiotepa should be stored at a temperature of 2° to 8°. At higher temperatures it polymerises and becomes inactive.

IMPURITIES

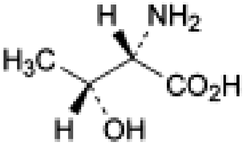
A. 'chloro-adduct'

B. 'hydroxythiotepa (A and B)'.

Threonine

General Notices

(Ph Eur monograph 1049)



$C_4H_9NO_3$ 119.1 *72-19-5*

Action and use

Amino acid.

Ph Eur

DEFINITION

Threonine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (2*S*,3*R*)-2-amino-3-hydroxybutanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, soluble in water, practically insoluble in alcohol.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *threonine CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Mix 1 ml of a 2 g/l solution of the substance to be examined with 1 ml of a 20 g/l solution of *sodium periodate R*. Add 0.2 ml of *piperidine R* and 0.1 ml of a 25 g/l solution of *sodium nitroprusside R*. A blue colour develops that changes to yellow after a few minutes.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

pH *(2.2.3)*

The pH of solution S is 5.0 to 6.5.

Specific optical rotation *(2.2.7)*

Dissolve 1.50 g in *water R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is - 27.6 to - 29.0, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *dilute hydrochloric acid R* and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *threonine CRS* in a 1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 50 ml with the same acid solution.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R*.

Reference solution (c) Dissolve 10 mg of *threonine CRS* and 10 mg of *proline CRS* in a 1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 25 ml with the same acid solution.

Apply to the plate 5 µl of each solution. Allow the plate to dry in air. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R*, 20 volumes of *water R* and 60 volumes of *butanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated principal spots.

Chlorides *(2.4.4)*

Dilute 10 ml of solution S to 15 ml with *water R*. The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dissolve 0.5 g in *distilled water R* and dilute to 15 ml with the same solvent. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

0.10 g complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm* NH_4*) R.*

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1,* shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals *(2.4.8)*

2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 5 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 11.91 mg of $C_4H_9NO_3$.

STORAGE

Store protected from light.

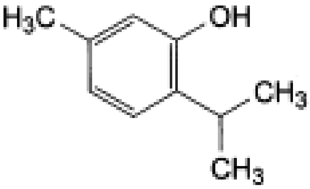
Thymol

General Notices

(Ph Eur monograph 0791)



$C_{10}H_{14}O$ 150.2 *89-83-8*

Ph Eur

DEFINITION

5-Methyl-2-(methylethyl)phenol.

CHARACTERS

Appearance

Colourless crystals.

Solubility

Very slightly soluble in water, very soluble in ethanol (96 per cent), freely soluble in essential oils and in fatty oils, sparingly soluble in glycerol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point *(2.2.14)* : 48 °C to 52 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *thymol CRS.*

C. Dissolve 0.2 g with heating in 2 ml of *dilute sodium hydroxide solution R* and add 0.2 ml of *chloroform R*. Heat on a water-bath. A violet colour develops.

D. Dissolve about 2 mg in 1 ml of *anhydrous acetic acid R*. Add 0.15 ml of *sulphuric acid R* and 0.05 ml of *nitric acid R.* A bluish-green colour develops.

TESTS

Appearance of solution

The solution is not more opalescent than reference suspension IV *(2.2.1)* and not more intensely coloured than reference solution R_6 *(2.2.2, Method II)*.

Dissolve 1.0 g in 10 ml of *dilute sodium hydroxide solution R*.

Acidity

To 1.0 g in a 100 ml glass-stoppered conical flask add 20 ml of *water R.* Boil until dissolution is complete, cool and stopper the flask. Shake vigorously for 1 min. Add a few crystals of the substance to be examined to initiate crystallisation. Shake vigorously for 1 min and filter. To 5 ml of the filtrate add 0.05 ml of *methyl red solution R* and 0.05 ml of *0.01 M sodium hydroxide*. The solution is yellow.

Related substances

Gas chromatography *(2.2.28)*.

Test solution Dissolve 0.100 g of the substance to be examined in *ethanol (96 per cent) R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dilute 1 ml of the test solution to 100 ml with *ethanol (96 per cent) R* .

Reference solution (b) Dilute 1 ml of reference solution (a) to 10 ml with *ethanol (96 per cent) R .*

Reference solution (c) Dilute 5 ml of reference solution (b) to 10 ml with *ethanol (96 per cent) R .*

Column:

- *material*: glass or steel;
- *size*: *l* = 4 m, Ø = 2 mm;
- *stationary phase*: diatomaceous earth for *gas chromatography R*, impregnated with a mixture suitable for the separation of free fatty acids.

Carrier gas *nitrogen for chromatography R.*

Flow rate 30 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 2	80
	2 - 22	80 → 240
	22 - 37	240
Injection port		250
Detector		300

Detection Flame ionisation.

Injection 1 µl.

System suitability Reference solution (b):

— *signal-to-noise ratio* : minimum 5 for the principal peak.

Limits:

— *total:* not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (1.0 per cent);

— *disregard limit:* the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Residue on evaporation

Maximum 0.05 per cent.

Evaporate 2.00 g on a water-bath and heat in an oven at 100-105 °C for 1 h. The residue weighs not more than 1.0 mg.

STORAGE

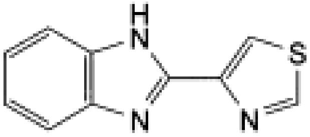
Protected from light.

Ph Eur

Tiabendazole

General Notices

(Ph Eur monograph 0866)



$C_{10}H_7N_3S$ 201.2 *148-79-8*

Action and use

Benzimidazole antihelminthic.

Preparation

Tiabendazole Tablets

Ph Eur

DEFINITION

Tiabendazole contains not less than 98.0 per cent and not more than the equivalent of 101.0 per cent of 2-(thiazol-4-yl)-1*H*-benzimidazole, calculated with reference to the anhydrous substance.

CHARACTERS

A white or almost white, crystalline powder, practically insoluble in water, slightly soluble in alcohol and in methylene chloride. It dissolves in dilute mineral acids. It melts at about 300 °C.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Dissolve 25 mg in *0.1 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 2.0 ml of the solution to 100.0 ml with *0.1 M hydrochloric acid* . Examined between 230 nm and 350 nm *(2.2.25)* , the solution shows two absorption maxima, at 243 nm and 302 nm. The ratio of the absorbance measured at the maximum at 302 nm to that measured at the maximum at 243 nm is 1.8 to 2.1.

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *tiabendazole CRS.* Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 5 mg in *0.1 M hydrochloric acid* and dilute to 5 ml with the same acid. Add 3 mg of *p-phenylenediamine dihydrochloride R* and shake until dissolved. Add 0.1 g of *zinc powder R* , mix, allow to stand for 2 min and add 5 ml of *ferric ammonium sulphate solution R2* . A bluish-violet colour develops.

TESTS

Related substances

Examine by thin-layer chromatography *(2.2.27)* , using *silica gel HF$_{254}$ R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 2 ml of test solution (a) to 20 ml with *methanol R* .

Reference solution (a) Dissolve 20 mg of *tiabendazole CRS* in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 10 ml with *methanol R* .

Reference solution (c) Dilute 1 ml of test solution (b) to 25 ml with *methanol R* .

Apply separately to the plate 20 µl of each solution. Develop over a path of 15 cm using a mixture of 2.5 volumes of *water R,* 10 volumes of *acetone R* , 25 volumes of *glacial acetic acid R* and 62.5 volumes of *toluene R* . Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.4 per cent).

o-Phenylenediamine

To 5.0 g in a flask fitted with a ground-glass stopper, add 25 ml of a mixture of 1 volume of *methanol R* and 2 volumes of *water R* . Shake for 3 min. Filter through a sintered-glass filter (16) *(2.1.2)* under reduced pressure. To 10 ml of the filtrate add 0.5 ml of *hydrochloric acid R* and 0.5 ml of *acetylacetone R* and shake until the solution is clear. The solution is not more intensely coloured than reference solution R_7 *(2.2.2, Method I)* (10 ppm).

Heavy metals *(2.4.8)*

1.0 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R* .

Water *(2.5.12)*

Not more than 0.5 per cent, determined on 1.00 g by the semi-micro determination of water.

Sulphated ash ***(2.4.14)***

Not more than 0.2 per cent, determined on 1.0 g.

ASSAY

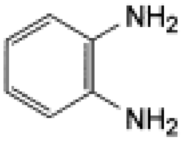
Dissolve 0.150 g in 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 20.12 mg of $C_{10}H_7N_3S$.

STORAGE

Store protected from light.

IMPURITIES



A. benzene-1,2-diamine.

Mobile phase *Water R*, *glacial acetic acid R*, *hexane R*, *methylene chloride R* (0.25:20:500:500 *V/V/V/V*); add the water to the acetic acid, then hexane and methylene chloride; sonicate the mixture for 2 min. Do not degas with helium during analysis.

Flow rate 1 ml/min.

Detection Spectrophotometer at 250 nm.

Injection 20 µl.

Run time Twice the retention time of tiaprofenic acid.

Relative retention With reference to tiaprofenic acid: impurity A = about 0.19; impurity B = about 0.43; impurity C = about 0.86.

System suitability Reference solution (d):

— *resolution*: minimum 3.0 between the peaks due to impurity C and tiaprofenic acid.

Limits:

— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *sum of impurities other than C*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 25 ml of *ethanol (96 per cent) R*. Add 25 ml of *water R* and 0.5 ml of *phenolphthalein solution R*. Titrate with *0.1 M sodium hydroxide*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 26.03 mg of $C_{14}H_{12}O_3S$.

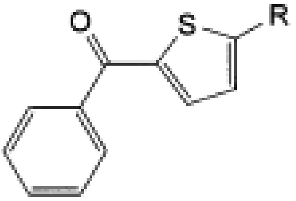
STORAGE

Protected from light.

IMPURITIES

Specified impurities C.

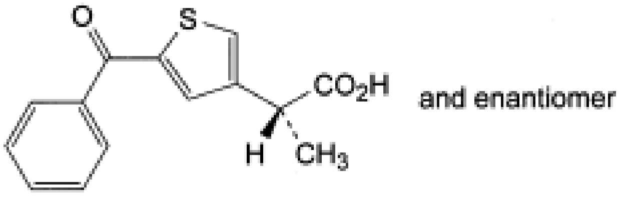
Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034).* It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A, B, D, E, F.*



A. R = C_2H_5: (5-ethylthiophen-2-yl)phenylmethanone,

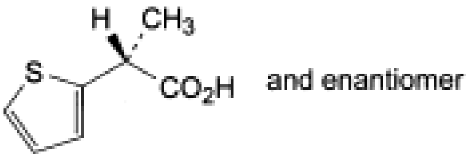
B. R = $CO\text{-}CH_3$: 1-(5-benzoylthiophen-2-yl)ethanone,

F. R = Br: (5-bromothiophen-2-yl)phenylmethanone,



C. (2*RS*)-2-(5-benzoylthiophen-3-yl)propanoic acid,

D. benzoic acid,



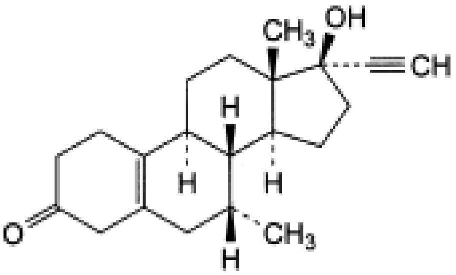
E. (2*RS*)-2-(thiophen-2-yl)propanoic acid.

Ph Eur

Tibolone

General Notices

(Ph Eur monograph 1739)



$C_{21}H_{28}O_2$ 312.5 *5630-53-5*

Action and use

Steroid with estrogenic and progestogenic properties.

Ph Eur

DEFINITION

17-Hydroxy-7α-methyl-19-nor-17α-pregn-5(10)-en-20-yn-3-one.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or crystals.

Solubility

Practically insoluble in water, soluble in acetone and in methanol.

It shows polymorphism *(5.9)* .

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of tibolone*.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined in the minimum volume of *anhydrous ethanol R* , evaporate to dryness on a water-bath and record a new spectrum using the residue.

TESTS

Specific optical rotation *(2.2.7)*

+ 100 to + 106 (dried substance).

Dissolve 0.250 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Select a brand of acetonitrile such that the formation of possible artefact peaks, eluting after impurity C at relative retentions 0.6 to 0.8, is avoided.

Solvent mixture *water R, acetonitrile R1* (25:75 *V/V*).

Test solution Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Reference solution (a) Dissolve 4 mg of *tibolone for system suitability CRS* (containing impurities A, B, C, D and E) in 1 ml of the solvent mixture.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture.

Column:

— *size*: l = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R, acetonitrile R1, water R* (8:40:52 *V/V/V*).

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 5 µl.

Run time 3 times the retention time of tibolone.

Identification of impurities Use the chromatogram supplied with *tibolone for system suitability CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, B, C, D and E.

Relative retention With reference to tibolone (retention time = about 14 min): impurity A = about 0.22; impurity B = about 0.24; impurity C = about 0.58; impurity D = about 1.12; impurity E = about 2.24.

System suitability Reference solution (a):

— *peak-to-valley ratio* : minimum 2.0, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tibolone.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 1.7; impurity B = 1.5; impurity C = 2.1;

— *impurities A, E*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *impurity B*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.4 per cent);

— *impurity C*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *impurity D*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 60 ml of *tetrahydrofuran R* . Add 25 ml of a 100 g/l solution of *silver nitrate R* . Titrate with *0.1 M sodium hydroxide* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.25 mg of $C_{21}H_{28}O_2$.

STORAGE

At a temperature of 2 °C to 8 °C.

IMPURITIES

Specified impurities *A, B, C, D, E*.

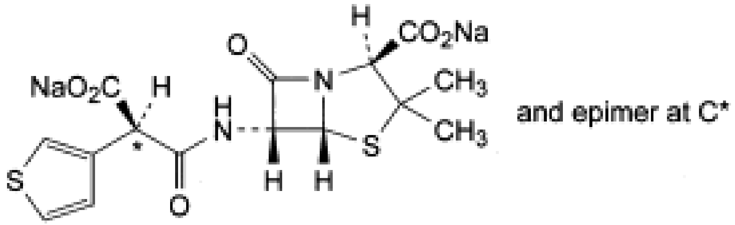
Ticarcillin Sodium

General Notices

(Ph Eur monograph 0956)



$C_{15}H_{14}N_2Na_2O_6S_2$ 428.4 *4697-14-7*

Action and use

Penicillin antibacterial.

Ph Eur

DEFINITION

Disodium (2*S*,5*R*,6*R*)-6-[[(2*RS*)-2-carboxylato-2-(thiophen-3-yl)acetyl]amino]-3,3-dimethyl-7-oxo-4-thia-1-azabicyclo[3.2.0]heptane-2-carboxylate.

Semi-synthetic product derived from a fermentation product.

Content

89.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or slightly yellow, hygroscopic powder.

Solubility

Freely soluble in water, soluble in methanol.

IDENTIFICATION

First identification A, D, E.

Second identification B, C, D.

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Dissolve 50 mg of the substance to be examined in 1 ml of *water R* , add 0.1 ml of *hydrochloric acid R1* , swirl and allow to stand in iced water for 10 min. Filter the precipitate and rinse with 2 ml of *water R* . Dissolve in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* . Evaporate the solvent almost to dryness, then dry in an oven at 60 °C for 30 min.

Comparison Repeat the operations using *ticarcillin monosodium CRS* .

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 25 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *ticarcillin monosodium CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *carbenicillin sodium CRS* and 25 mg of *ticarcillin monosodium CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silanised silica gel plate R* .

Mobile phase Mix 10 volumes of *acetone R* and 90 volumes of a 154 g/l solution of *ammonium acetate R* , adjusted to pH 5.0 with *glacial acetic acid R* .

Application 1 µl.

Development Over a path of 12 cm.

Drying In a current of hot air.

Detection Expose to iodine vapour.

System suitability Reference solution (b):

— The chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Place about 2 mg in a test-tube about 15 cm long and 15 mm in diameter. Moisten with 0.05 ml of *water R* and add 2 ml of *sulphuric acid-formaldehyde reagent R* . Mix the contents of the tube by swirling; the solution is brown. Place the test-tube in a water-bath for 1 min; a dark reddish-brown colour develops.

D. It gives reaction (a) of sodium *(2.3.1)* .

E. Specific optical rotation (see Tests).

TESTS

Solution S

Dissolve 2.50 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

pH ***(2.2.3)***

5.5 to 7.5 for solution S.

Specific optical rotation ***(2.2.7)***

+ 172 to + 187 (anhydrous substance).

Dissolve 0.250 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

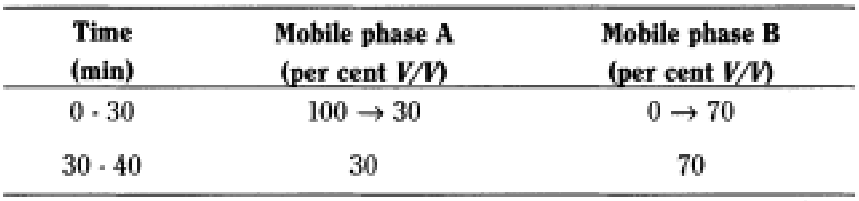
Test solution Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 25.0 ml with mobile phase A.

Reference solution (a) Dissolve 20.0 mg of *ticarcillin impurity A CRS* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 5.0 ml of this solution to 50.0 ml with mobile phase A.

Reference solution (b) Dilute 1 ml of the test solution to 50 ml with mobile phase A.

Column:
- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:
- *mobile phase A*: 1.3 g/l solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R* ;
- *mobile phase B*: *methanol R* , mobile phase A (50:50 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 30	100 → 30	0 → 70
30 - 40	30	70

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

System suitability Reference solution (b):
- *resolution*: minimum 2.0 between the 2 principal peaks (diastereoisomers).

Limits:

- *impurity A*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (4 per cent);
- *any other impurity*: for each impurity, not more than 1.25 times the area of the principal peak in the chromatogram obtained with reference solution (a) (2.5 per cent).

N*,*N*-Dimethylaniline** ***(2.4.26, Method B)

Maximum 20 ppm.

2-Ethylhexanoic acid ***(2.4.28)***

Maximum 0.5 per cent *m/m*.

Water ***(2.5.12)***

Maximum 5.5 per cent, determined on 0.150 g.

Bacterial endotoxins ***(2.6.14)***

Less than 0.05 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 10.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution Dissolve 50.0 mg of *ticarcillin monosodium CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 10.0 ml of this solution to 50.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 20 volumes of *methanol R* and 80 volumes of a 1.3 g/l solution of *ammonium phosphate R* adjusted to pH 7.0 with *phosphoric acid R* .

Flow rate 1 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

System suitability Reference solution:

- *resolution*: minimum 2.5 between the 2 principal peaks;
- *repeatability*: maximum relative standard deviation of 1.0 per cent for the 2 peaks due to ticarcillin after 6 injections.

Calculate the percentage content of ticarcillin sodium as the sum of the areas of the 2 peaks, multiplying the content of ticarcillin monosodium by 1.054.

STORAGE

In an airtight container , at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container .

IMPURITIES

Specified impurities *A.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. E. R = H: (4*S*)-2-[[[2-carboxy-2-(thiophen-3-yl)acetyl]amino]methyl]-5,5-dimethylthiazolidine-4-carboxylic acid (penilloic acids of ticarcillin).

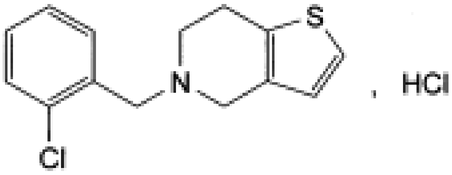
Ticlopidine Hydrochloride

General Notices

(Ph Eur monograph 1050)



$C_{14}H_{14}ClNS,HCl$ 300.2 *53885-35-1*

Action and use

Inhibition of adenosine diphosphate (ADP)-mediated platelet aggregation; antiplatelet drug.

Ph Eur

DEFINITION

5-(2-Chlorobenzyl)-4,5,6,7-tetrahydrothieno[3,2-*c*]pyridine hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Sparingly soluble in water and in anhydrous ethanol, very slightly soluble in ethyl acetate.

IDENTIFICATION

First identification B, D.

Second identification A, C, D.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25).*

Test solution (a) Dissolve 40 mg in *water R* and dilute to 100.0 ml with the same solvent.

Test solution (b) Dilute 5.0 ml of test solution (a) to 100.0 ml with *water R* .

Spectral range 250-350 nm for test solution (a); 200-350 nm for test solution (b).

Absorption maxima At 268 nm and 275 nm for test solution (a); at 214 nm and 232 nm for test solution (b).

Absorption ratio A_{268}/A_{275} = 1.1 to 1.2.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *ticlopidine hydrochloride CRS.*

C. Mix about 6 mg of *citric acid R* and 0.3 ml of *acetic anhydride R* . Add about 5 mg of the substance to be examined and heat in a water-bath at 80 °C. A red colour develops.

D. About 20 mg gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Dissolve 0.5 g in a 1 per cent *V/V* solution of *hydrochloric acid R* and dilute to 20 ml with the same solution.

pH *(2.2.3)*

3.5 to 4.0.

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Solvent mixture Mobile phase B, mobile phase A (20:80 *V/V*).

Test solution Dissolve 0.250 g of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

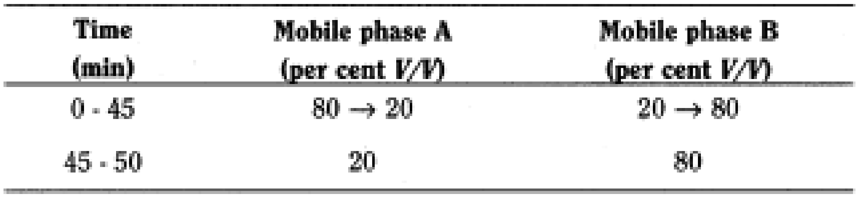
Reference solution Dissolve 5.0 mg of *ticlopidine impurity F CRS* in the solvent mixture. Add 1.00 ml of the test solution and dilute to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Column:
- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 40 °C.

Mobile phase:
- *mobile phase A*: 0.95 g/l solution of *sodium pentanesulphonate monohydrate R*,

adjusted to pH 3.4 with a 50 per cent *V/V* solution of *phosphoric acid R* ;

— *mobile phase B: methanol R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 45	80 → 20	20 → 80
45 - 50	20	80

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl; inject the solvent mixture as a blank.

Retention time Ticlopidine = about 15 min.

System suitability Reference solution:

— *resolution*: minimum 2.0 between the peaks due to ticlopidine and impurity F; if necessary, adjust the pH of mobile phase A;

— *signal-to-noise ratio* : minimum 50 for the peak due to ticlopidine.

Limits:

— *impurity F*: not more than 0.5 times the area of the corresponding peak in the chromatogram obtained with the reference solution (0.05 per cent);

— *any other impurity*: for each impurity, not more than 0.5 times the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.05 per cent);

— *total*: not more than the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.1 per cent);

— *disregard limit*: 0.1 times the area of the peak due to ticlopidine in the chromatogram obtained with the reference solution (0.01 per cent).

Formaldehyde

Maximum 20 ppm.

Dissolve 0.200 g in 4.0 ml of *water R* . Add 0.4 ml of *dilute sodium hydroxide solution R* . Centrifuge, filter the supernatant liquid through cotton previously impregnated with *water R* and dilute to 5.0 ml with *water R* . Transfer to a test-tube. Add 5.0 ml of *acetylacetone reagent R1* . Place the test-tube in a water-bath at 40 °C for 40 min. The test solution is not more intensely coloured than a standard prepared at the same time and in the same manner using 5.0 ml of a 0.8 ppm solution of formaldehyde (CH_2O), obtained by dilution of *formaldehyde standard solution (5 ppm* CH_2O*) R* with *water R* . Examine the tubes down their vertical axis.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in a 85 per cent *V/V* solution of *methanol R* and dilute to 20.0 ml with the same solvent. 12 ml of the solution complies with test B. Prepare the reference solution using 10 ml of *lead standard solution (1 ppm Pb) R* .

Water ***(2.5.12)***

Maximum 0.5 per cent, determined on 0.500 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 15 ml of *anhydrous acetic acid R* . Add 35 ml of *acetic anhydride R* . Titrate with 0.1 M perchloric acid, determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 30.02 mg of $C_{14}H_{15}Cl_2NS$.

IMPURITIES

Specified impurities F.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. Tilidine Hydrochloride Hemihydrate

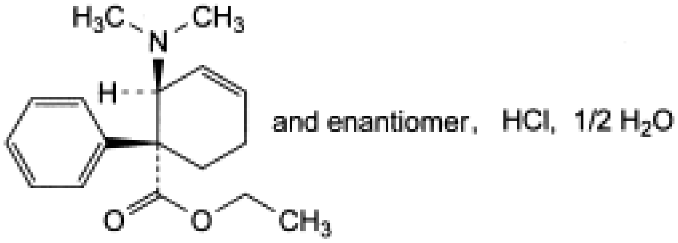
General Notices

(Ph Eur monograph 1767)



$C_{17}H_{23}NO_2,HCl,\frac{1}{2}H_2O$ *318.9 (anhydrous)* *27107-79-5*

Action and use

Opioid Analgesic.

Ph Eur

DEFINITION

Ethyl (1*RS*,2*SR*)-2-(dimethylamino)-1-phenylcyclohex-3-enecarboxylate hydrochloride hemihydrate.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

A suitable antioxidant may be added.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, very soluble in methylene chloride, freely soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of tilidine hydrochloride hemihydrate.*

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II).*

Acidity or alkalinity

To 20 ml of solution S add 0.2 ml of *0.01 M sodium hydroxide* . The pH is not less than 4.1. Add 0.4 ml of *0.01 M hydrochloric acid* . The pH is not more than 4.3.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dilute 0.5 ml of the test solution to 100.0 ml with *water R* .

Reference solution (b) Dilute 2.0 ml of reference solution (a) to 10.0 ml with *water R* .

Precolumn:

— *size*: *l* = 4 mm, Ø = 4.0 mm;

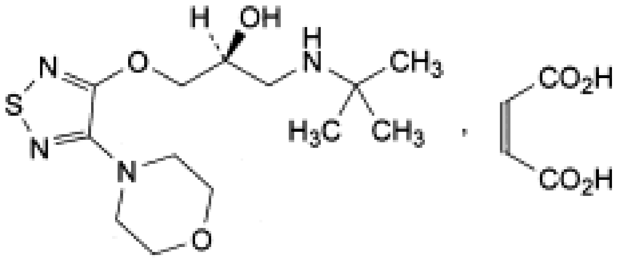
Ph Eur

Timolol Maleate

General Notices

(Ph Eur monograph 0572)



$C_{13}H_{24}N_4O_3S,C_4H_4O_4$ 432.5 *26921-17-5*

Action and use

Beta-adrenoceptor antagonist

For Timolol Eye Drops only: treatment of glaucoma.

Preparations

Timolol Eye Drops

Timolol Tablets

Ph Eur

DEFINITION

Timolol maleate contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (2*S*)-1-[(1,1-dimethylethyl)amino]-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol (*Z*)-butenedioate, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder or colourless crystals, soluble in water and in ethanol (96 per cent).

It melts at about 199 °C, with decomposition.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. Dissolve 1.000 g in *1 M hydrochloric acid* and dilute to 10.0 ml with the same acid. The specific optical rotation *(2.2.7)* is - 5.7 to - 6.2.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *timolol maleate CRS*.

C. Examine the chromatograms obtained in the test for related substances after exposure to iodine vapour. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Triturate 0.1 g with a mixture of 1 ml of *dilute sodium hydroxide solution R* and 3 ml of *water R*. Shake with 3 quantities, each of 5 ml, of *ether R*. To 0.1 ml of the aqueous layer add a solution of 10 mg of *resorcinol R* in 3 ml of *sulphuric acid R*. Heat on a water-bath for 15 min. No violet-red colour develops. Neutralise the remainder of the aqueous layer with *dilute sulphuric acid R* and add 1 ml of *bromine water R*. Heat on a water-bath for 15 min, then heat to boiling and cool. To 0.2 ml of this solution add a solution of 10 mg of *resorcinol R* in 3 ml of *sulphuric acid R*. Heat on a water-bath for 15 min; a violet-red colour develops. Add 0.2 ml of a 100 g/l solution of *potassium bromide R* and heat for 5 min on a water-bath; the colour becomes violet-blue.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_8 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 3.8 to 4.3.

Enantiomeric purity

Examine by liquid chromatography *(2.2.29)*. *Carry out the test protected from actinic light*.

Test solution Dissolve 30.0 mg of the substance to be examined in a mixture of 1 volume of *methylene chloride R* and 3 volumes of *2-propanol R* and dilute to 10.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 30 mg of *timolol maleate CRS* in a mixture of 1 volume of *methylene chloride R* and 3 volumes of *2-propanol R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 15.0 mg of *(R)-timolol CRS* in a mixture of 1 volume of *methylene chloride R* and 3 volumes of *2-propanol R* and dilute to 10.0 ml with the same mixture of solvents. Dilute 1.0 ml of the solution to 50.0 ml with a mixture of 1 volume of *methylene chloride R* and 3 volumes of *2-propanol R*.

Reference solution (c) Dilute 1 ml of reference solution (a) to 100 ml with a mixture of 1 volume of *methylene chloride R* and 3 volumes *of 2-propanol R.* Mix 1 ml of this solution with 1 ml of reference solution (b).

Reference solution (d) Dilute 1.0 ml of the test solution to 100.0 ml with a mixture of 1 volume of *methylene chloride R* and 3 volumes of *2-propanol R*.

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *silica gel OD for chiral separations R* (5 µm);

— as mobile phase at a flow rate of 1 ml/min a mixture of 2 ml of *diethylamine R*, 40 ml of *2-propanol R* and 960 ml of *hexane R*;

— as detector a spectrophotometer set at 297 nm.

Under these conditions the peak corresponding to the (*R*)-isomer appears first.

Inject 5 µl of reference solution (b). Adjust the sensitivity of the system so that the height of the principal peak in the chromatogram obtained is at least 50 per cent of the full scale of the recorder. Inject 5 µl of each solution. The test is not valid unless: in the chromatogram obtained with reference solution (c), the resolution between the peaks corresponding to the (*R*)-enantiomer and to the (*S*)-enantiomer is at least 4.0; the retention times of the principal peaks (corresponding to the (*S*)-enantiomer) in the chromatograms obtained with the test solution and reference solution (a) are identical. In the chromatogram obtained with the test solution, the area of any peak corresponding to the (*R*)-enantiomer is not greater than the area of the principal peak in the chromatogram obtained with reference solution (d) (1 per cent).

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate GF$_{254}$ R.*

Test solution (a) Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *methanol R*.

Reference solution (a) Dissolve 10 mg of *timolol maleate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 10 ml of test solution (b) to 50 ml with *methanol R*.

Apply to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 1 volume of *concentrated ammonia R*, 20 volumes of *methanol R* and 80 volumes of *methylene chloride R*. Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.4 per cent). Disregard the spot remaining at the starting point. Expose the plate to iodine vapour for 2 h. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.4 per cent). Disregard the spot remaining at the starting point.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

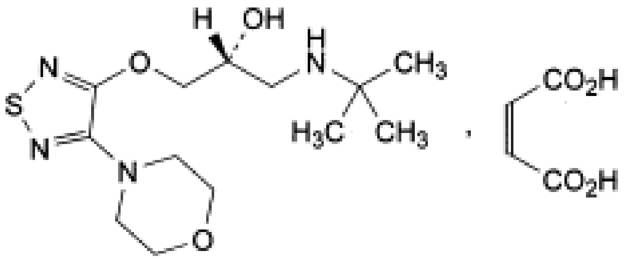
Dissolve 0.350 g in 60 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 43.25 mg of $C_{17}H_{28}N_4O_7S$.

STORAGE

Store protected from light.

IMPURITIES



A. (2*R*)-1-[(1,1-dimethylethyl)amino]-3-[[4-(morpholin-4-yl)-1,2,5-thiadiazol-3-yl]oxy]propan-2-ol (*Z*)-butenedioate.

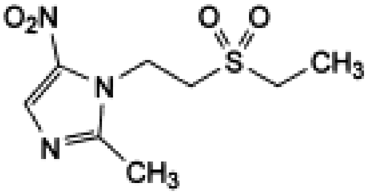
Tinidazole

General Notices

(Ph Eur monograph 1051)



$C_8H_{13}N_3O_4S$ 247.3 *19387-91-8*

Action and use

Antiprotozoal; antibacterial.

Ph Eur

DEFINITION

1-[2-(Ethylsulphonyl)ethyl]-2-methyl-5-nitro-1*H*-imidazole.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Almost white or pale yellow, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone and in methylene chloride, sparingly soluble in methanol.

IDENTIFICATION

First identification A, C.

Second identification A, B, D, E.

A. Melting point *(2.2.14)* : 125 °C to 128 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 10.0 mg in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 10.0 ml with *methanol R* .

Spectral range 220-350 nm.

Absorption maximum At 310 nm.

Specific absorbance at the absorption maximum 340 to 360.

C. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *tinidazole CRS.*

D. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 20 mg of *tinidazole CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel GF*$_{254}$ *plate R.*

Pretreatment Heat at 110 °C for 1 h and allow to cool.

Mobile phase *butanol R, ethyl acetate R* (25:75 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

E. To about 10 mg add about 10 mg of *zinc powder R* , 0.3 ml of *hydrochloric acid R* and 1 ml of *water R* . Heat in a water-bath for 5 min and cool. The solution gives the reaction of primary aromatic amines *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Dissolve 1.0 g in *acetone R* and dilute to 20 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* . *Protect solutions from light*.

Test solution Dissolve 10.0 mg of the substance to be examined in 10.0 ml of *methanol R* and dilute to 100.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *tinidazole impurity A CRS* and 5.0 mg of *tinidazole impurity B CRS* in 10.0 ml of *methanol R* and dilute to 100.0 ml with the mobile phase. Dilute 2.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 50.0 ml with the mobile phase.

Column:

— *size:* l = 0.25 m, Ø = 3.0 mm;

— *stationary phase: octylsilyl silica gel for chromatography R* (5 µm).

Regular column conditioning by subsequent flushing with 50 ml of *water R*, 100 ml of *methanol R*, 25 ml of *water R* and 100 ml of the mobile phase is recommended.

Mobile phase *acetonitrile R, methanol R, water R* (10:20:70 *V/V/V*).

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 320 nm.

Injection 20 µl.

Run time 1.5 times the retention time of tinidazole.

Relative retention With reference to tinidazole (retention time = about 6 min): impurity A = about 0.6; impurity B = about 0.7.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurities A and B.

Limits:

— *impurities A, B*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals ***(2.4.8)***

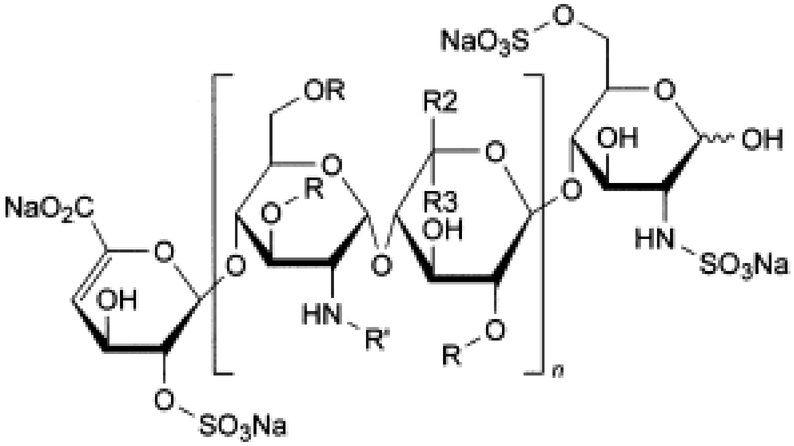
Ph Eur

Tinzaparin Sodium

General Notices

(Ph Eur monograph 1271)



n = 1 to 25 , R = H or SO_3Na , R' = H or SO_3Na or CO-CH_3
R2 = H and R3 = CO_2Na or R2 = CO_2Na and R3 = H

DEF Action and use

Low molecular weight heparin.

Ph Eur

DEFINITION

Tinzaparin sodium is the sodium salt of a low-molecular-mass heparin that is obtained by controlled enzymatic depolymerisation of heparin from porcine intestinal mucosa using heparinase from *Flavobacterium heparinum*. The majority of the components have a 2-*O*-sulpho-4-enepyranosuronic acid structure at the non-reducing end and a 2-*N*,6-*O*-disulpho-D-glucosamine structure at the reducing end of their chain.

Tinzaparin sodium complies with the monograph on Low-molecular-mass heparins (0828) with the modifications and additional requirements below The mass-average relative molecular mass ranges between 5500 and 7500 with a characteristic value of about 6500.

The degree of sulphatation is 1.8 to 2.5 per disaccharide unit.

The potency is not less than 70 IU and not more than 120 IU of anti-factor Xa activity per milligram calculated with reference to the dried substance. The ratio of the anti-factor Xa activity to anti-factor IIa activity is between 1.5 and 2.5.

IDENTIFICATION

Carry out identification test A as described in the monograph for *Low-molecular-mass heparins (0828)* using *tinzaparin sodium CRS* .

Carry out identification test C as described in the monograph for *Low-molecular-mass heparins (0828)*. The following requirements apply.

The mass-average relative molecular mass ranges between 5500 and 7500. The mass percentage of chains lower than 2000 is not more than 10.0 per cent. The mass percentage of chains between 2000 and 8000 ranges between 60.0 and 72.0 per cent. The mass percentage of chains above 8000 ranges between 22.0 and 36.0 per cent.

TESTS

Appearance of solution

Dissolve 1.0 g in 10 ml of *water R* . The solution is clear *(2.2.1)* and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*

Absorbance *(2.2.25)*

Dissolve 50.0 mg in 100 ml of *0.01 M hydrochloric acid* . The specific absorbance, measured at 231 nm and calculated with reference to the dried substance, is 8.0 to 12.5.

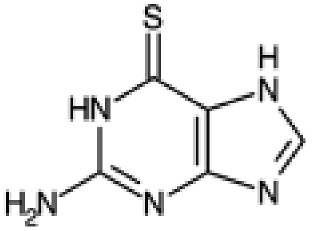
Tioguanine

General Notices



$C_5H_5N_5S$ 167.2 *154-42-7*

Action and use

Purine analogue; cytostatic.

Preparation

Tioguanine Tablets

DEFINITION

Tioguanine is 2-aminopurine-6(1*H*)-thione. It contains not less than 98.0% and not more than 101.0% of $C_5H_5N_5S$, calculated with reference to the dried substance.

CHARACTERISTICS

A pale yellow, crystalline powder.

Practically insoluble in *water* and in *ethanol (96%)*. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

A. Heat a suitable quantity at 105° at a pressure not exceeding 0.7 kPa for 5 hours. The *infrared absorption spectrum* of the residue, Appendix II A, is concordant with the *reference spectrum* of tioguanine *(RS 340)*.

B. The *light absorption*, Appendix II B, in the range 230 to 370 nm of a 0.001% w/v solution in 0.1M *hydrochloric acid* exhibits two maxima, at 258 nm and 348 nm. The *absorbance* at 348 nm is about 1.24.

C. Mix 10 mg with 10 mg of *sodium formate* in a test tube and heat gently until melted. A gas is evolved which turns *lead acetate paper* black.

TESTS

Phosphate

To 0.5 g add 2 ml of 5M *sulphuric acid* and heat on a water bath for 5 minutes. Add, drop wise, 5 ml of *nitric acid* and continue heating until a clear solution is obtained. Cool and add 10 ml of *water* and 0.75 ml of a solution prepared by dissolving 8.3 g of *ammonium molybdate* in 40 ml of *water* and adding 33 ml of 5M *sulphuric acid* and sufficient *water* to produce 100 ml. Add 1.0 ml of *strong aminohydroxynaphthalenesulphonic acid solution*, mix and dilute to 25 ml with *water*. Measure the *absorbance* of the resulting solution at 820 nm, Appendix II B, using in the reference cell a solution prepared in the same manner but omitting the substance being examined. The absorbance is not more than that obtained by treating 1.5 ml of *phosphate standard solution (100 ppm* PO_4*)* in the same manner, beginning at the words 'add 10 ml of *water* ...'.

Free sulphur

Dissolve 50 mg in 5 ml of 1M *sodium hydroxide*. The solution is *clear*, Appendix IV A.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel* GF_{254} as the coating substance and a mixture of 90 volumes of *methanol* and 15 volumes of 13.5M *ammonia* as the mobile phase. Apply separately to the plate 2 µl of solution (1) and 5 µl and 1 µl of solution (2). Solution (1) contains 1.0% w/v of the substance being examined in 0.1M *sodium hydroxide*. Solution (2) contains 0.010% w/v of *guanine* in 0.1M *sodium hydroxide*. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. Any spot corresponding to guanine in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with 5 µl of solution (2). Any other *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with 1 µl of solution (2).

Loss on drying

When dried at 105° at a pressure not exceeding 0.7 kPa for 5 hours, loses not more than 1.0% of its weight. Use 1 g.

ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using a solution prepared by dissolving 0.15 g in 15 ml of *anhydrous formic acid*, adding 50 ml of *butan-2-one* and determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 16.72 mg of $C_5H_5N_5S$.

Titanium Dioxide

General Notices

(Ph Eur monograph 0150)

TiO_2 79.9 *13463-67-7*

Action and use

Protective; excipient.

Preparation

Titanium Ointment

Ph Eur

DEFINITION

Content

98.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water. It does not dissolve in dilute mineral acids but dissolves slowly in hot concentrated sulphuric acid.

IDENTIFICATION

A. When strongly heated, it becomes pale yellow; the colour disappears on cooling.

B. To 5 ml of solution S2 (see Tests) add 0.1 ml of *strong hydrogen peroxide solution R*. An orange-red colour appears.

C. To 5 ml of solution S2 add 0.5 g of *zinc R* in granules. After 45 min, the mixture has a violet-blue colour.

TESTS

Solution S1

Shake 20.0 g with 30 ml of *hydrochloric acid R* for 1 min. Add 100 ml of *distilled water R* and heat the mixture to boiling. Filter the hot mixture through a hardened filter paper until a clear filtrate is obtained. Wash the filter with 60 ml of *distilled water R* and dilute the combined filtrate and washings to 200 ml with *distilled water R* .

Solution S2

Mix 0.500 g (m g) with 5 g of *anhydrous sodium sulphate R* in a 300 ml long-necked combustion flask. Add 10 ml of *water R* and mix. Add 10 ml of *sulphuric acid R* and boil vigorously, with the usual precautions, until a clear solution is obtained. Cool, add slowly a cooled mixture of 30 ml of *water R* and 10 ml of *sulphuric acid R* , cool again and dilute to 100.0 ml with *water R.*

Appearance of solution

Solution S2 is not more opalescent than reference suspension II *(2.2.1)* and is colourless *(2.2.2, Method II)*.

Acidity or alkalinity

Shake 5.0 g with 50 ml of *carbon dioxide-free water R* for 5 min. Centrifuge or filter until a clear solution is obtained. To 10 ml of the solution add 0.1 ml of *bromothymol blue solution R1* . Not more than 1.0 ml *of 0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Water-soluble substances

Maximum 0.5 per cent.

To 10.0 g add a solution of 0.5 g of *ammonium sulphate R* in 150 ml of *water R* and boil for 5 min. Cool, dilute to 200 ml with *water R* and filter until a clear solution is obtained. Evaporate 100 ml of the solution to dryness in a tared evaporating dish and ignite. The residue weighs a maximum of 25 mg.

Antimony

Maximum 100 ppm.

To 10 ml of solution S2 add 10 ml of *hydrochloric acid R* and 10 ml of *water R.* Cool to 20 °C, if necessary, and add 0.15 ml of *sodium nitrite solution R* . After 5 min, add 5 ml of a 10 g/l solution of *hydroxylamine hydrochloride R* and 10 ml of a freshly prepared 0.1 g/l solution of *rhodamine B R* . Mix thoroughly after each addition. Shake vigorously with 10.0 ml of *toluene R* for 1 min. Allow to separate and centrifuge for 2 min if necessary. Any pink colour in the toluene phase is not more intense than that in the toluene phase of a standard prepared at the same time in the same manner using a mixture of 5.0 ml of *antimony standard solution (1 ppm Sb) R* , 10 ml of *hydrochloric acid R* and 15 ml of a solution containing 0.5 g of *anhydrous sodium sulphate R* and 2 ml of *sulphuric acid R* instead of the mixture of 10 ml of solution S2, 10 ml of *hydrochloric acid R* and 10 ml of *water R* .

Arsenic *(2.4.2, Method A)*

Maximum 5 ppm.

Place 0.50 g in a 250 ml round-bottomed flask, fitted with a thermometer, a funnel with stopcock and a vapour-outlet tube connected to a flask containing 30 ml of *water R*. Add 50 ml of *water R*, 0.5 g of *hydrazine sulphate R*, 0.5 g of *potassium bromide R* and 20 g of *sodium chloride R*. Through the funnel, add dropwise 25 ml of *sulphuric acid R,* heat and maintain the temperature of the liquid at 110-115 °C for 20 min. Collect the vapour in the flask containing 30 ml of *water R*. Dilute to 50 ml with *water R*. 20 ml of the solution complies with the test.

Barium

To 10 ml of solution S1 add 1 ml of *dilute sulphuric acid R*. After 30 min, any opalescence in the solution is not more intense than that in a mixture of 10 ml of solution S1 and 1 ml of *distilled water R*.

Iron

Maximum 200 ppm.

To 8 ml of solution S2 add 4 ml of *water R*. Mix and add 0.05 ml of *bromine water R*. Allow to stand for 5 min and remove the excess of bromine with a current of air. Add 3 ml of *potassium thiocyanate solution R*. Any colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using a mixture of 4 ml of *iron standard solution (2 ppm Fe) R* and 8 ml of a 200 g/l solution of *sulphuric acid R.*

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dilute 10 ml of solution S1 to 20 ml with *water R*. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R*.

ASSAY

To 300 g of *zinc R* in granules (710) add 300 ml of a 20 g/l solution of *mercuric nitrate R* and 2 ml of *nitric acid R*, shake for 10 min and wash with *water R*. Pack the amalgamated zinc into a glass tube about 400 mm long and about 20 mm in diameter fitted with a tap and a filter plate. Pass through the column 100 ml of *dilute sulphuric acid R* followed by 100 ml of *water R ,* making sure that the amalgam is always covered with liquid. Pass slowly at a rate of about 3 ml/min through the column a mixture of 100 ml of *dilute sulphuric acid R* and 100 ml of *water R* followed by 100 ml of *water R*. Collect the eluate in a 500 ml conical flask containing 50.0 ml of a 150 g/l solution of *ferric ammonium sulphate R* in a mixture of 1 volume of *sulphuric acid R* and 3 volumes of *water R*. Add 0.1 ml of *ferroin R* and titrate immediately with *0.1 M ammonium and cerium nitrate* until a greenish colour is obtained (n1 ml). Pass slowly at a rate of about 3 ml/min through the column a mixture of 50 ml of *dilute sulphuric acid R* and 50 ml of *water R*, followed by 20.0 ml of solution S2, a mixture of 50 ml of *dilute sulphuric acid R* and 50 ml of *water R* and finally 100 ml of *water R.* Collect the eluate in a 500 ml conical flask containing 50.0 ml of a 150 g/l solution of *ferric ammonium sulphate R* in a mixture of 1 volume of *sulphuric acid R* and 3 volumes of *water R.* Rinse the lower end of the column with *water R*, add 0.1 ml of *ferroin R* and titrate immediately with *0.1 M ammonium and cerium nitrate* until a greenish colour is obtained (n2 ml).

Calculate the percentage content of TiO2 using the following expression:

$$\frac{3.99 \times (n_2 - n_1)}{m}$$

m = mass of the substance to be examined used for the preparation of solution S2, in grams

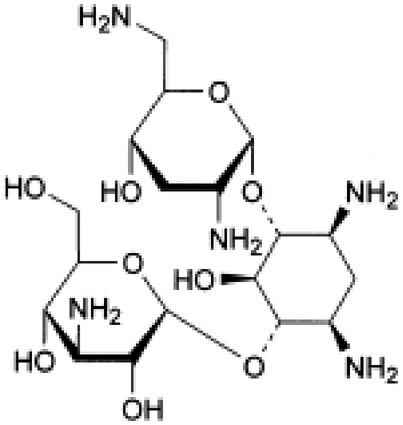
---

Ph Eur

Tobramycin

General Notices

(Ph Eur monograph 0645)



$C_{18}H_{37}N_5O_9$ 467.5 *32986-56-4*

Action and use

Aminoglycoside antibacterial.

Preparation

Tobramycin Injection

Ph Eur

DEFINITION

4-*O*-(3-Amino-3-deoxy-α-D-glucopyranosyl)-2-deoxy-6-*O*-(2,6-diamino-2,3,6-trideoxy-α-D-*ribo*-hexopyranosyl)-L-streptamine.

Substance produced by *Streptomyces tenebrarius* or obtained by any other means.

Content

97.0 per cent to 102.0 per cent (anhydrous substance).

PRODUCTION

It is produced by methods of manufacture designed to eliminate or minimise substances lowering blood pressure.

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water, very slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Nuclear magnetic resonance spectrometry *(2.2.33)* .

Preparation 100 g/l solution in *deuterium oxide R* .

Comparison 100 g/l solution of *tobramycin CRS* in *deuterium oxide R* .

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 20 mg of the substance to be examined in *water R* and dilute to 5 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *tobramycin CRS* in *water R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 4 mg of *neomycin sulphate CRS* and 4 mg of *kanamycin monosulphate CRS* in 1 ml of reference solution (a).

Plate *TLC silica gel plate R.*

Mobile phase *Methylene chloride R, concentrated ammonia R, methanol R* (17:33:50 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In a current of warm air.

Detection Spray with a mixture of equal volumes of a 2 g/l solution of *1,3-dihydroxynaphthalene R* in *ethanol (96 per cent) R* and a 460 g/l solution of *sulphuric acid R* ; heat at 105 °C for 5-10 min.

System suitability The chromatogram obtained with reference solution (b) shows 3 major spots which are clearly separated.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 5 mg in 5 ml of *water R* . Add 5 ml of a 1 g/l solution of *ninhydrin R* in *ethanol (96 per cent) R* and heat in a water-bath for 3 min. A violet-blue colour develops.

TESTS

pH *(2.2.3)*

9.0 to 11.0.

Dissolve 1.0 g in 10 ml of *carbon dioxide-free water R*.

Specific optical rotation *(2.2.7)*

+ 138 to + 148 (anhydrous substance).

Dissolve 1.00 g in *water R* and dilute to 25.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Test solution (b) Dilute 10.0 ml of test solution (a) to 100.0 ml with the mobile phase.

Reference solution (a) Dissolve 25.0 mg of *tobramycin CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Reference solution (d) Dissolve 10.0 mg of *kanamycin B sulphate CRS* in 20.0 ml of the mobile phase. To 1.0 ml of this solution, add 2.0 ml of reference solution (a) and dilute to 10.0 ml with the mobile phase.

Reference solution (e) Dilute 10.0 ml of reference solution (a) to 25.0 ml with the mobile phase.

Column:

- *size:* l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: styrene-divinylbenzene copolymer R* (8 µm) with a pore size of 100 nm;
- *temperature*: 55 °C.

Mobile phase Mixture prepared with *carbon dioxide-free water R* containing 52 g/l of *anhydrous sodium sulphate R*, 1.5 g/l of *sodium octanesulphonate R*, 3 ml/l of *tetrahydrofuran R* stabilised with *butylhydroxytoluene R*, and 50 ml/l of *0.2 M potassium dihydrogen phosphate R* previously adjusted to pH 3.0 with *dilute phosphoric acid R*. Degas.

Flow rate 1.0 ml/min.

Post-column solution *Carbonate-free sodium hydroxide solution R* diluted 25-fold with *carbon dioxide-free water R*, which is added pulselessly to the column effluent using a 375 µl polymeric mixing coil.

Flow rate 0.3 ml/min.

Detection Pulsed amperometric detector or equivalent with a gold working electrode, a silver-silver chloride reference electrode and a stainless steel auxiliary electrode which is the cell body, held at respectively + 0.05 V detection, + 0.75 V oxidation and - 0.15 V reduction potentials, with pulse durations according to the instrument used. The temperature of the detector is set at 35 °C.

NOTE: to prevent problems due to salt precipitation, the electrochemical cell can be flushed with water R overnight.

Injection 20 µl using a refrigerated injector (4-8 °C); inject test solution (a) and reference solutions (b), (c) and (d).

Run time 1.5 times the retention time of tobramycin.

Relative retention With reference to tobramycin (retention time = about 18 min): impurity C = about 0.35; impurity B = about 0.40, impurity A = about 0.70.

System suitability:

— *resolution*: minimum 3.0 between the peaks due to impurity A and to tobramycin in the chromatogram obtained with reference solution (d); if necessary, adjust the concentration of sodium octanesulphonate in the mobile phase;

— *signal-to-noise ratio* : minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *any impurity*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent) and not more than 1 such peak has an area greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (c) (1.5 per cent);

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent).

2-Methyl-1-propanol *(2.4.24, System B)*

Maximum 1.0 per cent m/m.

Water *(2.5.12)*

Maximum 8.0 per cent, determined on 0.30 g.

Sulphated ash *(2.4.14)*

Maximum 0.3 per cent, determined on 1.0 g.

Bacterial endotoxins *(2.6.14)*

Less than 2.0 IU/mg, if intended for use in the manufacture of parenteral preparations without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modifications.

Injection Test solution (b) and reference solution (e).

Calculate the percentage content of tobramycin.

STORAGE

If the substance is sterile, store in a sterile, airtight, tamper-proof container.

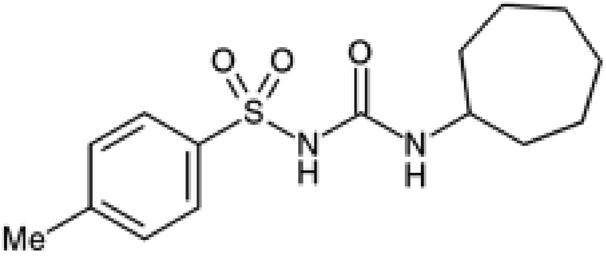
Ph Eur

Tolazamide

General Notices



$C_{14}H_{21}N_3O_3S$ 311.4 *1156-19-0*

Action and use

Inhibition of ATP-dependent potassium channels (sulphonylurea); treatment of diabetes mellitus.

Preparation

Tolazamide Tablets

DEFINITION

Tolazamide is 1-perhydroazepin-1-yl-3-tolyl-*p*-sulphonylurea. It contains not less than 98.0% and not more than 101.0% of $C_{14}H_{21}N_3O_3S$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder; odourless or almost odourless.

Very slightly soluble in *water*; freely soluble in *chloroform* ; soluble in *acetone* ; slightly soluble in *ethanol (96%)* .

IDENTIFICATION

A. The *infrared absorption spectrum* , Appendix II A, is concordant with the *reference spectrum* of tolazamide *(RS 342)* .

B. The *light absorption* , Appendix II B, in the range 230 to 350 nm of a 0.04% w/v solution in *ethanol (96%)* exhibits maxima at 256, 263 and 275 nm and a shoulder at 268 nm. The *absorbances* at the maxima are about 0.78, about 0.83 and about 0.62, respectively.

C. *Melting point* , about 165°, Appendix V A.

TESTS

Heavy metals

Moisten the residue obtained in the test for Sulphated ash with 1 ml of *hydrochloric acid*, evaporate to dryness and dissolve the residue in 20 ml of *water*. 12 ml of the resulting solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (1 ppm Pb)* to prepare the standard (20 ppm).

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using *silica gel G* as the coating substance and a mixture of 200 volumes of *chloroform*, 100 volumes of *methanol*, 60 volumes of *cyclohexane* and 23 volumes of 13.5M *ammonia* as the mobile phase. Apply separately to the plate 10 µl of each of two solutions in *acetone* containing (1) 2.0% w/v of the substance being examined and (2) 0.010% w/v of *toluene*-p-*sulphonamide*. After removal of the plate, dry it in a current of cold air, heat at 110° for 10 minutes, place the hot plate in a tank of chlorine gas prepared by the addition of *hydrochloric acid* to a 5% w/v solution of *potassium permanganate* contained in a beaker placed in the tank and allow to stand for 2 minutes. Dry it in a current of cold air until an area of the plate below the line of application gives at most a very faint blue colour with a 0.5% w/v solution of *potassium iodide* in *starch mucilage*; avoid prolonged exposure to cold air. Spray the plate with a 0.5% w/v solution of *potassium iodide* in *starch mucilage*. Any *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2).

Loss on drying

When dried to constant weight at 60° at a pressure not exceeding 0.7 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.2%, Appendix IX A. Use 1 g.

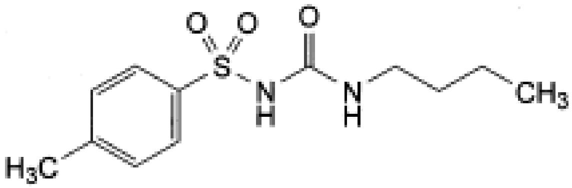
ASSAY

Dissolve 0.5 g in 20 ml of *butan-2-one* with the aid of gentle heat. Allow to cool, add 30 ml of *ethanol (96%)* and titrate with 0.1M *sodium hydroxide VS* using *phenolphthalein solution R1* as indicator. Each ml of 0.1M *sodium hydroxide VS* is equivalent to 31.14 mg of $C_{14}H_{21}N_3O_3S$.

Tolbutamide

General Notices

(Ph Eur monograph 0304)



$C_{12}H_{18}N_2O_3S$ 270.3 *64-77-7*

Action and use

Inhibition of ATP-dependent potassium channels (sulphonylurea); treatment of diabetes mellitus.

Preparation

Tolbutamide Tablets

Ph Eur

DEFINITION

Tolbutamide contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 1-butyl-3-[(4-methylphenyl)sulphonyl]urea, calculated with reference to the dried substance.

CHARACTERS

A white or almost white crystalline powder, practically insoluble in water, soluble in acetone and in alcohol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D.*

A. Melting point *(2.2.14)* : 126 °C to 130 °C.

B. Dissolve 25.0 mg in *methanol R* and dilute to 100.0 ml with the same solvent. Examined between 245 nm and 300 nm *(2.2.25)*, the solution shows three absorption maxima, at 258 nm, 263 nm and 275 nm, and a shoulder at 268 nm. Dilute 10.0 ml of the solution to 250.0 ml with *methanol R.* Examined between 220 nm and 235 nm, the solution shows a single absorption maximum, at 228 nm. The specific absorbance at this maximum is 480 to 520.

C. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *tolbutamide CRS*.

D. To 0.2 g add 8 ml of a 500 g/l solution of *sulphuric acid R* and heat under a reflux condenser for 30 min. Allow to cool. Crystals are formed which, after recrystallisation from hot *water R* and drying at 100 °C to 105 °C, melt *(2.2.14)* at 135 °C to 140 °C.

TESTS

Appearance of solution

Dissolve 0.2 g in 5 ml of dilute *sodium hydroxide solution R* and add 5 ml of *water R.* The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

To 2.0 g add 50 ml of *carbon dioxide-free water R* and heat at 70 °C for 5 min. Cool rapidly and filter. The pH of the filtrate is 4.5 to 5.5.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance.

Test solution Dissolve 0.50 g of the substance to be examined in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 15 mg of *toluenesulphonamide R* in *acetone R* and dilute to 100 ml with the same solvent.

Reference solution (b) To 5 ml of the test solution add 5 ml of reference solution (a).

Apply to the plate 5 µl of the test solution and of reference solution (a) and 10 µl of reference solution (b). Develop over a path of 15 cm using a mixture of 2 volumes of *anhydrous formic acid R*, 8 volumes of *methanol R* and 90 volumes of *chloroform R*. Dry the plate in a current of warm air and heat at 110 °C for 10 min. At the bottom of a chromatography tank, place an evaporating dish containing a 50 g/l solution of *potassium permanganate R* and add an equal volume of *hydrochloric acid R*. Place the plate whilst still hot in the tank and close the tank. Leave the plate in contact with the chlorine vapour for 2 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of coating below the points of application gives at most a very faint blue colour with a drop of potassium iodide and *starch solution R*; avoid prolonged exposure to cold air. Spray with *potassium iodide and starch solution R* and allow to stand for 5 min. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.3 per cent). The test is not valid unless the chromatogram obtained with reference solution (b) shows two clearly separated spots.

Heavy metals *(2.4.8)*

Dissolve 1.0 g in a mixture of 15 volumes of *water R* and 85 volumes of *acetone R* and dilute to 20 ml with the same mixture of solvents. 12 ml of the solution complies with limit test B for heavy metals (20 ppm). Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 15 volumes of *water R* and 85 volumes of *acetone R.*

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.2500 g in a mixture of 20 ml of *water R* and 40 ml of *alcohol R* . Titrate with *0.1 M sodium hydroxide* , using *1 ml of phenolphthalein solution R* as indicator.

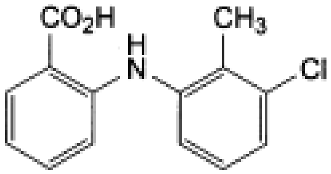
1 ml of *0.1 M sodium hydroxide* is equivalent to 27.03 mg of $C_{12}H_{18}N_2O_3S$.

Ph Eur

Tolfenamic Acid

General Notices

(Ph Eur monograph 2039)



$C_{14}H_{12}ClNO_2$ 261.7 *13710-19-5*

Action and use

Cyclo-oxygenase inhibitor; analgesic; anti-inflammatory.

Ph Eur

DEFINITION

2-[(3-Chloro-2-methylphenyl)amino]benzoic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Practically insoluble in water, soluble in dimethylformamide, sparingly soluble in ethanol and in methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

mp

About 213 °C.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Dissolve 20 mg in a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R* and dilute to 100 ml with the same mixture of solvents. Dilute 5.0 ml of the solution to 50 ml with a mixture of 1 volume of *1 M hydrochloric acid* and 99 volumes of *methanol R*. Examined between 250 nm and 380 nm *(2.2.25)*, the solution shows 2 absorption maxima, at 286 nm and 345 nm. The ratio of the absorbance measured at the maximum at 286 nm to that measured at the maximum at 345 nm is 1.2 to 1.4.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *tolfenamic acid CRS.*

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 25 mg of the substance to be examined in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 25 mg of *tolfenamic acid CRS* in a mixture of 1 volume of *methanol R* and 3 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Plate *TLC silica gel GF* $_{254}$ *plate R*.

Mobile phase *glacial acetic acid R, dioxan R, toluene R* (1:25:90 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In a current of warm air.

Detection Ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in 5 ml of *ethanol R* and dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 25 mg of *2-chlorobenzoic acid R* and 25 mg of *3-chloro-2-methylaniline R* in 5 ml of ethanol R and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 50.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *spherical end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 450 m2/g and a pore size of 8 nm.

Mobile phase *glacial acetic acid R*, *water R*, *ethanol R* (2:350:650 *V/V/V*).

Flow rate 0.8 ml/min.

Detection spectrophotometer at 232 nm.

Injection 20 µl.

Run time 3 times the retention time of tolfenamic acid.

Relative retention With reference to tolfenamic acid (retention time = about 15 min): impurity A = about 0.25; impurity B = about 0.34.

System suitability Reference solution (a):

- *resolution*: minimum 2.5 between the peaks due to impurity A and to impurity B.

Limits:

- *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *impurity B*: not more than half the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.05 per cent);
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.01 per cent).

Copper

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I).*

Test solution Place 1.00 g of the substance to be examined in a silica crucible, moisten with *sulphuric acid R*, heat cautiously on a flame for 30 min and then progressively to about 650 ± 50 °C. Continue ignition until all black particles have disappeared. Allow to cool, dissolve the residue in *0.1 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Reference solutions Prepare the reference solutions using *copper standard solution (0.1 per cent Cu) R*, diluted as necessary using *0.1 M nitric acid*.

Source Copper hollow-cathode lamp.

Wavelength 324.8 nm.

Flame Air-acetylene.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

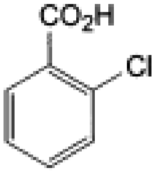
Dissolve 0.200 g with the aid of ultrasound in 100 ml of *ethanol R* . Add 0.1 ml of *phenol red solution R* and titrate with *0.1 M sodium hydroxide* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 26.17 mg of $C_{14}H_{12}ClNO_2$.

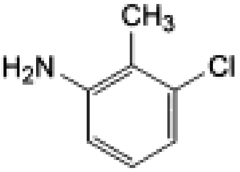
STORAGE

Protected from light.

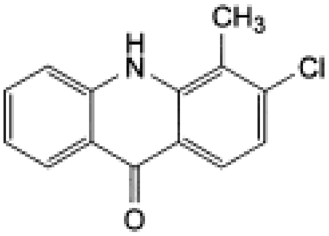
IMPURITIES



A. 2-chlorobenzoic acid,



B. 3-chloro-2-methylaniline,



C. 3-chloro-4-methyl-9-oxo-9,10-dihydroacridine.

Ph Eur

First identification *B.*

Second identification *A, C, D.*

A. Melting point *(2.2.14)* : 109 °C to 112 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *tolnaftate CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Mix about 1 mg with 0.5 ml of *sulphuric acid R* . Add 0.05 ml of *formaldehyde solution R* . A greenish-blue colour develops.

TESTS

Appearance of solution

Dissolve 0.5 g in 10 ml of *acetone R* . The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Related substances

Examine by thin-layer chromatography *(2.2.27)* , using *silica gel GF* $_{254}$ *R* as the coating substance.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *acetone R* and dilute to 2 ml with the same solvent.

Test solution (b) Dilute 0.5 ml of test solution (a) to 10 ml with *acetone R.*

Reference solution (a) Dissolve 25 mg of *tolnaftate CRS* in *acetone R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 10 ml with *acetone R* .

Reference solution (c) Dissolve 50 mg of β*-naphthol R* in 1 ml of test solution (a) and dilute to 10 ml with *acetone R* .

Apply separately to the plate 5 µl of each solution. Develop over a path of 12 cm using *toluene R.* Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

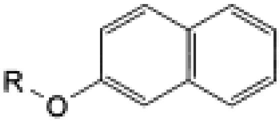
Dissolve 50.0 mg in *methanol R* and dilute to 250.0 ml with the same solvent. Dilute 2.0 ml to 50.0 ml with *methanol R* . Measure the absorbance *(2.2.25)* at the maximum at 257 nm.

Calculate the content of $C_{19}H_{17}NOS$ taking the specific absorbance to be 720.

STORAGE

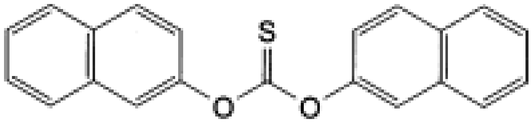
Store protected from light.

IMPURITIES

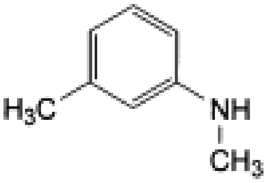


A. R = H: naphthalen-2-ol (β-naphtol),

C. R = CS-Cl: *O*-naphthalen-2-yl chlorothioformate,



B. *O,O*-dinaphtalen-2-yl thiocarbonate,



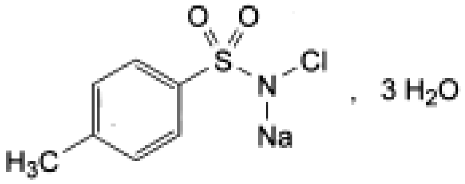
D. *N*,3-dimethylaniline.

Ph Eur

Tosylchloramide Sodium

General Notices

(Ph Eur monograph 0381)



$C_7H_7ClNNaO_2S,3H_2O$ 281.7 *127-65-1*

Action and use

Antiseptic.

Ph Eur

DEFINITION

Sodium *N*-chloro-4-methylbenzene-sulphonimidate trihydrate.

Content

98.0 per cent to 103.0 per cent of $C_7H_7ClNNaO_2S,_3H_2O$.

CHARACTERS

Appearance

White or slightly yellow, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. Solution S (see Tests) turns *red litmus paper R* blue and then bleaches it.

B. To 10 ml of solution S add 10 ml of *dilute hydrogen peroxide solution R* . A white precipitate is formed which dissolves on heating. Filter the hot solution and allow to cool.

White crystals are formed which, when washed and dried at 100-105 °C, melt *(2.2.14)* at 137 °C to 140 °C.

C. Ignite cautiously 1 g, because of the risk of deflagration. Dissolve the residue in 10 ml of *water R* . The solution gives reaction (a) of chlorides *(2.3.1)* .

D. The solution prepared for identification test C gives reaction (a) of sulphates *(2.3.1)* .

E. The solution prepared for identification test C gives reaction (b) of sodium *(2.3.1)* .

TESTS

Solution S

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and is colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

8.0 to 10.0 for solution S.

Ortho compound

To 2 g add 10 ml of *water R* , mix, add 1 g of *sodium metabisulphite R* and heat to boiling. Cool to 0 °C, filter rapidly and wash with 3 quantities, each of 5 ml, of iced *water R* . The precipitate, dried over *diphosphorus pentoxide R* at a pressure not exceeding 600 Pa, melts *(2.2.14)* at a minimum of 134 °C.

Residue insoluble in anhydrous ethanol

Maximum 2 per cent.

Shake 1.00 g with 20 ml of *anhydrous ethanol R* for 30 min, filter on a tared filter, wash any residue with 5 ml of *anhydrous ethanol R* and dry at 100-105 °C. The residue weighs a maximum of 20 mg.

ASSAY

Dissolve 0.125 g in 100 ml of *water R* in a ground-glass-stoppered flask. Add 1 g of *potassium iodide R* and 5 ml of *dilute sulphuric acid R* . Allow to stand for 3 min. Titrate with *0.1 M sodium thiosulphate* , using 1 ml of *starch solution R* as indicator.

1 ml of *0.1 M sodium thiosulphate* is equivalent to 14.08 mg of $C_7H_7ClNNaO_2S,_3H_2O$.

STORAGE

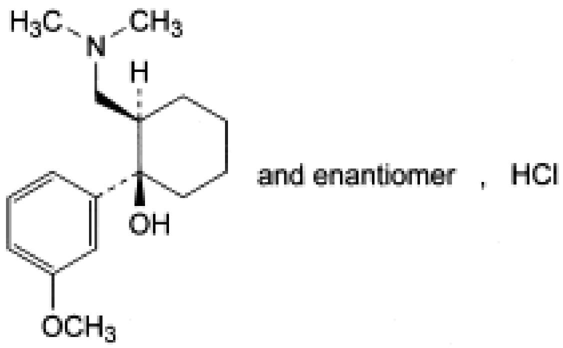
In an airtight container , protected from light.

Ph Eur

Tramadol Hydrochloride

General Notices

(Ph Eur monograph 1681)



$C_{16}H_{26}ClNO_2$ 299.8 *36282-47-0*

Action and use

Opioid receptor agonist; noradrenaline reuptake inhibitor; analgesic.

Preparation

Tramadol Capsules

Ph Eur

DEFINITION

(1*RS*,2*RS*)-2-[(Dimethylamino)methyl]-1-(3-methoxyphenyl)cyclohexanol hydrochloride.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in methanol, very slightly soluble in acetone.

IDENTIFICATION

First identification *B, D.*

Second identification *A, C, D.*

A. Melting point *(2.2.14)* : 180 °C to 184 °C.

B. Infrared absorption spectrophotometry *(2.2.24*).

Comparison *tramadol hydrochloride CRS.*

C. Chromatograms obtained in the test for impurity E.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

D. It gives reaction (a) of chlorides *(2.3.1).*

TESTS

Solution S

Dissolve 1.0 g in *water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Acidity

To 10 ml of solution S, add 0.2 ml of *methyl red solution R* and 0.2 ml *of 0.01 M hydrochloric acid* . The solution is red. Not more than 0.4 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°, determined on solution S.

Impurity E

Thin-layer chromatography *(2.2.27)* .

Test solution (a) Dissolve 0.10 g in *methanol R* and dilute to 2 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R* .

Reference solution (a) Dissolve 25 mg of *tramadol hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 5 mg of *tramadol impurity E CRS* in 5 ml of *methanol R* . Dilute 1 ml of the solution to 10 ml with *methanol R* .

Reference solution (c) Dissolve 5 mg of *tramadol impurity A CRS* in 1 ml of reference solution (a).

Plate *TLC silica gel F $_{254}$ plate R*, prewashed with *methanol R*.

Mobile phase *Concentrated ammonia R, 2-propanol R, toluene R* (1:19:80 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate. Saturate the plate for 20 min with *concentrated ammonia R*. For this, add *concentrated ammonia R* to one trough of a twin trough tank. Just before developing, add the mobile phase to the other trough. Place the plate in the chromatographic tank, ensuring that the layer of silica gel is orientated towards the middle of the tank.

Drying In air.

Detection Expose the plate to iodine vapour for 1 h, examine in ultraviolet light at 254 nm.

System suitability The chromatogram obtained with reference solution (c) shows 2 clearly separated spots.

Limit In the chromatogram obtained with test solution (a):

— *impurity E*: any spot corresponding to impurity E is not more intense and not greater than the spot in the chromatogram obtained with reference solution (b) (0.2 per cent).

Related substances

Liquid chromatography *(2.2.29*).

Test solution Dissolve 0.15 g of the substance to be examined in the mobile phase and dilute to 100 ml with the mobile phase.

Reference solution (a) Dilute 2.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of *tramadol impurity A CRS* in 4.0 ml of the test solution and dilute to 100 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase: base-deactivated end-capped octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase 295 volumes of *acetonitrile R* and 705 volumes of a mixture of 0.2 ml of *trifluoroacetic acid R* and 100 ml of *water R.*

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µl.

Run time 4 times the retention time of tramadol.

Relative retention With reference to tramadol (retention time = about 5 min): impurity A = about 0.85.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurity A and tramadol.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *any other impurity*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.4 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of this solution complies with limit test A. Prepare the standard using *lead standard solution (2 ppm Pb) R* .

Water *(2.5.12)*

Maximum 0.5 per cent, determined on 1.000 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.180 g in 25 ml of *anhydrous acetic acid R* and add 10 ml of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20).*

1 ml of *0.1 M perchloric acid* is equivalent to 29.98 mg of $C_{16}H_{26}ClNO_2$.

STORAGE

Protected from light.

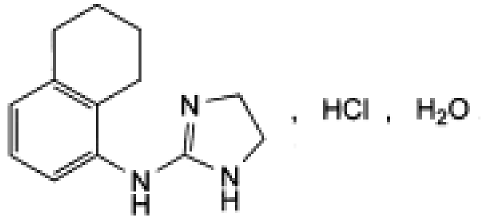
Tramazoline Hydrochloride Monohydrate

General Notices

(Ph Eur monograph 1597)



$C_{13}H_{17}N_3,HCl,H_2O$ 269.8 *3715-90-0*

Action and use

Alpha-adrenoceptor agonist.

Ph Eur

DEFINITION

N-(5,6,7,8-Tetrahydronaphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine hydrochloride monohydrate.

Content

98.5 per cent to 101.5 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water and in ethanol (96 per cent).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *tramazoline hydrochloride monohydrate CRS.*

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

4.9 to 6.3 for solution S.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 50.0 mg of the substance to be examined in a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 5.0 mg of *tramazoline impurity A CRS* and 5.0 mg of *tramazoline impurity B CRS* in 5 ml of a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* and add 5 ml of the test solution.

Reference solution (b) Dilute 0.2 ml of reference solution (a) to 100 ml with a mixture of 50 volumes of *acetonitrile R* and 50 volumes of *water R* .

Column:

— *size:* *l* = 0.125 m, Ø = 4 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase 2.0 g/l solution of *sodium dodecyl sulphate R* in a mixture of 6 volumes of *2-propanol R* , 42 volumes of *acetonitrile R* and 52 volumes of *water R* .

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 5 µl.

Run time 3 times the retention time of tramazoline.

Relative retention With reference to tramazoline (retention time = about 6.5 min): impurity A = about 0.71; impurity B = about 0.86.

System suitability Reference solution (a):

— the chromatogram obtained shows 3 clearly separated peaks;

— *resolution*: minimum 1.5 between tramazoline and impurity B.

Limits:

- *impurity A:* not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *impurity B*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *any other impurity:* not more than the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *sum of other impurities*: not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.2 per cent);
- *disregard limit:* 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.02 per cent).

Water ***(2.5.12)***

6.2 per cent to 7.2 per cent, determined on 0.500 g.

Sulphated ash ***(2.4.14)***

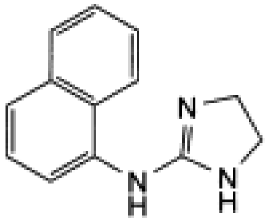
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

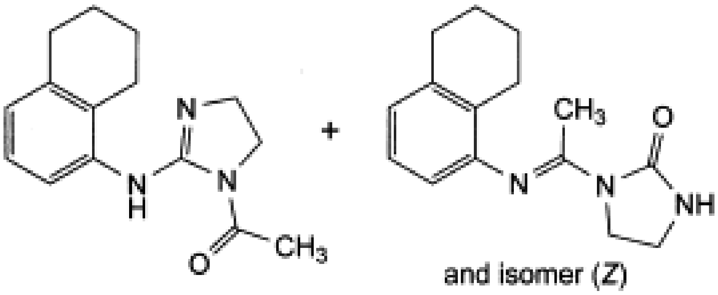
Dissolve 2.000 g in a mixture of 5 ml of *0.1 M hydrochloric acid* and 75 ml of *ethanol (96 per cent) R* . Carry out a potentiometric titration (*2.2.20*) using *1 M sodium hydroxide* . Read the volume added between the 2 points of inflexion.

1 ml of *1 M sodium hydroxide* is equivalent to 251.8 mg of $C_{13}H_{18}ClN_3$.

IMPURITIES



A. *N*-(naphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine,



B. mixture of 1-acetyl-*N*-(5,6,7,8-tetrahydronaphthalen-1-yl)-4,5-dihydro-1*H*-imidazol-2-amine and 1-[(*EZ)*-1-[(5,6,7,8-tetrahydronaphthalen-1-yl)imino]ethyl]imidazolidin-2-one.

Angiotensin converting enzyme inhibitor.

Ph Eur

DEFINITION

(2*S*,3a*R*,7a*S*)-1-[(2*S*)-2-[[(1*S*)-1-(Ethoxycarbonyl)-3-phenylpropyl]amino]propanoyl]octahydro-1*H*-indole-2-carboxylic acid.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *trandolapril CRS.*

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution Y_7 *(2.2.2, Method II)*.

Dissolve 1.0 g in *methanol R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

- 16.5 to - 18.5 (anhydrous substance).

Dissolve 1.0 g in *anhydrous ethanol R* and dilute to 50.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in mobile phase A and dilute to 10.0 ml with mobile phase A.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 100.0 ml with mobile phase A.

Reference solution (b) Dissolve 5 mg of *trandolapril impurity C CRS* and 5 mg of *trandolapril impurity D CRS* in mobile phase A and dilute to 5 ml with mobile phase A. Dilute 1 ml of this solution to 20 ml with mobile phase A.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

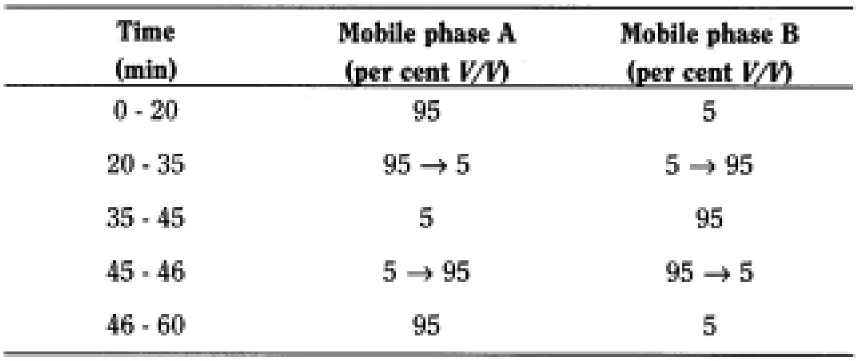
— *stationary phase: end-capped polar-embedded octadecylsilyl amorphous organosilica polymer R* (3.5 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: mix 25 volumes of *acetonitrile R,* and 75 volumes of a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.5 ± 0.1 with *phosphoric acid R;*

— *mobile phase B*: mix equal volumes of *acetonitrile R* , and a 6.8 g/l solution of *potassium dihydrogen phosphate R* previously adjusted to pH 2.2 ± 0.1 with *phosphoric acid R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 20	95	5
20 - 35	95 → 5	5 → 95
35 - 45	5	95
45 - 46	5 → 95	95 → 5
46 - 60	95	5

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Relative retention With reference to trandolapril (retention time = about 14.5 min): impurity C = about 2.1; impurity D = about 2.5.

System suitability Reference solution (b):

— *resolution*: minimum 4 between the peaks due to impurity C and impurity D.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity C by 2.2;

— *impurity C*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *impurity D*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *sum of impurities other than D*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Palladium

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Solvent mixture *nitric acid R, water R* (1:99 *V/V*).

Test solution To the residue of the test for sulphated ash add 3 ml of *hydrochloric acid R* and 1 ml of fuming *nitric acid R* . Cover the crucible with a watch glass and heat at 160-170 °C for 1 h to dissolve the residue. Afterwards continue heating in the open crucible and evaporate the solution. Stop heating before the residue is completely dried, add 1 ml of *nitric acid R* , heat at 160-170 °C for further 10 min, and after cooling dilute to 10.0 ml with *water R* .

Reference solutions Prepare reference solutions containing 0.5 µg, 1.0 µg and 1.5 µg of Pd per millilitre by diluting *palladium standard solution (500 ppm Pd) R* with the solvent mixture.

Source Palladium hollow-cathode lamp.

Wavelength 244.8 nm.

Atomisation device Air-acetylene flame.

Water ***(2.5.32)***

Maximum 0.2 per cent, determined on 1.000 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 2.0 g in a porcelain or quartz crucible.

ASSAY

Dissolve 0.300 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 43.05 mg of $C_{24}H_{34}N_2O_5$.

STORAGE

Protected from light.

IMPURITIES

Specified impurities C, D.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. Ph Eur

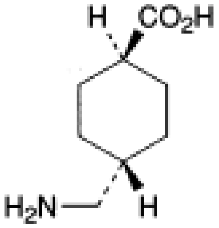
Tranexamic Acid

General Notices

(Ph Eur monograph 0875)



$C_8H_{15}NO_2$ 157.2 *1197-18-8*

Action and use

Antifibrinolytic.

Preparations

Tranexamic Acid Injection

Tranexamic Acid Tablets

Ph Eur

DEFINITION

trans-4-(Aminomethyl)cyclohexanecarboxylic acid.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water and in glacial acetic acid, practically insoluble in acetone and in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *tranexamic acid CRS.*

TESTS

pH *(2.2.3)*

7.0 to 8.0.

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.20 g of the substance to be examined in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with *water R* . Dilute 1.0 ml of this solution to 10.0 ml with *water R* .

Reference solution (b) Dissolve 20 mg of *tranexamic acid CRS* (containing impurity C) in water R and dilute to 2 ml with the same solvent.

Reference solution (c) Dissolve 12 mg of 4-*aminomethylbenzoic acid R* (impurity D) in *water R* and dilute to 100 ml with the same solvent. Dilute 1 ml of the solution to 50 ml with *water R* . Dilute 5 ml of this solution to 200 ml with *water R* .

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm or l = 0.25 m, Ø = 6.0 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Dissolve 11.0 g of *anhydrous sodium dihydrogen phosphate R* in 500 ml of *water R* and add 5 ml of *triethylamine R* and 1.4 g of *sodium laurilsulfate R.* Adjust to pH 2.5 with *dilute phosphoric acid R* and dilute to 600 ml with *water R* . Add 400 ml of *methanol R* and mix.

Flow rate 0.9 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl.

Run time 3 times the retention time of tranexamic acid.

Identification of impurities Use the chromatogram supplied with *tranexamic acid CRS* and the chromatogram obtained with reference solution (b) to identify the peak due to impurity C; use the chromatogram obtained with reference solution (c) to identify the peak due to impurity D.

Relative retention With reference to tranexamic acid (retention time = about 13 min):

impurity C = about 1.1; impurity D = about 1.3; impurity B = about 1.5; impurity A = about 2.1.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to tranexamic acid and impurity C.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.2; impurity C = 0.005; impurity D = 0.006;

— *impurity A*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *impurity B:* not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *sum of unspecified impurities*: not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.025 per cent).

Halides expressed as chlorides ***(2.4.4)***

Maximum 140 ppm.

Dissolve 1.2 g in *water R* and dilute to 50 ml with the same solvent.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in *water R* and dilute to 20 ml with the same solvent. 12 ml of this solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

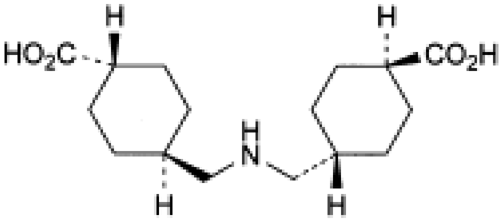
Dissolve 0.140 g in 20 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 15.72 mg of $C_8H_{15}NO_2$.

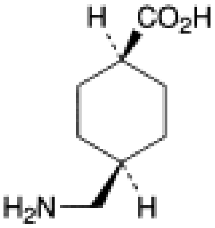
IMPURITIES

Specified impurities A, B.

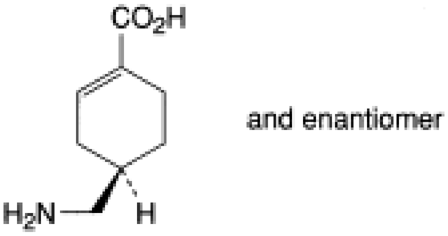
Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): C, D.*



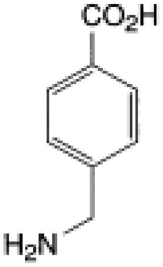
A. *trans*,*trans*-4,4′-(iminodimethylene)di(cyclohexanecarboxylic) acid,



B. *cis*-4-(aminomethyl)cyclohexanecarboxylic acid,



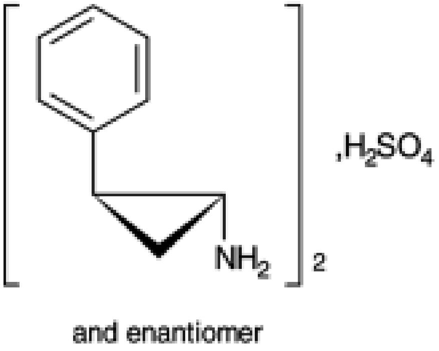
C. (*RS*)-4-(aminomethyl)cyclohex-1-enecarboxylic acid,



D 4-aminomethylbenzoic acid.

Tranylcypromine Sulphate

General Notices



$(C_9H_{11}N)_2,H_2SO_4$ 364.5 *13492-01-8*

Action and use

Monoamine oxidase inhibitor; antidepressant.

Preparation

Tranylcypromine Tablets

DEFINITION

Tranylcypromine Sulphate is (1*RS*,2*SR*)-2-phenylcyclopropylamine sulphate. It contains not less than 98.0% and not more than 101.0% of $(C_9H_{11}N)_2,H_2SO_4$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Soluble in *water*; very slightly soluble in *ethanol (96%)* and in *ether* .

IDENTIFICATION

A. The *infrared absorption spectrum* , Appendix II A, is concordant with the *reference spectrum* of tranylcypromine sulphate *(RS 345)* .

B. Yields the reactions characteristic of *sulphates* , Appendix VI.

TESTS

Related substances

Dissolve 10 mg of *4-chloroaniline* (internal standard) in sufficient 0.1M *hydrochloric acid* to produce 20 ml (solution A). Carry out the method for *gas chromatography*, Appendix III B, using the following solutions. For solution (1) add 5 ml of 1M *sodium hydroxide* to 1 ml of solution A, extract with 10 ml of *dichloromethane*, add 1 ml of *trifluoroacetic anhydride* to the dichloromethane extract and allow to stand for 10 minutes. Evaporate the solution at a pressure of 2 kPa using a rotary evaporator and a water bath at 20° and dissolve the residue in 2 ml of *dichloromethane*. For solution (2) dissolve 0.1 g of the substance being examined in 5 ml of *water*, add 1 ml of 5M *sodium hydroxide* and continue as for solution (1), beginning at the words 'extract with...'. For solution (3) dissolve 0.1 g of the substance being examined in 5 ml of *water*, add 1 ml of solution A and 1 ml of 5M *sodium hydroxide* and continue as for solution (1), beginning at the words 'extract with...'.

The chromatographic procedure may be carried out using a glass column (1.5 m × 4 mm) packed with *acid-washed, silanised diatomaceous support* (100 to 120 mesh) coated with 3% w/w of cyanopropylmethylphenyl methyl silicone fluid (OV-225 is suitable) and maintained at 170°.

In the chromatogram obtained with solution (3) the area of any *secondary peak* is not greater than that of the peak due to the trifluoracetyl derivative of 4-chloroaniline (0.5%).

Loss on drying

When dried to constant weight at 105°, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

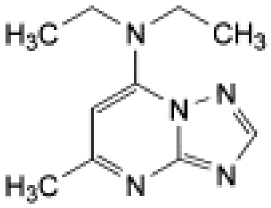
ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.3 g and determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 36.45 mg of $(C_9H_{11}N)_2,H_2SO_4$.

Trapidil

General Notices

(Ph Eur monograph 1576)



$C_{10}H_{15}N_5$ 205.3 *15421-84-8*

Action and use

Antiplatelet agent; vasodilator.

Ph Eur

DEFINITION

N,N-Diethyl-5-methyl-[1,2,4]triazolo[1,5-a]pyrimidin-7-amine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, soluble in ethanol and in methylene chloride.

mp

About 102 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *trapidil CRS.*

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Acidity or alkalinity

To 10 ml of solution S add 0.2 ml of *methyl red solution R* and 0.2 ml of *0.01 M hydrochloric acid* . The solution is red. Add 0.4 ml of *0.01 M sodium hydroxide* . The solution is yellow.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 5.0 mg of *trapidil impurity A CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *trapidil impurity B CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 50.0 ml with the mobile phase.

Reference solution (c) Mix equal volumes of reference solution (a) and reference solution (b).

Column:

— *size*: *l* = 0.125 m, Ø = 4.0 mm;

— *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm),

Mobile phase 50 ml of *methanol R* , 75 ml of *acetonitrile R* and 800 ml of a 1.7 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 2.45 with *phosphoric acid R;* dilute to 1000 ml with *water R* .

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 205 nm.

Injection 10 µl.

Run time 3 times the retention time of trapidil.

System suitability:

— *resolution*: minimum of 4.0 between the peaks due to impurity A and impurity B in the chromatogram obtained with reference solution (c).

Limits:

- *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *impurity B:* not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);
- *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.01 per cent).

Chlorides ***(2.4.4)***

Maximum 100 ppm.

Dissolve 0.25 g in 10 ml of *water R* and dilute to 15 ml with *water R*. The solution complies with the limit test for chlorides. Prepare the standard using 5 ml of *chloride standard solution (5 ppm Cl) R.*

Ammonium ***(2.4.1)***

Maximum 20 ppm.

0.50 g complies with limit test A. Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm NH_4) R*.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dissolve 2.0 g in 20 ml of *water R*. 12 ml of the solution complies with limit test A. Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 60 °C for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

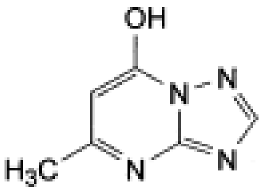
Dissolve 0.180 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 20.53 mg of $C_{10}H_{15}N_5$.

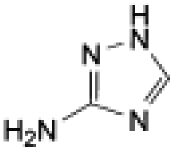
STORAGE

Protected from light.

IMPURITIES



A. 5-methyl-[1,2,4]triazolo[1,5-*a*]pyrimidin-7-ol,

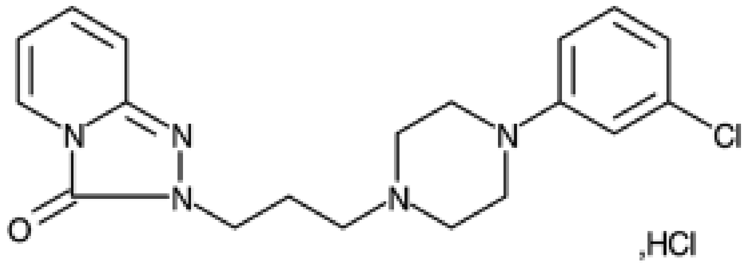


B. 1,2,4-triazol-3-amine.

Ph Eur

Trazodone Hydrochloride

General Notices



$C_{19}H_{22}ClN_5O,HCl$ 408.3 *25332-39-2*

Action and use

Monoamine reuptake inhibitor; antidepressant.

DEFINITION

Trazodone Hydrochlorideis 2-3-[4-(3-chloro)phenylpiperazin-1-yl]propyl-1,2,4triazolo[4,3-*a*] pyridin-3(2*H*)-one hydrochloride. It contains not less than 99.0% and not more than 101.0% of $C_{19}H_{22}ClN_5O,HCl$, calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white, crystalline powder.

Soluble in *water*; sparingly soluble in *ethanol (96%)* ; practically insoluble in *ether* .

IDENTIFICATION

A. The *infrared absorption spectrum* , Appendix II A, is concordant with the *reference spectrum* of trazodone hydrochloride *(RS 346)* . In the preparation of the disc, avoid excessive grinding when triturating the substance being examined with the *potassium chloride* .

B. Yields the reactions characteristic of *chlorides* , Appendix VI.

TESTS

Acidity

pH of a 1% w/v solution, 3.9 to 4.5, Appendix V L.

Heavy metals

1.0 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (20 ppm).

3-Chloroaniline

To 10 ml of a 1% w/v solution of the substance being examined in a mixture of equal volumes of *water* and *ethanol* add 2 ml of a freshly prepared 5% w/v solution of *4-dimethylaminobenzaldehyde* in *ethanol* and 0.1 ml of *hydrochloric acid*. Shake well and allow to stand for 5 minutes. Any yellow colour produced within 5 minutes of preparation of the solution is not more intense than that produced by treating at the same time and in the same manner 10 ml of a 1 µg per ml solution of *3-chloro-aniline* in a mixture of equal volumes of *water* and *ethanol* beginning at the words 'add 2 ml…' (100 ppm).

Related substances

The combined nominal total content of impurities determined in tests A and B below is not more than 1.0% and no single impurity is more than 0.3%.

A. Carry out the method for *liquid chromatography*, Appendix III D, using three solutions in the mobile phase containing (1) 0.10% w/v of the substance being examined, (2) 0.00050% w/v of the substance being examined and (3) 0.10% w/v of *trazodone hydrochloride impurity standard BPCRS*.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *non-endcapped alkylamide silica gel for chromatography* (5 µm) (Supelco Suplex pKb 100 is suitable) and a pre-column (1 cm × 4.6 mm) packed with the same material placed between the pump and the injector, (b) a mixture of 0.4 volume of *diethylamine*, 350 volumes of *acetonitrile* and 650 volumes of *water* as the mobile phase with a flow rate of 2.0 ml per minute and (c) a detection wavelength of 254 nm. If necessary adjust the proportions of *acetonitrile* and *water* in the mobile phase to obtain a retention time of about 10 minutes for the principal peak. For solution (1) allow the chromatography to proceed for three times the retention time of the principal peak.

The test is not valid unless the chromatogram obtained with solution (3) closely resembles reference chromatogram A supplied with *trazodone hydrochloride impurity standard BPCRS*.

From any *secondary peaks* in the chromatogram obtained with solution (1) calculate the nominal content of each impurity with a retention time of up to and including that of impurity E, identified from reference chromatogram A. Use, as reference, the principal peak in the chromatogram obtained with solution (2). Disregard any peak with an area less than 0.1 times that of the principal peak in the chromatogram obtained with solution (2) (0.05%).

B. Carry out the method for *liquid chromatography*, Appendix III D, using three solutions in the mobile phase containing (1) 0.10% w/v of the substance being examined, (2) 0.00050% w/v of the substance being examined and (3) 0.10% w/v of *trazodone hydrochloride impurity BPCRS*.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *non-endcapped alkylamide silica gel for chromatography* (5 µm) (Supelco Suplex pKb 100 is suitable) and a pre-column (1 cm × 4.6 mm) packed with the same material placed between the pump and the injector, (b) a mixture of 0.4 volume of *diethylamine* , 320 volumes of *water* and 680 volumes of *acetonitrile* as the mobile phase with a flow rate of 1.7 ml per minute and (c) a detection wavelength of 254 nm. If necessary adjust the proportions of *acetonitrile* and *water* in the mobile phase to obtain a retention time of about 2.5 minutes for the principal peak. For solution (1) allow the chromatography to proceed for at least five times the retention time of the principal peak.

From any *secondary peaks* in the chromatogram obtained with solution (1) calculate the nominal content of each impurity with a retention time longer than that of impurity E identified from reference chromatogram B, supplied with *trazodone hydrochloride impurity standard BPCRS* . Use, as reference, the principal peak in the chromatogram obtained with solution (2) . Disregard any peak with an area less than 0.1 times that of the principal peak in the chromatogram obtained with solution (2) (0.05%).

Loss on drying

When dried to constant weight at 105° at a pressure of 3.5 to 6.5 kPa, loses not more than 0.5% of its weight. Use 1 g.

Sulphated ash

Not more than 0.2%, Appendix IX A.

ASSAY

Dissolve 0.3 g in 60 ml of *glacial acetic acid* , add 5 ml of *mercury(* II *) acetate solution* and carry out Method I for *non-aqueous titration* , Appendix VIII A, determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 40.83 mg of $C_{19}H_{22}ClN_5O,HCl$.

STORAGE

Trazodone Hydrochloride should be kept in an airtight container and protected from light.

IMPURITIES

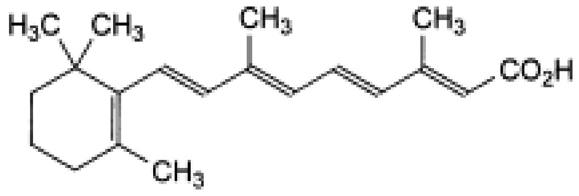
Tretinoin

General Notices

(Ph Eur monograph 0693)



$C_{20}H_{28}O_{2}$ 300.4 *302-79-4*

Action and use

Vitamin A analogue (retinoid); treatment of acne.

Preparations

Tretinoin Gel

Tretinoin Solution

Ph Eur

DEFINITION

Tretinoin contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (2*E*,4*E*,6*E*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid, calculated with reference to the dried substance.

CHARACTERS

A yellow or light orange, crystalline powder, practically insoluble in water, soluble in methylene chloride, slightly soluble in alcohol. It is sensitive to air, heat and light, especially in solution.

It melts at about 182 °C, with decomposition.

Carry out all operations as rapidly as possible and avoid exposure to actinic light; use freshly prepared solutions.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C, D.*

A. Dissolve 75.0 mg in 5 ml of *methylene chloride R* and dilute immediately to 100.0 ml with acidified 2-propanol (prepared by diluting 1 ml of *0.01 M hydrochloric acid* to 1000 ml with *2-propanol R*). Dilute 5.0 ml of this solution to 100.0 ml with the acidified 2-propanol. Dilute 5.0 ml of this latter solution to 50.0 ml with the acidified 2-propanol. Examined between 300 nm and 400 nm *(2.2.25)* , the solution shows a single maximum, at 353 nm. The specific absorbance at the maximum is 1455 to 1545.

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *tretinoin CRS* . Examine the substances prepared as discs.

C. Examine by thin-layer chromatography *(2.2.27)* , using a *TLC silica gel GF* $_{254}$ *plate R*.

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 10 mg of *tretinoin CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Apply separately to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 2 volumes of *glacial acetic acid R* , 4 volumes of *acetone R* , 40 volumes of *peroxide-free ether R* and 54 volumes of *cyclohexane R.* Allow the plate to dry in air and examine in ultraviolet light at 254 nm. The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. Dissolve about 5 mg in 2 ml of *antimony trichloride solution R* . An intense red colour develops and later becomes violet.

TESTS

Related substances

Examine by liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.100 g of the substance to be examined in *methanol* R and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 10.0 mg of *isotretinoin CRS* in *methanol R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 25.0 ml with *methanol R.*

Reference solution (c) Mix 1.0 ml of reference solution (a) with 0.5 ml of the test solution and dilute to 25.0 ml with *methanol R* .

Reference solution (d) Dilute 0.5 ml of the test solution to 100.0 ml with *methanol R.*

The chromatographic procedure may be carried out using:

— a stainless steel column 0.15 m long and 4.6 mm in internal diameter packed with *octadecylsilyl silica gel for chromatography R* (3 µm);

— as mobile phase at a flow rate of 1.0 ml/min a mixture of 5 volumes of *glacial acetic acid R* , 225 volumes of *water R* and 770 volumes of *methanol R* ;

— as detector a spectrophotometer set at 355 nm.

Inject separately 10 µl of reference solutions (b), (c) and (d) and of the test solution. Adjust the sensitivity of the detector so that the height of the principal peak in the chromatogram obtained with reference solution (b) is about 70 per cent of the full scale of the recorder. The test is not valid unless the resolution between isotretinoin and tretinoin in the chromatogram obtained with reference solution (c) is at least 2.0. In the chromatogram obtained with the test solution, the area of the peak due to isotretinoin is not greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent) and the sum of the areas of any peaks, apart from the principal peak and any peak due to isotretinoin, is not greater than the area of the principal peak in the chromatogram obtained with reference solution (d) (0.5 per cent).

Heavy metals ***(2.4.8)***

0.5 g complies with limit test D for heavy metals (20 ppm). Prepare the standard using 1 ml of *lead standard solution (10 ppm Pb) R* .

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 70 ml of *acetone R* . Titrate with *0.1 M tetrabutylammonium hydroxide* determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M tetrabutylammonium hydroxide* is equivalent to 30.04 mg of $C_{20}H_{28}O_2$.

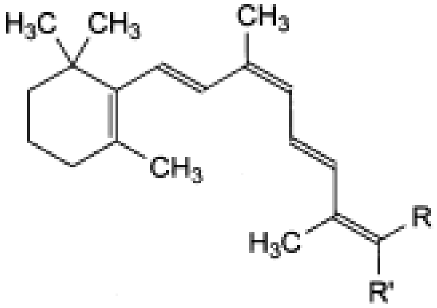
STORAGE

Store in an airtight container, protected from light, at a temperature not exceeding 25 °C.

It is recommended that the contents of an opened container be used as soon as possible and any unused part be protected by an atmosphere of an inert gas.

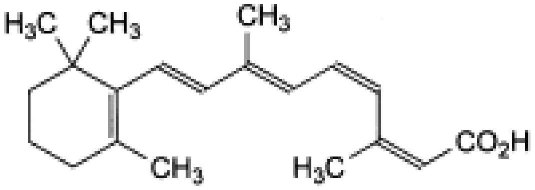
IMPURITIES

A. isotretinoin,



B. R = CO_2H, R′ = H: (2Z,4*E*,6*Z*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (9,13-di-*cis*-retinoic acid),

D. R = H, R′ = CO_2H: (2*E*,4*E*,6*Z*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (9-*cis*-retinoic acid),



C. (2*Z*,4*Z*,6*E*,8*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraenoic acid (11,13-di-*cis*-retinoic acid),

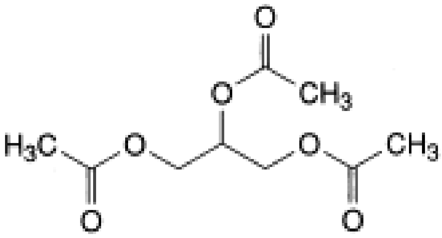
Ph Eur

Triacetin

General Notices

(Ph Eur monograph 1106)



$C_9H_{14}O_6$ 218.2 *102-76-1*

Action and use

Antifungal.

Ph Eur

DEFINITION

Propane-1,2,3-triyl triacetate.

Content

97.0 per cent to 100.5 per cent (anhydrous substance).

CHARACTERS

Appearance

Clear, colourless, slightly viscous oily liquid.

Solubility

Soluble in water, miscible with ethanol (96 per cent) and toluene.

bp: about 260 °C.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24).*

Comparison: Ph. Eur. reference spectrum of triacetin.

TESTS

Appearance

It is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Acidity

Dissolve 5.00 g in 25 ml of *anhydrous ethanol R*, previously neutralised to 0.2 ml of *phenolphtalein solution R* and add 0.20 ml of *0.1 M sodium hydroxide*. The pink colour of the mixture persists for 15 s.

Relative density *(2.2.5)*

1.159 to 1.164.

Refractive index *(2.2.6)*

1.429 to 1.432.

Water *(2.5.12)*

Maximum 0.2 per cent, determined on 5.00 g.

ASSAY

Introduce 0.300 g into a 250 ml borosilicate glass flask fitted with a reflux condenser. Add 25.0 ml of *0.5 M alcoholic potassium hydroxide* and a few glass beads. Attach the condenser and heat under reflux for 30 min. Add *1 ml of phenolphthalein solution R1* and titrate immediately with *0.5 M hydrochloric acid*. Carry out a blank test under the same conditions. Calculate the content from the difference in consumption of alkali in the main and the blank procedure.

1 ml of *0.5 M alcoholic potassium* hydroxide is equivalent to 36.37 mg of $C_9H_{14}O_6$.

STORAGE

In a well-filled container.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *methanol R* and evaporate to dryness. Using the residues, prepare halogen salt discs or mulls in *liquid paraffin R* and record new spectra.

B. Thin-layer chromatography *(2.2.27)* . *Prepare the solutions immediately before use and protect from light.*

Test solution Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 20 mg of *triamcinolone acetonide CRS* in *methanol R* and dilute to 20 ml with the same solvent.

Reference solution (b) Dissolve 10 mg of *triamcinolone hexacetonide CRS in* reference solution (a) and dilute to 10 ml with reference solution (a).

Plate TLC *silica gel* F_{254} *plate R.*

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R* .

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm, immediately after development.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Thin-layer chromatography *(2.2.27)* . *Prepare the solutions immediately before use and protect from light.*

Test solution (a) Dissolve 10 mg of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Test solution (b) In a separating funnel, dissolve 10 mg of the substance to be examined in 1.5 ml of *glacial acetic acid R* , add 0.5 ml of a 20 g/l solution of *chromium trioxide R* and allow to stand for 60 min. Add 5 ml of *water R* , 2 ml of *methylene chloride R* and shake vigorously for 2 min. Allow to separate and use the lower layer.

Reference solution (a) Dissolve 10 mg of *triamcinolone acetonide CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) In a separating funnel, dissolve 10 mg of *triamcinolone acetonide CRS* in 1.5 ml of *glacial acetic acid R* , add 0.5 ml of a 20 g/l solution of *chromium trioxide R* and allow to stand for 60 min. Add 5 ml of *water R* , 2 ml of *methylene chloride R* and shake vigorously for 2 min. Allow to separate and use the lower layer.

Plate TLC *silica gel F $_{254}$ plate R*.

Mobile phase Add a mixture of 1.2 volumes of *water R* and 8 volumes of *methanol R* to a mixture of 15 volumes of *ether R* and 77 volumes of *methylene chloride R* .

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm, immediately after development.

Results The principal spot in each of the chromatograms obtained with the test solutions is similar in position and size to the principal spot in the chromatogram obtained with the corresponding reference solution. The principal spot in the chromatograms obtained with test solution (b) and reference solution (b) has an R_F value distinctly higher than that of the principal spot in the chromatograms obtained with test solution (a) and reference solution (a).

D. Mix about 5 mg with 45 mg of *heavy magnesium oxide R* and ignite in a crucible until an almost white residue is obtained (usually less than 5 min). Allow to cool, add 1 ml of *water R* , 0.05 ml of *phenolphthalein solution R1* and about 1 ml of *dilute hydrochloric acid R* to render the solution colourless. Filter. To a freshly prepared mixture of 0.1 ml of *alizarin S solution R* and 0.1 ml of *zirconyl nitrate solution R,* add 1.0 ml of the filtrate. Mix, allow to stand for 5 min and compare the colour of the solution to that of a blank prepared in the same manner. The test solution is yellow and the blank is red.

TESTS

Specific optical rotation *(2.2.7)*

+ 100 to + 107 (anhydrous substance).

Dissolve 0.100 g in *dioxan R* and dilute to 10.0 ml with the same solvent.

Related substances

Liquid chromatography (2.2.29) Carry out the test protected from light.

Test solution Dissolve 25.0 mg of the substance to be examined in 7 ml of *methanol R* and dilute to 10.0 ml with *water R* .

Reference solution (a) Dissolve 2 mg of *triamcinolone acetonide CRS* and 2 mg of *triamcinolone R* (impurity A) in the mobile phase and dilute to 100.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase.

Column:

- *size:* *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase In a 1000 ml volumetric flask mix 525 ml of *methanol R* with 400 ml of *water R* and allow to equilibrate; dilute to 1000 ml with *water R* and mix again.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Equilibration With the mobile phase for about 10 min.

Injection 20 µl.

Run time 3.5 times the retention time of triamcinolone acetonide.

Retention time Impurity A = about 5 min; triamcinolone acetonide = about 17 min.

System suitability Reference solution (a):

- *resolution*: minimum 15 between the peaks due to impurity A and triamcinolone acetonide; if necessary, adjust the concentration of methanol in the mobile phase.

Limits:

- *impurity A:* not more than 0.25 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- *total*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent);
- *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Water ***(2.5.12)***

Maximum 2.0 per cent, determined on 0.500 g.

ASSAY

Protect the solutions from light throughout the assay.

Dissolve 50.0 mg in *ethanol (96 per cent) R* and dilute to 50.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with *ethanol (96 per cent) R* . Measure the absorbance *(2.2.25)* at the absorption maximum at 238.5 nm.

Calculate the content of $C_{24}H_{31}FO_6$ taking the specific absorbance to be 355.

STORAGE

Protected from light.

Action and use

Sodium channel blocker; potassium-sparing diuretic.

Preparations

Co-triamterzide Tablets

Triamterene Capsules

Ph Eur

DEFINITION

6-Phenylpteridine-2,4,7-triamine.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, crystalline powder.

Solubility

Very slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

Infrared absorption spectrophotometry (*2.2.24*).

Comparison *triamterene CRS.*

TESTS

Acidity

Boil 1.0 g with 20 ml of *water R* for 5 min, cool, filter and wash the filter with 3 quantities, each of 10 ml, of *water R*. Combine the filtrate and washings and add 0.3 ml of *phenolphthalein solution R*. Not more than 1.5 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Impurity D

Gas chromatography (*2.2.28*).

Internal standard solution Dilute 0.1 ml of *nitrobenzene R* to 100 ml with *methanol R*. Dilute 1 ml of this solution to 50 ml with *methanol R*.

Test solution Introduce 0.800 g of the substance to be examined into a suitable vial, add 5 ml of *dimethyl sulphoxide R* and heat until the sample is dissolved (do not heat to boiling). Allow to cool. Add 5 ml of cold *methanol R* to enhance the precipitation of triamterene. Filter and wash the filter with 5 ml of *methanol R*. Combine the filtrate and washing, add 2.0 ml of the internal standard solution and dilute to 20.0 ml with *methanol R.*

Reference solution Dissolve 20.0 mg of *benzyl cyanide R* (impurity D) in *methanol R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of the solution to 50.0 ml with *methanol R*. To 2.0 ml of this solution add 2.0 ml of the internal standard solution and 5 ml of *dimethyl sulphoxide R* and dilute to 20.0 ml with *methanol R*.

Blank solution Dilute 5 ml of *dimethyl sulphoxide R* to 20 ml with *methanol R.*

Column:
- *material*: fused silica;
- *size: l* = 30 m, Ø = 0.25 mm;
- *stationary phase*: *macrogol 20 000 R* (0.5 µm).

Carrier gas *helium for chromatography R*.

Flow rate 1.5 ml/min.

Split ratio 1:15.

Temperature:
- *column*: 170 °C;
- *injection port*: 210 °C;
- *detector*: 230 °C.

Detection Flame ionisation.

Injection 1 µl.

Run time Twice the retention time of the internal standard.

Relative retention With reference to the internal standard (retention time = about 6 min): impurity D = about 1.6.

System suitability Reference solution:

- *resolution*: *minimum* 2.0 between the peak due to impurity D and the nearest peak due to the solvent (blank solution);
- *signal-to-noise ratio* : minimum 10 for the peak due to impurity D.

Limit:

- *impurity D*: calculate the ratio (*R*) of the area of the peak due to impurity D to the area of the peak due to the internal standard from the chromatogram obtained with the reference solution; from the chromatogram obtained with the test solution, calculate the ratio of the area of the peak due to impurity D to the area of the peak due to the internal standard: this ratio is not greater than *R* (50 ppm).

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *nitrosotriaminopyrimidine CRS* (impurity A) in the mobile phase and dilute to 100.0 ml with the mobile phase. Dilute 1.0 ml of the solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve the contents of a vial of *triamterene impurity B CRS* in 0.5 ml of the mobile phase with the aid of ultrasound. To this solution, add 0.5 ml of the test solution.

Column:

- *size: l* = 0.25 m, Ø = 4.0 mm;
- *stationary phase*: spherical *end-capped octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *butylamine R* , *acetonitrile R* , *methanol R* , *water R* (2:200:200:600 *V/V/V/V*), adjusted to pH 5.3 with *acetic acid R.*

Flow rate 1 ml/min.

Detection Spectrophotometer at 320 nm and at 355 nm.

Injection 50 µl.

Relative retention With reference to triamterene (retention time = about 5 min): impurity A = about 0.6; impurity B = about 0.8; impurity C = about 1.7.

System suitability:

- *resolution*: minimum 1.5 between the peaks due to impurity B and triamterene in the chromatogram obtained with reference solution (c) at 355 nm; if necessary, increase the quantity of *water R* in the mobile phase;

— *signal-to-noise ratio* : minimum *10* for the principal peak in the chromatogram obtained with reference solution (b) at 320 nm.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 1.8; impurity C = 1.5;

— *impurity A at 320 nm*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (50 ppm);

— *impurities B, C a*t 355 nm: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities at 355 nm*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total at 355 nm*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit at 355 nm*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying *(2.2.32*)

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 ml of *anhydrous formic acid R* and add 100 ml of *anhydrous acetic acid R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically (*2.2.20*).

1 ml of *0.1 M perchloric acid* is equivalent to 25.33 mg of $C_{12}H_{11}N_7$.

STORAGE

Protected from light.

Preparation Discs.

Comparison *tribenoside CRS.*

TESTS

Solution S

Dissolve 4.00 g in *methanol R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 420 nm has a maximum of 0.10.

Specific optical rotation *(2.2.7)*

- 31.0 to - 40.0.

Dilute 2.0 ml of solution S to 20.0 ml with *methanol R* .

Related substances

Liquid chromatography *(2.2.29)* .

Test solution (a) Dissolve 1.000 g of the substance to be examined in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 25.0 ml with the same mixture of solvents.

Test solution (b) Dissolve 50.0 mg of the substance to be examined in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (a) Dilute 25.0 mg of *benzaldehyde R* and 30.0 mg of *tribenoside impurity A CRS* to 100.0 ml with *acetonitrile R.* Introduce 20.0 ml of this solution into a 50 ml volumetric flask, add 2.5 ml of *water R* and dilute to 50.0 ml with *acetonitrile R.*

Reference solution (b) Dissolve 50.0 mg of *tribenoside CRS* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 50.0 ml with the same mixture of solvents.

Reference solution (c) Dissolve 12.0 mg of *benzyl ether R* in a mixture of 5 volumes of *water R* and 95 volumes of *acetonitrile R* and dilute to 100.0 ml with the same mixture of solvents.

Column:

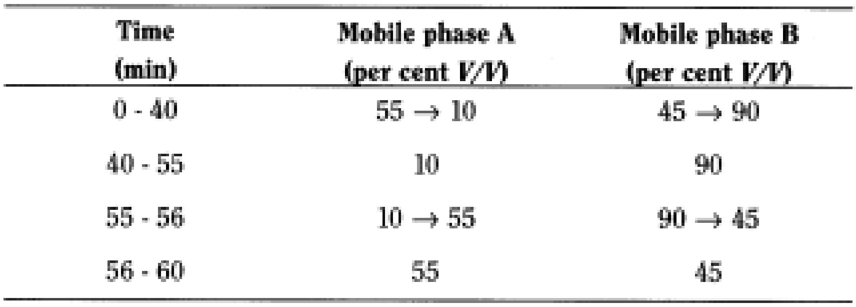
— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (3 µm).

Mobile phase:

— *mobile phase A*: 0.1 per cent *V/V* solution of *phosphoric acid R* ;

— *mobile phase B: acetonitrile R;*



Time (min)	Mobile phase A (per cent V/V)	Mobile phase B (per cent V/V)
0 - 40	55 → 10	45 → 90
40 - 55	10	90
55 - 56	10 → 55	90 → 45
56 - 60	55	45

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl; inject test solution (a) and reference solutions (a), (b) and (c).

Relative retentions With reference to the β-anomer of tribenoside (retention time = about 18 min): α-anomer = about 1.1; impurity C = about 0.2; impurity B = about 0.6; impurity D = about 0.8; impurity A = about 1.4.

System suitability Reference solution (b):

— *resolution:* minimum 3.0 between the peaks due to the α-anomer and to the β-anomer of tribenoside.

Limits:

— *impurity A*: not more than 1.7 times the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *impurity C*: not more than twice the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.5 per cent); if the area of the peak due to impurity C in the chromatogram obtained with the test solution is greater than the area of the corresponding peak in the chromatogram obtained with reference solution (a) (0.25 per cent), dilute the test solution to obtain an area equal to or smaller than the area of the peak in the chromatogram obtained with reference solution (a); calculate the content of impurity C taking into account the dilution factor;

— *impurity D*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

— *any other impurity*: not more than the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *total:* not more than 6.7 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (2.0 per cent);

— *disregard limit*: 0.17 times the area of the peak due to impurity A in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dilute 5.0 ml of solution S to 20.0 ml with *methanol R*. 12 ml of the solution complies with limit test B. Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *methanol R*.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

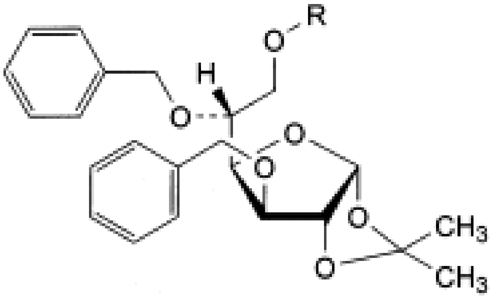
Injection Test solution (b) and reference solution (b).

Calculate the sum of the percentage contents of the α-anomer and the β-anomer of tribenoside.

STORAGE

Under nitrogen, in an airtight container.

IMPURITIES



A. R = CH_2-C_6H_5: 3,5,6-tri-*O*-benzyl-1,2-*O*-(1-methylethylidene)-α-D-glucofuranose,

B. R = H: 3,5-di-*O*-benzyl-1,2-*O*-(1-methylethylidene)-α-D-glucofuranose,

C. C_6H_5-CHO: benzaldehyde,

D. C_6H_5-CH_2-O-CH_2-C_6H_5: dibenzyl ether.

Ph Eur

DEFINITION

2,2,2-Trichloroacetic acid.

Content

98.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline mass or colourless crystals, very deliquescent.

Solubility

Very soluble in water, in alcohol and in methylene chloride.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *Ph. Eur. reference spectrum of trichloroacetic acid* .

B. To 0.5 ml of solution S (see Tests) add 2 ml of *pyridine R* and 5 ml of *strong sodium hydroxide solution R* . Shake vigorously and heat in a water-bath at 60-70 °C for 5 min. The upper layer shows an intense red colour.

C. Solution S is strongly acidic *(2.2.4)* .

TESTS

Solution S

Dissolve 2.5 g in *water R* and dilute to 25 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Chlorides *(2.4.4)*

Maximum 100 ppm.

Dilute 5 ml of solution S to 15 ml with *water R* . The solution complies with the limit test for chlorides.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 20 ml of *water R* . Titrate with *0.1 M sodium hydroxide* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 16.34 mg of $C_2HCl_3O_2$.

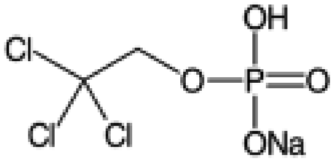
STORAGE

In an airtight container .

Ph Eur

Triclofos Sodium

General Notices



$C_2H_3Cl_3NaO_4P$ 251.4 *7246-20-0*

Action and use

Hypnotic.

Preparation

Triclofos Oral Solution

DEFINITION

Triclofos Sodium is sodium 2,2,2-trichloroethyl hydrogen orthophosphate. It contains not less than 41.3% and not more than 43.2% of Cl and not less than 97.0% and not more than 102.0% of $C_2H_3Cl_3NaO_4P$, both calculated with reference to the dried substance.

CHARACTERISTICS

A white or almost white powder; hygroscopic.

Freely soluble in *water*; slightly soluble in *ethanol (96%)*; practically insoluble in *ether*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of triclofos sodium *(RS 350)*.

B. Yields the reactions characteristic of *sodium salts*, Appendix VI.

C. Heat 0.1 g with 1 g of *anhydrous sodium carbonate* to a dull red heat and maintain for 10 minutes, cool, extract the residue with *water* and filter. The filtrate yields the reactions characteristic of *chlorides* and of *phosphates*, Appendix VI.

TESTS

Acidity

pH of a 2% w/v solution, 3.0 to 4.5, Appendix V L.

Clarity of solution

A 2.0% w/v solution is *clear*, Appendix IV A.

Heavy metals

A 10.0% w/v solution complies with *limit test A for heavy metals*, Appendix VII. Use *lead standard solution (2 ppm Pb)* to prepare the standard (20 ppm).

Chloride

Dissolve 0.1 g in 50 ml of *water*. 15 ml of the solution complies with the *limit test for chlorides*, Appendix VII (0.17%).

Phosphate

Not more than 1.0%, calculated as PO_4, when determined by the following method. Dissolve 25 mg in 10 ml of *water*, add 4 ml of 1M *sulphuric acid*, 1 ml of *ammonium molybdate solution* and 2 ml of *methylaminophenol—sulphite reagent* and allow to stand for 15 minutes. Add sufficient *water* to produce 25 ml, allow to stand for a further 15 minutes and measure the *absorbance* of a 4 cm layer of the resulting solution at 730 nm, Appendix II B. Calculate the content of phosphate from a calibration curve prepared by treating suitable volumes of a 0.00143% w/v solution of *potassium dihydrogen orthophosphate* in the same manner.

Loss on drying

When dried at 100° at a pressure not exceeding 0.7 kPa for 3 hours, loses not more than 5.0% of its weight. Use 1 g.

ASSAY

For Cl

Mix 0.25 g with 1 g of *anhydrous sodium carbonate* in a nickel crucible about 3 cm in diameter, fill the crucible completely with *anhydrous sodium carbonate* and invert into a nickel crucible about 4 cm in diameter; cover the smaller crucible with *anhydrous sodium carbonate*, well pressed down, using about 25 g of *anhydrous sodium carbonate* in all. Heat for 30 minutes at a dull red heat, cool, transfer to a 400 ml beaker, add 150 ml of *water* and boil gently for 10 minutes. Filter through absorbent cotton into a 600 ml beaker, washing the residue thoroughly with hot *water*, until about 400 ml of filtrate has been collected. Cool, cautiously add *nitric acid* until the solution is neutral to *litmus paper* and add 3 ml of *nitric acid* in excess. Add 50 ml of 0.1M *silver nitrate VS*, allow to stand until precipitation is complete, filter, wash the precipitate with *water* and titrate the combined filtrate and washings with 0.1M *ammonium thiocyanate VS* using *ammonium iron(III) sulphate solution R2* as indicator. Each ml of 0.1M *silver nitrate VS* is equivalent to 3.545 mg of Cl.

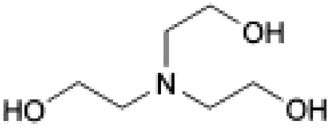
For $C_2H_3Cl_3NaO_4P$

Heat 0.2 g in a Kjeldahl flask with 2 ml of *sulphuric acid* and 2.5 ml of *nitric acid* until brown fumes cease to be evolved, cool, add 1 ml of *nitric acid* and heat again. Continue adding *nitric acid* and heating until brown fumes are no longer evolved and the solution is colourless when cold. Heat until dense, white fumes are evolved, cool, transfer the solution to a flask with the aid of 150 ml of *water*, add 50 ml of *citric—molybdic acid solution* and heat slowly to boiling. Swirling the flask continuously, add 25 ml of *quinoline solution* at first drop wise and then in a steady stream, heat on a water bath for 5 minutes and cool. Filter, wash the precipitate with *water* until free from acid, transfer the precipitate to a flask with the aid of 100 ml of *water*, add 50 ml of 0.5M *sodium hydroxide VS* and shake until dissolved. Titrate the excess of alkali with 0.5M *hydrochloric acid VS* using *phenolphthalein—thymol blue solution* as indicator. Each ml of 0.5M *sodium hydroxide VS* is equivalent to 4.835 mg of $C_2H_3Cl_3NaO_4P$. Correct the result for the content of phosphate, as determined by the test described above; each mg of PO_4 is equivalent to 2.65 mg of $C_2H_3Cl_3NaO_4P$.

Triethanolamine

General Notices

(Trolamine, Ph Eur monograph 1577)



$C_6H_{15}NO_3$ 149.2 *102-71-6*

Action and use

Pharmaceutical aid.

Ph Eur

DEFINITION

2,2′,2″-Nitrilotriethanol.

Content

99.0 per cent *m/m* to 103.0 per cent *m/m* of total bases (anhydrous substance).

CHARACTERS

Appearance

Clear, viscous, colourless or slightly yellow liquid, very hygroscopic.

Solubility

Miscible with water and with alcohol, soluble in methylene chloride.

IDENTIFICATION

First identification B, C.

Second identification A, B, D.

A. Relative density *(2.2.5):* 1.120 to 1.130.

B. Refractive index *(2.2.6)*: 1.482 to 1.485.

C. Examine the chromatograms obtained in the test for related substances.

Results the principal peak in the chromatogram obtained with the test solution is similar in retention time and size to the principal peak in the chromatogram obtained with reference solution (a).

D. To 1 ml add 0.3 ml of *copper sulphate solution R* . A blue colour develops. Add 2.5 ml of *dilute sodium hydroxide solution R* and heat to boiling. The blue colour remains unchanged.

TESTS

Solution S

Dissolve 12 g in *water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_6 *(2.2.2, Method II)*.

Related substances

Gas chromatography *(2.2.28)* .

Internal standard solution Dissolve 5.0 g of *3-aminopropanol R* in *water R* and dilute to 100.0 ml with the same solvent.

Test solution Dissolve 10.0 g of the substance to be examined in *water R* . Add 1.0 ml of the internal standard solution and dilute to 100.0 ml with *water R* .

Reference solution (a) Dissolve 1.0 g of *trolamine CRS* in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dissolve 1.0 g of *ethanolamine R* , 5.0 g of *diethanolamine R* and 1.0 g of *trolamine CRS* in *water R* and dilute to 100.0 ml with the same solvent. To 1.0 ml of the solution add 1.0 ml of the internal standard solution and dilute to 100.0 ml with *water R.*

Column:

— *material*: fused silica;

— *size*: *l* = 25 m, Ø = 0.25 mm;

— *stationary phase: poly(dimethyl)(diphenyl)siloxane R* (film thickness 0.50 µm).

Carrier gas *helium for chromatography R* .

Flow rate 1 ml/min.

Split ratio 1:35.

Maximum 0.25 per cent, determined on 1.000 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

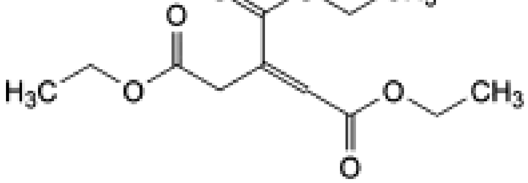
Introduce 1.500 g into a 250 ml borosilicate-glass flask fitted with a reflux condenser. Add 25 ml of *2-propanol R* , 50 ml of *water R* , 25.0 ml of *1 M sodium hydroxide* and a few glass beads. Heat under a reflux condenser for 1 h. Allow to cool. Add 1 ml of *phenolphthalein solution R1* and titrate with *1 M hydrochloric acid*. Carry out a blank titration.

1 ml of *1 M sodium hydroxide* is equivalent to 92.1 mg of $C_{12}H_{20}O_7$.

STORAGE

In an airtight container .

IMPURITIES



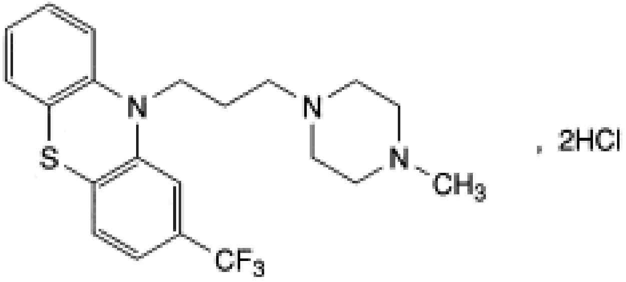
A. triethyl propene-1,2,3-tricarboxylate (triethyl aconitate).

Ph Eur

Trifluoperazine Hydrochloride

General Notices

(Ph Eur monograph 0059)



$C_{21}H_{24}F_3N_3S,2HCl$ 480.4   *440-17-5*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Trifluoperazine Tablets

Ph Eur

DEFINITION

Trifluoperazine hydrochloride contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 10-[3-(4-methylpiperazin-1-yl)propyl]-2-(trifluoromethyl)-10*H*-phenothiazine dihydrochloride, calculated with reference to the dried substance.

CHARACTERS

A white to pale yellow, crystalline powder, hygroscopic, freely soluble in water, soluble in alcohol.

It melts at about 242 °C, with decomposition.

IDENTIFICATION

A. *Protect the solutions from bright light and measure the absorbances immediately.* Dissolve 50 mg in *0.1 M hydrochloric acid* and dilute to 500 ml with the same acid.

Examined between 280 nm and 350 nm, the solution shows an absorption maximum *(2.2.25)* at 305 nm. Dilute 5 ml of the solution to 100 ml with *0.1 M hydrochloric acid* . Examined between 230 nm and 280 nm, this solution shows an absorption maximum at 255 nm. The specific absorbance at this maximum is about 650.

B. It complies with the identification test for phenothiazines by thin-layer chromatography *(2.3.3)* : use *trifluoperazine hydrochloride CRS* to prepare the reference solution.

C. Place 0.25 g in a 100 ml separating funnel, add 5 ml of *water R* and 2 ml of *dilute sodium hydroxide solution R* . Shake vigorously with 20 ml of *ether R* . Wash the ether layer with 5 ml of *water R* , add 0.15 g of *maleic acid R* and evaporate the ether. The residue, recrystallised from 30 ml of *alcohol R* and dried, melts *(2.2.14)* at about 192 °C.

D. Dissolve about 0.5 mg in 1 ml of *water R* , add 0.1 ml of *bromine water R* and shake for about 1 min. Add dropwise 1 ml of *sulphuric acid R* with constant, vigorous agitation. A red colour develops.

E. Dissolve about 50 mg in 5 ml of *water R* and add 2 ml of *nitric acid R* . A dark-red colour develops which turns to pale yellow. The solution gives reaction (a) of chlorides *(2.3.1)*.

TESTS

pH *(2.2.3)*

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent. The pH of the solution is 1.6 to 2.5.

Related substances

Carry out the test protected from bright light.

Examine by thin-layer chromatography *(2.2.27)* , using a *TLC silica gel GF$_{254}$ plate R*.

Test solution Dissolve 0.2 g of the substance to be examined in a mixture of 5 volumes of *diethylamine R* and 95 volumes of *methanol R* and dilute to 10 ml with the same mixture of solvents. Prepare immediately before use.

Reference solution Dilute 1 ml of the test solution to 200 ml with a mixture of 5 volumes of *diethylamine R* and 95 volumes of *methanol R* .

Apply to the plate 10 µl of each solution. Develop over a path of 12 cm using a mixture of 10 volumes of *acetone R,* 10 volumes of *diethylamine R* and 80 volumes of *cyclohexane R.* Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with the reference solution (0.5 per cent).

Loss on drying *(2.2.32)*

Not more than 1.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 50 ml of *alcohol R* and add 5.0 ml of *0.01 M hydrochloric acid*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 48.04 mg of $C_{21}H_{26}Cl_2F_3N_3S$.

STORAGE

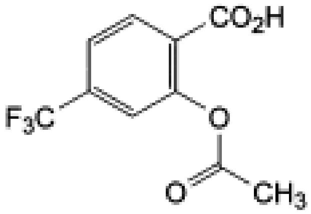
Store in an airtight container, protected from light.

Ph Eur

Triflusal

General Notices

(Ph Eur monograph 1377)



$C_{10}H_7F_3O_4$ 248.2 *322-79-2*

Action and use

Thromboxane synthesis inhibitor; antiplatelet drug.

Ph Eur

DEFINITION

2-(Acetyloxy)-4-(trifluoromethyl)benzoic acid.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

practically insoluble in water, very soluble in ethanol, freely soluble in methylene chloride.

mp

About 118 °C, with decomposition.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *triflusal CRS.*

TESTS

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.20 g of the substance to be examined in *acetonitrile R* and dilute to 20.0 ml with the same solvent. *Prepare the solution immediately before use.*

Reference solution (a) Dissolve 5.0 mg of *triflusal impurity B CRS* in *acetonitrile R* and dilute to 10.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 25.0 ml with *acetonitrile R* .

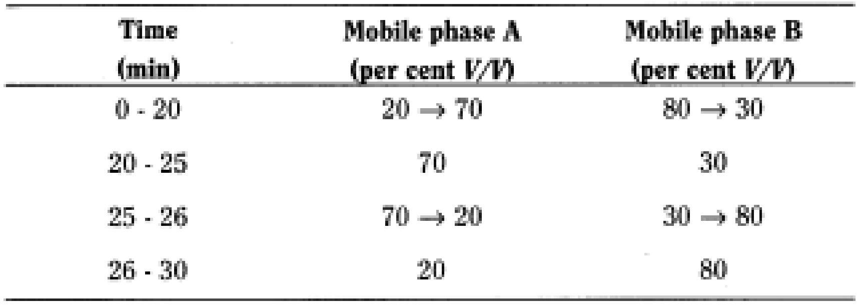
Reference solution (c) Dissolve 2.5 mg of the substance to be examined in *acetonitrile R* , add 5 ml of reference solution (a) and dilute to 10 ml with *acetonitrile R* . Prepare the solution immediately before use.

Column:

- *size:* *l* = 0.15 m, Ø = 4.0 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (4-5 µm).

Mobile phase:

- *mobile phase A: acetonitrile R* ;
- *mobile phase B:* 0.5 per cent *V/V* solution of *phosphoric acid R,*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 20	20 → 70	80 → 30
20 - 25	70	30
25 - 26	70 → 20	30 → 80
26 - 30	20	80

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 237 nm.

Injection 10 µl of the test solution and reference solutions (b) and (c).

Relative retention With reference to triflusal (retention time = about 13 min): impurity A = about 0.3; impurity B = about 1.2; impurity C = about 1.3; impurity D = about 1.6.

System suitability Reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to triflusal and impurity B.

Limits:

- *impurity B*: not more than 1.5 times the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.3 per cent);
- *total of impurities other than B*: not more than 0.5 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.1 per cent);
- *disregard limit*: 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (b) (0.02 per cent).

Heavy metals *(2.4.8)*

Maximum 10 ppm.

Dissolve 2.0 g in 12 ml of *alcohol R* and dilute to 20 ml with *water R* . 12 ml complies with limit test B. Prepare the standard using lead standard solution (1 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with a mixture of 2 volumes of *water R* and 3 volumes of *alcohol R* .

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in a desiccator *in vacuo* over *diphosphorus pentoxide R* .

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g in a platinum crucible.

ASSAY

Dissolve 0.200 g in 50 ml of *ethanol R* . Titrate with *0.1 M sodium hydroxide* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 24.82 mg of $C_{10}H_7F_3O_4$.

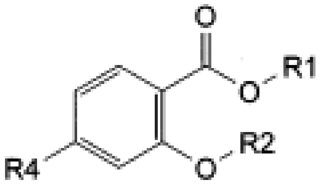
STORAGE

In an airtight container , at a temperature not exceeding 25 °C.

IMPURITIES

Specified impurities *B.*

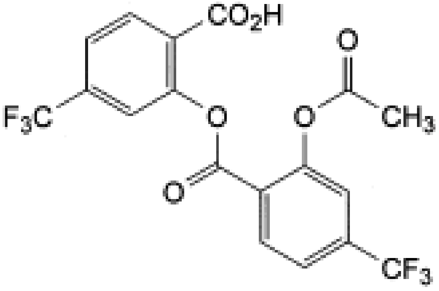
Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A, C, D.*



A. R1 = H, R2 = CO-CH_3, R4 = CO_2H: 2-(acetyloxy)benzene-1,4-dicarboxylic acid (2-acetoxyterephthalic acid),

B. R1 = R2 = H, R4 = CF_3: 2-hydroxy-4-(trifluoromethyl)benzoic acid (4-(trifluoromethyl) salicylic acid),

C. R1 = R2 = CO-CH_3, R4 = CF_3: acetic 2-(acetyloxy)-4-(trifluoromethyl)benzoic anhydride,



D. 2-[[2-(acetyloxy)-4-(trifluoromethyl)benzoyl]oxy]-4-(trifluoromethyl)benzoic acid.

Ph Eur

Triglycerol Diisostearate

General Notices

(Ph Eur monograph 2032)

Ph Eur

DEFINITION

Mixture of polyglycerol diesters of mainly isostearic acid, obtained by esterification of polyglycerol and isostearic acid. The polyglycerol consists mainly of triglycerol.

CHARACTERS

Appearance

Clear, yellowish, viscous liquid.

Solubility

Practically insoluble in water, miscible with ethanol (96 per cent) and with fatty oils.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Film between 2 plates of *sodium chloride R.*

Comparison *triglycerol diisostearate CRS.*

B. Composition of fatty acids (see Tests).

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_3 *(2.2.2, Method I)*.

Mix 10 ml with 10 ml of *ethanol (96 per cent) R.*

Acid value *(2.5.1)*

Maximum 3.0, determined on 1.0 g.

Hydroxyl value *(2.5.3, Method A)*

180 to 230, determined on 0.25 g.

Iodine value ***(2.5.4, Method B)***

Maximum 3.0.

Peroxide value ***(2.5.5, Method B)***

Maximum 6.0.

Saponification value ***(2.5.6)***

128 to 160.

Composition of fatty acids ***(2.4.22, Method B)***

Use the mixture of calibrating substances in Table 2.4.22.-1.

Composition of the fatty-acid fraction of the substance:

— *sum of the contents of the fatty acids eluting between palmitic acid and stearic acid* : minimum 60.0 per cent;

— *sum of the contents of myristic acid, palmitic acid and stearic acid* : maximum 11.0 per cent.

Water ***(2.5.12)***

Maximum 0.5 per cent, determined on 2.00 g.

Sulphated ash

Maximum 0.5 per cent, determined on 1.0 g.

Heat a silica crucible to redness for 30 min, allow to cool in a desiccator and weigh. Evenly distribute 1.00 g of the substance to be examined in the crucible and weigh. Dry at 100-105 °C for 1 h and ignite in a muffle furnace at 600 °C ± 25 °C, until the substance is thoroughly charred. Carry out the test for sulphated ash *(2.4.14)* on the residue obtained, starting with "Moisten the substance to be examined...".

STORAGE

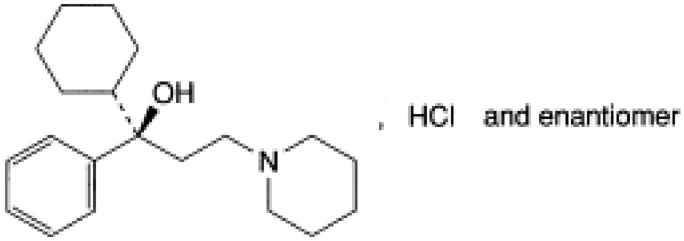
In an airtight container, protected from light.

Ph Eur

Trihexyphenidyl Hydrochloride

General Notices

(Ph Eur monograph 1626)



$C_{20}H_{31}NO,HCl$ 337.9 *52-49-3*

Action and use

Anticholinergic.

Preparation

Trihexyphenidyl Tablets

Ph Eur

DEFINITION

(1*RS*)-1-Cyclohexyl-1-phenyl-3-(piperidin-1-yl)propan-1-ol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water, sparingly soluble in alcohol and in methylene chloride.

mp

About 250 °C, with decomposition.

IDENTIFICATION

First identification *A, D.*

Second identification *B, C, D.*

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *trihexyphenidyl hydrochloride CRS* .

B. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 25 mg of the substance to be examined in a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Reference solution Dissolve 25 mg of *trihexyphenidyl hydrochloride CRS* in a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R* and dilute to 10 ml with the same mixture of solvents.

Plate *TLC silica gel G plate R* .

Mobile phase *diethylamine R, hexane R* (5:95 *V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Spray with a 0.1 g/l solution of *chloroplatinic acid R* in *hydrochloric acid R* containing 0.4 per cent *V/V* of *hydriodic acid R* .

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve 0.5 g in 5 ml of warm *methanol R* and make just alkaline to *red litmus paper R* with *sodium hydroxide solution R* . A precipitate is formed which, after recrystallisation from *methanol R* , melts *(2.2.14)* at about 113 °C to 115 °C.

D. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

pH *(2.2.3)*

5.2 to 6.2.

Dissolve 0.5 g with heating in 25 ml of *carbon dioxide-free water R.* Cool to room temperature and dilute to 50 ml with *carbon dioxide-free water R.*

Optical rotation *(2.2.7)*

- 0.10° to + 0.10°.

Dissolve 1.25 g in a mixture of 20 volumes of *methanol R* and 80 volumes of *methylene chloride R* and dilute to 25.0 ml with the same mixture of solvents.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 20.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 200.0 ml with the mobile phase. Dilute 10.0 ml to 50.0 ml with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of *trihexyphenidyl impurity A CRS* in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 100.0 ml with the mobile phase.

Reference solution (d) To 1 ml of reference solution (b), add 1 ml of the test solution and dilute to 100 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 200 ml of *water R* with 0.2 ml of *triethylamine R* . Adjust to pH 4.0 with *phosphoric acid R* and add 800 ml of *acetonitrile R* .

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Run time 3 times the retention time of trihexyphenidyl.

System suitability Reference solution (d):

— *resolution*: minimum 4.0 between the peaks corresponding to trihexyphenidyl and to impurity A.

Limits:

— *impurity A*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *any other impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total*: not more than 0.5 per cent;

— *disregard limit*: 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

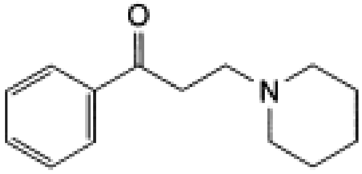
Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *alcohol R* and add 5.0 ml of *0.01 M hydrochloric acid* . Carry out a potentiometric titration (*2.2.20*), using *0.1 M sodium hydroxide* . Read the volume added between the 2 points of inflexion.

1 ml of *0.1 M sodium hydroxide* is equivalent to 33.79 mg of $C_{20}H_{32}ClNO$.

IMPURITIES



A. 1-phenyl-3-(piperidin-1-yl)propan-1-one.

Action and use

Vasodilator.

Ph Eur

DEFINITION

1-(2,3,4-Trimethoxybenzyl)piperazine dihydrochloride.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder, slightly hygroscopic.

Solubility

Freely soluble in water, sparingly soluble in alcohol.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison Ph. Eur. reference spectrum of trimetazidine dihydrochloride.

B. Dissolve 25 mg in 5 ml of *water R* . 2 ml of the solution gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Dissolve 1.0 g in *water R* and dilute to 10 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.200 g of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 20.0 mg of *trimetazidine for system suitability CRS* in *water R* and dilute to 5.0 ml with the same solvent.

Reference solution (b) Dilute 2.0 ml of the test solution to 100.0 ml with *water R* . Dilute 5.0 ml of this solution to 100.0 ml with *water R* .

Reference solution (c) Dilute 25.0 ml of reference solution (b) to 50.0 ml with *water R* .

Column:

— *size*: *l* = 0.15 m, Ø = 4.6 mm;

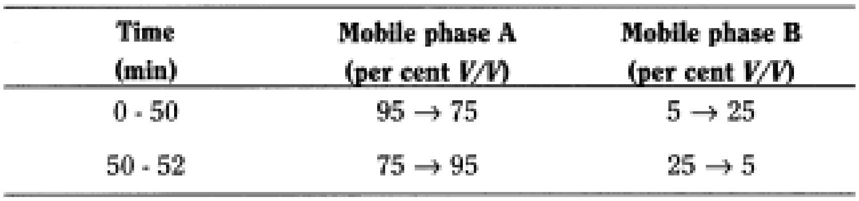
— *stationary phase: spherical octadecylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm;

— *temperature*: 30 °C.

Mobile phase:

— *mobile phase A*: mix 357 volumes of *methanol R* and 643 volumes of a 2.87 g/l solution of *sodium heptanesulphonate R* adjusted to pH 3.0 with *dilute phosphoric acid R* ;

— *mobile phase B*: *methanol R,*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 50	95 → 75	5 → 25
50 - 52	75 → 95	25 → 5

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 240 nm.

Equilibration For at least 1 h with the mobile phase at the initial composition.

Injection 10 µl.

Relative retention With reference to trimetazidine (retention time = about 25 min): impurity D

= about 0.2; impurity C = about 0.4; impurity H = about 0.6; impurities A and I = about 0.9; impurity E = about 0.95; impurity F = about 1.4; impurity B = about 1.8.

System suitability:

— *peak-to-valley ratio* : minimum 3, where H_p = height above the baseline of the peak due to impurity E and H_v = height above the baseline of the lowest point of the curve separating this peak from the principal peak in the chromatogram obtained with reference solution (a);

— *signal-to-noise ratio* : minimum 10 for the principal peak in the chromatogram obtained with reference solution (c).

Limits:

— *correction factors*: for the calculation of contents, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.55; impurity C = 0.37; impurity F = 0.71;

— *impurities A, B, C, D, E, F, H, I*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Impurity G

Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.10 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 22.6 mg of *piperazine hydrate R* in *methanol R* and dilute to 100 ml with the same solvent. Dilute 10 ml of the solution to 100 ml with *methanol R* .

Plate *TLC silica gel plate R* .

Mobile phase *Concentrated ammonia R, alcohol R* (20:80 *V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying At 100-105 °C for 30 min.

Detection Spray with *iodoplatinate reagent R* .

Limit:

— *impurity G*: any spot due to impurity G is not more intense than the spot in the chromatogram obtained with the reference solution (0.1 per cent, expressed as anhydrous piperazine).

Loss on drying *(2.2.32)*

Maximum 2.5 per cent, determined on 1.000 g by drying in an oven at 105 °C over *diphosphorus pentoxide R* at a pressure not exceeding 15 kPa.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.120 g in 50.0 ml of *water R*. Add 1 ml of *nitric acid R* and titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M silver nitrate* is equivalent to 16.96 mg of $C_{14}H_{24}Cl_2N_2O_3$.

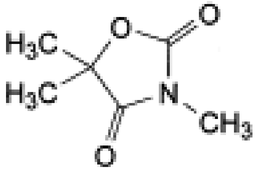
Ph Eur

Trimethadione

General Notices

(Ph Eur monograph 0440)



$C_6H_9NO_3$ 143.1 *127-48-0*

Action and use

Antiepileptic.

Ph Eur

DEFINITION

3,5,5-Trimethyloxazolidine-2,4-dione.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Colourless or almost colourless crystals.

Solubility

Soluble in water, very soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Melting point *(2.2.14)* : 45 °C to 47 °C, determined without previous drying.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs prepared using 3 mg of substance per 0.4 g of *potassium bromide R* .

Comparison *trimethadione CRS* .

C. To 2 ml of solution S (see Tests) add 1 ml of *barium hydroxide solution R* . A white precipitate is formed, which dissolves on addition of 1 ml of *dilute hydrochloric acid R.*

D. Dissolve 0.3 g in a mixture of 5 ml of *alcoholic potassium hydroxide solution R* and 5 ml of *ethanol (96 per cent) R* . Allow to stand for 10 min. Add 0.05 ml of *phenolphthalein solution R1* and neutralise exactly with *hydrochloric acid R* . Evaporate to dryness on a water-bath and take up the residue with 4 quantities, each of 5 ml, of *ether R* . Filter the combined ether layers and evaporate to dryness. The residue, recrystallised from 5 ml of *toluene R* and dried, melts *(2.2.14)* at about 80 °C.

TESTS

Solution S

Dissolve 2.0 g in *carbon dioxide-free water R* and dilute to 40 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II).*

Acidity or alkalinity

To 10 ml of solution S add 0.1 ml of *methyl red solution R* . Not more than 0.1 ml of *0.01 M hydrochloric acid* or *0.01 M sodium hydroxide* is required to change the colour of the indicator.

Heavy metals *(2.4.8)*

Maximum 20 ppm.

12 ml of solution S complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.00 g by drying in a desiccator over *anhydrous silica gel R* for 6 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Gas chromatography *(2.2.28)* .

Internal standard solution Dissolve 0.125 g of *decanol R* in *anhydrous ethanol R* and dilute to 25 ml with the same solvent.

Test solution Dissolve 0.100 g of the substance to be examined in the internal standard solution and dilute to 10.0 ml with the same solution.

Reference solution Dissolve 0.100 g of *trimethadione CRS* in the internal standard solution and dilute to 10.0 ml with the same solution.

Column:
- *material:* stainless steel;
- *size*: *l* = 0.75 m, Ø = 3 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (125-150 µm).

Carrier gas *nitrogen for chromatography R* .

Flow rate 20 ml/min.

Temperature:
- *column:* 210 °C,
- *injection port*: 240 °C,
- *detector:* 270 °C.

Detection Flame ionisation.

Injection 1 µl.

Calculate the content of $C_6H_9NO_3$ from the declared content of *trimethadione CRS* .

STORAGE

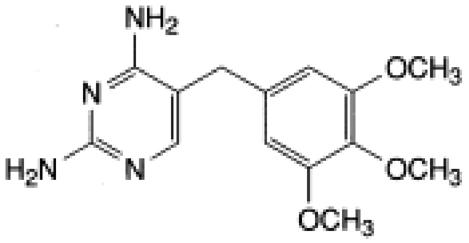
Protected from light.

Ph Eur

Trimethoprim

General Notices

(Ph Eur monograph 0060)



$C_{14}H_{18}N_4O_3$ *290.3* *738-70-5*

Action and use

Dihydrofolate reductase inhibitor; antibacterial.

Preparations

Co-trimoxazole Intravenous Infusion

Co-trimoxazole Oral Suspension

Paediatric Co-trimoxazole Oral Suspension

Co-trimoxazole Tablets

Dispersible Co-trimoxazole Tablets

Paediatric Co-trimoxazole Tablets

Trimethoprim Oral Suspension

Trimethoprim Tablets

Ph Eur

DEFINITION

5-(3,4,5-Trimethoxybenzyl)pyrimidine-2,4-diamine.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or yellowish-white powder.

Solubility

Very slightly soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification *C.*

Second identification *A, B, D.*

A. Melting point *(2.2.14)* : 199 °C to 203 °C.

B. Dissolve about 20 mg in *0.1 M sodium hydroxide* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 10.0 ml with *0.1 M sodium hydroxide* . Examined between 230 nm and 350 nm *(2.2.25)* , the solution shows an absorption maximum at 287 nm. The specific absorbance at the absorption maximum is 240 to 250.

C. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *trimethoprim CRS* .

D. Dissolve about 25 mg, heating if necessary, in 5 ml of *0.005 M sulphuric acid* and add 2 ml of a 16 g/l solution of *potassium permanganate R* in *0.1 M sodium hydroxide* . Heat to boiling and add to the hot solution 0.4 ml of *formaldehyde R* . Mix, add 1 ml of *0.5 M sulphuric acid* , mix and heat again to boiling. Cool and filter. To the filtrate, add 2 ml of *methylene chloride R* and shake vigorously. The organic layer, examined in ultraviolet light at 365 nm, shows green fluorescence.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Dissolve 0.5 g in 10 ml of a mixture of 1 volume of *water R,* 4.5 volumes of *methanol R* and 5 volumes of *methylene chloride R* .

Related substances

A. Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *trimethoprim for system suitability CRS* (containing impurity E) in 1 ml of the mobile phase.

Column:

- *size*: *l* = 0.250 m, Ø = 4.0 mm;
- *stationary phase: base-deactivated octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 30 volumes of *methanol R* and 70 volumes of a 1.4 g/l solution of *sodium perchlorate R* adjusted to pH 3.6 with *phosphoric acid R* .

Flow rate 1.3 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl loop injector.

Run time 11 times the retention time of trimethoprim.

Relative retention With reference to trimethoprim (retention time = about 5 min): impurity C = about 0.8; impurity E = about 0.9; impurity A = about 1.5; impurity D = about 2.0; impurity G = about 2.1; impurity B = about 2.3; impurity J = about 2.7; impurity F = about 4.0.

System suitability Reference solution (b):

- *resolution*: minimum 2.5 between the peaks due to impurity E and trimethoprim.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.43; impurity E = 0.53; impurity J = 0.66;
- *any impurity*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);
- *total:* not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);
- *disregard limit*: 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak corresponding to impurity H (relative retention = about 10.3).

B. Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 200.0 ml with the mobile phase.

Reference solution (b) Dissolve 5.0 mg of *trimethoprim CRS* and 5.0 mg of *trimethoprim impurity B CRS* in the mobile phase and dilute to 100.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase*: *nitrile silica gel for chromatography R* (5 µm) with a specific surface area of 350 m2/g and a pore diameter of 10 nm.

Mobile phase Dissolve 1.14 g of *sodium hexane sulphonate R* in 600 ml of a 13.6 g/l solution of *potassium dihydrogen phosphate R* ; adjust to pH 3.1 with *phosphoric acid R* and mix with 400 ml of *methanol R.*

Flow rate 0.8 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl loop injector.

Run time 6 times the retention time of trimethoprim.

Relative retention With reference to trimethoprim (retention time = about 4 min): impurity H = about 1.8; impurity I = about 4.9.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to trimethoprim and impurity B.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity H = 0.50; impurity I = 0.28;

— *any impurity*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *total:* not more than 0.4 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.04 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.02 per cent); disregard any peak due to impurity B (relative retention = about 1.3).

Impurity K

Gas chromatography *(2.2.28)* .

Test solution Dissolve 0.500 g of the substance to be examined in 35.0 ml of *citrate buffer solution pH 5.0 R*, add 10.0 ml of *1,1-dimethylethyl methyl ether R* , shake thoroughly and centrifuge for 10 min. Use the upper layer.

Reference solution Dilute 5.0 ml of *hydrochloric acid R* to 50.0 ml with *water R* , add 12.5 mg of *aniline R* and shake thoroughly. Add 10.0 µl of this solution and 10.0 ml of *1,1-dimethylethyl methyl ether R* to 35.0 ml of *citrate buffer solution pH 5.0 R*, shake thoroughly and centrifuge for 10 min. Use the upper layer.

Column:

— *material:* fused silica;

— *size*: *l* = 30 m, Ø = 0.53 mm;

— *stationary phase*: *poly(dimethyl)siloxane R* (film thickness 3 µm).

Carrier gas *helium for chromatography R* .

Flow rate 12 ml/min.

Temperature:

— *column*: 80 °C;

— *injection port*: 230 °C;

— *detector*: 270 °C.

Detection Nitrogen-phosphorus detector.

Injection 3 µl.

Run time 15 min.

System suitability Reference solution:

— *repeatability*: maximum relative standard deviation of 5.0 per cent after 6 injections.

Limit:

— *impurity K*: not more than the area of the corresponding peak in the chromatogram obtained with the reference solution (5 ppm).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*

Loss on drying *(2.2.32)*

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash (*2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 29.03 mg of $C_{14}H_{18}N_4O_3$.

IMPURITIES

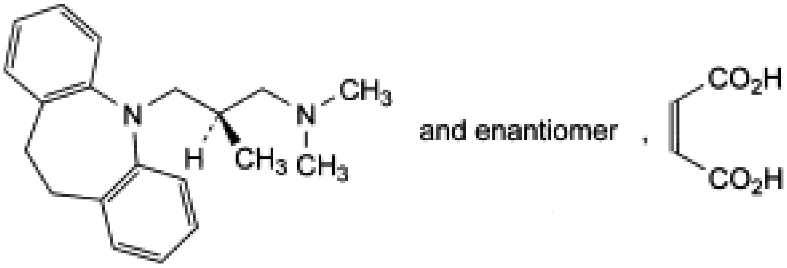
Ph Eur

Trimipramine Maleate

General Notices

(Ph Eur monograph 0534)



$C_{20}H_{26}N_2,C_4H_4O_4$ 410.5 *521-78-8*

Action and use

Monoamine reuptake inhibitor; tricyclic antidepressant.

Preparation

Trimipramine Tablets

Ph Eur

DEFINITION

(2*RS*)-3-(10,11-Dihydro-5*H*-dibenzo[*b*,*f*]azepin-5-yl)-*N,N*,2-trimethylpropan-1-amine (*Z*)-butenedioate.

Content

98.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Slightly soluble in water and in ethanol (96 per cent).

IDENTIFICATION

First identification *A, C.*

Second identification *A, B, D, E.*

A. Melting point *(2.2.14)* : 140 °C to 144 °C.

B. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution Dissolve 40.0 mg in *0.01 M hydrochloric acid* and dilute to 100.0 ml with the same acid. Dilute 5.0 ml of this solution to 100.0 ml with *0.01 M hydrochloric acid* .

Spectral range 230-350 nm.

Absorption maximum At 250 nm.

Shoulder At 270 nm.

Specific absorbance at the absorption maximum 205 to 235.

C. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *trimipramine maleate CRS* .

D. Thin-layer chromatography *(2.2.27). Prepare the solutions immediately before use.*

Test solution Dissolve 0.50 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 20 ml with *methanol R.*

Reference solution Dissolve 25 mg of *trimipramine maleate CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel G plate R* .

Mobile phase *concentrated ammonia R* , *anhydrous ethanol R* , *toluene R* (0.7:10:90 *V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air for 15 min.

Detection Spray with a 5 g/l solution of *potassium dichromate R* in a mixture of 1 volume of *sulphuric acid R* and 4 volumes of *water R* and examine immediately.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

E. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 56 mg of *maleic acid R* in *methanol R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel GF$_{254}$ R*.

Mobile phase *water R, anhydrous formic acid R*, *di-isopropyl ether R* (3:7:90 *V/V/V*).

Application 5 µl as bands of 10 mm.

Development Over 2/3 of the plate.

Drying In a current of air for a few minutes and then at 120 °C for 10 min.

Detection Examine in ultraviolet light at 254 nm.

Results The chromatogram obtained with the test solution shows 2 zones: one is on the starting line and the other is similar in position and size to the principal zone in the chromatogram obtained with the reference solution.

TESTS

Related substances

Liquid chromatography *(2.2.29)*. *Carry out the test protected from light.*

Buffer solution pH 7.7 2.64 g/l solution of *ammonium phosphate R* in *water for chromatography R*; adjust to pH 7.7 with *phosphoric acid R*.

Test solution Dissolve 50 mg of the substance to be examined in the mobile phase and dilute to 100 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of the substance to be examined and 5 mg of *iminodibenzyl R* (impurity F) in the mobile phase and dilute to 10 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve the contents of a vial of *trimipramine for peak identification CRS* (containing impurities A, B, C, D and E) in 1 ml of *acetonitrile R1*.

Column:

— *size*: *l* = 0.125 m, Ø = 4.0 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *acetonitrile R1*, buffer solution pH 7.7 (38:62 *V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Run time 3 times the retention time of trimipramine.

Identification of impurities Use the chromatogram supplied with *trimipramine for peak identification CRS* and the chromatogram obtained with reference solution (c) to identify the peaks due to impurities A, B, C, D and E; doubling of the peak due to impurity E may be observed.

Relative retention With reference to trimipramine (retention time = about 27 min): impurity A = about 0.1; impurity B = about 0.3; impurity C = about 0.4; impurity D = about 0.5; impurity F = about 1.4; impurity E = about 1.5.

System suitability:

— *resolution*: minimum 3.5 between the peaks due to trimipramine and impurity F in the chromatogram obtained with reference solution (a);

— the chromatogram obtained with reference solution (c) is similar to the chromatogram supplied with *trimipramine for peak identification CRS*.

Limits:

— *correction factor*: for the calculation of content, multiply the peak area of impurity F by 0.5;

— *impurity E*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *impurity F*: not more than 2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *impurities A, B, C, D*: for each impurity, not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.15 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 10 times the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

2.0 g complies with test C. Prepare the reference solution using 4 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 ml of *anhydrous acetic acid R* . Titrate with *0.1 M perchloric acid* determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M perchloric acid* is equivalent to 41.05 mg of $C_{24}H_{30}N_2O_4$.

STORAGE

Protected from light.

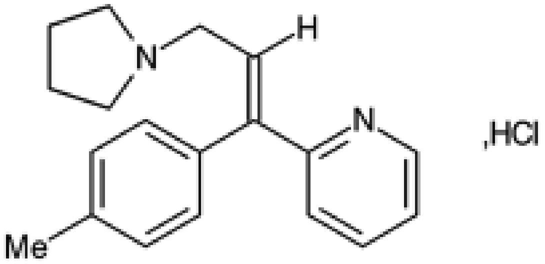
Ph Eur

Triprolidine Hydrochloride

General Notices



$C_{19}H_{22}N_2,HCl,H_2O$ 332.9 *6138-79-0*

Action and use

Histamine H_1 receptor antagonist; antihistamine.

Preparation

Triprolidine Tablets

DEFINITION

Triprolidine Hydrochloride is (*E*)-2-(3-pyrrolidin-1-yl-1-*p*-tolylprop1-enyl)pyridine hydrochloride monohydrate. It contains not less than 98.5% and not more than 101.0% of $C_{19}H_{22}N_2,HCl$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

A white, crystalline powder.

Freely soluble in *water*; freely soluble in *ethanol (96%)* and practically insoluble in *ether* .

IDENTIFICATION

A. The *infrared absorption spectrum* , Appendix II A, is concordant with the *reference spectrum* of triprolidine hydrochloride *(RS 356)* .

B. Yields reaction A characteristic of *chlorides* , Appendix VI.

TESTS

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, using a silica gel F_{254} precoated plate (Merck silica gel 60 F_{254} plates are suitable) and a mixture of equal volumes of *butan-2-one* and *dimethylformamide* as the mobile phase. Apply separately to the plate 5 µl of each of three solutions in *methanol* containing (1) 1.0% w/v of the substance being examined, (2) 0.020% w/v of Z- *triprolidine hydrochloride BPCRS* and (3) 0.010% w/v of the substance being examined. After removal of the plate, allow it to dry in air and examine under *ultraviolet light (254 nm)*. In the chromatogram obtained with solution (1) any spot corresponding to *Z*-triprolidine is not more intense than the spot in the chromatogram obtained with solution (2) and any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (3).

Sulphated ash

Not more than 0.1%, Appendix IX A.

Water

4.5 to 6.0% w/w, Appendix IX C. Use 0.4 g.

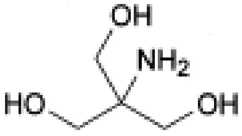
ASSAY

Carry out Method I for *non-aqueous titration*, Appendix VIII A, using 0.25 g dissolved in a mixture of 50 ml of *anhydrous acetic acid* and 0.5 ml of *acetic anhydride* and *crystal violet solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 15.74 mg of $C_{19}H_{22}N_2$,HCl.

Trometamol

General Notices

(Ph Eur monograph 1053)



$C_4H_{11}NO_3$ 121.1 *77-86-1*

Action and use

Organic amine proton acceptor; alkalinizing agent.

Ph Eur

DEFINITION

Trometamol contains not less than 99.0 per cent and not more than the equivalent of 100.5 per cent of aminomethylidynetri(methanol), calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, or colourless crystals, freely soluble in water, sparingly soluble in alcohol, very slightly soluble in ethyl acetate.

IDENTIFICATION

First identification B, C.

Second identification A, B, D.

A. Solution S (see Tests) is strongly alkaline *(2.2.4)* .

B. Melting point *(2.2.14)* : 168 °C to 174 °C.

C. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *trometamol CRS* .

D. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of freshly prepared solution S is 10.0 to 11.5.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using *silica gel G R* as the coating substance. Wash the plate with *methanol R* before applying the solutions.

Test solution (a) Dissolve 0.20 g in 1 ml of *water R*, with heating, and dilute to 10 ml with *methanol R*.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (a) Dissolve 20 mg of *trometamol CRS* in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (a) to 100 ml with *methanol R*.

Apply to the plate 10 µl of each solution. Develop over a path of 10 cm using a mixture of 10 volumes of *dilute ammonia R1* and 90 volumes of *2-propanol R*. Dry the plate at 100 °C to 105 °C. Spray with a 5 g/l solution of *potassium permanganate R* in a 10 g/l solution of *sodium carbonate R*. After about 10 min examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (1.0 per cent).

Chlorides *(2.4.4)*

To 10 ml of solution S add 2.5 ml of *dilute nitric acid R* and dilute to 15 ml with *water R*. The solution complies with the limit test for chlorides (100 ppm).

Heavy metals *(2.4.8)*

Dissolve 2.0 g in 10 ml of *water R*. Neutralise the solution with *hydrochloric acid R1* and dilute to 20 ml with *water R*. 12 ml of the solution complies with limit test A for heavy metals (10 ppm). Prepare the standard using *lead standard solution (1 ppm Pb) R*.

Iron *(2.4.9)*

Dissolve 1.0 g in *water R* and dilute to 10 ml with the same solvent. The solution complies with the limit test for iron (10 ppm).

Loss on drying *(2.2.32)*

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

Bacterial endotoxins ***(2.6.14)***

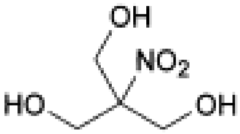
Less than 0.03 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.100 g in 20 ml of *water R* . Add 0.2 ml of *methyl red solution R* . Titrate with *0.1 M hydrochloric acid* until the colour changes from yellow to red.

1 ml of *0.1 M hydrochloric acid* is equivalent to 12.11 mg of $C_4H_{11}NO_3$.

IMPURITIES



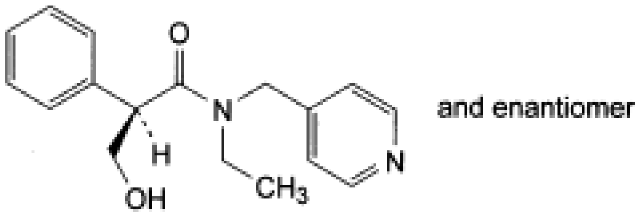
A. nitromethylidynetri(methanol).

Ph Eur

Tropicamide

General Notices

(Ph Eur monograph 1159)



$C_{17}H_{20}N_2O_2$ 284.4 *1508-75-4*

Action and use

Anticholinergic.

Preparation

Tropicamide Eye Drops

Ph Eur

DEFINITION

Tropicamide contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (2*RS*)-*N*-ethyl-3-hydroxy-2-phenyl-*N*-(pyridin-4-ylmethyl)propanamide, calculated with reference to the dried substance.

CHARACTERS

A white or almost white, crystalline powder, slightly soluble in water, freely soluble in alcohol and in methylene chloride.

IDENTIFICATION

First identification C.

Second identification A, B, D, E.

A. Melting point *(2.2.14)* : 95 °C to 98 °C.

B. Dissolve 20.0 mg in *0.1 M hydrochloric acid* and dilute to 50.0 ml with the same acid.

Dilute 2.0 ml of the solution to 20.0 ml *with 0.1 M hydrochloric acid* . Examined between 230 nm and 350 nm *(2.2.25)* , the solution shows an absorption maximum at 254 nm. The specific absorbance at the maximum is 170 to 190.

C. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *tropicamide CRS* . Examine the substances prepared as discs.

D. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position and size to the spot in the chromatogram obtained with reference solution (a).

E. Dissolve about 5 mg in 3 ml of a mixture of 9 ml of *acetic anhydride R* , 1 ml of *acetic acid R* and 0.1 g of *citric acid R.* Heat on a water-bath for 5 min to 10 min. A reddish-yellow colour is produced.

TESTS

Appearance of solution

Dissolve 0.1 g in *alcohol R* and dilute to 10 ml with the same solvent. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Optical rotation *(2.2.7)*

Dissolve 2.5 g in *ethanol R* and dilute to 25.0 ml with the same solvent. The angle of optical rotation is - 0.1 ° to + 0.1 °.

Related substances

Examine by thin-layer chromatography *(2.2.27*), using as the coating substance a suitable silica gel with a fluorescent indicator having an optimal intensity at 254 nm.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 20 ml *with methylene chloride R* .

Reference solution (a) Dissolve 10 mg of *tropicamide CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution (b) Dilute 1 ml of test solution (b) to 10 ml with *methylene chloride R* .

Reference solution (c) Dilute 2 ml of reference solution (b) to 5 ml with *methylene chloride R* .

Reference solution (d) Dissolve 20 mg of *4-[(ethylamino)methyl]pyridine R* in *methylene chloride R* and dilute to 20 ml with the same solvent. Dilute 1 ml of the solution and 1 ml of reference solution (a) to 10 ml with *methylene chloride R* .

Apply separately to the plate 10 µl of each solution. Develop over a path of 15 cm using a mixture of 0.5 volumes of *concentrated ammonia R* , 5 volumes of *methanol R* and 95 volumes of *methylene chloride R* . Allow the plate to dry in air and examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (c) (0.2 per cent). The test is not valid unless the chromatogram obtained with reference solution (d) shows two clearly separated spots.

Tropic acid

To 10.0 mg add 5 mg of *disodium tetraborate R* and 0.35 ml of a freshly prepared 100 g/l solution of *dimethylaminobenzaldehyde R* in a mixture of 1 volume of *water R* and 9 volumes of *sulphuric acid R.* Heat on a water-bath for 3 min. Cool in ice water and add 5 ml of *acetic anhydride R* . No violet-red colour develops (0.05 per cent).

Chlorides ***(2.4.4)***

Dissolve 1.0 g with heating in 8 ml of *acetic acid R* , cool and dilute to 10 ml with the same acid. Dilute 5 ml of the solution to 15 ml with *water R.* The solution complies with the limit test for chlorides (100 ppm).

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 80 °C at a pressure not exceeding 0.7 kPa for 4 h.

Sulphated ash ***(2.2.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

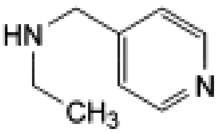
Dissolve 0.200 g in 50 ml of *anhydrous acetic acid R* . Add 0.2 ml of *naphtholbenzein solution R* and titrate with *0.1 M perchloric acid* until the colour changes from orange to green.

1 ml of *0.1 M perchloric acid* is equivalent to 28.44 mg of $C_{17}H_{20}N_2O_2$.

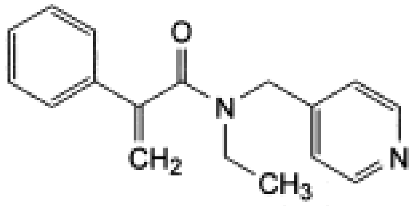
STORAGE

Store protected from light.

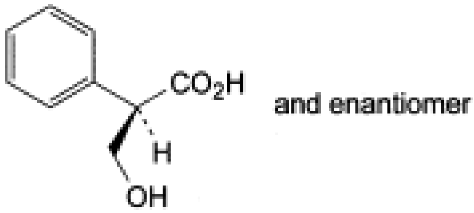
IMPURITIES



A. *N*-(pyridin-4-ylmethyl)ethanamine,



B. *N*-ethyl-2-phenyl-*N*-(pyridin-4-ylmethyl)propenamide,



CO₂H
H
OH
and enantiomer

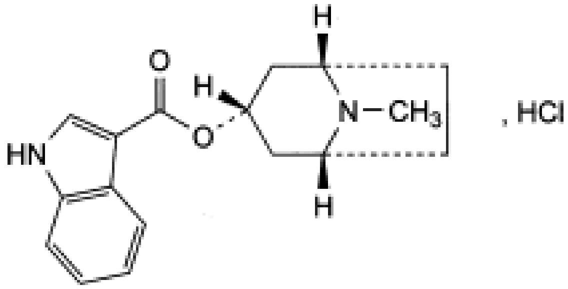
C. (2*RS*)-3-hydroxy-2-phenylpropanoic acid (tropic acid).

Ph Eur

Tropisetron Hydrochloride

General Notices

(Ph Eur monograph 2102)



$C_{17}H_{20}N_2O_2$, HCl 320.8 *105826-92-4*

Action and use

Serotonin $5HT_3$ receptor antagonist; antiemetic.

Ph Eur

DEFINITION

Hydrochloride of (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]oct-3-yl 1*H*-indole-3-carboxylate.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble or soluble in water, sparingly soluble in ethanol (96 per cent), very slightly soluble in methylene chloride.

IDENTIFICATION

First identification *B, D*.

Second identification *A, C, D*.

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)* .

Test solution. Dissolve 50 mg in *methanol R* and dilute to 25.0 ml with the same solvent. Dilute 1.0 ml of this solution to 100.0 ml with *methanol R* .

Spectral range 220-360 nm.

Absorption maxima At 228 nm and 282 nm.

Absorbance ratio A_{228}/A_{282} = 1.3 to 1.4.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *tropisetron hydrochloride CRS*.

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 5 mg of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 ml with the same mixture of solvents.

Reference solution Dissolve 5 mg of *tropisetron hydrochloride CRS* in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5 ml with the same mixture of solvents.

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *anhydrous formic acid R, water R, methanol R, methylene chloride R* (2:2:30:70 *V/V/V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In cold air.

Detection A Examine in ultraviolet light at 254 nm.

Detection B Spray first with a solution prepared as follows: dissolve 0.85 g of *bismuth subnitrate R* in a mixture of 10 ml of *acetic acid R* and 40 ml of *water R* ; to 5 ml of this solution add 5 ml of a 400 g/l solution of *potassium iodide R* and dilute to 100 ml with *water R* . Then spray with *strong hydrogen peroxide solution R* .

Results For both detection methods, the principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

D. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*.

Dissolve 1.00 g in *water R* and dilute to 20 ml with the same solvent.

Impurity A

Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.200 g of the substance to be examined in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 5.0 ml with the same mixture of solvents.

Reference solution (a) Dissolve 5.0 mg of *tropine CRS* (impurity A) in a mixture of equal volumes of *methanol R* and *methylene chloride R* and dilute to 25.0 ml with the same mixture of solvents.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with a mixture of equal volumes of *methanol R* and *methylene chloride R* . To 0.1 ml of this solution add 1.0 ml of reference solution (a).

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *ammonia R, methanol R, methylene chloride R* (5:40:60 *V/V/V*).

Application 10 µl.

Development Over 2/3 of the plate.

Drying In a current of cold air.

Detection Dip the plate in *potassium iodobismuthate solution R1* .

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Limit:

— *impurity A*: any spot due to impurity A is not more intense than the spot in the chromatogram obtained with reference solution (a) (0.5 per cent).

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 0.100 g of the substance to be examined in mobile phase A and dilute to 20.0 ml with mobile phase A.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 10.0 ml with mobile phase A.

Reference solution (b) Dissolve 5.0 mg of *tropisetron impurity B CRS* and 5 mg of *ethyl indole-3-carboxylate CRS* in mobile phase A and dilute to 20.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 50.0 ml with mobile phase A.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

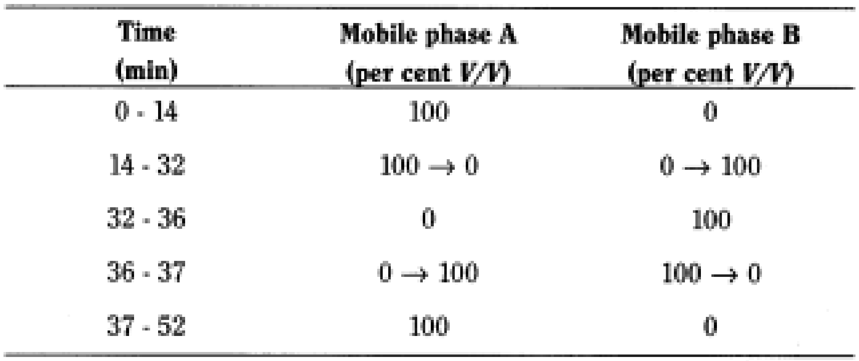
— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: *triethylamine R, acetonitrile R, water R, methanol R* (0.3:35:400:565 *V/*

V/V/V);

— *mobile phase B*: *triethylamine R, acetonitrile R, water R, methanol R* (0.3:100:100:800 *V/V/V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 14	100	0
14 - 32	100 → 0	0 → 100
32 - 36	0	100
36 - 37	0 → 100	100 → 0
37 - 52	100	0

Flow rate 2 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl.

Relative retention With reference to tropisetron (retention time = about 22 min): impurity B = about 0.05; ethyl indole-3-carboxylate = about 0.2.

System suitability Reference solution (b):

— *resolution*: minimum 4 between the peaks due to impurity B and ethyl indole-3-carboxylate.

Limits:

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

***N,N*-Dimethylaniline**

Liquid chromatography *(2.2.29)* . *Prepare the solutions immediately before use*.

Test solution Dissolve 250 mg of the substance to be examined in mobile phase A and dilute to 5.0 ml with mobile phase A.

Reference solution Dissolve 10.0 mg of *N,N-dimethylaniline R* in mobile phase A and dilute to 100.0 ml with mobile phase A. Dilute 1.0 ml of this solution to 100.0 ml with mobile phase A.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- *mobile phase A*: *triethylamine R, acetonitrile R, water R, methanol R* (0.3:35:400:565 *V/V/V/V*);
- *mobile phase B*: *triethylamine R, acetonitrile R, water R; methanol R* (0.3:100:100:800 *V/V/V/V*);

Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 11	100 → 0	0 → 100
11 - 30	0	100
30 - 31	0 → 100	100 → 0
31 - 50	100	0

Flow rate 1 ml/min.

Detection Spectrophotometer at 248 nm.

Injection 20 µl.

Limit:

- *N,N-dimethylaniline* : not more than the area of the principal peak in the chromatogram obtained with the reference solution (20 ppm).

Loss on drying *(2.2.32)*

Maximum 0.3 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

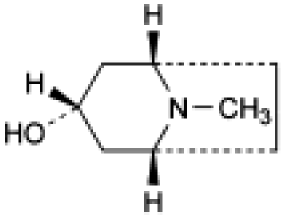
ASSAY

Dissolve 0.250 g in 10 ml of *anhydrous acetic acid R* and add 70 ml of *acetic anhydride R* . Titrate with *0.1 M perchloric acid* , determining the end-point potentiometrically *(2.2.20)* .

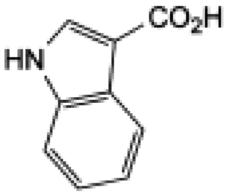
1 ml of *0.1 M perchloric acid* is equivalent to 32.08 mg of $C_{17}H_{21}ClN_2O_2$.

IMPURITIES

Specified impurities *A, B.*



A. (1*R*,3*r*,5*S*)-8-methyl-8-azabicyclo[3.2.1]octan-3-ol (tropine),



B. 1*H*-indole-3-carboxylic acid.

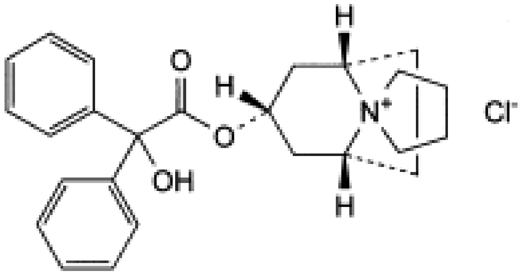
Trospium Chloride

General Notices

(Ph Eur monograph 1798)



$C_{25}H_{30}ClNO_3$ 428.0 *10405-02-4*

Action and use

Anticholinergic.

Ph Eur

DEFINITION

(1*R*,3*r*,5*S*)-3-[(Hydroxydiphenylacetyl)oxy]spiro[8-azoniabicyclo[3.2.1]octane-8,1′-pyrrolidinium] chloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, freely soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *trospium chloride CRS.*

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Solution S

Dissolve 3.0 g in *carbon dioxide-free water R* and dilute to 30 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution B_7 *(2.2.2, Method II)*.

pH *(2.2.3)*

5.0 to 7.0.

Dilute 5 ml of solution S to 50 ml with *carbon dioxide-free water R* .

Impurity C

Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.20 g of the substance to be examined in 2.0 ml of *methanol R* .

Reference solution (a) Dissolve 1.0 mg of *trospium impurity C CRS* in 2.0 ml of *methanol R* .

Reference solution (b) Dilute 1.0 ml of test solution to 10.0 ml with *methanol R* . To 50 µl of this solution add 1 ml of reference solution (a).

Plate *TLC silica gel plate R* .

Mobile phase *glacial acetic acid R, hydrochloric acid R, acetonitrile R* (1:3.5:45 *V/V/V*).

Application 10 µl as bands.

Development Over 2/3 of the plate.

Drying In a current of warm air until the odour of acetic acid is no longer perceptible.

Detection Spray with *potassium iodobismuthate solution R* and subsequently with a 5 g/l solution of *sodium nitrite R* .

System suitability Reference solution (b):

— the chromatogram shows 2 clearly visible and separated zones.

Limit:

— *impurity C*: any zone due to impurity C is not more intense than the zone in the chromatogram obtained with reference solution (a) (0.5 per cent).

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 30.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 6.0 mg of *trospium impurity A CRS* in the mobile phase and dilute to 20.0 ml with the mobile phase.

Reference solution (b) Dissolve 7.5 mg of *trospium impurity B CRS* in the mobile phase and dilute to 5.0 ml with the mobile phase.

Reference solution (c) Dilute a mixture of 0.3 ml of the test solution, 1.0 ml of reference solution (a) and 1.0 ml of reference solution (b) to 100.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: end-capped octylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 1 volume of *triethylamine R* and 3 volumes of *phosphoric acid R* with 700 volumes of *water R* and add 300 volumes of *acetonitrile R* .

Flow rate: 1 ml/min.

Detection Spectrophotometer at 215 nm.

Injection 20 µl.

Run time 3 times the retention time of trospium.

Relative retention With reference to trospium (retention time = about 10 min): impurity B = about 0.7; impurity A = about 1.9.

System suitability Reference solution (c):

— *resolution*: minimum 3 between the peaks due to impurity B and trospium.

Limits:

— *impurity A*: not more than 3 times the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.3 per cent);

— *impurity B:* not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *any other impurity*: for each impurity, not more than 0.2 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.1 per cent);

— *total*: not more than twice the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (1.0 per cent);

— *disregard limit:* 0.1 times the area of the peak due to impurity B in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in 50 ml of *water R*. Titrate with *0.1 M silver nitrate*, determining the end-point potentiometrically *(2.2.20)*.

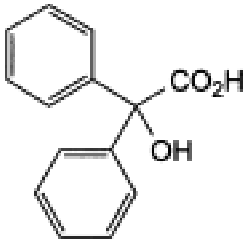
1 ml of *0.1 M silver nitrate* is equivalent to 42.80 mg of $C_{25}H_{30}ClNO_3$.

STORAGE

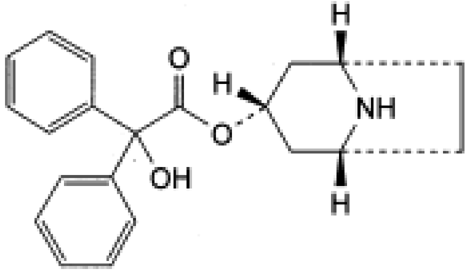
Protected from light.

IMPURITIES

Specified impurities: A, B, C.



A. hydroxydiphenylacetic acid (benzilic acid),



B. (1*R*,3*r*,5*S*)-8-azabicyclo[3.2.1]oct-3-yl hydroxydiphenylacetate,

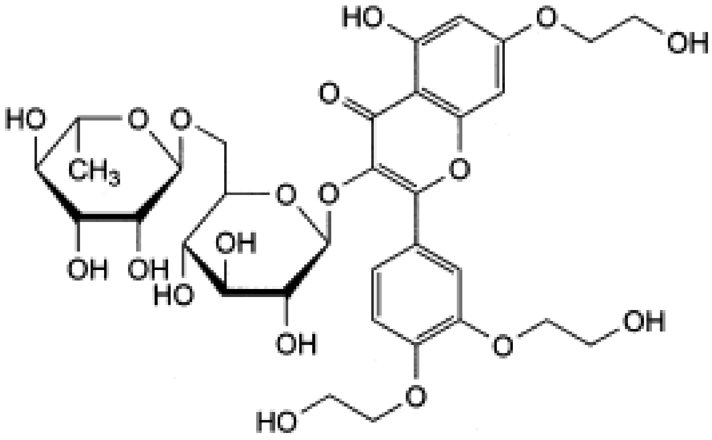
Troxerutin

General Notices

(Ph Eur monograph 2133)



$C_{33}H_{42}O_{19}$ 743 *7085-55-4*

Action and use

Bioflavonoid.

Ph Eur

DEFINITION

Mixture of *C*-hydroxyethylated derivatives of rutin containing minimum 80 per cent of 2-[3,4-bis(2-hydroxyethoxy)phenyl]-3-[[6-*C*-(6-deoxy-α-L-mannopyranosyl)-β-D-glucopyranosyl]oxy]-5-hydroxy-7-(2-hydroxyethoxy)-4H-1-benzopyran-4-one (tris(hydroxyethyl)rutin).

Content

95.0 per cent to 105.0 per cent (dried substance).

CHARACTERS

Appearance

Yellowish-green, crystalline powder, hygroscopic.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent) and practically insoluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *troxerutin CRS.*

B. Examine the chromatograms obtained in the test for composition.

Results The principal peak in the chromatogram obtained with the test solution is similar in position and size to the principal peak in the chromatogram obtained with the reference solution (a).

TESTS

Composition

Liquid chromatography *(2.2.29)* : use the normalisation procedure.

Test solution Dissolve 10.0 mg of the substance to be examined in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of *troxerutin CRS* in the mobile phase, if necessary using an ultrasonic bath and dilute to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1 ml of reference solution (a) to 10 ml with the mobile phase. Dilute 1 ml of this solution to 100 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: end-capped octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 20 volumes of *acetonitrile R* and 80 volumes of a 15.6 g/l solution of *sodium dihydrogen phosphate* R adjusted to pH 4.4 with *dilute phosphoric acid R* or *dilute sodium hydroxide solution R .*

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 350 nm.

Injection 10 µl.

Run time Twice the retention time of the main compound of troxerutin (tris(hydroxyethyl) rutin).

Relative retention With reference to tris(hydroxyethyl)rutin (retention time = about 25 min): tetrakis(hydroxyethyl)rutin = about 0.5; mono(hydroxyethyl)rutin = about 0.8; bis(hydroxyethyl) rutin = about 1.1.

System suitability Reference solution (a):

— *peak-to-valley ratio* : minimum 2.0, where H_p = height above the baseline of the peak due to bis(hydroxyethyl)rutin and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to tris(hydroxyethyl)rutin;

— *signal-to-noise ratio* : minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *principal peak*: minimum 80 per cent;

— *any other peak*: for each peak, maximum 5 per cent, except for 1 peak which can be maximum 10 per cent;

— *disregard limit*: area of the principal peak in the chromatogram obtained with reference solution (b).

Ethylene oxide

Head-space gas chromatography *(2.2.28)* .

Test solution   To 1.00 g of the substance to be examined in a vial, add 1.0 ml of *water R.* Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

Reference solution   To 1.00 g of the substance to be examined in a vial, add 50 µl of *ethylene oxide solution R4* and 950 µl of *water R* and close tightly. Mix to obtain a homogeneous solution. Heat at 70 °C for 45 min.

Column:

— *material*: fused silica;

— *size*: *l* = 30 m, Ø = 0.32 mm;

— *stationary phase: poly(cyanopropyl)(7)(phenyl)(7)methyl(86)siloxane R* (film thickness 1 µm).

Carrier gas   *helium for chromatography R.*

Flow rate   1.1 ml/min.

Static head-space conditions which may be used:

— *equilibration temperature*: 80 °C;

— *equilibration time*: 45 min;

— *transfer line temperature*: 110 °C;

— *pressurisation time*: 2 min;

— *injection time*: 12 s.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	40
	5 - 18	40 → 200
Injection port		150
Detector		250

Detection Flame ionisation.

Injection 1.0 ml.

The peak due to ethylene oxide is identified by injecting solutions of ethylene oxide of increasing concentration.

Determine the content of ethylene oxide (ppm) in the substance to be examined using the following expression:

$$\frac{A_1 \times m_1}{(A_2 \times m_2) - (A_1 \times m_3)}$$

A_1 = area of the peak due to ethylene oxide in the chromatogram obtained with the test solution

A_2 = area of the peak due to ethylene oxide in the chromatogram obtained with the reference solution

m_1 = mass of ethylene oxide in the reference solution, in micrograms

m_2 = mass of the substance to be examined in the test solution, in grams

m_3 = mass of the substance to be examined in the reference solution, in grams

Limit:

— *ethylene oxide* : maximum 1 ppm.

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.0 g complies with test F. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 5.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 4 h.

Sulphated ash ***(2.4.14)***

Maximum 0.4 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 100.0 ml of *water R* . Dilute 10.0 ml of this solution to 100.0 ml with *water R* . Dilute 10.0 ml to 100.0 ml with *water R.* Measure the absorbance *(2.2.25)* at the absorption maximum at 350 nm.

Calculate the percentage content of $C_{33}H_{42}O_{19}$ taking the specific absorbance to be 250.

STORAGE

In an airtight container , protected from light.

Ph Eur

Trypsin

General Notices

(Ph Eur monograph 0694)

9002-07-7

Action and use

Proteolytic enzyme.

Ph Eur

DEFINITION

Trypsin is a proteolytic enzyme obtained by the activation of trypsinogen extracted from the pancreas of healthy mammals. It has an activity of not less than 0.5 microkatal per milligram, calculated with reference to the dried substance. In solution, it has maximum enzymic activity at pH 8; the activity is reversibly inhibited at pH 3, at which pH it is most stable.

PRODUCTION

The animals from which trypsin is derived must fulfil the requirements for the health of animals suitable for human consumption

The method of manufacture is validated to demonstrate that the product, if tested, would comply with the following test.

Histamine *(2.6.10)*

Not more than 1 µg of histamine base per 0.2 microkatal of trypsin activity. Use a 10 g/l solution of the substance to be examined in *0.0015 M borate buffer solution pH 8.0 R* inactivated by heating on a water-bath for 30 min. Carry out dilutions with a 9 g/l solution of *sodium chloride R* .

CHARACTERS

A white or almost white, crystalline or amorphous powder, sparingly soluble in water. The amorphous form is hygroscopic.

IDENTIFICATION

A. Dilute 1 ml of solution S (see Tests) to 100 ml with *water R* . In a depression in a white spot-plate, mix 0.1 ml of this solution with 0.2 ml of *tosylarginine methyl ester hydrochloride solution R*. A reddish-violet colour develops within 3 min.

B. Dilute 0.5 ml of solution S to 5 ml with *water R*. Add 0.1 ml of a 20 g/l solution of *tosyl-lysyl-chloromethane hydrochloride R*. Adjust to pH 7.0, shake for 2 h and dilute to 50 ml with *water R*. In one of the depressions of a white spot-plate, mix 0.1 ml of this solution with 0.2 ml of *tosylarginine methyl ester hydrochloride solution R.* No reddish-violet colour develops within 3 min.

TESTS

Solution S

Dissolve 0.10 g in *carbon dioxide-free water R* and dilute to 10.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension III *(2.2.1).*

pH *(2.2.3)*

The pH of solution S is 3.0 to 6.0.

Absorbance (*2.2.25)*

Dissolve 30.0 mg in *0.001 M hydrochloric acid* and dilute to 100.0 ml with the same acid. The solution shows an absorption maximum at 280 nm and a minimum at 250 nm. The specific absorbance at the absorption maximum is 13.5 to 16.5 and at the absorption minimum is not greater than 7.0.

Chymotrypsin

To 1.8 ml of *buffer solution pH 8.0 R* add 7.4 ml of *water R* and 0.5 ml of *0.2 M acetyltyrosine ethyl ester R*. While shaking the solution, add 0.3 ml of solution S and start a timer. After exactly 5 min, measure the pH *(2.2.3)* (test solution). Prepare a reference solution in the same manner, replacing solution S by 0.3 ml of a 0.5 g/l solution of *chymotrypsin BRP* and measure the pH *(2.2.3)* exactly 5 min after adding the chymotrypsin. The pH of the test solution is higher than that of the reference solution.

Loss on drying *(2.2.32)*

Not more than 5.0 per cent, determined on 0.500 g by drying at 60 °C at a pressure not exceeding 670 Pa for 2 h.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^4 micro-organisms per gram, determined by plate count. It complies with the tests for *Escherichia coli* and *Salmonella (2.6.13).*

ASSAY

The activity of trypsin is determined by comparing the rate at which it hydrolyses *benzoylarginine ethyl ester hydrochloride R* with the rate at which *trypsin BRP* hydrolyses the same substrate in the same conditions.

Apparatus Use a reaction vessel of about 30 ml capacity provided with:

— a device that will maintain a temperature of 25.0 ± 0.1 °C;

— a stirring device (for example, a magnetic stirrer);

— a lid with holes for the insertion of electrodes, the tip of a burette, a tube for the admission of nitrogen and the introduction of reagents.

An automatic or manual titration device may be used. For the latter, the burette is graduated in 0.005 ml and the pH meter is provided with a wide-range scale and glass-calomel or glass-silver-silver chloride electrodes.

Test solution Dissolve sufficient of the substance to be examined in *0.001 M hydrochloric acid* and dilute to 25.0 ml with the same acid in order to obtain a solution containing approximately 700 nanokatals per millilitre.

Reference solution Dissolve 25.0 mg of *trypsin BRP* in *0.001 M hydrochloric acid* and dilute to 25.0 ml with the same acid.

Store the solutions at 0-5 °C. Warm 1 ml of each solution to about 25 °C over 15 min and use 50 µl of each solution for each titration. Carry out the titration in an atmosphere of nitrogen. Transfer 10.0 ml of *0.0015 M borate buffer solution pH 8.0 R* to the reaction vessel and, while stirring, add 1.0 ml of a freshly prepared 6.86 g/l solution of *benzoylarginine ethyl ester hydrochloride R*. When the temperature is steady at 25.0 ± 0.1 °C (after about 5 min) adjust the pH to exactly 8.0 with *0.1 M sodium hydroxide*. Add 50 µl of the test solution and start a timer. Maintain the pH at 8.0 by the addition of *0.1 M sodium hydroxide*, the tip of the microburette being immersed in the solution; note the volume added every 30 s. Follow the reaction for 8 min. Calculate the volume of *0.1 M sodium hydroxide* used per second. Carry out a titration in the same manner using the reference solution and calculate the volume of *0.1 M sodium hydroxide* used per second.

Calculate the activity in microkatals per milligram using the following expression:

$$\frac{m' \times V}{m \times V'} \times A$$

m = mass of the substance to be examined, in milligrams

m' = mass of *trypsin BRP*, in milligrams

V = volume of *0.1 M sodium hydroxide* used per second by the test solution

V' = volume of *0.1 M sodium hydroxide* used per second by the reference solution

A = activity of *trypsin BRP*, in microkatals per milligram

STORAGE

In an airtight container, protected from light, at a temperature of 2 °C to 8 °C.

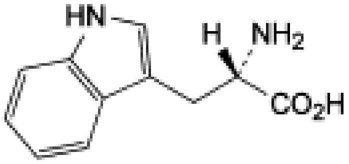
LABELLING

The label states the activity in microkatals per milligram.

Tryptophan

General Notices

(Ph Eur monograph 1272)



$C_{11}H_{12}N_2O_2$ 204.2 *73-22-3*

Ph Eur

DEFINITION

(*S*)-2-Amino-3-(1*H*-indol-3-yl)propanoic acid.

Content

98.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline or amorphous powder.

Solubility

Sparingly soluble in water, slightly soluble in ethanol (96 per cent). It dissolves in dilute solutions of mineral acids and alkali hydroxides.

IDENTIFICATION

First identification A, B.

Second identification A, C, D.

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *tryptophan CRS.*

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances.

Results The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. Dissolve about 20 mg in 10 ml of *water R* . Add 5 ml of *dimethylaminobenzaldehyde solution R6* and 2 ml of *hydrochloric acid R1* . Heat on a water-bath. A purple-blue colour develops.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II*).

Dissolve 0.1 g in *1 M hydrochloric acid* and dilute to 10 ml with the same acid.

Specific optical rotation *(2.2.7)*

- 30.0 to - 33.0 (dried substance).

Dissolve 0.25 g in *water R* , heating on a water-bath if necessary, and dilute to 25.0 ml with the same solvent.

Ninhydrin-positive substances

Thin-layer chromatography *(2.2.27)* .

Solvent mixture *glacial acetic acid R, water R* (50:50 *V/V*).

Test solution (a) Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10 ml with the solvent mixture.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with the solvent mixture.

Reference solution (a) Dissolve 10 mg of *tryptophan CRS* in the solvent mixture and dilute to 50 ml with the solvent mixture.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with the solvent mixture.

Reference solution (c) Dissolve 10 mg of *tryptophan CRS* and 10 mg of *tyrosine CRS* in the solvent mixture and dilute to 25 ml with the solvent mixture.

Plate *TLC silica gel plate R* .

Mobile phase *glacial acetic acid R, water R, butanol R* (20:20:60 *V/V/V*).

Application 5 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

System suitability Reference solution (c):

— the chromatogram shows 2 clearly separated spots.

Limit Test solution (a):

— *any impurity*: any spot, apart from the principal spot, is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Impurity A and other related substances

Liquid chromatography *(2.2.29)*. *Prepare the standard, test and reference solutions immediately before use.*

Buffer solution pH 2.3 Dissolve 3.90 g of *sodium dihydrogen phosphate R* in 1000 ml of *water R*. Add about 700 ml of a 2.9 g/l solution of *phosphoric acid R* and adjust to pH 2.3 with the same acid solution.

Solvent mixture *acetonitrile R*, *water R* (10:90 *V/V*).

Standard solution Dissolve 10.0 mg of *N-acetyltryptophan R* in the solvent mixture and dilute to 100.0 ml with the solvent mixture. Dilute 2.0 ml of this solution to 100.0 ml with the solvent mixture.

Test solution (a) Dissolve 0.10 g of the substance to be examined in the solvent mixture and dilute to 10.0 ml with the solvent mixture.

Test solution (b) Dissolve 0.10 g of the substance to be examined in the standard solution and dilute to 10.0 ml with the standard solution.

Reference solution (a) Dissolve 1.0 mg of *1,1′-ethylidenebistryptophan CRS* (impurity A) in the solvent mixture and dilute to 100.0 ml with the solvent mixture.

Reference solution (b) Dilute 10.0 ml of reference solution (a) to 50.0 ml with the standard solution.

Reference solution (c) Dilute 10.0 ml of reference solution (a) to 50.0 ml with the solvent mixture.

Reference solution (d) Dissolve 0.10 g of the substance to be examined in reference solution (c) and dilute to 10.0 ml with reference solution (c).

Reference solution (e) Dilute 1.0 ml of reference solution (c) to 10.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

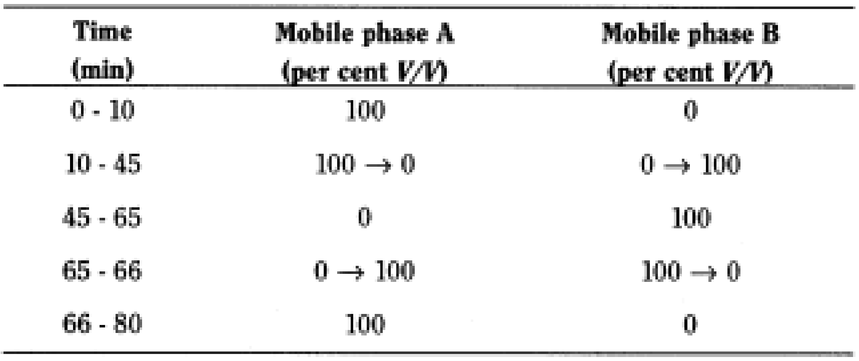
— *stationary phase:* octadecylsilyl silica gel for chromatography R (5 µm);

— *temperature*: 40 °C.

Mobile phase:

— *mobile phase A*: *acetonitrile R,* buffer solution pH 2.3 (115:885 *V/V*);

— *mobile phase B*: *acetonitrile R*, buffer solution pH 2.3 (350:650 *V/V*);



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 10	100	0
10 - 45	100 → 0	0 → 100
45 - 65	0	100
65 - 66	0 → 100	100 → 0
66 - 80	100	0

Flow rate 0.7 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 20 µl of test solutions (a) and (b) and reference solutions (b), (d) and (e).

Retention time Tryptophan = about 8 min; *N*-acetyltryptophan = about 29 min; impurity A = about 34 min.

System suitability:

— *resolution*: minimum 8.0 between the peaks due to *N*-acetyltryptophan and impurity A in the chromatogram obtained with reference solution (b); if necessary, adjust the time programme for the elution gradient (an increase in the duration of elution with mobile phase A produces longer retention times and a better resolution);

— *signal-to-noise ratio* : minimum 15 for the principal peak in the chromatogram obtained with reference solution (e);

— in the chromatogram obtained with test solution (a) there is no peak with the same retention time as *N*-acetyltryptophan (in such case correct the area of the *N*-acetyltryptophan peak).

Limits Test solution (b):

— *impurity A*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (e) (10 ppm);

— sum of impurities with a retention time less than that of tryptophan: not more than 0.6 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b) (100 ppm);

— sum of impurities with a retention time greater than that of tryptophan and up to 1.8 times the retention time of *N*-acetyltryptophan: not more than 1.9 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b) (300 ppm);

— *disregard limit*: 0.02 times the area of the peak due to *N*-acetyltryptophan in the chromatogram obtained with reference solution (b); disregard the peak due to *N*-acetyltryptophan.

Chlorides ***(2.4.4)***

Maximum 200 ppm.

Dissolve 0.25 g in 3 ml of *dilute nitric acid R* and dilute to 15 ml with *water R* . The solution, without any further addition of nitric acid, complies with the test.

Sulphates ***(2.4.13)***

maximum 300 ppm.

Dissolve 0.5 g in a mixture of 5 volumes of *dilute hydrochloric acid R* and 25 volumes of *distilled water R,* and dilute to 15 ml with the same mixture of solvents.

Ammonium *(2.4.1, Method B)*

Maximum 200 ppm, determined on 0.10 g.

Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm NH_4) R*.

Iron *(2.4.9)*

Maximum 20 ppm.

In a separating funnel, dissolve 0.50 g in 10 ml of *dilute hydrochloric acid R.* Shake with 3 quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. Examine the aqueous layer.

Heavy metals (*2.4.8)*

Maximum 10 ppm.

2.0 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R.* Titrate with *0.1 M perchloric acid*, using 0.1 ml of *naphtholbenzein solution R* as indicator.

1 ml of *0.1 M perchloric acid* is equivalent to 20.42 mg of $C1_1H_{12}N_2O_2$.

STORAGE

Protected from light.

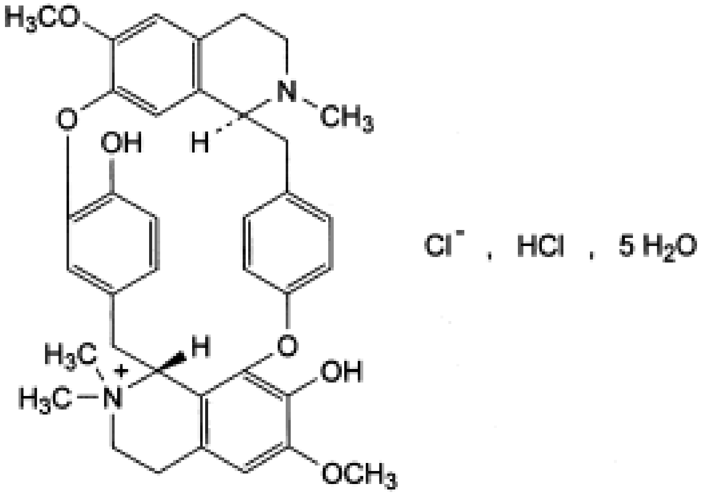
Ph Eur

Tubocurarine Chloride

General Notices

(Ph Eur monograph 0305)



$C_{37}H_{41}ClN_2O_6,HCl,5H_2O$ 772 *6989-98-6*

Action and use

Non-depolarizing neuromuscular blocker.

Ph Eur

DEFINITION

Tubocurarine chloride contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of (3a*R*,16a*S*)-8,23-dihydroxy-24,29-dimethoxy-3,3,16-trimethyl-2,3,3a,4,15,16,16a,17-octahydro-1*H*-11,13:18,21-dietheno-5,9-metheno-14*H*-pyrido[3′,2′:14,15][1,11]dioxacycloicosino[2,3,4-*ij*]isoquinolinium chloride hydrochloride, calculated with reference to the anhydrous substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, soluble in water and in alcohol, practically insoluble in acetone. It dissolves in solutions of alkali hydroxides.

It melts at about 270 °C, with decomposition.

IDENTIFICATION

First identification *B, E.*

Second identification *A, C, D, E, F.*

A. Dissolve 50.0 mg in *water R* and dilute to 1000.0 ml with the same solvent. Examined between 230 nm and 350 nm *(2.2.25)* , the solution shows an absorption maximum at 280 nm and a minimum at 255 nm. The specific absorbance at the maximum is 113 to 123, calculated with reference to the anhydrous substance.

B. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *tubocurarine chloride CRS* .

C. Dissolve about 25 mg in 1 ml of *water R*. Add 0.2 ml of *ferric chloride solution* R2 and heat in a water-bath for 1 min. The solution is green. Carry out a blank test; after heating in a water-bath, the colour is brown.

D. To 1 ml of solution S (see Tests) add 1 ml of nitric acid *solution of mercury R* . A red colour develops slowly.

E. It gives reaction (a) of chlorides *(2.3.1)* .

F. It gives the reaction of alkaloids *(2.3.1)* .

TESTS

Solution S

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

pH *(2.2.3)*

The pH of solution S is 4.0 to 6.0.

Specific optical rotation *(2.2.7)*

+ 210 to + 222, determined on solution S 3 h after preparation and calculated with reference to the anhydrous substance.

Chloroform-soluble substances

Dissolve 0.25 g in 150 ml of *water R* . Add 5 ml of a saturated solution of *sodium bicarbonate R* and shake with three quantities, each of 20 ml, of *chloroform R* . Wash the combined chloroform layers with 10 ml of *water R* , filter the chloroform solution into a tared beaker and wash the filter with two quantities, each of 5 ml, of *chloroform R* . Add the washings to the filtrate. Evaporate to dryness on a water-bath and dry at 100-105 °C for 1 h. The residue weighs not more than 5 mg. The residue does not dissolve in 10 ml of *water R* , but dissolves on the addition of 1 ml of *dilute hydrochloric acid R.*

Related substances

Examine by thin-layer chromatography *(2.2.27)* , using *silica gel G R* as the coating substance.

Test solution Dissolve 0.25 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dilute 1.5 ml of the test solution to 100 ml with *water R.*

Reference solution (b) Dilute 5 ml of reference solution (a) to 10 ml with *water R* .

Apply to the plate 5 µl of each solution. Develop in a non-saturated tank over a path of 15 cm using the lower layer of a mixture of equal volumes of *chloroform R* , *methanol R* and a 125 g/l solution of *trichloroacetic acid R* . Dry the plate in a current of cold air. Spray with a mixture of 1 volume of *potassium ferricyanide solution R* , 1 volume of *water R* and 2 volumes of *ferric chloride solution R1* , prepared immediately before use. Any spot in the chromatogram obtained with the test solution, apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (a) (1.5 per cent) and at most one such spot is more intense than the spot in the chromatogram obtained with reference solution (b) (0.75 per cent).

Water *(2.5.12)*

9.0 per cent to 12.0 per cent, determined on 0.30 g by the semi-micro determination of water.

Sulphated ash *(2.4.14)*

Not more than 0.25 per cent, determined on 0.2 g.

ASSAY

Dissolve 25.0 mg in *water R* and dilute to 500.0 ml with the same solvent. In the same manner, prepare a reference solution using 25.0 mg of *tubocurarine chloride CRS* . Measure the absorbance *(2.2.25)* at the maximum at 280 nm.

Calculate the content of $C_{37}H_{42}Cl_2N_2O_6$ from the absorbances measured, the concentrations of the solutions and the declared content of anhydrous tubocurarine chloride in *tubocurarine chloride CRS* .

STORAGE

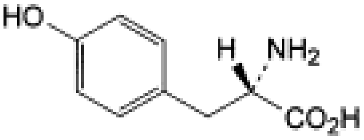
Store in an airtight container .

Ph Eur

Tyrosine

General Notices

(Ph Eur monograph 1161)



$C_9H_{11}NO_3$ 181.2 *60-18-4*

Action and use

Amino acid.

Ph Eur

DEFINITION

Tyrosine contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-amino-3-(4-hydroxyphenyl)propanoic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white crystalline powder or colourless crystals, very slightly soluble in water, practically insoluble in alcohol. It dissolves in dilute mineral acids and in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification A, B.

Second identification A, C, D, E.

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *tyrosine CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To about 50 mg add 1 ml of *dilute nitric acid R*. A dark red colour is produced within 15 min.

E. Dissolve about 30 mg in 2 ml of *dilute sodium hydroxide solution R.* Add 3 ml of a freshly prepared mixture of equal volumes of a 100 g/l solution of *sodium nitrite R* and a solution of 0.5 g of *sulphanilic acid R* in a mixture of 6 ml of *hydrochloric acid R1* and 94 ml of *water R*. An orange-red colour is produced.

TESTS

Appearance of solution

Dissolve 0.5 g in *dilute hydrochloric acid R* and dilute to 20 ml with the *same acid.* The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method II).*

Specific optical rotation *(2.2.7)*

Dissolve 1.25 g in a mixture of equal volumes of *dilute hydrochloric acid R* and *water R* and dilute to 25.0 ml with the same mixture of solvents. The specific optical rotation is - 11.0 to - 12.3, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel plate R*.

Test solution (a) Dissolve 0.10 g of the substance to be examined in *dilute ammonia R2* and dilute to 10 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R*.

Reference solution (a) Dissolve 10 mg of *tyrosine CRS* in 1 ml of *dilute ammonia R2* and dilute to 50 ml with *water R*.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R.*

Reference solution (c) Dissolve 10 mg of *tyrosine CRS* and 10 mg of *phenylalanine CRS* in 1 ml of *dilute ammonia R2* and dilute to 25 ml with *water R*.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 30 volumes of *concentrated ammonia R1* and 70 volumes of *propanol R*. Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides *(2.4.4)*

Dissolve 0.25 g in 3 ml of *dilute nitric acid R* and dilute to 15 ml with *water R.* The solution complies with the limit test for chlorides, without any further addition of nitric acid (200 ppm).

Sulphates *(2.4.13)*

Dissolve with gentle heating, 0.5 g in 5 ml of *dilute hydrochloric acid R* and dilute to 15 ml with *distilled water R*. The solution complies with the limit test for sulphates (300 ppm).

Ammonium ***(2.4.1)***

0.10 g complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.2 ml of *ammonium standard solution (100 ppm NH_4) R*. Replace the *heavy magnesium oxide R* by 2.0 ml of *strong sodium hydroxide solution R.*

Iron ***(2.4.9)***

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals ***(2.4.8)***

2.0 g complies with limit test C for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.150 g in 5 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 18.12 mg of $C_9H_{11}NO_3$.

STORAGE

Store protected from light.

1404-88-2

Action and use

Polypeptide antibacterial.

Ph Eur

DEFINITION

Mixture of antimicrobial linear and cyclic polypeptides, isolated from the fermentation broth of *Brevibacillus brevis* Dubos. It consists mainly of gramicidins and tyrocidins as described above; other related compounds may be present in smaller amounts.

Potency 180 IU/mg to 280 IU/mg (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Practically insoluble in water, soluble in ethanol (96 per cent) and in methanol.

IDENTIFICATION

First identification *B.*

Second identification *A.*

A. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 5 mg of the substance to be examined in 4.0 ml of *ethanol (96 per cent) R.*

Reference solution Dissolve 5 mg of *tyrothricin CRS* in 4.0 ml of *ethanol (96 per cent) R* .

Plate *TLC silica gel* F_{254} *plate R* .

Mobile phase *methanol R, butanol R, water R, acetic acid R, butyl acetate R* (2.5:7.5:12:20:40 *V/V/V/V/V*).

Application 1 µl.

Development Over 2/3 of the plate.

Drying In a current of warm air.

Detection A Examine in ultraviolet light at 254 nm.

Results A The principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

Detection B Spray with *dimethylaminobenzaldehyde solution R2* . Heat the plate in a current of warm air until the spots appear.

System suitability Reference solution:

— the chromatogram shows 2 clearly separated spots or groups of spots.

Results B The principal spots or groups of principal spots in the chromatogram obtained with the test solution are similar in position, colour and size to the principal spots or groups of principal spots in the chromatogram obtained with the reference solution. The upper group corresponds to gramicidins, the lower group to tyrocidins.

B. It complies with the test for composition (see Tests).

TESTS

Composition

Liquid chromatography (*2.2.29*)

Use the normalisation procedure. *Prepare the solutions immediately before use.*

Test solution Dissolve 5 mg of the substance to be examined in 2 ml of *methanol R* and dilute to 5.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *tyrothricin CRS* in 2 ml of *methanol R* and dilute to 5.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 50.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 60 °C.

Mobile phase 0.79 g/l solution of *ammonium sulphate R, methanol R* (25:75 *V/V*).

Flow rate 1.2 ml/min.

Detection spectrophotometer at 280 nm.

Injection 25 µl.

Run time 6 times the retention time of gramicidin A1. Use the chromatogram obtained with reference solution (a) and the chromatogram supplied with *tyrothricin CRS* to identify the peaks due to gramicidin A1, gramicidin A2 and the tyrocidins.

Relative retention With reference to gramicidin A1 (retention time = about 10 min): gramicidin C1 = about 0.8; gramicidin C2 = about 0.9; gramicidin A2 = about 1.1; tyrocidins = about 1.5 to 6.

System suitability Reference solution (a):

— *peak-to-valley ratio* : minimum 3.0, where H_p = height above the baseline of the peak due to gramicidin A2 and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to gramicidin A1.

Composition:

— *sum of gramicidins*: 25 per cent to 50 per cent;

— *sum of tyrocidins*: 50 per cent to 70 per cent;

— *total*: minimum 85 per cent;

— *disregard limit*: the sum of the areas of the peaks due to gramicidins in the chromatogram obtained with reference solution (b).

Loss on drying *(2.2.32)*

Maximum 4.0 per cent, determined on 1.000 g by drying under high vacuum at 60°C for 3 h.

Sulphated ash ***(2.4.14)***

Maximum 1.5 per cent, determined on 1.0 g.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2)* using the turbidimetric method. Use *gramicidin CRS* as the reference substance.

Test solution Prepare a solution of tyrothricin containing about the same amount of gramicidin as the corresponding solution of *gramicidin CRS* i.e. 5 times more concentrated.

STORAGE

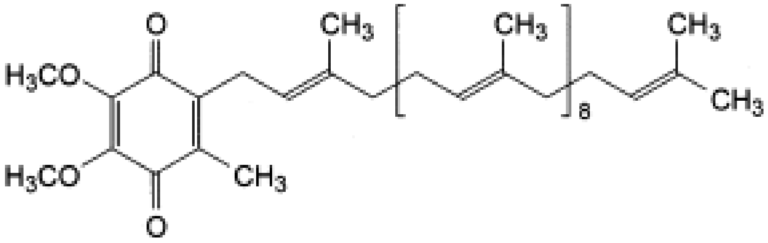
In an airtight container, protected from light.

Ph Eur

Ubidecarenone

General Notices

(Ph Eur monograph 1578)



$C_{59}H_{90}O_4$ 863 *303-98-0*

Action and use

Co-enzyme in mitochondrial electron transport.

Ph Eur

DEFINITION

2-[(all-*E*)-3,7,11,15,19,23,27,31,35,39-Decamethyltetraconta-2,6,10,14,18,22,26,30,34,38-decaenyl]-5,6-dimethoxy-3-methylbenzene-1,4-dione.

Content

97.0 per cent to 103.0 per cent.

CHARACTERS

Appearance

Yellow or orange, crystalline powder.

Solubility

Practically insoluble in water, soluble in acetone, very slightly soluble in ethanol.

It gradually decomposes and darkens on exposure to light.

mp

About 48 °C.

Carry out all operations avoiding exposure to light.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *ubidecarenone CRS.*

B. Examine the chromatograms obtained in the test for related substances.

Results The retention time of the principal peak in the chromatogram obtained with the test solution is similar to that of the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Related substances

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in 25.0 ml of *ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

Reference solution (a) Dissolve 5 mg of *ubidecarenone CRS* in 5 ml of *ethanol R* by heating at about 50 °C for 2 min. Allow to cool.

Reference solution (b) Dissolve 2 mg of *ubidecarenone impurity D CRS* in 2 ml of the test solution by heating at about 50 °C for 2 min. Allow to cool. Dilute 1 ml to 50 ml with *ethanol R* .

Reference solution (c) Dilute 1.0 ml of the test solution to 100.0 ml with *ethanol R* .

Column:

— *size*: l = 0.15 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *ethanol R, methanol R2* (20:80 *V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 10 µl.

Run time 2 times the retention time of ubidecarenone.

Relative retention With reference to ubidecarenone (retention time = about 12 min): impurity D = about 0.67.

System suitability Reference solution (b):

— *resolution*: minimum 6.5 between the peaks due to impurity D and to ubidecarenone.

Limits:

— *any impurity*: not more than half the area of the principal peak in the chromatogram obtained with reference solution (c) (0.5 per cent);

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (1.0 per cent);

— *disregard limit*: 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Impurity F

Liquid chromatography *(2.2.29)* .

Test solution Dissolve 25.0 mg of the substance to be examined in 25.0 ml of *hexane R* .

Reference solution (a) Dissolve the contents of a vial of *ubidecarenone for system suitability CRS* in 1 ml of *hexane R.*

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with *hexane R* .

Column:
— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase: silica gel for chromatography R* (7 µm).

Mobile phase *ethyl acetate R, hexane R* (3:97 *V/V*).

Flow rate 2 ml/min.

Detection Spectrophotometer at 275 nm.

Injection 20 µl.

Run time 1.2 times the retention time of ubidecarenone.

Relative retention With reference to ubidecarenone (retention time = about 10 min): impurity F = about 0.85.

System suitability Reference solution (a):

— *resolution*: minimum 1.5 between the peaks due to impurity F and to ubidecarenone.

Limit:
— *impurity F*: not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.5 per cent).

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 50.0 mg in 1.0 ml of *hexane R* and dilute to 50.0 ml with *ethanol R* . Dilute 2.0 ml of the solution to 50.0 ml with *ethanol R.* Measure the absorbance *(2.2.25)* at the maximum at 275 nm. Calculate the content of $C_{59}H_{90}O_4$ taking the specific absorbance to be 169.

STORAGE

Store in an airtight container , protected from light.

Ph Eur

Undecenoic Acid

General Notices

(Undecylenic Acid, Ph Eur monograph 0461)

$C_{11}H_{20}O_2$ 184.3 *112-38-9*

Ph Eur

DEFINITION

Undec-10-enoic acid.

Content

97.0 per cent to 102.0 per cent.

CHARACTERS

Appearance

White or very pale yellow, crystalline mass or colourless or pale yellow liquid.

Solubility

Practically insoluble in water, freely soluble in ethanol (96 per cent) and in fatty and essential oils.

IDENTIFICATION

A. Refractive index *(2.2.6)*

1.447 to 1.450, determined at 25 ± 0.5 °C.

B. Freezing point *(2.2.18)* : 21 °C to 24 °C.

C. To 2.0 g add 2 ml of freshly distilled *aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 ml of *ether R*. Shake with 3 quantities, each of 20 ml, of *dilute hydrochloric acid R* and then with 20 ml of *water R.* Evaporate the organic layer to dryness on a water-bath. After recrystallising twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, the residue melts *(2.2.14)* at 66 °C to 68 °C.

D. Dissolve 0.1 g in a mixture of 2 ml of *dilute sulphuric acid R* and 5 ml of *glacial acetic acid R*. Add dropwise 0.25 ml of *potassium permanganate solution R*. The colour of the potassium permanganate is discharged.

TESTS

Peroxide value *(2.5.5, Method A)*

Maximum 10.

Fixed and mineral oils

To 1.0 g add 5 ml of *sodium carbonate solution R* and 25 ml of *water R* and boil for 3 min. The hot solution is not more opalescent than reference suspension II *(2.2.1)*.

Water-soluble acids

To 1.0 g add 20 ml of *water R* heated to 35-45 °C and shake for 2 min. Cool and filter the aqueous layer through a moistened filter. To 10 ml of the filtrate add 0.1 ml of *phenolphthalein solution R.* Not more than 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Degree of unsaturation

Dissolve 85.0 mg in a mixture of 5 ml of *dilute hydrochloric acid R* and 30 ml of *glacial acetic acid R*. Using 0.05 ml of *indigo carmine solution R1* as indicator, added towards the end of the titration, titrate with *0.0167 M bromide-bromate* until the colour changes from blue to yellow. 8.9 ml to 9.4 ml of *0.0167 M bromide-bromate* is required. Carry out a blank titration.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 0.50 g.

ASSAY

Dissolve 0.750 g in 10 ml of *ethanol (96 per cent) R.* Titrate with *0.5 M sodium hydroxide* using 0.1 ml of *phenolphthalein solution R* as indicator, until a pink colour is obtained.

1 ml of *0.5 M sodium hydroxide* is equivalent to 92.14 mg of $C_{11}H_{20}O_2$.

STORAGE

In a non-metallic container, protected from light.

Urea Cream

Ph Eur

DEFINITION

Carbamide.

Content

98.5 per cent to 101.5 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder or transparent crystals, slightly hygroscopic.

Solubility

Very soluble in water, soluble in alcohol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification A, B.

Second identification *A, C, D.*

A. Melting point *(2.2.14)* : 132 °C to 135 °C.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Preparation Discs.

Comparison *urea CRS.*

C. Dissolve 0.1 g in 1 ml of *water R.* Add 1 ml of *nitric acid R* . A white, crystalline precipitate is formed.

D. Heat 0.5 g in a test tube until it liquefies and the liquid becomes turbid. Cool, dissolve in a mixture of 1 ml of *dilute sodium hydroxide solution R* and 10 ml of *water R* and add 0.05 ml of *copper sulphate solution R* . A reddish-violet colour is produced.

TESTS

Solution S

Dissolve 10.0 g in *water R* and dilute to 50 ml with the same solvent.

Appearance of solution

The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

To 2.5 ml of solution S add 7.5 ml of *water R* .

Alkalinity

To 2.5 ml of solution S add 7.5 ml of *water R,* 0.1 ml of *methyl red solution R* and 0.4 ml of *0.01 M hydrochloric acid* . The solution is red to orange.

Biuret

Maximum 0.1 per cent.

To 10 ml of solution S add 5 ml of *water R* , 0.5 ml of a 5 g/l solution of *copper sulphate R* and 0.5 ml of *strong sodium hydroxide solution R* . Allow to stand for 5 min. Any reddish-violet colour in the solution is not more intense than that in a standard prepared at the same time in the same manner using 10 ml of a 0.2 g/l solution of *biuret R*.

Ammonium ***(2.4.1)***

Maximum 500 ppm, determined on 0.1 ml of solution S.

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

Dilute 10 ml of solution S to 20 ml with *water R* . 12 ml of the solution complies with limit test A. Prepare the standard using *lead standard solution (1 ppm Pb) R* .

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.2000 g in *water R* and dilute to 50.0 ml with the same solvent. Introduce 1.0 ml of this solution into a combustion flask. Add 4 g of a powdered mixture of 100 g of *dipotassium sulphate R*, 5 g of *copper sulphate R* and 2.5 g of *selenium R,* and 3 glass beads. Wash any adhering particles from the neck into the flask with 5 ml of *sulphuric acid R*, allowing it to run down the sides of the flask, and mix the contents by rotation. Close the mouth of the flask loosely, for example by means of a glass bulb with a short stem, to avoid excessive loss of sulphuric acid. Heat gradually at first, then increase the temperature until there is vigorous boiling with condensation of sulphuric acid in the neck of the flask; take precautions to prevent the upper part of the flask from becoming overheated. Continue the heating for 30 min. Cool, dissolve the solid material by cautiously adding to the mixture 25 ml of *water R*, cool again and place in a steam-distillation apparatus. Add 30 ml of strong *sodium hydroxide solution R* and distil immediately by passing steam through the mixture. Collect the distillate in 15 ml of a 40 g/l *solution of boric acid R* to which has been added 0.2 ml of *methyl red mixed solution R* and enough *water R* to cover the tip of the condenser. Towards the end of the distillation, lower the receiver so that the tip of the condenser is above the surface of the acid. Take precautions to prevent any water on the outer surface of the condenser from reaching the contents of the receiver. Titrate the distillate with *0.01 M sulphuric acid*.

1 ml of *0.01 M sulphuric acid* is equivalent to 0.6006 mg of CH_4N_2O.

STORAGE

In an airtight container.

Ph Eur

Urofollitropin

General Notices

(Ph Eur monograph 0958)

97048-13-0

Action and use

Follicle-stimulating hormone.

Preparation

Urofollitropin Injection

Ph Eur

DEFINITION

Urofollitropin is a dry preparation containing menopausal gonadotrophin obtained from the urine of post-menopausal women. It has follicle-stimulating activity and no or virtually no luteinising activity. The potency is not less than 90 International Units of follicle-stimulating hormone (hFSH) per milligram. The ratio of units of luteinising hormone (interstitial-cell-stimulating hormone) [hLH(ICSH)] to units of follicle-stimulating hormone is not more than 1/60.

PRODUCTION

It may be prepared by a suitable fractionation procedure followed by immunoaffinity chromatography.

CHARACTERS

Appearance

Almost white or slightly yellowish powder.

Solubility

Soluble in water.

IDENTIFICATION

When administered as prescribed in the assay it causes enlargement of the ovaries of immature female rats.

TESTS

Hepatitis virus antigens

Examined by a suitably sensitive immunochemical method *(2.7.1)* , hepatitis virus antigens are not detected.

HIV antigen

Examined by a suitably sensitive immunochemical method *(2.7.1)* , HIV antigen is not detected.

Residual luteinising activity

The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organisation. Use immature female rats approximately 21 days old and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 4 equal groups of at least 6 animals. If sets of 4 litter mates are available, assign one litter mate at random from each set to each group and mark according to litter.

Inject subcutaneously into each rat 50 IU of *serum gonadotrophin R* on the first day and 25 IU of *chorionic gonadotrophin R* on the fourth day, each in 0.5 ml of *phosphate-albumin buffered saline pH 7.2 R.*

Choose 3 doses of the reference preparation such that the smallest dose produces a depletion of the ovarian ascorbic acid content in all the rats and the largest dose does not produce a maximal depletion in all the rats. Use doses in geometric progression; as an initial approximation, total doses of 0.5 IU, 1.0 IU and 2.0 IU may be tried although the dose to be used will depend on the sensitivity of the animals.

Choose a dose of the preparation to be examined expected to contain 60X IU of follicle-stimulating hormone (hFSH), in which X = the number of IU of hLH in the middle dose of the reference preparation.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation in 1.0 ml of *phosphate-albumin buffered saline pH 7.2 R*. Inject into a tail vein to each separate group of rats 6 days after the injection of chorionic gonadotrophin. Exactly 4 h after the injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the ovaries immediately.

Treat the combined ovaries from each rat separately, as follows. Crush and homogenise within 2 min in a freshly prepared 25 g/l solution of *metaphosphoric acid R* at a temperature of 4 °C and dilute to 7 ml with the same solution. Allow the homogenate to stand for 30 min at 4 °C and centrifuge at 4 °C at approximately 2500 g. Filter the supernatant liquid, if necessary, through a 0.22 µm filter.

Prepare a fresh solution consisting of a mixture of 2 ml of a 45.3 g/l solution of *sodium acetate R* adjusted to pH 7 with *acetic acid R* , 3 ml of *water R* and 2 ml of dichlorophenolindophenol *standard solution R.* Mix 2 ml of this solution with 2 ml of the clear supernatant liquid. 30 s after mixing, measure the absorbance (*2.2.25*) of the solution at the maximum at about 520 nm. Use as reference a solution with a known content of *ascorbic* *acid CRS* in a 25 g/l solution of *metaphosphoric acid R*, treated by the same process.

Calculate the amount of ascorbic acid from the ascorbic acid standard curve obtained and express in milligrams per 0.1 g of ovary to obtain the ascorbic acid content of the ovaries. Calculate the mean and its variance of the ascorbic acid content of the ovaries of the rats treated with the preparation to be examined.

For each dose-group of the reference preparation, plot the mean ascorbic acid content of the ovaries as a function of the logarithm of the dose and analyse the regression of the ascorbic acid content on the logarithm of the dose injected, using standard methods of analysis (the method of least squares).

The test is not valid unless:

— the slope constant b is significant at the 5 per cent level of significance;

— for the groups treated with the reference preparation, the sum of squares due to linear regression is equal to at least 95 per cent of the total sum of squares of the ascorbic acid content;

— the within-group variance of the ascorbic acid content of the group receiving the preparation to be examined is not significantly different at the 5 per cent level of significance from the within-group variance of the ascorbic acid content of the groups receiving the reference preparation.

The mean ascorbic acid content of the ovaries of the rats treated with the preparation to be examined is not significantly lower than that of the rats treated with the middle dose of the reference preparation (calculated from the regression equation) at the 5 per cent level of significance.

Water ***(2.5.32)***

Maximum 5.0 per cent.

Bacterial endotoxins ***(2.6.14, Method C)***

Less than 0.40 IU per IU of urofollitropin, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

The follicle-stimulating activity of urofollitropin is estimated by comparing under given conditions its effect in enlarging the ovaries of immature rats treated with chorionic gonadotrophin with the same effect of the International Standard preparation of human urinary follicle-stimulating hormone and luteinising hormone or of a reference preparation calibrated in International Units. The International Units of FSH and LH are the activities contained in stated amounts of the International Standard of human urinary follicle-stimulating hormone and luteinising hormone (interstitial-cell-stimulating hormone) which consists of a mixture of a freeze-dried extract of urine of post-menopausal women with lactose. The equivalence in International Units of the International Standard is stated by the World Health Organisation.

Use immature female rats of the same strain, 19 to 28 days old, differing in age by not more than 3 days and having masses such that the difference between the heaviest and the lightest rat is not more than 10 g. Assign the rats at random to 6 equal groups of at least 5 animals. If sets of 6 litter mates are available, assign one litter mate from each set to each group and mark according to litter.

Choose 3 doses of the reference preparation and 3 doses of the preparation to be examined such that the smallest dose produces a positive response in some of the rats and the largest dose does not produce a maximal response in all the rats. Use doses in geometric progression and as an initial approximation total doses of 1.5 IU, 3.0 IU and 6.0 IU may be tried although the dose will depend on the sensitivity of the animals used, which may vary widely.

Dissolve separately the total quantities of the preparation to be examined and of the reference preparation corresponding to the daily doses to be used in sufficient *phosphate-albumin buffered saline pH 7.2 R* such that the daily dose is administered in a volume of about 0.5 ml. The buffer solution shall contain in the daily dose not less than 14 IU of chorionic gonadotrophin to ensure complete luteinisation. Add a suitable antimicrobial preservative such as 4 g/l of phenol or 0.02 g/l of thiomersal. Store the solutions at 5 ± 3 °C.

Inject subcutaneously into each rat the daily dose allocated to its group. Repeat the injection of each dose 24 h and 48 h after the first injection. About 24 h after the last injection, euthanise the rats and remove the ovaries from each animal. Remove any extraneous fluid and tissue from the ovaries and weigh the 2 combined ovaries of each animal immediately. Calculate the results by the usual statistical methods, using the mass of the 2 combined ovaries as the response. (The precision of the assay may be improved by a suitable correction of the organ mass with reference to the mass of the animal from which it was taken; an analysis of covariance may be used).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P = 0.95$) of the estimated potency are not less than 64 per cent and not more than 156 per cent of the stated potency.

STORAGE

In an airtight, tamper-proof container, protected from light, at a temperature of 2 °C to 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

- the activity expressed in International Units of follicle-stimulating hormone per container;
- the potency expressed in International Units of follicle-stimulating hormone per milligram.

Ph Eur

Urokinase

General Notices

(Ph Eur monograph 0695)

9039-53-6

Action and use

Plasminogen activator; fibrinolytic; enzyme.

Ph Eur

DEFINITION

Urokinase is an enzyme, obtained from human urine, that activates plasminogen. It consists of a mixture of low-molecular-mass (LMM) (M_r 33 000) and high-molecular-mass (HMM) (M_r 54 000) forms, the high-molecular-mass form being predominant. The potency is not less than 70 000 International Units per milligram of protein.

PRODUCTION

It is produced by validated methods of manufacturing designed to minimise or eliminate asoactive substances.

CHARACTERS

A white or almost white, amorphous powder, soluble in water.

IDENTIFICATION

A. Place separately in two haemolysis tubes 0.5 ml of citrated human plasma and 0.5 ml of citrated bovine plasma and maintain in a water-bath at 37 °C. To each tube add 0.1 ml of a solution containing a quantity of the substance to be examined equivalent to 1000 IU/ml in *phosphate buffer solution pH 7.4 R* and 0.1 ml of a solution containing a quantity of *humanthrombin R* equivalent to 20 IU/ml in *phosphate buffer solution pH 7.4 R* . Shake immediately. In both tubes, a clot forms and lyses within 30 min.

B. Carry out identification by a suitable immunodiffusion test.

TESTS

Appearance of solution

Dissolve 10 mg in 10 ml of *water R* . The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

Hepatitis B surface antigen

Examine by a suitably sensitive method such as radio-immunoassay. Hepatitis B surface antigen is not detected.

Thromboplastic contaminants

Test solutions Dissolve suitable quantities of the substance to be examined in *barbital buffer solution pH 7.4 R* to obtain solutions with activities of 5000 IU/ml, 2500 IU/ml, 1250 IU/ml, 625 IU/ml and 312 IU/ml.

To each of six haemolysis tubes 1 cm in internal diameter add 0.1 ml of *citrated rabbit plasma R* . Allocate the test solutions one to each of five of the tubes; add to each tube 0.1 ml of the solution allocated to it and to the sixth tube add 0.1 ml of *barbital buffer solution pH 7.4 R* (blank). Incubate the tubes at 25 ± 0.5 °C for 5 min and add 0.1 ml of a 3.675 g/l solution of *calcium chloride R* . Measure with a stop-watch the coagulation time for each tube. Plot the shortening of the recalcification time (clotting time of the blank minus clotting time measured) against log concentration in International Units. Extrapolate the best-fitting straight line through the five points until it reaches the log-concentration axis. The urokinase activity at the intersection point, which represents the limit concentration for coagulant activity (zero coagulant activity), is not less than 150 IU/ml.

Molecular fractions

Examine by size-exclusion chromatography *(2.2.30)* .

Test solution Dissolve about 1 mg of the substance to be examined in 1.0 ml of *0.02 M phosphate buffer pH 8.0 R* . Prepare immediately before use.

The chromatographic procedure may be carried out using:

- — a column 0.9 m long and 16 mm in internal diameter packed with *cross-linked dextran for chromatography R3*;
- — as mobile phase at a flow rate of 6 ml/h a 17.5 g/l solution of *sodium chloride R* in *0.02 M phosphate buffer solution pH 8.0 R* ;

equilibrating the column and operating at 5 °C. Apply the test solution to the head of the column rinsing twice with 0.5 ml portions of the buffer and carry out the elution. The eluate may be collected in fractions of 1 ml. Measure the absorbance *(2.2.25*) of the eluate at the maximum at 280 nm and plot the individual values on a graph. Draw perpendicular lines towards the axis of the abscissae from the minima before the HMM peak, between the HMM and the LMM peaks, and after the LMM peak, thus identifying the fractions to be considered in calculating the HMM/LMM activity ratio. Pool the HMM fractions and, separately, the LMM fractions. Determine separately the urokinase activity in International Units of each of the fraction pools by the method prescribed under Assay. The ratio of the urokinase activity in the HMM fraction pool to that in the LMM fraction pool is not less than 2.0.

Total protein

Determine the nitrogen content, using 10 mg, by the method of sulphuric acid digestion *(2.5.9)* and calculate the quantity of protein by multiplying by 6.25.

Pyrogens *(2.6.8)*

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of pyrogen, it complies with the test for pyrogens. Inject per kilogram of the rabbit's mass 1.0 ml of a sterile 9 g/l solution of *sodium chloride R* containing a quantity of the substance to be examined equivalent to 20 000 IU/ml.

ASSAY

The potency of urokinase is determined by comparing its capacity to activate plasminogen to form plasmin with the same capacity of a reference preparation of urokinase calibrated in International Units; the formation of plasmin is measured by the determination of the lysis time of a fibrin clot in given conditions.

The International Unit is the activity contained in a stated amount of the International Reference Preparation, which consists of freeze-dried urokinase with lactose. The equivalence in International Units of the International Reference Preparation is stated by the World Health Organisation.

Unless otherwise prescribed, use *phosphate buffer solution pH 7.4* R containing 30 g/l of *bovine albumin R* for the preparation of the solutions and dilutions used in the assay.

Test solution Prepare a solution of the substance to be examined expected to have an activity of 1000 IU/ml.

Reference solution Prepare a solution of a reference preparation having an activity of 1000 IU/ml.

Keep the test solution and the reference solution in iced water and use within 6 h. Prepare three serial 1.5-fold dilutions of the reference preparation such that the longest clot-lysis time is less than 20 min and the shortest clot-lysis time is greater than 3 min. Prepare three similar dilutions of the test solution. Keep the solutions in iced water and use within 1 h. Use twenty-four tubes 8 mm in diameter. Label the tubes T_1, T_2 and T_3 for the dilutions of the test solution and S_1, S_2 and S_3 for the dilutions of the reference solution, allocating four tubes to each dilution. Place the tubes in iced water. Into each tube, introduce 0.2 ml of the appropriate dilution, 0.2 ml of *phosphate buffer solution pH 7.4 R* containing 30 g/l of bovine *albumin R* and 0.1 ml of a solution of *humanthrombin R* having an activity of not less than 20 IU/ml. Place the tubes in a water-bath at 37 °C and allow to stand for 2 min to attain temperature equilibrium. Using an automatic pipette, introduce into the bottom of the first tube 0.5 ml of a 10 g/l solution of *bovine euglobulins R*, ensuring mixing. At intervals of 5 s, introduce successively into the remaining tubes 0.5 ml of a 10 g/l solution of *bovine euglobulins R*. Using a stop-watch, measure for each tube the time in seconds that elapses between the addition of the euglobulins solution and the lysis of the clot. Plot the logarithms of the lysis times for the substance to be examined and for the reference preparation against the logarithms of the concentration and calculate the activity of the substance to be examined using the usual statistical methods.

The estimated potency is not less than 90 per cent and not more than 111 per cent of the stated potency. The confidence limits ($P = 0.95$) of the estimated potency are not less than 80 per cent and not more than 125 per cent of the stated potency.

STORAGE

Store in an airtight container, protected from light, at a temperature not exceeding 8 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

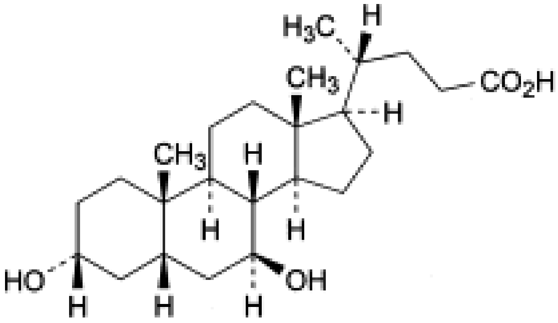
The label states the potency in International Units per milligram of protein.

Ph Eur

Ursodeoxycholic Acid

General Notices

(Ph Eur monograph 1275)



$C_{24}H_{40}O_4$ 392.6 *128-13-2*

Action and use

Bile acid; treatment of gallstones.

Preparations

Ursodeoxycholic Acid Capsules

Ursodeoxycholic Acid Tablets

Ph Eur

DEFINITION

Ursodeoxycholic acid contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 3α,7β-dihydroxy-5β-cholan-24-oic acid, calculated with reference to the dried substance.

CHARACTERS

A white or almost white powder, practically insoluble in water, freely soluble in ethanol (96 per cent), slightly soluble in acetone, practically insoluble in methylene chloride.

It melts at about 202 °C.

IDENTIFICATION

First identification *A.*

Second identification *B, C.*

A. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *ursodeoxycholic acid CRS.* Examine the substances as discs prepared using *potassium bromide R*.

B. Examine the chromatograms obtained in the test for related substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 10 mg in 1 ml of *sulphuric acid R*. Add 0.1 ml of *formaldehyde solution R* and allow to stand for 5 min. Add 5 ml of *water R*. The suspension obtained is greenish-blue.

TESTS

Specific optical rotation *(2.2.7)*

Dissolve 0.500 g in *anhydrous ethanol R* and dilute to 25.0 ml with the same solvent. The specific optical rotation is + 58.0 to + 62.0, calculated with reference to the dried substance.

Related substances

Examine by thin-layer chromatography *(2.2.27)*, using a suitable silica gel as the coating substance.

Test solution (a) Dissolve 0.40 g of the substance to be examined in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*.

Reference solution (a) Dissolve 40 mg of *ursodeoxycholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents.

Reference solution (b) Dissolve 20 mg of *lithocholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 10 ml with the same mixture of solvents. Dilute 2 ml of this solution to 100 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R.*

Reference solution (c) Dissolve 20 mg of *chenodeoxycholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 50 ml with the same mixture of solvents.

Reference solution (d) Dissolve 20 mg of *cholic acid CRS* in a mixture of 1 volume of *water R* and 9 volumes of *acetone R* and dilute to 100 ml with the same mixture of solvents.

Reference solution (e) Dilute 0.5 ml of test solution (a) to 20 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R.* Dilute 1 ml of this solution to 10 ml with a mixture of 1 volume of *water R* and 9 volumes of *acetone R*.

Reference solution (f) Dissolve 10 mg of *ursodeoxycholic acid CRS* in reference solution (c) and dilute to 25 ml with the same solution.

Apply 5 µl of each solution to the plate. Develop in an unsaturated tank over a path of 15 cm using a mixture of 1 volume of *glacial acetic acid R*, 30 volumes of *acetone R* and 60 volumes of *methylene chloride R*. Dry the plate at 120 °C for 10 min. Spray the plate immediately with a 47.6 g/l solution of *phosphomolybdic acid R* in a mixture of 1 volume of *sulphuric acid R* and 20 volumes of *glacial acetic acid R* and heat again at 120 °C until blue spots appear on a lighter background. In the chromatogram obtained with test solution (a): any spot corresponding to lithocholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (b) (0.1 per cent); any spot corresponding to chenodeoxycholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (c) (1 per cent); any spot corresponding to cholic acid is not more intense than the principal spot in the chromatogram obtained with reference solution (d) (0.5 per cent); any spot, apart from the principal spot and any spots corresponding to lithocholic acid, chenodeoxycholic acid and cholic acid, is not more intense than the principal spot in the chromatogram obtained with reference solution (e) (0.25 per cent). The test is not valid unless the chromatogram obtained with reference solution (f) shows two clearly separated principal spots.

Heavy metals *(2.4.8)*

1.0 g complies with limit test C for heavy metals (20 ppm). Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

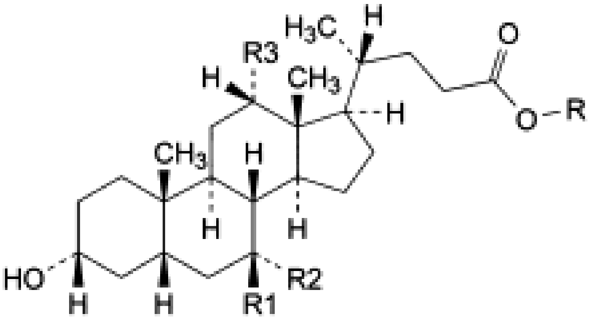
Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.350 g in 50 ml of *ethanol (96 per cent) R*, previously neutralised to 0.2 ml of *phenolphthalein solution R*. Add 50 ml of *water R* and titrate with *0.1 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.1 M sodium hydroxide* is equivalent to 39.26 mg of $C_{24}H_{40}O_4$.

IMPURITIES



A. R = R1 = R3 = H, R2 = OH: chenodeoxycholic acid,

B. R = R1 = H, R2 = R3 = OH: 3α,7α,12α-trihydroxy-5β-cholan-24-oic acid (cholic acid),

C. R = R1 = R2 = R3 = H: 3α-hydroxy-5β-cholan-24-oic acid (lithocholic acid),

D. R = R2 = H, R1 = R3 = OH: 3α,7β,12α-trihydroxy-5β-cholan-24-oic acid (ursocholic acid),

E. R = R1 = R2 = H, R3 = OH: 3α,12α-dihydroxy-5β-cholan-24-oic acid (deoxycholic acid),

F. R = R3 = H, R1+R2 = O: 3α-hydroxy-7-oxo-5β-cholan-24-oic acid,

G. R = CH_3, R1 = OH, R2 = R3 = H: methyl 3α,7β-dihydroxy-5β-cholan-24-oate.

Ph Eur

Hydrogenated Vegetable Oil

General Notices

68334-00-9

Action and use

Excipient.

DEFINITION

Hydrogenated Vegetable Oil is a mixture of triglycerides of fatty acids of vegetable origin.

CHARACTERISTICS

An almost white, fine powder at room temperature and a pale yellow, oily liquid above its melting point.

Practically insoluble in *water*; soluble in *hexane* and in hot *propan-2-ol*.

IDENTIFICATION

Complies with the tests for Acid value, Iodine value and Saponification value.

TESTS

Melting point

57° to 70°, Appendix V A.

Acid value

Not more than 4.0, Appendix X B.

Iodine value

Not more than 5, Appendix X E, Method B.

Saponification value

175 to 205, Appendix X G, Method II.

Unsaponifiable matter

Not more than 0.8% w/w, Appendix X H.

Heavy metals

2.0 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Loss on drying

When dried at 105° for 4 hours, loses not more than 0.1% of its weight. Use 5 g.

STORAGE

Hydrogenated Vegetable Oil should be stored at a temperature of 8° to 25°.

Natural Vitamin A Ester Concentrate

General Notices

DEFINITION

Natural Vitamin A Ester Concentrate consists of a natural ester or a mixture of natural esters of retinol or of a solution of the ester or mixture of esters in Arachis Oil or other suitable vegetable oil. It contains in 1 g not less than 485,000 IU of vitamin A and not less than 97.0% of the number of IU of vitamin A stated on the label. It may contain a suitable antioxidant or mixture of antioxidants.

CHARACTERISTICS

A yellow oil or a mixture of oil and crystalline material which yields a homogeneous yellow oil on warming.

Solubility

Practically insoluble in *water*; soluble or partly soluble in *ethanol (96%)*; miscible with *ether* and with petroleum spirit.

IDENTIFICATION

A. Dissolve a quantity containing 10 IU in a mixture of 100 parts of *absolute ethanol* and 1 part of *hydrochloric acid*. The *light absorption*, Appendix II B, of the solution immediately after preparation exhibits a single maximum at 326 nm. Heat the solution in a water bath for 30 seconds and cool rapidly. The *light absorption* in the range 300 to 400 nm exhibits a low maximum or inflection at 332 nm and sharp maxima at 348, 367 and 389 nm.

B. Dissolve a quantity containing 30 IU in 1 ml of *chloroform* and add 10 ml of *antimony trichloride solution*. A transient bright blue colour is produced immediately.

TESTS

Acid value

Not more than 2.0, Appendix X B.

Peroxide value

Place 1 g in a boiling tube (20 cm × 2.5 cm) and dissolve in 20 ml of a mixture of 2 volumes of *glacial acetic acid* and 1 volume of *ethanol-free chloroform*. Add 1 g of finely powdered *potassium iodide* and pass a rapid current of *oxygen-free nitrogen* through the mixture for 1 minute. Stopper the tube loosely, partly immerse in boiling water for 30 seconds and then in water at 80° for 2 minutes, tighten the stopper and cool rapidly. Transfer the contents to a flask containing 25 ml of a freshly prepared 1% w/v solution of *potassium iodide*, rinse the tube with a further 25 ml of the potassium iodide solution, shake the combined solution and rinsings and titrate with 0.01M *sodium thiosulphate VS*. Repeat the procedure without the concentrate. The difference between the titrations does not exceed 1.4 ml.

Retinol

Carry out the method for *descending paper chromatography*, Appendix III E, using a mixture of 70 volumes of *1,4-dioxan*, 15 volumes of *methanol* and 15 volumes of *water* containing 1% w/v of *butylated hydroxyanisole* in the bottom of the tank and as the mobile phase. Saturate the paper with a 10% w/v solution of *liquid paraffin* in *petroleum spirit (boiling range, 40° to 60°)* and dry without the aid of heat. Apply separately to the impregnated paper 5 µl and 10 µl of each of the following freshly prepared solutions. For solution (1) dissolve sufficient of the concentrate in *petroleum spirit (boiling range, 40° to 60°)* to yield a solution containing 16,150 to 17,850 IU per ml. For solution (2) mix a quantity of the concentrate containing not less than 500 IU of vitamin A and not more than 1 g of fat with 30 ml of *absolute ethanol* and 3 ml of a 50% w/w solution of *potassium hydroxide*. Boil gently under a reflux condenser in a current of *oxygen-free nitrogen* for 30 minutes, cool rapidly and add 30 ml of water. Transfer the hydrolysate to a separating funnel using three 50 ml quantities of *ether* and extract the vitamin A by shaking for 1 minute. After complete separation discard the aqueous layer and wash the extract with four 50 ml quantities of *water*, mixing very cautiously during the first two washes to avoid the formation of emulsions. Evaporate the separated extract to about 5 ml and remove the remaining solvent in a current of *oxygen-free nitrogen* without the application of heat. Dissolve the residue in sufficient *petroleum spirit (boiling range, 40° to 60°)* to produce a solution of retinol containing about 340 IU per ml.

Develop until the solvent front approaches the bottom of the paper. Examine the dried paper under *ultraviolet light (365 nm)*. The fluorescence of any spot corresponding to retinol in the chromatograms obtained with solution (1) is not more intense than that of the spot in the corresponding chromatogram obtained with solution (2).

ASSAY

Carry out the test as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper and iron) and acids.

Examine by *ultraviolet absorption spectrophotometry*, Appendix II B (Method A). If method A is found not to be valid, examine by *liquid chromatography*, Appendix III D (Method B).

Method A

Test solution To a quantity of the substance being examined containing 50,000 IU in a round-bottomed flask, add 3 ml of a freshly prepared 50% w/w solution of *potassium hydroxide* and 30 ml of *absolute ethanol*. Boil under a reflux condenser in a current of *nitrogen* for 30 minutes. Cool rapidly and add 30 ml of *water*. Extract with four 50 ml quantities of *ether* discarding the lower layer after complete separation. Wash the combined upper layers with four 50 ml quantities of *water* and evaporate to dryness under a gentle current of *nitrogen* at a temperature not exceeding 30° or in a rotary evaporator at a temperature not exceeding 30° under reduced pressure (water ejector). Dissolve the residue in sufficient *propan-2-ol* to give an expected concentration of vitamin A equivalent to 10 to 15 IU per ml.

Measure the *absorbances*, Appendix II B, of the solution at 300 nm, 310 nm, 325 nm and 334 nm and at the wavelength of maximum absorption with a suitable spectrophotometer in 1-cm specially matched cells, using *propan-2-ol* as the compensation liquid.

Calculate the content of vitamin A, as all-*trans*-retinol, in IU per gram from the expression:

$$A_{325} \times \frac{1830}{100m} \times V$$

where A_{325} = absorbance at 325 nm,

m = mass of the substance to be examined in grams,

V = total volume of solution containing 10 IU to 15 IU of vitamin A per ml,

1830 = conversion factor for the specific absorbance of all-*trans*-retinol in IU.

The above expression can be used only if A_{325} has a value of not greater than $A_{325.\ corr}$ / 0.970 where $A_{325,\ corr}$ is the corrected *absorbance* at 325 nm and is given by the equation:

$A_{325,\ corr} = 6.815A_{325} - 2.555A_{310} - 4.260A_{334}$

where A designates the absorbance at the wavelength indicated by the subscript.

If A_{325} has a value greater than $A_{325,\ corr}$ / 0.970, calculate the content of vitamin A from the expression:

$$A_{325,corr} \times \frac{1830}{100m} \times V$$

The assay is not valid unless:

(a) the wavelength of maximum absorption lies between 323 nm and 327 nm and

(b) the *absorbance* at 300 nm relative to that at 325 nm is at most 0.73.

Method B

Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. Prepare solution (1) as follows. To a quantity of the substance being examined containing 50, 000 IU in a round-bottomed flask, add 5 ml of a freshly prepared 10% w/v solution of *ascorbic acid* and 10 ml of a freshly prepared 80% w/v solution of *potassium hydroxide* and 100 ml of *ethanol (96%)*. Boil under a reflux condenser on a water bath for 15 minutes. Add 100 ml of a 1% w/v solution of *sodium chloride* and cool. Transfer the solution to a 500 ml separating funnel rinsing the round-bottomed flask with about 75 ml of a 1% w/v solution of *sodium chloride* and then with 150 ml of a mixture of equal volumes of *petroleum spirit (boiling range, 40° to 60°)* and *ether*. Shake for 1 minute. When the layers have separated completely, discard the lower layer and wash the upper layer, first with 50 ml of a 3% w/v solution of *potassium hydroxide* in a 10% v/v solution of *ethanol (96%)* and then with three 50 ml quantities of a 1% w/v solution of *sodium chloride*. Filter the upper layer through 5 g of *anhydrous sodium sulphate* on a fast filter paper into a 250 ml flask suitable for a rotary evaporator. Wash the funnel with 10 ml of fresh extraction mixture, filter and combine the upper layers. Distil them at a temperature not exceeding 30° under reduced pressure (water ejector) and fill with *nitrogen* when evaporation is completed. Alternatively evaporate the solvent under a gentle current of *nitrogen* at a temperature not exceeding 30°. Dissolve the residue in *propan-2-ol*, transfer to a 25 ml volumetric flask and dilute to 25 ml with *propan-2-ol*. Gentle heating in an ultrasonic bath may be required. For solution (2) prepare a solution of *retinyl acetate EPCRS* in *propan-2-ol R1* so that 1 ml contains about 1000 IU of all-*trans*-retinol.

The exact concentration of solution (2) is assessed by ultraviolet absorption spectrophotometry, Appendix II B. Dilute solution (2) with *propan-2-ol R1* to a presumed concentration of 10 IU per ml to 15 IU per ml and measure the *absorbance* at 326 nm in matched 1-cm cells using *propan-2-ol R1* as the compensation liquid.

Calculate the content of vitamin A in IU per ml of solution (2) from the following expression, taking into account the assigned content of *retinyl acetate EPCRS:*

$$A_{326} \times \frac{1900 \times V_2}{100 \times V_1}$$

where A_{326} = *absorbance* at 326 nm,

V_2 = volume of the diluted solution,

V_1 = volume of solution (2) used,

1900 = conversion factor for the specific absorbance of *retinyl acetate EPCRS* in IU.

For solution (3) proceed as described for solution (1) but use 2 ml of solution (2) in place of the substance being examined.

The exact concentration of solution (3) is assessed by *ultraviolet absorption spectrophotometry*, Appendix II B. Dilute solution (3) with *propan-2-ol R1* to a presumed concentration of 10 IU per ml to 15 IU per ml of all-*trans*-retinol and measure the absorbance at 325 nm in matched 1 cm cells using *propan-2-ol R1* as the compensation liquid.

Calculate the content of all-*trans*-retinol in IU per millilitre of solution (3) from the expression:

$$A_{325} \times \frac{1830 \times V_4}{100 \times V_3}$$

where A_{325} = *absorbance* at 325 nm,

V_3 = volume of the diluted solution,

V_4 = volume of solution (3) used,

1830 = conversion factor for the specific absorbance of all-*trans*-retinol in IU.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *octadecylsilyl silica gel for chromatography* (5 µm to 10 µm), (b) as mobile phase at a flow rate of 1 ml per minute a mixture of 3 volumes of *water* and 97 volumes of *methanol*, (c) a detection wavelength of 325 nm, (d) a 10 µl loop injector and (e) an electronic integrator.

Inject in triplicate solution (1) and solution (3). The retention time of all-*trans*-retinol is 5 minute ± 1 minute.

The assay is not valid unless (a) the chromatogram obtained with solution (1) shows a peak corresponding to that of all-*trans*-retinol in the chromatogram obtained with solution (3), (b) when using the method of standard additions to solution (1) there is greater than 95% recovery of the added *retinyl acetate EPCRS*, and (c) the recovery of all-*trans*-retinol in solution (3) as assessed by direct absorption spectrophotometry is greater than 95%.

Calculate the content of vitamin A using the following expression:

$$A_1 \times \frac{C \times V}{A_2} \times \frac{1}{m}$$

where A_1 = area of the peak corresponding to all-*trans*-retinol in the chromatogram obtained with solution (1),

A_2 = area of the peak corresponding to all-*trans*-retinol in the chromatogram obtained with solution (3),

C = concentration of *retinyl acetate EPCRS* in solution (2) as assessed prior to the saponification in International Units per ml (1000 IU per ml),

V = volume of solution (2) treated,

m = mass of the substance being examined in solution (1).

STORAGE

Vitamin A Ester Concentrate (Natural) should be kept in an airtight container, protected from light and stored at a temperature of 8° to 15°. Once the container has been opened its contents should be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of an inert gas.

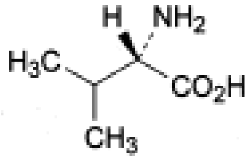
LABELLING

The label states (1) the number of IU (Units) of vitamin A per g; (2) the name of the ester or esters; (3) the name and proportion of the principal excipients; (4) the method of restoring the solution if partial crystallisation has occurred.

Valine

General Notices

(Ph Eur monograph 0796)



$C_5H_{11}NO_2$ 117.1 *72-18-4*

Action and use

Amino acid.

Ph Eur

DEFINITION

Valine contains not less than 98.5 per cent and not more than the equivalent of 101.0 per cent of (*S*)-2-amino-3-methylbutanoic acid, calculated with reference to the dried substance.

CHARACTERS

White or almost white, crystalline powder or colourless crystals, soluble in water, very slightly soluble in alcohol.

IDENTIFICATION

First identification *A, B.*

Second identification *A, C.*

A. It complies with the test for specific optical rotation (see Tests).

B. Examine by infrared absorption spectrophotometry *(2.2.24)* , comparing with the spectrum obtained with *valine CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for ninhydrin-positive substances. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 2.5 g in *water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution BY_6 *(2.2.2, Method II)*.

Specific optical rotation *(2.2.7)*

Dissolve 2.00 g in *hydrochloric acid R1* and dilute to 25.0 ml with the same acid. The specific optical rotation is + 26.5 to + 29.0, calculated with reference to the dried substance.

Ninhydrin-positive substances

Examine by thin-layer chromatography *(2.2.27)* , using a *TLC silica gel plate R* .

Test solution (a) Dissolve 0.10 g of the substance to be examined in *dilute hydrochloric acid R* and dilute to 10 ml with the same acid.

Test solution (b) Dilute 1 ml of test solution (a) to 50 ml with *water R* .

Reference solution (a) Dissolve 10 mg of *valine CRS* in *0.1 M hydrochloric acid* and dilute to 50 ml with the same acid.

Reference solution (b) Dilute 5 ml of test solution (b) to 20 ml with *water R* .

Reference solution (c) Dissolve 10 mg of *phenylalanine CRS* and 10 mg of *valine CRS* in *0.1 M hydrochloric acid* and dilute to 25 ml with the same acid.

Apply to the plate 5 µl of each solution. Develop over a path of 15 cm using a mixture of 20 volumes of *glacial acetic acid R,* 20 volumes of *water R* and 60 volumes of *butanol R* . Allow the plate to dry in air, spray with *ninhydrin solution R* and heat at 100 °C to 105 °C for 15 min. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). The test is not valid unless the chromatogram obtained with reference solution (c) shows two clearly separated spots.

Chlorides *(2.4.4)*

Dilute 10 ml of solution S to 15 ml with *water R* . The solution complies with the limit test for chlorides (200 ppm).

Sulphates *(2.4.13)*

Dissolve 0.5 g in *distilled water R* and dilute to 15 ml with the same solvent. The solution complies with the limit test for sulphates (300 ppm).

Ammonium *(2.4.1)*

50 mg complies with limit test B for ammonium (200 ppm). Prepare the standard using 0.1 ml of *ammonium standard solution (100 ppm* NH_4*) R*.

Iron *(2.4.9)*

In a separating funnel, dissolve 1.0 g in 10 ml of *dilute hydrochloric acid R*. Shake with three quantities, each of 10 ml, of *methyl isobutyl ketone R1*, shaking for 3 min each time. To the combined organic layers add 10 ml of *water R* and shake for 3 min. The aqueous layer complies with the limit test for iron (10 ppm).

Heavy metals ***(2.4.8)***

2.0 g complies with limit test D for heavy metals (10 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R*.

Loss on drying ***(2.2.32)***

Not more than 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Not more than 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 3 ml of *anhydrous formic acid R*. Add 30 ml of *anhydrous acetic acid R*. Using 0.1 ml of *naphtholbenzein solution R* as indicator, titrate with *0.1 M perchloric acid* until the colour changes from brownish-yellow to green.

1 ml of *0.1 M perchloric acid* is equivalent to 11.71 mg of $C_5H_{11}NO_2$.

STORAGE

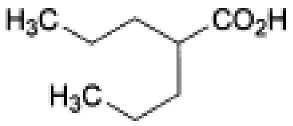
Store protected from light.

Ph Eur

Valproic Acid

General Notices

(Ph Eur monograph 1378)



$C_8H_{16}O_2$ 144.2 *99-66-1*

Action and use

Antiepileptic.

Ph Eur

DEFINITION

2-Propylpentanoic acid.

Content

99.0 per cent to 101.0 per cent.

CHARACTERS

Appearance

Colourless or very slightly yellow, clear liquid, slightly viscous.

Solubility

Very slightly soluble in water, miscible with ethanol (96 per cent) and with methylene chloride. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification B.

Second identification A, C, D.

A. Refractive index *(2.2.5)* : 1.422 to 1.425.

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *valproic acid CRS* .

C. Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 50 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 50 mg of *valproic acid CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel plate R* .

Mobile phase *Ether R, methylene chloride R* (50:50 *V/V*).

Application 2 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Spray with *bromocresol green solution R* .

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

D. To 1 ml add 3 ml of dilute *sodium hydroxide solution R* . Add 3 ml of *water R* and 1 ml of a 100 g/l solution of *cobalt nitrate R* . A violet precipitate is formed. Filter. The precipitate dissolves in *methylene chloride R* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Dissolve 2.0 g in *dilute sodium hydroxide solution R* and dilute to 10 ml with the same alkaline solution.

Related substances

Gas chromatography *(2.2.28)* .

Internal standard solution Dissolve 10 mg of *butyric acid R* in *heptane R* and dilute to 200 ml with the same solvent.

Test solution Dissolve 0.250 g of the substance to be examined in the internal standard solution and dilute to 5.0 ml with the internal standard solution. Dilute 1.0 ml of this solution to 10.0 ml with *heptane R* .

Reference solution Dissolve 20 mg of the substance to be examined and 20 mg of *2-(1-methylethyl)pentanoic acid CRS* (impurity C) in *heptane R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *heptane R* .

Column:
- *material*: wide-bore fused silica;
- *size*: *l* = 30 m, Ø = 0.53 mm;
- *stationary phase: macrogol 20 000 2-nitroterephthalate R* (film thickness 0.5 µm).

Carrier gas *Helium for chromatography R*.

Flow rate 8 ml/min.

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 10	130
	10 - 30	130 → 190
Injection port		220
Detector		220

Detection Flame ionisation.

Injection 1 µl.

System suitability Reference solution:
- *resolution*: minimum 3.0 between the peaks due to impurity C and valproic acid.

Limits:
- *any impurity*: for each impurity, not more than the area of the peak due to the internal standard (0.1 per cent);
- *total*: not more than 3 times the area of the peak due to the internal standard (0.3 per cent);
- *disregard limit*: 0.1 times the area of the peak due to the internal standard (0.01 per cent) .

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 2.0 g in *ethanol (80 per cent V/V) R* and dilute to 20 ml with the same solvent. 12 ml of the solution complies with test B. Prepare the reference solution using lead standard solution (2 ppm Pb) obtained by diluting *lead standard solution (100 ppm Pb) R* with *ethanol (80 per cent V/V) R.*

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.100 g in 25 ml of *ethanol (96 per cent) R* . Add 2 ml of *water R* . Titrate with *0.1 M sodium hydroxide* , determining the end-point potentiometrically *(2.2.20)* .

1 ml of *0.1 M sodium hydroxide* is equivalent to 14.42 mg of $C_8H_{16}O_2$.

STORAGE

In an airtight container .

Glycopeptide antibacterial.

Preparations

Vancomycin Intravenous Infusion

Vancomycin Oral Solution

Ph Eur

DEFINITION

Hydrochloride of a mixture of related glycopeptides, consisting principally of the monohydrochloride of (3*S*,6*R*,7*R*,22*R*,23*S*,26*S*,30a*S*a,36*R*,38a*R*)-3-(2-amino-2-oxoethyl)-44-[[2-*O*-(3-amino-2,3,6-trideoxy-3-*C*-methyl-α-L-*lyxo*-hexopyranosyl)-β-D-glucopyranosyl]oxy]-10,19-dichloro-7,22,28,30,32-pentahydroxy-6-[[(2*R*)-4-methyl-2-(methylamino)pentanoyl]amino]-2,5,24,38,39-pentaoxo-2,3,4,5,6,7,23,24,25,26,36,37,38,38a-tetradecahydro-22*H*-8,11:18,21-dietheno-23,36-(iminomethano)-13,16:31,35-dimetheno-1*H*,13*H*-[1,6,9]oxadiazacyclohexadecino[4,5-*m*][10,2,16]benzoxadiazacyclotetracosine-26-carboxylic acid (vancomycin B).

Substance produced by certain strains of *Amycolatopsis orientalis* or obtained by any other means.

Potency Minimum 1050 IU/mg (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic powder.

Solubility

Freely soluble in water, slightly soluble in ethanol (96 per cent).

IDENTIFICATION

A. Examine the chromatograms obtained in the test for vancomycin B.

Results The principal peak in the chromatogram obtained with test solution (a) is similar in retention time to the principal peak in the chromatogram obtained with the reference solution.

B. It gives reaction (a) of chlorides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and its absorbance *(2.2.25)* at 450 nm is not greater than 0.10.

Dissolve 2.50 g in *water R* and dilute to 25.0 ml with the same solvent.

pH *(2.2.3)*

2.5 to 4.5.

Dissolve 0.50 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Vancomycin B

Liquid chromatography *(2.2.29)* . Use the solutions within 4 h of preparation.

Test solution (a) Dissolve 10.0 mg of the substance to be examined in mobile phase A and dilute to 5.0 ml with mobile phase A.

Test solution (b) Dilute 2.0 ml of test solution (a) to 50.0 ml with mobile phase A.

Test solution (c) Dilute 0.5 ml of test solution (b) to 20.0 ml with mobile phase A.

Reference solution Dissolve the contents of a vial of *vancomycin hydrochloride CRS* in *water R* and dilute with the same solvent to obtain a solution containing 0.5 mg/ml. Heat at 65 °C for 24 h. Allow to cool.

Column:

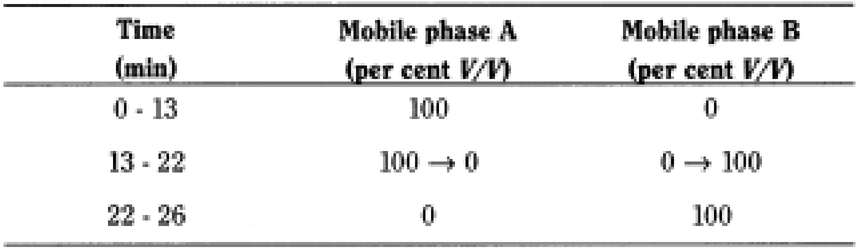
— *size: l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

— *mobile phase A*: to 4 ml of *triethylamine R* add 1996 ml of *water R* and adjust to pH 3.2 with *phosphoric acid R* ; to 920 ml of this solution add 10 ml of *tetrahydrofuran R* and 70 ml of *acetonitrile R* ;

— *mobile phase B*: to 4 ml of *triethylamine R* add 1996 ml of *water R* and adjust to pH 3.2 with *phosphoric acid R* ; to 700 ml of this solution add 10 ml of *tetrahydrofuran R* and 290 ml of *acetonitrile R* ;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 13	100	0
13 - 22	100 → 0	0 → 100
22 - 26	0	100

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 280 nm.

Injection 20 µl.

System suitability:

— *resolution*: minimum 5.0 between the 2 principal peaks in the chromatogram obtained with the reference solution;

— *signal-to-noise ratio* : minimum 5 for the principal peak in the chromatogram obtained with test solution (c);

— *symmetry factor* : maximum 1.6 for the peak due to vancomycin in the chromatogram obtained with test solution (b).

Calculate the percentage content of vancomycin B hydrochloride using the following expression:

$$\frac{A_b \times 100}{A_b + \left(\frac{A_t}{25}\right)}$$

A_b = area of the peak due to vancomycin B in the chromatogram obtained with test solution (b);

A_t = sum of the areas of the peaks due to impurities in the chromatogram obtained with test solution (a).

Limit:

— *vancomycin B*: minimum 93.0 per cent.

Related substances

Liquid chromatography *(2.2.29)* as described in the test for vancomycin B with the following modifications.

Injection Test solution (a), (b) and (c).

Calculate the percentage content of each impurity using the following expression:

$$\frac{\left(\frac{A_i}{25}\right) \times 100}{A_b + \left(\frac{A_t}{25}\right)}$$

A_i = area of the peak due to an impurity in the chromatogram obtained with test solution (a);

A_b = area of the peak due to vancomycin B in the chromatogram obtained with test solution (b);

A_t = sum of the areas of the peaks due to impurities in the chromatogram obtained with test solution (a).

Limits:

— *any impurity*: for each impurity, maximum 4.0 per cent;

— *total*: maximum 7.0 per cent;

— *disregard limit*: the area of the principal peak in the chromatogram obtained with test solution (c) (0.1 per cent).

Heavy metals *(2.4.8)*

Maximum 30 ppm.

1.0 g complies with test C. Prepare the reference solution using 3.0 ml of *lead standard solution (10 ppm Pb) R.*

Water *(2.5.12)*

Maximum 5.0 per cent, determined on 0.500 g.

Sulphated ash *(2.4.14)*

Maximum 1.0 per cent, determined on 1.00 g.

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/mg, if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Carry out the microbiological assay of antibiotics *(2.7.2).* Use *vancomycin hydrochloride CRS* as the chemical reference substance.

STORAGE

In an airtight container, protected from light. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

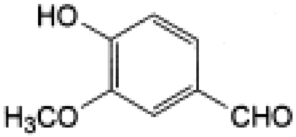
Ph Eur

Vanillin

General Notices

(Ph Eur monograph 0747)



$C_8H_8O_3$ 152.1 *121-33-5*

Ph Eur

DEFINITION

Vanillin contains not less than 99.0 per cent and not more than the equivalent of 101.0 per cent of 4-hydroxy-3-methoxybenzaldehyde, calculated with reference to the dried substance.

CHARACTERS

White or slightly yellowish, crystalline powder or needles, slightly soluble in water, freely soluble in alcohol and in methanol. It dissolves in dilute solutions of alkali hydroxides.

IDENTIFICATION

First identification *B.*

Second identification *A, C, D.*

A. Melting point *(2.2.14)* : 81 °C to 84 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the spectrum obtained with *vanillin CRS* . Examine the substances prepared as discs.

C. Examine the chromatograms obtained in the test for related substances in daylight after spraying. The principal spot in the chromatogram obtained with test solution (b) is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a).

D. To 5 ml of a saturated solution of the substance to be examined add 0.2 ml of *ferric chloride solution R1* . A blue colour is produced. Heat to 80 °C. The solution becomes brown. On cooling, a white precipitate is formed.

TESTS

Appearance of solution

Dissolve 1.0 g in *alcohol R* and dilute to 20 ml with the same solvent. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution B_6 *(2.2.2, Method II).*

Related substances

Examine by thin-layer chromatography *(2.2.27),* using *silica gel GF $_{254}$ R* as the coating substance.

Test solution (a) Dissolve 0.1 g of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Test solution (b) Dilute 1 ml of test solution (a) to 10 ml with *methanol R*.

Reference solution (a) Dissolve 10 mg of *vanillin CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dilute 0.5 ml of test solution (a) to 100 ml with *methanol R*.

Apply to the plate 5 µl of each solution. Develop in an unsaturated tank over a path of 10 cm using a mixture of 0.5 volumes of *anhydrous acetic acid R*, 1 volume of *methanol R* and 98.5 volumes of *methylene chloride R*. Dry the plate in a current of cold air. Examine in ultraviolet light at 254 nm. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent). Spray with *dinitrophenylhydrazine-aceto-hydrochloric solution R* and examine in daylight. Any spot in the chromatogram obtained with test solution (a), apart from the principal spot, is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

Reaction with sulphuric acid Dissolve 50 mg in 5 ml of *sulphuric acid R*. After 5 min, the solution is not more intensely coloured than a mixture of 4.9 ml of yellow primary solution and 0.1 ml of red primary solution or a mixture of 4.9 ml of yellow primary solution and 0.1 ml of blue primary solution *(2.2.2, Method I)*.

Loss on drying *(2.2.32)*

Not more than 1.0 per cent, determined on 1.000 g by drying in a desiccator for 4 h.

Sulphated ash *(2.4.14)*

Not more than 0.05 per cent, determined on 2.0 g.

ASSAY

Dissolve 0.120 g in 20 ml of *alcohol R* and add 60 ml of *carbon dioxide-free water R*. Titrate with *0.1 M sodium hydroxide*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M sodium hydroxide* is equivalent to 15.21 mg of $C_8H_8O_3$.

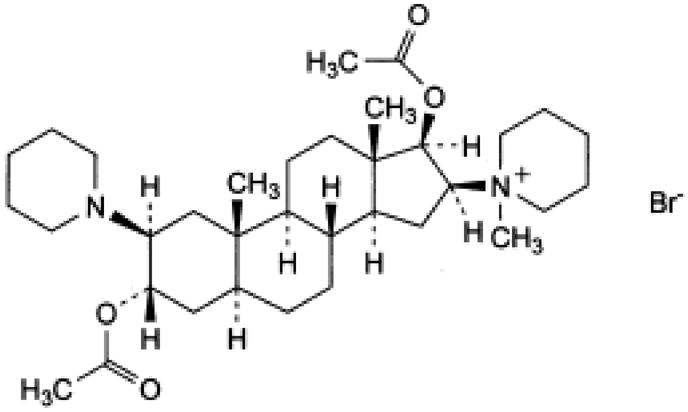
STORAGE

Store protected from light.

Vecuronium Bromide

General Notices

(Ph Eur monograph 1769)



$C_{34}H_{57}BrN_2O_4$ 638 *50700-72-6*

Action and use

Non-depolarizing neuromuscular blocker.

Ph Eur

DEFINITION

1-[3α,17β-Bis(acetyloxy)-2β-(piperidin-1-yl)-5α-androstan-16β-yl]-1-methylpiperidinium bromide.

Content

99.0 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white crystals or crystalline powder.

Solubility

Slightly soluble in water, freely soluble in methylene chloride, sparingly soluble in acetonitrile and in anhydrous ethanol.

IDENTIFICATION

A. Specific optical rotation (see Tests).

B. Infrared absorption spectrophotometry *(2.2.24)* .

Comparison *vecuronium bromide CRS.*

C. It gives reaction (a) of bromides *(2.3.1)* .

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II)*.

Dissolve 0.1 g in *water R* and dilute to 10 ml with the same solvent.

Specific optical rotation *(2.2.7)*

+ 30.5 to + 35.0 (anhydrous substance).

Dissolve 0.250 g in *0.05 M hydrochloric acid* and dilute to 25.0 ml with the same solvent.

Impurity B

Thin-layer chromatography *(2.2.27)* .

Test solution Dissolve 0.10 g of the substance to be examined in *methylene chloride R* and dilute to 5.0 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of the substance to be examined and 5 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 5 ml with the same solvent.

Reference solution (b) Dissolve 5.0 mg of *pancuronium bromide CRS* (impurity B) in *methylene chloride R* and dilute to 100.0 ml with the same solvent.

Stationary phase *TLC silica gel plate R* (2-10 µm).

Mobile phase Dissolve 1 g of *sodium bromide R* in 5 ml of *water R* . Add 85 ml of *2-propanol R* , then 10 ml of *acetonitrile R* .

Application 1 µl.

Development In an unsaturated tank, over 2/3 of the plate.

Drying In air for 30 min.

Detection Spray with a 2.5 g/l solution of *iodine R* in a mixture of equal volumes of *methanol R* and *methylene chloride R* .

System suitability Reference solution (a):

— the chromatogram obtained shows 2 clearly separated spots.

Limit:

— *impurity B*: any spot due to impurity B is not more intense than the spot in the chromatogram obtained with reference solution (b) (0.25 per cent).

Related substances

Liquid chromatography *(2.2.29).* Use freshly prepared solutions.

Test solution Dissolve 40.0 mg of the substance to be examined in a 0.2 g/l solution of *hydrochloric acid R* in *methanol R* and dilute to 20.0 ml with the same solution.

Reference solution (a) Dissolve 4 mg of *vecuronium for peak identification CRS* (containing impurities A, C, D and E) in a 0.2 g/l solution of *hydrochloric acid R* in *methanol R* and dilute to 2 ml with the same solution.

Reference solution (b) Dilute 5.0 ml of the test solution to 100.0 ml with a 0.2 g/l *solution of hydrochloric acid R* in *methanol R* . Dilute 5.0 ml of this solution to 100.0 ml with a 0.2 g/l *solution of hydrochloric acid R* in *methanol R* .

Reference solution (c) Dilute 10.0 ml of reference solution (b) to 50.0 ml with a 0.2 g/l solution of *hydrochloric acid R* in *methanol R.*

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *spherical octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 50 volumes of a 18.0 g/l solution of *tetramethylammonium hydroxide R* adjusted to pH 6.5 with *phosphoric acid R* , 250 volumes of *methanol R* and 700 volumes of *acetonitrile R.*

Flow rate 2.0 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl.

Run time 2.5 times the retention time of vecuronium.

Identification of impurities Use the chromatogram supplied with *vecuronium for peak identification CRS* and the chromatogram obtained with reference solution (a) to identify the peaks due to impurities A, C, D and E. The elution order may vary, but the quantity of each impurity in the CRS is different so that a clear identification of the impurities is possible.

Relative retention With reference to vecuronium (retention time = about 5 min): impurity C = about 0.8; impurity D = about 0.9; impurity E = about 1.2; impurity A = about 1.3.

System suitability Reference solution (a):

— *peak-to-valley ratio* : minimum 2.0, where H_p = height above the baseline of the peak due to impurity D and H_v = height above the baseline of the lowest point of the curve separating this peak from the principal peak; if necessary, increase the volume of the buffer solution while simultaneously decreasing the volume of acetonitrile in the mobile phase; do not change the volume of methanol;

— *symmetry factor* : maximum 3.5 for the principal peak.

Limits:

- *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity A = 0.6; impurity C = 1.4;
- *impurities A, C, D, E*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.25 per cent);
- *unspecified impurities*: for each impurity, not more than twice the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);
- *total*: not more than 2.8 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.7 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Water ***(2.5.12)***

Maximum 4.0 per cent, determined on 0.300 g.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.450 g in 50 ml of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 63.8 mg of $C_{34}H_{57}BrN_2O_4$.

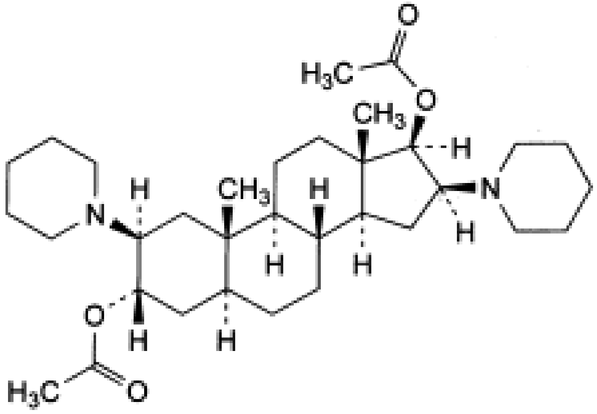
STORAGE

In an airtight container, protected from light and moisture.

IMPURITIES

Specified impurities *A, B, C, D, E.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): F.*



A. 2β,16β-bis(piperidin-1-yl)-5α-androstane-3α,17β-diyl diacetate,

B. pancuronium,

Ph Eur

Vegetable Fatty Oils

General Notices

(Ph Eur monograph 1579)

Ph Eur

DEFINITION

Vegetable fatty oils are mainly solid or liquid triglycerides of fatty acids. They may contain small amounts of other lipids such as waxes, free fatty acids, partial glycerides or unsaponifiable matters. Vegetable fatty oils are obtained from the seeds, the fruit or the pit/stone/kernel of various plants by expression and/or solvent extraction, then possibly refined and hydrogenated. A suitable antioxidant may be added if necessary.

Virgin oil An oil obtained from raw materials of special quality by mechanical procedures (e.g. by cold expression or centrifugation).

Refined oil An oil obtained by expression and/or solvent extraction, and subsequently either alkali refining (followed by bleaching and any deodorisation) or physical refining.

Hydrogenated oil An oil obtained by expression and/or solvent extraction, and subsequently either alkali refining or physical refining, then possible bleaching, followed by drying, hydrogenation and subsequent bleaching and deodorisation.

Only alkali-refined oils are used in the preparation of parenteral dosage forms.

PRODUCTION

Measures are taken to ensure that the oil complies with the limit for benzo[a]pyrene decided by the competent authority. A limit of 2.0 ppb is set in Commission Regulation (EC) No. 208/2005.

OBTENTION OF A CRUDE OIL

Where the plant has a high oil content, the oil is generally obtained by expression under heating followed by an extraction; where the plant has a low oil content, the oil is generally obtained by direct extraction.

Mechanical procedures

A. Expression

High-pressure screw-pressing It consists of some or all of the following steps: cleaning, drying, dehulling or decorticating, grinding, cooking and flaking.

During *cleaning* the foreign matter is eliminated. *Drying* may be necessary if the seed moisture content is higher than desirable for downstream processing. *Decorticating* is useful to obtain a high-protein meal by reduction of fibre and to reduce impurities in the oil. *Cooking* serves various purposes: completion of the breakdown of oil cells, lowering of the viscosity of the oil, coagulation of the protein in the meal, adjustment of the moisture level, sterilisation of the seed, detoxifying undesirable seed constituents (gossypol for cottonseed) and fixing certain phosphatides in the cake thus lowering subsequent refining losses. The efficacy of the expression process is such that only 3 per cent to 6 per cent of the oil is left in the cake.

Wet screw-pressing The bunches are loaded into cages (for palm fruit) and moved into a horizontal steriliser with application of live steam and heating. The purposes of this steriliser are inactivation of enzymes, loosening of the fruit on the bunch, coagulation of proteins, etc. After heating in a digester, the pulp is fed to a screw-press. The oil is centrifugally clarified and vacuum-dried.

Pre-pressing followed by solvent extraction The same sequence of steps is performed as above. The main function of pre-pressing is to obtain a cake of excellent permeability for the following solvent extraction stage. The extraction is performed either in a percolation-type or in an immersion-type apparatus. The efficacy of the solvent extraction process is such that residual oil levels in meal are generally below 1 per cent.

B. Centrifugation

Centrifugation separates the oily phase from the aqueous phase, which contains water-soluble components and residual solid particles. This operation can be carried out using:

— self-cleaning bowl or disc centrifuges;

— super-decanters, which are horizontal turbines equipped with a cylindrical bowl that tapers slightly at one end and which contains a continuously turning screw that scrapes the sides of the bowl; the screw and the bowl rotate at different speeds; the solid particles are discarded from the tapered end of the bowl and the oil flows out from the other end.

Solvent extraction

Prior to extraction, the following steps are carried out: the seeds are tempered for about a week at a temperature below 24 °C in order to loosen the hull from the seed and allow the seed moisture to attain equilibrium, then the seeds are cleaned, ground, dehulled and flaked. The most widely used solvent is a mixture of mainly *n*-hexane and methylpentanes (bp: 65-70 °C) commonly referred to as 'hexane'. Due to the major fire and explosive risks of this mixture, liquified gases and supercritical gases may also be used.

REFINING

The objective of refining is to remove impurities and contaminants of the oil with the least possible damage to the triglycerides and with minimal loss of oil. The contents of the following substances are reduced:

— free fatty acids, which may cause deterioration of the oil by oxidation, a smoked taste when heated and a sharp flavour (by alkali refining);

— water, which favours the enzymatic hydrolysis reactions (by alkali refining, drying);

— partial glycerides, which may cause foaming and a bitter taste (by neutralisation, washing);

— phosphatides and phosphorous compounds, which have emulsifying properties and may cause deposits, a darkening of the oil when heated, a cloudy appearance and bad organoleptic stability (by alkali refining);

— colouring matters such as chlorophyll (by alkali refining) and carotenoids (by bleaching);

— glycolipids, which may form colloidal solutions with water;

— free hydrocarbons, paraffin, waxes and resinous materials;

— metals (Fe, Cu, Pb, Sn, Pt, Pd, etc.), which are strong oxidation catalysts;

— pigments such as gossypol (in cottonseed oil) or mycotoxins such as aflatoxin (mainly in arachis seeds);

— pesticides;

— oxidation products (aldehydes, peroxides);

— proteins having possible allergic reactions;

— unsaponifiable matters (sterols, tocopherols and other vitamins);

— polycyclic aromatic hydrocarbons.

Alkali refining

It involves the following steps: degumming if necessary, neutralisation using alkali, washing and drying.

Degumming During this step of the refining, i.e. treatment with water and/or phosphoric acid and/or sodium chloride, the phosphatides, phosphorous compounds and metals are eliminated. The use of this step depends on the nature of the oil.

Neutralisation with alkali This step reduces the free-fatty-acid content below 0.1 per cent; the fatty acids are converted into oil-insoluble soaps, also called 'soapstocks'. Other substances may be removed by adsorption on these soaps: mucilaginous substances, phosphatides, oxidation products, colouring matters, etc. All substances that become insoluble in the oil on hydration are removed. Neutralisation with alkali has the disadvantage of saponifying a portion of neutral oil if the neutralisation is not well conducted.

Washing This operation consists in removing the excess of soaps and alkali as well as the remaining traces of metals, phosphatides and other impurities, using hot water.

Drying The remaining water is eliminated under vacuum before any further steps, such as bleaching.

Physical refining

It involves a steam treatment of the oil under high vacuum at a temperature greater than 235 °C. This technique must be applied to oils naturally low in phosphatides and metals (palm, coconut, olive) or from which phosphatides and metals have been removed by an acid treatment using concentrated phosphoric acid followed by an adsorptive treatment with activated bleaching earth (for sunflower, rapeseed, soya-bean). Moreover, it cannot be used for heat-sensitive oils (cottonseed oil), which darken.

Bleaching

The common method of bleaching is by adsorption treatment of the oil, which is generally heated at 90 °C for 30 min under vacuum, with bleaching earth (natural or activated) or carbon (activated or not); synthetic silica adsorbents may also be added. Substances that have not been totally removed during refining are eliminated, for example carotenoids and chlorophyll.

Deodorisation

Deodorisation eliminates odours, volatile substances and any residual extraction solvents; it involves injecting dry vapour into the oil, which is kept under vacuum at a high temperature. Different temperatures are used according to the oil: 200-235 °C for 1.5-3 h or greater than 240 °C for 30 min.

One of the main side reactions is thermic decolourisation due to the destruction of carotenoids when the temperature is greater than 150 °C. This technique provokes a loss of substances that may be distilled (free fatty acids, sterols, tocopherols, part of the refined oil), and may cause *cis-trans* isomerisation of the unsaturated fatty-acid double bonds.

WINTERISATION

Elimination of solids and waxes by filtration at low temperature (also called dewaxing). These solids and waxes could affect the appearance of the oil and cause deposits.

HYDROGENATION

The hydrogenation of the dried and/or bleached oil is performed using a catalyst (e.g. Ni, Pt, Pd), at a temperature of about 100-200 °C under hydrogen pressure. The catalyst is then removed by filtration at 90 °C. The hydrogen must be pure: free of poisons for the catalyst, water-free, and low in carbon dioxide, methane and nitrogen contents. Small amounts of polymers may be obtained. *Trans*-fatty acids are formed during partial hydrogenation.

CHROMATOGRAPHIC PURIFICATION

In high-purity applications, mainly for parenteral uses, the oil may be further purified by passing the oil through a column containing an activated earth. A solvent may sometimes be used to improve the efficiency. High-polarity molecules, such as oxidised materials, acids, alcohols, partial glycerides and free sterols, are preferentially removed.

When the oil is used in the preparation of parenteral dosage forms, the limits set in the monograph for the acid value, the peroxide value and the water content may be different.

LABELLING

The label states:

— where applicable, that the oil was obtained by expression or extraction;

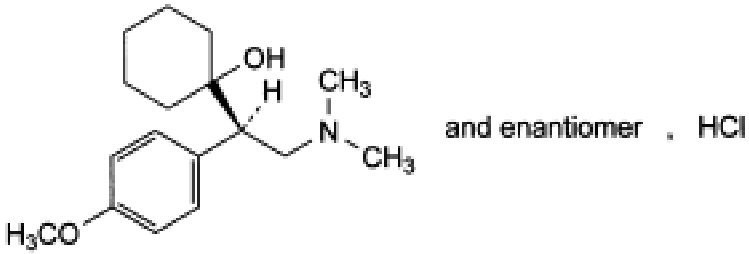
— where applicable, that the oil is suitable for use in the manufacture of parenteral dosage forms.

Ph Eur

Venlafaxine Hydrochloride

General Notices

(Ph Eur monograph 2119)



$C_{17}H_{27}NO_2,HCl$ 313.9 *99300-78-4*

Action and use

Inhibition of 5HT and noradrenaline reuptake; antidepressant.

Ph Eur

DEFINITION

1-[(1*RS*)-2-(Dimethylamino)-1-(4-methoxyphenyl)ethyl]cyclohexanol hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white powder.

Solubility

Freely soluble in water and in methanol, soluble in anhydrous ethanol, slightly soluble or practically insoluble in acetone.

It shows polymorphism (*5.9*).

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison venlafaxine hydrochloride CRS.

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in *2-propanol R,* evaporate to dryness and record new spectra using the residues.

B. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Acidity or alkalinity

Dissolve 0.20 g in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent. Add 0.05 ml of *methyl red solution R* and 0.1 ml of *0.01 M hydrochloric acid*. The solution is pink. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and dilute to 25.0 ml with the mobile phase.

Reference solution (a) Dilute 1.0 ml of the test solution to 10.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Reference solution (b) Dissolve the contents of a vial of *venlafaxine for system suitability CRS* (containing impurities D and F) in 1.0 ml of the mobile phase.

Column:

— *size*: *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase: end-capped octylsilyl silica gel for chromatography R* (5 µm) with a pore size of 10 nm.

Mobile phase Mix 510 volumes of *acetonitrile R* and 1490 volumes of a solution prepared as follows: dissolve 17 g of *ammonium dihydrogen phosphate R* in 1490 ml of *water R* and adjust to pH 4.4 using *phosphoric acid R*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 225 nm.

Injection 20 µl.

Run time 10 times the retention time of venlafaxine.

Relative retention With reference to venlafaxine (retention time = about 9 min): impurity D = about 0.9; impurity F = about 3.4.

System suitability Reference solution (b):

— *resolution*: minimum 1.5 between the peaks due to impurity D and venlafaxine.

Limits:

— *impurity F*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained

with reference solution (a) (0.2 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

Dissolve 1.0 g in 20 ml of water R. 12 ml of the solution complies with test A. Prepare the reference solution using *lead standard solution (1 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying *in vacuo* at 80 °C for 3 h.

Sulphated ash *(2.4.14*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in a mixture of 5.0 ml of *0.01 M hydrochloric acid* and 50 ml of *ethanol (96 per cent) R*. Carry out a potentiometric titration *(2.2.20)*, using *0.1 M sodium hydroxide*. Read the volume added between the 2 points of inflexion. Carry out a blank titration.

1 ml of *0.1 M sodium hydroxide* is equivalent to 31.39 mg of $C_{17}H_{28}ClNO_2$.

IMPURITIES

Specified impurities F.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A, B, C, D, E, G, H.*

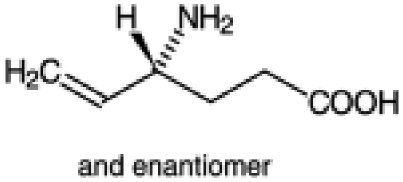
Vigabatrin

General Notices



$C_6H_{11}NO_2$ 129.2 *60643-86-9*

Action and use

Antiepileptic.

Preparations

Vigabatrin Oral Powder

Vigabatrin Tablets

DEFINITION

Vigabatrin is (*RS*)-4-aminohex-5-enoic acid. It contains not less than 98.0% and not more than 102.0% of $C_6H_{11}NO_2$, calculated with reference to the anhydrous, ethanol-free substance.

CHARACTERISTICS

A white to almost white powder.

Very soluble in *water*.

IDENTIFICATION

A. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of vigabatrin *(RS 360)*.

B. In the Assay, the retention time of the principal peak in the chromatogram obtained with solution (1) is the same as that of the principal peak in the chromatogram obtained with solution (2).

TESTS

Optical rotation

+0.5° to-0.5°, determined in a 20% w/v solution, Appendix V F.

Related substances

The sum of the impurities determined by methods A and B below is not more than 0.5%.

A. Not more than 0.1% of any single impurity determined by the following method. Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in the mobile phase. Solution (1) contains 0.4% w/v of the substance being examined. Solution (2) contains 0.0004% w/v of *3-aminopent-4-ene-1,1-dicarboxylic acid BPCRS*. Solution (3) contains 0.0004% w/v of *5-vinyl-2-pyrrolidone BPCRS*. Solution (4) contains 0.0004% w/v of (E)*-4-amino-2-ethylidenebutyric acid hydrochloride BPCRS*. Solution (5) contains 0.002% w/v of *5-vinyl-2-pyrrolidone BPCRS* and 0.4% w/v of *vigabatrin BPCRS*.

The chromatographic procedure may be carried out using (a) two stainless steel columns in series; the first (25 cm × 4.6 mm) packed with particles of silica, the surface of which has been modified with chemically-bonded hexylsilyl groups (5 µm) (Spherisorb C6 is suitable) and the second (25 cm × 4.6 mm) packed with cation exchange resin (10 µm) (Partisil-10 SCX is suitable), (b) as the mobile phase at a flow rate of 1.0 ml per minute, a mixture of 25 volumes of *acetonitrile*, 25 volumes of a phosphate buffer solution prepared by dissolving 58.5 g of *sodium dihydrogen orthophosphate monohydrate* in *water*, adding 23 ml of *orthophosphoric acid* and sufficient *water* to produce 1000 ml, and 950 volumes of *water* and (c) a detection wavelength of 210 nm.

Inject 20 µl of solution (5). When the chromatograms are recorded under the prescribed conditions, the retention times are 5-vinyl-2-pyrrolidone, about 18 minutes and vigabatrin, about 21 minutes. The test is not valid unless the *resolution factor* between the peaks corresponding to 5-vinyl-2-pyrrolidone and vigabatrin is at least 1.5; if necessary, adjust the concentration of the mobile phase (reduce the concentration of the phosphate buffer solution to increase the retention time of vigabatrin and increase the concentration of acetonitrile to decrease the retention time of 5-vinyl-2-pyrrolidone).

Inject separately 20 µl of each of solutions (1) to (4). For solution (1) continue the chromatography for twice the retention time of the principal peak. In the chromatogram obtained with solution (1) the areas of any peaks corresponding to 5-vinyl-2-pyrrolidone and *(E)*-4-amino-2-ethylidenebutyric acid are not greater than the areas of the peaks in the chromatograms obtained with solutions (3) and (4), respectively (0.1% of each). The area of any other *secondary peak* is not greater than the area of the peak in the chromatogram obtained with solution (2) (0.1%). Calculate the percentage content of 5-vinyl-2-pyrrolidone and *(E)*-4-amino-2-ethylidenebutyric acid using the areas of the peaks in the chromatograms obtained with solutions (3) and (4) respectively and of any other impurity from the peak in the chromatogram obtained with solution (2) taking, for the purposes of calculation, that this peak is equivalent to 0.1%, and hence determine the sum of the contents of the impurities.

B. Not more than 0.2% of 4-aminobutyric acid when determined by the following method. Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions. For solution (1) add to 1 ml of a 0.20% w/v solution of the substance being examined 2 ml of a solution prepared by dissolving 7.7 g of *boric acid* in *water*, adjusting to pH 7.7 with a 50% w/v solution of *sodium hydroxide* and diluting to 250 ml with *water* and mix. Add 3 ml of a 0.16% w/v solution of *(9-fluorenyl)methyl chloroformate* in *acetone*, mix and allow to stand for 5 minutes. Add 3 ml of *ethyl acetate*, shake vigorously for a few seconds, and allow to separate; use the lower layer within 8 hours of preparation. Prepare solution (2) in the same manner using 1 ml of a solution containing 0.20% w/v of the substance being examined and 0.002% w/v of *4-aminobutyric acid* in place of the solution of the substance being examined.

The chromatographic procedure may be carried out using (a) a stainless steel column (15 cm × 4.6 mm) packed with particles of silica the surface of which has been modified by chemically-bonded phenyl groups (5 µm) (Vydac Phenyl is suitable), (b) as the mobile phase at a flow rate of 1.0 ml per minute, a mixture of 25 volumes of *acetonitrile* and 75 volumes of a solution prepared by dissolving 8.2 g of *anhydrous sodium acetate* in *water*, adjusting the pH to 4.2 with *glacial acetic acid* and diluting to 2000 ml with *water* and (c) a detection wavelength of 263 nm.

Inject 25 µl of solution (2). When the chromatogram is recorded under the prescribed conditions, the retention times for the derivatives of the following are (9-fluorenyl)methanol, about 6 minutes; 4-aminobutyric acid, about 9 minutes and vigabatrin, about 14 minutes. The test is not valid unless the *resolution factor* between the peaks corresponding to the derivatives of 4-aminobutyric acid and (9-fluoreny)-lmethanol is at least 2; if necessary, adjust the proportion of the components of the mobile phase.

Inject separately 25 µl of each of solutions (1) and (2) and calculate the content of 4-aminobutyric acid in the substance being examined from the chromatograms obtained.

Heavy metals

2.0 g complies with *limit test C for heavy metals*, Appendix VII. Use 2 ml of *lead standard solution (10 ppm Pb)* to prepare the standard (10 ppm).

Ethanol

Not more than 0.6% w/w of ethanol when determined by the following method. Carry out the method for head-space *gas chromatography*, Appendix III B. Solution (1) contains 2 g of the substance being examined in 10 ml of a solution containing 0.0025% w/v of *1,2-dichloroethane* (internal standard) in *water* in a 20 ml headspace vial. Heat the vial at 60° for 30 minutes. Solution (2) contains 0.025% w/v of *absolute ethanol* and 0.0025% w/v of *1,2-dichloro-ethane* in *water*. Use *water* as the blank.

The chromatographic procedure may be carried out using a fused-silica column (60 m × 0.32 mm) coated with a 1.0-µm film of bonded methylsilicone (SPB-1 is suitable) at an initial temperature of 35° for 12 minutes, increasing to 175° at a constant rate of 10° per minute, maintaining the injector at 150° and the detector at 250°. Use *helium* as the carrier gas. Calculate the content of ethanol in the substance being examined from the areas of the peaks in the chromatograms obtained with solutions (1) and (2).

Water

Not more than 0.5% w/w, Appendix IX C. Use 0.3 g dissolved in 50 ml of *anhydrous methanol* .

Sulphated ash

Not more than 0.1%, Appendix IX A.

ASSAY

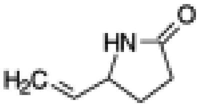
Carry out the method for *liquid chromatography*, Appendix III D, using the following solutions in the mobile phase. Solution (1) contains 0.2% w/v of the substance being examined. Solution (2) contains 0.2% w/v of *vigabatrin BPCRS*. Solution (3) contains 0.002% w/v of *5-vinyl-2-pyrrolidone BPCRS* and 0.2% w/v of *vigabatrin BPCRS*.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with cation exchange resin (10 µm) (Whatman Partisil 10 SCX is suitable), (b) as the mobile phase with a flow rate of 1.5 ml per minute a mixture of 4 volumes of *acetonitrile*, 40 volumes of *methanol* and 1000 volumes of a 0.34% w/v solution of *potassium dihydrogen orthophosphate*, the mixture adjusted to pH 2.8 with *orthophosphoric acid* and (c) a detection wavelength of 210 nm.

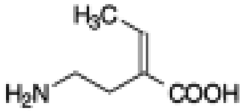
Inject 20 µl of solution (3). When the chromatogram is recorded under the prescribed conditions, the retention times are 5-vinyl-2-pyrrolidone, about 5 minutes and vigabatrin, about 8 minutes. The test is not valid unless the *resolution factor* between the peaks corresponding to 5-vinyl-2-pyrrolidone and vigabatrin is at least 1.5.

Inject separately 20 µl of solutions (1) and (2) and calculate the percentage content of vigabatrin from the areas of the peaks using the declared content of $C_6H_{11}NO_2$ in *vigabatrin BPCRS*.

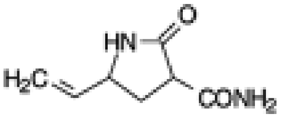
IMPURITIES



A. 5-vinyl-2-pyrrolidone

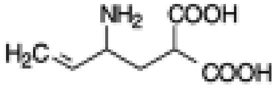


B. (*E*)-4-amino-2-ethylidenebutyric acid



C. 2-oxo-5-vinylpyrrolidine-3-carboxamide

D. 4-aminobutyric acid

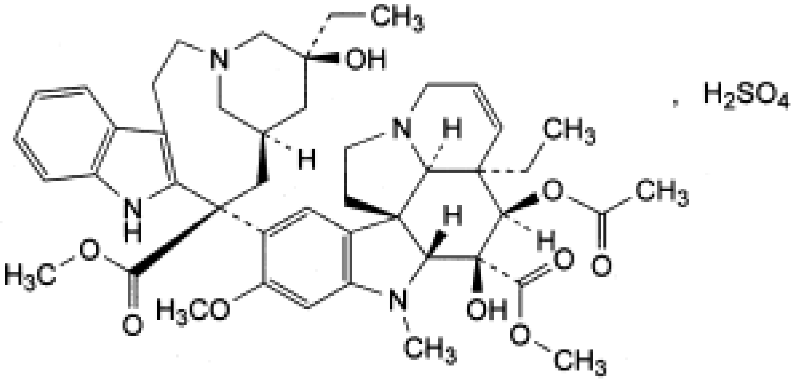


E. 3-aminopent-4-ene-1,1-dicarboxylic acid

Vinblastine Sulphate

General Notices

(Ph Eur monograph 0748)



$C_{46}H_{58}N_4O_9,H_2SO_4$ 909 *143-67-9*

Action and use

Vinca alkaloid cytotoxic.

Preparation

Vinblastine Injection

Ph Eur

DEFINITION

Vinblastine sulphate contains not less than 95.0 per cent and not more than the equivalent of 104.0 per cent of methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*S*,7*R*,9*S*)-5-ethyl-5-hydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-5-hydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate sulphate, calculated with reference to the dried substance.

CHARACTERS

A white or slightly yellowish, crystalline powder, very hygroscopic, freely soluble in water, practically insoluble in alcohol.

IDENTIFICATION

A. Examine by infrared absorption spectrophotometry *(2.2.24),* comparing with the *Ph. Eur. reference spectrum of vinblastine sulphate.*

B. Examine the chromatograms obtained in the assay. The principal peak in the chromatogram obtained with the test solution is similar in position and approximate size to the principal peak in the chromatogram obtained with reference solution (a).

TESTS

Solution S

Dissolve 50.0 mg in *carbon dioxide-free water R* and dilute to 10.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method I).*

pH *(2.2.3)*

Dilute 3 ml of solution S to 10 ml with *carbon dioxide-free water R.* The pH of this solution is 3.5 to 5.0.

Related substances

Examine the chromatograms obtained in the assay. In the chromatogram obtained with the test solution, the area of any peak apart from the principal peak is not greater than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent) and the sum of the areas of any such peaks is not greater than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5.0 per cent). Disregard any peak with an area less than that of the peak in the chromatogram obtained with reference solution (d).

Loss on drying

Not more than 15.0 per cent, determined on 3 mg by thermogravimetry *(2.2.34).* Heat to 200 °C at a rate of 5 °C/min, under a stream of *nitrogen for chromatography R*, at a flow rate of 40 ml/min.

ASSAY

Examine by liquid chromatography *(2.2.29)*.

Keep the solutions in iced water before use.

Test solution Dilute 1.0 ml of solution S (see Tests) to 5.0 ml with *water R*.

Reference solution (a) Dissolve the contents of a vial of *vinblastine sulphate CRS* in 5.0 ml of *water R* to obtain a concentration of 1.0 mg/ml.

Reference solution (b) Dissolve 1.0 mg of *vincristine sulphate CRS* in 1.0 ml of reference solution (a).

Reference solution (c) Dilute 1.0 ml of reference solution (a) to 50.0 ml with *water R*.

Reference solution (d) Dilute 1.0 ml of reference solution (c) to 20.0 ml with *water R.*

The chromatographic procedure may be carried out using:

— a stainless steel column 0.25 m long and 4.6 mm in internal diameter packed with *octylsilyl silica gel for chromatography R* (5 µm). Place between the injector and the column a guard column packed with suitable silica gel;

— as mobile phase at a flow rate of 1.0 ml/min a mixture of 38 volumes of a 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R,* 12 volumes of *acetonitrile R* and 50 volumes of *methanol R*;

— as detector a spectrophotometer set at 262 nm;

— a loop injector.

Inject 10 µl of each solution and record the chromatograms for three times the retention time of the peak corresponding to vinblastine. The assay is not valid unless: in the chromatogram obtained with reference solution (b) the resolution between the peaks corresponding to vincristine and vinblastine is not less than four; the peak in the chromatogram obtained with reference solution (d) has a signal-to-noise ratio not less than five. Calculate the percentage content of $C_{46}H_{60}N_4O_{13}S$ from the area of the principal peak in each of the chromatograms obtained with the test solution and reference solution (a) and from the declared content of *vinblastine sulphate CRS*.

STORAGE

Store in an airtight, glass container, protected from light, at a temperature not exceeding - 20 °C. If the substance is sterile, store in an sterile, airtight, tamper-proof glass container.

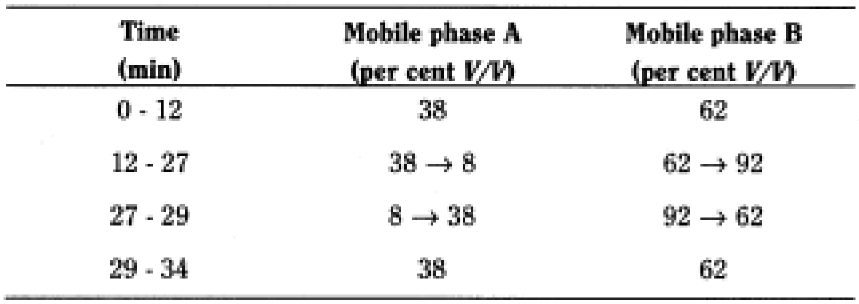
Mobile phase:
— *mobile phase A*: 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R*;

— *mobile phase B*: *methanol R;*



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 12	38	62
12 - 27	38 → 8	62 → 92
27 - 29	8 → 38	92 → 62
29 - 34	38	62

Flow rate 2 ml/min.

Detection Spectrophotometer at 297 nm.

Injection 20 µl.

System suitability Reference solution (b):

— *resolution*: minimum 4 between the peaks due to vincristine and vinblastine.

Limits:

— *any impurity*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (2.0 per cent);

— *total*: not more than 2.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (5.0 per cent);

— *disregard limit*: area of the peak in the chromatogram obtained with reference solution (d) (0.1 per cent).

Loss on drying

Maximum 12.0 per cent, determined on 3 mg by thermogravimetry *(2.2.34)*. Heat the substance to be examined to 200 °C increasing the temperature by 5 °C/min, under a current of *nitrogen for chromatography R*, at a flow rate of 40 ml/min.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances, with the following modifications.

Mobile phase Mix 30 volumes of a 1.5 per cent *V/V* solution of *diethylamine R* adjusted to pH 7.5 with *phosphoric acid R* and 70 volumes of *methanol R*.

Flow rate 1.0 ml/min.

Calculate the percentage content of $C_{46}H_{58}N_4O_{14}S$ using the chromatogram obtained with reference solution (a) and the declared content of *vincristine sulphate CRS.*

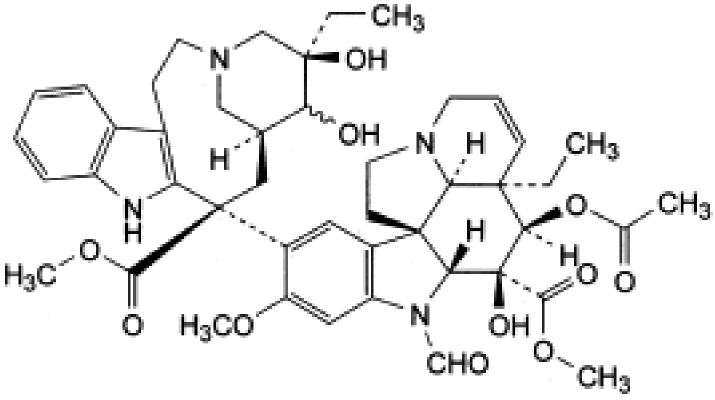
STORAGE

In an airtight, glass container, protected from light, at a temperature not exceeding - 20 °C. If the substance is sterile, store in a sterile, airtight, tamper-proof glass container.

IMPURITIES

Specified impurities A, B, C, D, H.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): E, F, G.*



A. methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(5*R*,7*S*,9*S*)-5-ethyl-5,6-dihydroxy-9-(methoxycarbonyl)-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[5,4-*b*]indol-9-yl]-6-formyl-5-hydroxy-8-methoxy-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate (3'-hydroxy-VCR),

DEFINITION

Methyl (5*S*,7*R*,9*S*)-9-[(3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-5-carbamoyl-3a-ethyl-4,5-dihydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazol-9-yl]-5-ethyl-5-hydroxy-1,4,5,6,7,8,9,10-octahydro-2*H*-3,7-methanoazacycloundecino[4,5-*b*]indole-9-carboxylate sulphate.

Content

96.0 per cent to 103.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, amorphous, hygroscopic substance.

Solubility

Freely soluble in water and in methanol, practically insoluble in cyclohexane.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison   Ph. Eur. reference spectrum of vindesine sulphate.

TESTS

Solution S

Dissolve 50 mg in *carbon dioxide-free water R* and dilute to 10 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and not more intensely coloured than reference solution Y_7 *(2.2.2, Method I)*.

pH *(2.2.3)*

3.5 to 5.5 for solution S.

Related substances

Liquid chromatography *(2.2.29)*. *Keep the solutions in iced water before use*.

Test solution   Dissolve 10.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a)   Dilute 1.0 ml of the test solution to 50.0 ml with *water R.*

Reference solution (b)   Dissolve 1.0 mg of *desacetylvinblastine CRS* in *water R*, add 1.0 ml of the test solution and dilute to 50.0 ml with *water R.*

Reference solution (c)   Dilute 1.0 ml of reference solution (a) to 200.0 ml with *water R*.

Column:

- *size*: *l* = 0.15 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase:

- *mobile phase A*: 1.5 per cent *V/V solution of diethylamine R* adjusted to pH 7.4 with *phosphoric acid R;*
- *mobile phase B*: *methanol R*;

0 - 40	49	51
40 - 49	49 → 30	51 → 70
49 - end	30	70

Flow rate   2 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 200 µl.

Run time Twice the retention time of vindesine.

System suitability Reference solution (b)

- the retention time of vindesine is less than 40 min;
- *resolution*: minimum 2.0 between the peaks due to vindesine and desacetylvinblastine;
- *symmetry factor*: maximum 2.0 for the peak due to vindesine.

Limits:

- *impurities A, B, C*: for each impurity, not more than 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1 per cent);
- *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (2 per cent);
- *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (c) (0.01 per cent).

Acetonitrile

Gas chromatography (*2.2.28*).

Internal standard solution (a) Dilute 0.500 g of *propanol R* to 100 ml with *water R.*

Internal standard solution (b) Dilute 10.0 ml of internal standard solution (a) to 50.0 ml with *water R*.

Reference solution Dilute 10.0 g of *acetonitrile R* to 1000 ml with *water R*. To 3.0 ml of this solution add 10.0 ml of internal standard solution (a) and dilute to 50.0 ml with *water R*.

Test solution Dissolve 40 mg of the substance to be examined in 1.0 ml of internal standard solution (b).

Column:

- *material*: glass;
- *size*: *l* = 1.25 m, Ø = 3 mm;
- *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R*.

Carrier gas *Helium for chromatography R*.

Flow rate 60 ml/min.

Temperature:

- *column*: 170 °C;
- *injection port and detector*: 250 °C.

Detection Flame ionisation.

Injection 3 µl.

System suitability Reference solution:

- *resolution*: minimum 1.5 between the peaks due to acetonitrile and propanol;
- *symmetry factor*: maximum 1.6 for the peak due to acetonitrile.

Limit:

- *acetonitrile*: maximum 1.5 per cent m/m.

Loss on drying

Maximum 10.0 per cent, determined on 9.00 mg by thermogravimetry *(2.2.34)*. Heat to 200 °C at a rate of 5 °C/min, under a stream of *nitrogen for chromatography R* at a flow rate of 40 ml/min.

ASSAY

Liquid chromatography *(2.2.29)*. *Keep the solutions in iced water before use*.

Test solution Dissolve 5.0 mg of the substance to be examined in *water R* and dilute to 10.0 ml with the same solvent.

Reference solution (a) Dissolve and dilute the entire contents of a vial of *vindesine sulphate CRS* with *water R* to yield a concentration of approximately 0.50 mg/ml.

Reference solution (b) Add 1.0 mg of *desacetylvinblastine CRS* to 2.0 ml of reference solution (a).

Column:

- *size*: *l* = 0.15 m, 4.6 mm;
- *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 38 volumes of a 1.5 per cent *V/V* solution of *diethylamine R*, previously adjusted to pH 7.4 with *phosphoric acid R*, and 62 volumes of *methanol R*.

Flow rate 1 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µl.

System suitability Reference solution (b):

- *resolution*: minimum 1.5 between the peaks due to vindesine and desacetylvinblastine;
- *symmetry factor*: maximum 2.0 for the peak due to vindesine;
- *repeatability*: maximum relative standard deviation of 1.5 per cent for the peak due to vindesine after 5 injections.

Calculate the percentage content of $C_{43}H_{57}N_5O_{11}S$ from the declared content of *vindesine sulphate CRS.*

STORAGE

In an airtight polypropylene container with a polypropylene cap, at a temperature of - 50 °C or below. If the substance is sterile, store in a sterile, airtight, tamper-proof container.

Ph Eur

DEFINITION

Methyl (3a*R*,4*R*,5*S*,5a*R*,10b*R*,13a*R*)-4-(acetyloxy)-3a-ethyl-9-[(6*R*,8*S*)-4-ethyl-8-(methoxycarbonyl)-1,3,6,7,8,9-hexahydro-2,6-methano-2*H*-azacyclodecino[4,3-*b*]indol-8-yl]-5-hydroxy-8-methoxy-6-methyl-3a,4,5,5a,6,11,12,13a-octahydro-1*H*-indolizino[8,1-*cd*]carbazole-5-carboxylate dihydrogen bis[(2*R*,3*R*)-2,3-dihydroxybutanedioate].

Content

98.0 per cent to 102.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white powder, hygroscopic.

Solubility

Freely soluble in water and in methanol, practically insoluble in hexane.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dissolve 10 mg in 5 ml of *water R.* Add 0.5 ml of *sodium hydroxide solution R.* Extract with 5 ml of *methylene chloride R*. Dry the organic layer over *anhydrous sodium sulphate R*, filter and reduce its volume to about 0.5 ml by evaporation and apply to a disc of *potassium bromide R.* Evaporate and record the spectrum.

Comparison *vinorelbine tartrate CRS*, treated as described above.

B. It gives reaction (b) of tartrates *(2.3.1)*.

TESTS

Solution S

Dissolve a quantity equivalent to 0.140 g of the anhydrous substance in *water R* and dilute to 10.0 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and its absorbance *(2.2.25)* at 420 nm is not greater than 0.030.

pH *(2.2.3)*

3.3 to 3.8 for solution S.

Related substances

Liquid chromatography *(2.2.29)*: use the normalisation procedure.

Test solution Dissolve 35.0 mg of the substance to be examined in the mobile phase and dilute to 25 ml with the mobile phase.

Reference solution (a) Dissolve 7 mg of *vinorelbine impurity B CRS* in *water R* and dilute to 50 ml with the same solvent. To 1 ml of this solution add 14 mg of *vinorelbine tartrate CRS*, dissolve in *water R* and dilute to 10 ml with the same solvent. Expose this solution for 1 h to a xenon lamp apparatus at a wavelength of 310-880 nm, supplying a dose of 1600 kJ/m2 at a fluence rate of 500 W/m2 in order to generate impurity A.

Reference solution (b) Dilute 1.0 ml of the test solution to 20.0 ml with *water R*. Dilute 1.0 ml of this solution to 100.0 ml with the mobile phase.

Column:

- — *size*: *l* = 0.15 m, Ø = 3.9 mm;
- — *stationary phase*: spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm) with a specific surface area of 125 m2/g, a pore size of 30 nm and a carbon loading of 7 per cent;
- — *temperature*: 35 ± 5 °C.

Mobile phase Dissolve 1.22 g of *sodium decanesulphonate R* in 620 ml of *methanol R* and dd 380 ml of a 7.80 g/l solution of *sodium dihydrogen phosphate R* previously adjusted to pH 4.2 with dilute *phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 267 nm.

Injection 20 µl.

Run time Twice the retention time of vinorelbine.

Relative retention With reference to vinorelbine (retention time = about 14 min): impurity A = about 0.8; impurity B = about 1.2.

System suitability:

— *peak-to-valley ratio*: minimum 4, where H_p = height above the baseline of the peak due to impurity B and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to vinorelbine in the chromatogram obtained with reference solution (a);

— *signal-to-noise ratio*: minimum 10 for the principal peak in the chromatogram obtained with reference solution (b).

Limits:

— *impurity A*: maximum 0.3 per cent;

— *any other impurity*: for each impurity, maximum 0.2 per cent;

— *sum of impurities other than A*: maximum 0.7 per cent;

— *disregard limit*: the area of the principal peak in the chromatogram obtained with reference solution (b).

Boron

Maximum 50 ppm.

Test solution Dissolve 0.10 g of the substance to be examined in 2 ml of *water R*. Slowly add 10.0 ml of *sulphuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 ml of a 0.5 g/l solution of *carminic acid R* in *sulphuric acid R*.

Reference solution Dilute 2.5 ml of a 0.572 g/l solution of *boric acid R* to 100.0 ml with *water R*. To 2.0 ml of this solution slowly add 10.0 ml of *sulphuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 ml of a 0.5 g/l solution of *carminic acid R* in *sulphuric acid R*.

Blank solution To 2.0 ml of *water R* slowly add 10.0 ml of *sulphuric acid R* while cooling in iced water. Stir and allow to warm to room temperature. Add 10.0 ml of a 0.5 g/l solution of *carminic acid R* in *sulphuric acid R*.

After 45 min, measure the absorbance *(2.2.25)* of the test solution and the reference solution, between 560 nm and 650 nm, using the blank solution as compensation liquid. The maximum absorbance value of the test solution is not greater than that of the reference solution.

Fluorides

Maximum 50 ppm.

Potentiometry *(2.2.36, Method I)* using a fluoride-selective indicator electrode and a silver-silver chloride reference electrode.

Test solution Dissolve 0.19 g of the substance to be examined in 20 ml of *water R.* Add 5.0 ml of *total-ionic-strength-adjustment buffer R* and dilute to 50 ml with *water R.*

Reference solutions To 0.6 ml, 0.8 ml, 1.0 ml, 1.2 ml and 1.4 ml of *fluoride standard solution (10 ppm F) R*, add 5.0 ml of *total-ionic-strength-adjustment buffer R* and dilute to 50 ml with *water R.*

Introduce the electrodes into the reference solutions and allow to stand for 5 min. Determine the potential difference between the electrodes after 1 min of stabilisation. Using semi-logarithmic paper plot the potential difference obtained for each reference solution as a function of concentration of fluoride. Using exactly the same conditions, determine the potential difference obtained with the test solution and calculate the content of fluoride.

Silver

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 0.500 g of the substance to be examined in 10.0 ml of *water R.*

Reference solutions Prepare the reference solutions using *silver standard solution (5 ppm Ag) R* and diluting with a 6.5 per cent *V/V* solution of *lead-free nitric acid R.*

Source Silver hollow-cathode lamp.

Wavelength 328.1 nm.

Atomisation device Air-acetylene flame.

Water *(2.5.12)*

Maximum 4.0 per cent, determined on 0.250 g.

Bacterial endotoxins *(2.6.14)*

Less than 2 IU/mg (expressed as vinorelbine base), if intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins.

ASSAY

Dissolve 0.350 g in 40 ml of *glacial acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 53.96 mg of $C_{53}H_{66}N_4O_20$.

STORAGE

Under an inert gas, protected from light, at a temperature not exceeding - 15 °C.

IMPURITIES

Specified impurities A.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E, F, G, H, I, J.*

Ph Eur

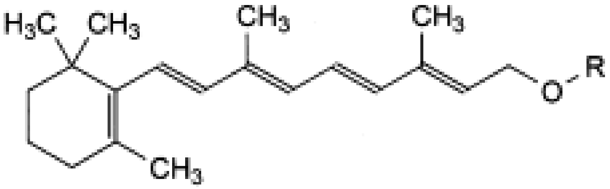
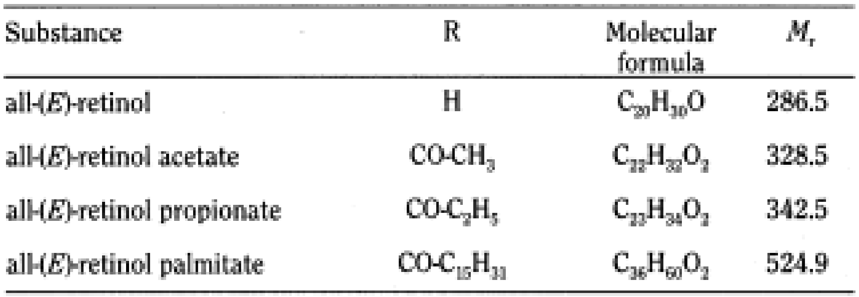
Vitamin A

General Notices

(Ph Eur monograph 0217)





Substance	R	Molecular formula	M_r
all-(*E*)-retinol	H	$C_{20}H_{30}O$	286.5
all-(*E*)-retinol acetate	$CO\text{-}CH_3$	$C_{22}H_{32}O_2$	328.5
all-(*E*)-retinol propionate	$CO\text{-}C_2H_5$	$C_{23}H_{34}O_2$	342.5
all-(*E*)-retinol palmitate	$CO\text{-}C_{15}H_{31}$	$C_{36}H_{60}O_2$	524.9

In the British Pharmacopoeia, the term 'Retinol' is used within titles for preparations containing synthetic ester(s) and the term 'Vitamin A' within the title for the preparation containing material of natural origin.

Preparation

Paediatric Vitamins A, C and D Oral Drops

Ph Eur

DEFINITION

Vitamin A refers to a number of substances of very similar structure (including (*Z*)-isomers) found in animal tissues and possessing similar activity. The principal and biologically most active substance is all-(*E*)-retinol (all-(*E*)-3,7-dimethyl-9-(2,6,6-trimethylcyclohex-1-enyl)nona-2,4,6,8-tetraen-1-ol; $C_{20}H_{30}O$). Vitamin A is generally used in the form of esters such as the acetate, propionate and palmitate.

Synthetic retinol ester refers to an ester (acetate, propionate or palmitate) or a mixture of synthetic retinol esters.

The activity of vitamin A is expressed in retinol equivalents (R.E.). 1 mg R.E. corresponds to the activity of 1 mg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 mg R.E. of vitamin A corresponds to the activity of:

— 1.147 mg of all-(*E*)-retinol acetate;

— 1.195 mg of all-(*E*)-retinol propionate;

— 1.832 mg of all-(*E*)-retinol palmitate.

International Units (IU) are also used to express the activity of vitamin A. 1 IU of vitamin A is equivalent to the activity of 0.300 µg of all-(*E*)-retinol. The activity of the other retinol esters is calculated stoichiometrically, so that 1 IU of vitamin A is equivalent to the activity of:

— 0.344 µg of all-(*E*)-retinol acetate;

— 0.359 µg of all-(*E*)-retinol propionate;

— 0.550 µg of all-(*E*)-retinol palmitate;

1 mg of retinol equivalent is equivalent to 3333 IU.

CHARACTERS

Appearance

Retinol acetate: pale-yellow crystals (mp: about 60 °C). Once melted retinol acetate tends to yield a supercooled melt.

Retinol propionate: reddish-brown oily liquid.

Retinol palmitate: a fat-like, light yellow solid or a yellow oily liquid, if melted (mp: about 26 °C) .

Solubility

All retinol esters are practically insoluble in water, soluble or partly soluble in anhydrous ethanol and miscible with organic solvents.

Vitamin A and its esters are very sensitive to the action of air, oxidising agents, acids, light and heat.

Carry out the assay and all tests as rapidly as possible, avoiding exposure to actinic light and air, oxidising agents, oxidation catalysts (e.g. copper , iron), acids and heat; use freshly prepared solutions.

IDENTIFICATION

A. Thin-layer chromatography *(2.2.27)*.

Test solution Prepare a solution containing about 3.3 IU of vitamin A per microlitre in *cyclohexane R* containing 1 g/l of *butylhydroxytoluene R*.

Reference solution Prepare a 10 mg/ml solution of *retinol esters CRS* (i.e. 3.3 IU of each ester per microlitre) in *cyclohexane R* containing 1 g/l of *butylhydroxytoluene R*.

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *ether R, cyclohexane R* (20:80 *V/V*).

Application 3 µl.

Development Over 2/3 of the plate.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution:

— the chromatogram shows the individual spots of the corresponding esters. The elution order from bottom to top is: retinol acetate, retinol propionate and retinol palmitate.

Results The composition of esters is confirmed by the correspondence of the principal spot or spots of the test solution with those obtained with the reference solution.

B. It complies with the test for related substances.

TESTS

Retinol

Thin-layer chromatography *(2.2.27)*.

Test solution Prepare a solution in *cyclohexane R*, stabilised with a solution containing 1 g/l of *butylhydroxytoluene R*, containing about 330 IU of vitamin A per microlitre.

Reference solution Shake 1 ml of the test solution with 20 ml of *0.1 M tetrabutylammonium hydroxide* in *2-propanol* for 2 min and dilute to 100 ml with *cyclohexane R*, stabilised with a solution containg 1 g/l of *butylhydroxytoluene R*.

Plate *TLC silica gel* F_{254} *plate R*.

Mobile phase *ether R, cyclohexane R* (20:80 *V/V*).

Application 3 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution:

— in the chromatogram obtained no or only traces of the retinol esters are seen.

Limit Any spot corresponding to retinol in the chromatogram obtained with the test solution is not more intense than the spot in the chromatogram obtained with the reference solution (1.0 per cent).

Related substances

Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution The solution described under Activity.

Absorption maximum At 325 nm to 327 nm.

Absorbance ratios:

— A_{300}/A_{326} = maximum 0.60;

— A_{350}/A_{326} = maximum 0.54;

— A_{370}/A_{326} = maximum 0.14.

The thresholds indicated under Related substances (Table 2034.-1) in the general monograph *Substances for pharmaceutical use (2034)* do not apply.

ACTIVITY

The activity of the substance is determined in order to be taken into account for the production of concentrates.

Dissolve 25-100 mg, weighed with an accuracy of 0.1 per cent, in 5 ml of *pentane R* and dilute with *2-propanol R1* to a presumed concentration of 10 IU/ml to 15 IU/ml. Measure the absorbance *(2.2.25)* at the absorption maximum at 326 nm. Calculate the activity of vitamin A in International Units per gram from the expression:

$$\frac{A_{326} \times V \times 1900}{100 \times m}$$

A_{326} = absorbance at 326 nm

m = mass of the substance to be examined, in grams

V = total volume to which the substance to be examined is diluted to give 10 IU/ml to 15 IU/ml

1900 = factor to convert the specific absorbance of esters of retinol into International Units per gram

STORAGE

In an airtight container, protected from light.

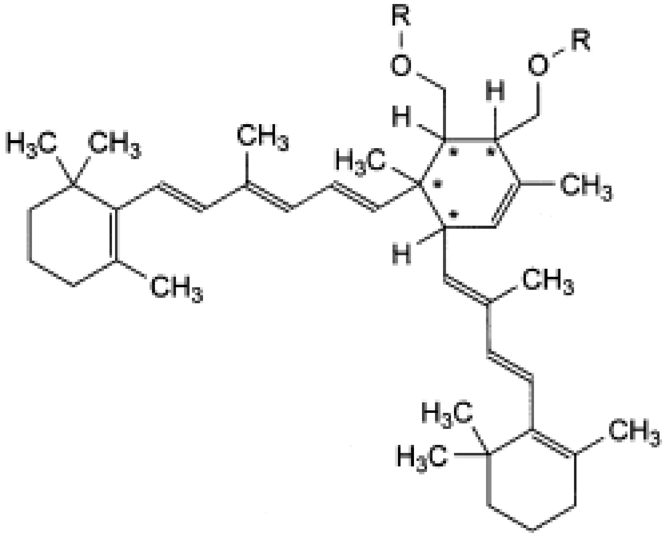
Once the container has been opened, its contents are to be used as soon as possible; any part of the contents not used at once should be protected by an atmosphere of inert gas.

LABELLING

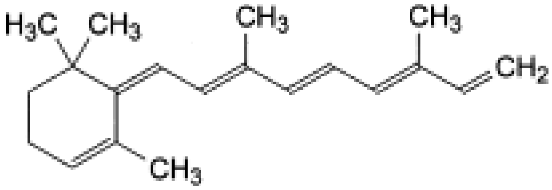
The label states:

- the number of International Units per gram;
- the name of the ester or esters.

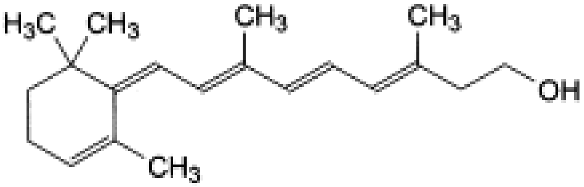
IMPURITIES



A. R = H, CO-CH_3: kitols (Diels-Alder dimers of vitamin A),



B. (3*E*,5*E*,7*E*)-3,7-dimethyl-9-[(1*Z*)-2,6,6-trimethylcyclohex-2-enylidene]nona-1,3,5,7-tetraene (anhydro-vitamin A),



C. (3*E*,5*E*,7*E*)-3,7-dimethyl-9-[(1*Z*)-2,6,6-trimethylcyclohex-2-enylidene]nona-3,5,7-trien-1-ol (*retro*-vitamin A),

D. oxidation products of vitamin A.

Ph Eur

Highly Purified Water

General Notices

(Ph Eur monograph 1927)

H_2O 18.02 *7732-18-5*

Ph Eur

DEFINITION

Water intended for use in the preparation of medicinal products where water of high biological quality is needed, except where *Water for injections (0169)* is required.

PRODUCTION

Highly purified water is obtained from water that complies with the regulations on water intended for human consumption laid down by the competent authority.

Current production methods include for example double-pass reverse osmosis coupled with other suitable techniques such as ultrafiltration and deionisation. Correct operation and maintenance of the system is essential.

During production and subsequent storage, appropriate measures are taken to ensure that the total viable aerobic count is adequately controlled and monitored. Appropriate alert and action limits are set so as to detect adverse trends. Under normal conditions, an appropriate action limit is a total viable aerobic count *(2.6.12)* of 10 micro-organisms per 100 ml when determined by membrane filtration, using agar medium S, at least 200 ml of highly purified water and incubating at 30-35 °C for 5 days.

Total organic carbon *(2.2.44)*

Maximum 0.5 mg/l.

Conductivity

Determine the conductivity off-line or in-line under the following conditions.

EQUIPMENT

Conductivity cell:

- electrodes of a suitable material such as stainless steel;
- *cell constant*: within 2 per cent of the given value determined using a certified reference solution with a conductivity less than 1500 $\mu S \cdot cm^{-1}$.

Conductometer Resolution 0.1 $\mu S \cdot cm^{-1}$ on the lowest range.

System calibration (conductivity cell and conductometer):

- against one or more suitable certified standard solutions;
- accuracy: within 3 per cent of the measured conductivity plus 0.1 $\mu S \cdot cm^{-1}$.

Conductometer calibration by means of precision resistors or equivalent devices after disconnecting the conductivity cell, for all ranges used for conductivity measurement and cell calibration (with an accuracy within 0.1 per cent of the stated value, traceable to the official standard).

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity cell placed close to the cell to be calibrated in the water flow.

PROCEDURE

Stage 1

1. Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

2. Using Table 1927.-1, find the closest temperature value that is not greater than the measured temperature. The corresponding conductivity value is the limit at that temperature.

3. If the measured conductivity is not greater than the value in Table 1927.-1, the water to be examined meets the requirements of the test for conductivity. If the conductivity is higher than the value in Table 1927.-1, proceed with stage 2.

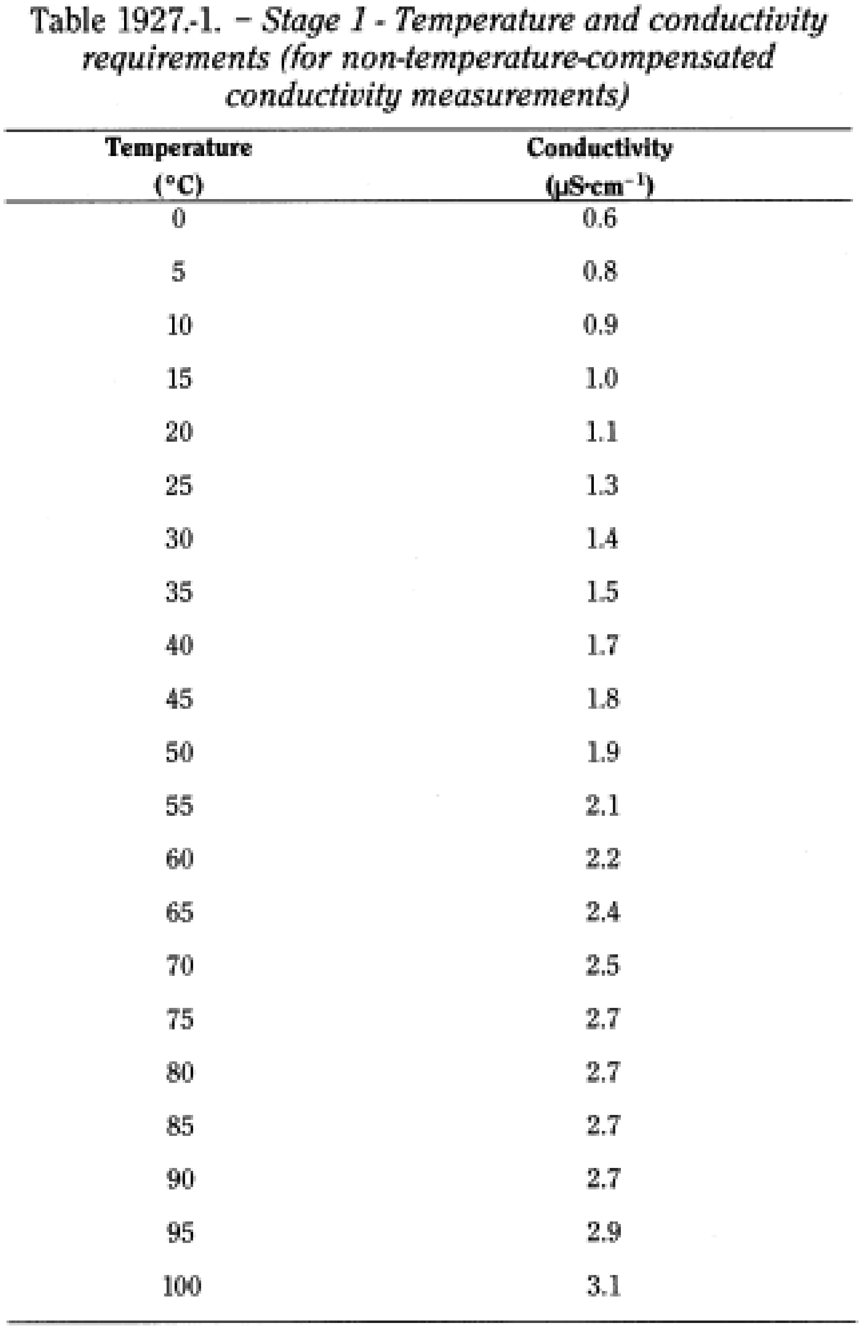


Table 1927.-1. – *Stage 1 - Temperature and conductivity requirements (for non-temperature-compensated conductivity measurements)*

Temperature (°C)	Conductivity (µS·cm^{-1})
0	0.6
5	0.8
10	0.9
15	1.0
20	1.1
25	1.3
30	1.4
35	1.5
40	1.7
45	1.8
50	1.9
55	2.1
60	2.2
65	2.4
70	2.5
75	2.7
80	2.7
85	2.7
90	2.7
95	2.9
100	3.1

Stage 2

4. Transfer a sufficient amount of the water to be examined (100 ml or more) to a suitable container, and stir the test sample. Adjust the temperature, if necessary, and while maintaining it at 25 ± 1 °C, begin vigorously agitating the test sample while periodically observing the conductivity. When the change in conductivity (due to uptake of atmospheric carbon dioxide) is less than 0.1 µS·cm^{-1} per 5 min, note the conductivity.

5. If the conductivity is not greater than 2.1 µS·cm^{-1}, the water to be examined meets the requirements of the test for conductivity. If the conductivity is greater than 2.1 µS·cm^{-1}, proceed with stage 3.

Stage 3

6. Perform this test within approximately 5 min of the conductivity determination in step 5 under stage 2, while maintaining the sample temperature at 25 ± 1 °C. Add a recently prepared saturated solution of *potassium chloride R* to the test sample (0.3 ml per 100 ml of

the test sample), and determine the pH *(2.2.3)* to the nearest 0.1 pH unit.

7. Using Table 1927.-2, determine the conductivity limit at the measured pH value in step 6. If the measured conductivity in step 4 under stage 2 is not greater than the conductivity requirements for the pH determined, the water to be examined meets the requirements of the test for conductivity. If either the measured conductivity is greater than this value or the pH is outside the range of 5.0-7.0, the water to be examined does not meet the requirements of the test for conductivity.

In order to ensure the appropriate quality of the water, validated procedures and in-process monitoring of the electrical conductivity and regular microbial monitoring are applied.

Highly purified water is stored in bulk and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

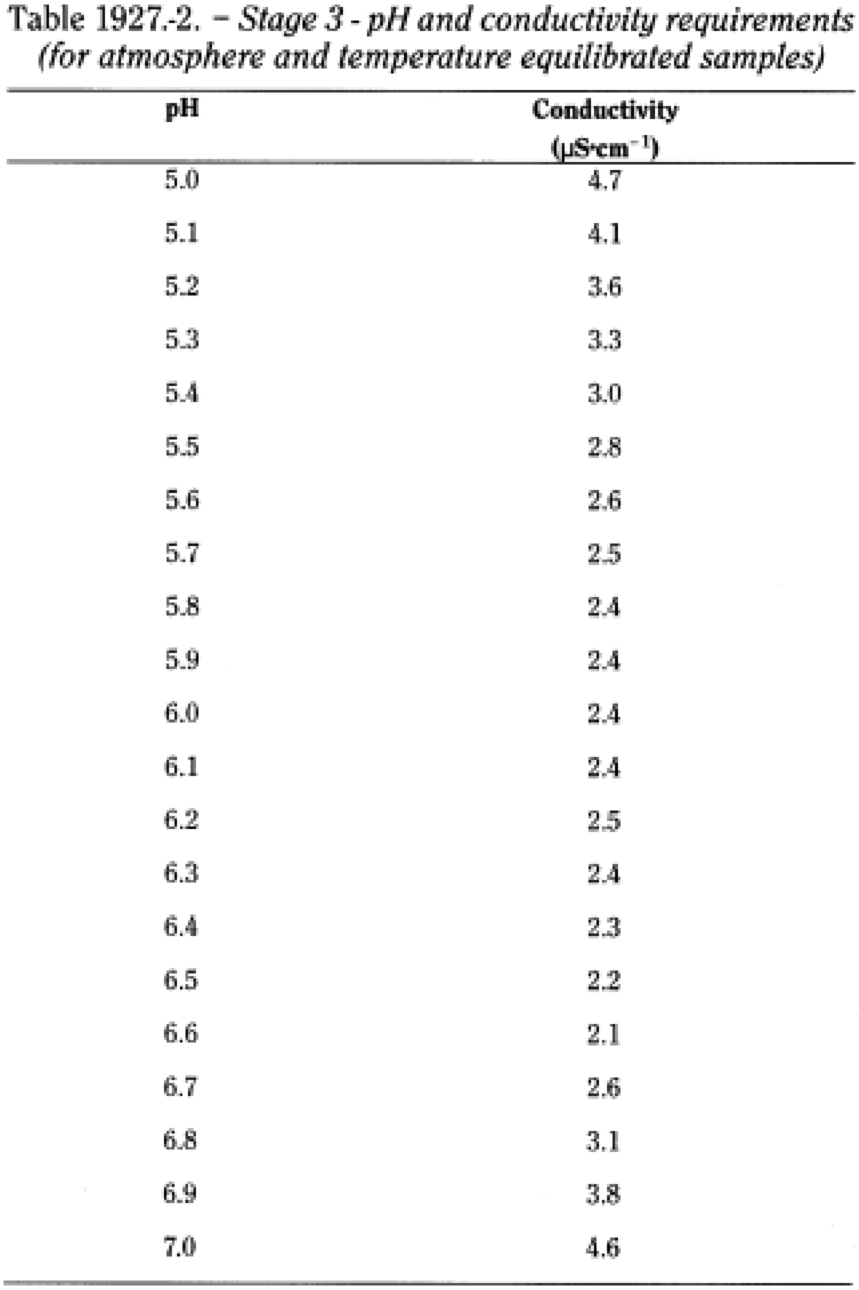

Table 1927.-2. – *Stage 3 - pH and conductivity requirements (for atmosphere and temperature equilibrated samples)*

pH	Conductivity ($\mu S \cdot cm^{-1}$)

CHARACTERS

Appearance

Clear and colourless liquid.

TESTS

Nitrates

Maximum 0.2 ppm.

Place 5 ml in a test-tube immersed in iced water, add 0.4 ml of a 100 g/l solution of *potassium chloride R*, 0.1 ml of *diphenylamine solution R* and, dropwise with shaking, 5 ml of *nitrogen-free sulphuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 ml of *nitrate-free water R* and 0.5 ml of *nitrate standard solution (2 ppm* NO_3*) R*.

Aluminium *(2.4.17)*

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 ml of the water to be examined add 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *distilled water R.*

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 0.1 ppm.

Heat 200 ml in a glass evaporating dish on a water-bath until the volume is reduced to 20 ml. 12 ml of the concentrated solution complies with limit test A. Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R.*

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/ml.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

Ph Eur

Hydrogenated Wool Fat

General Notices

(Ph Eur monograph 0969)

Ph Eur

DEFINITION

Mixture of higher aliphatic alcohols and sterols obtained from the direct, high-pressure, high-temperature hydrogenation of *wool fat (0134)* during which the esters and acids present are reduced to the corresponding alcohols. It may contain butylhydroxytoluene.

CHARACTERS

Appearance

White or pale yellow, unctuous substance.

Solubility

Practically insoluble in water, soluble in boiling alcohol and in light petroleum.

IDENTIFICATION

First identification B.

Second identification A, C.

A. It complies with the test for melting point (see Tests).

B. Examine the chromatograms obtained in the test for fatty alcohols and sterols.

Results The principal peaks in the chromatogram obtained with the test solution are similar in retention time and size to the principal peaks in the chromatogram obtained with reference solution (a).

C. Dissolve 50 mg in 5 ml of *methylene chloride R* and add 1 ml of *acetic anhydride R* and 0.1 ml of *sulphuric acid R.* A green colour is produced.

TESTS

Melting point *(2.2.15)*

45 °C to 55 °C. Allow to stand at 20 °C for 16 h.

Acid value *(2.5.1)*

Maximum 1.0, determined on 5.0 g.

Hydroxyl value *(2.5.3, Method A)*

140 to 180.

Saponification value ***(2.5.6)***

Maximum 8.0. Heat under reflux for 4 h.

Fatty alcohols and sterols

Gas chromatography *(2.2.28)*.

Test solution Dissolve 0.25 g of the substance to be examined in 60 ml of *ethanol* R and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dissolve 0.25 g of *hydrogenated wool fat CRS* in 60 ml of *ethanol R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dissolve 50 mg of *cetyl alcohol CRS* and 50 mg of *stearyl alcohol CRS* in 60 ml of *ethanol R* and dilute to 100.0 ml with the same solvent.

Column:

- *material*: fused silica;
- *size*: *l* = 30 m, Ø = 0.25 mm;
- *stationary phase: poly(dimethyl)siloxane R* or another non-polar phase (film thickness: 0.25 µm).

Carrier gas *helium for chromatography R* at a pressure of 100 kPa

Temperature:

	Time (min)	Temperature (°C)
Column	0 - 5	100
	5 - 45	100 → 300
	45 - 60	300
Injection port		325
Detector		350

Detection Flame ionisation.

Injection 1 µl.

The chromatogram obtained with the test solution does not differ significantly from the chromatogram obtained with reference solution (a) (Figure 0969.-1) and it does not show enhanced peaks with retention times corresponding to cetyl alcohol and stearyl alcohol present in the chromatogram obtained with reference solution (b).

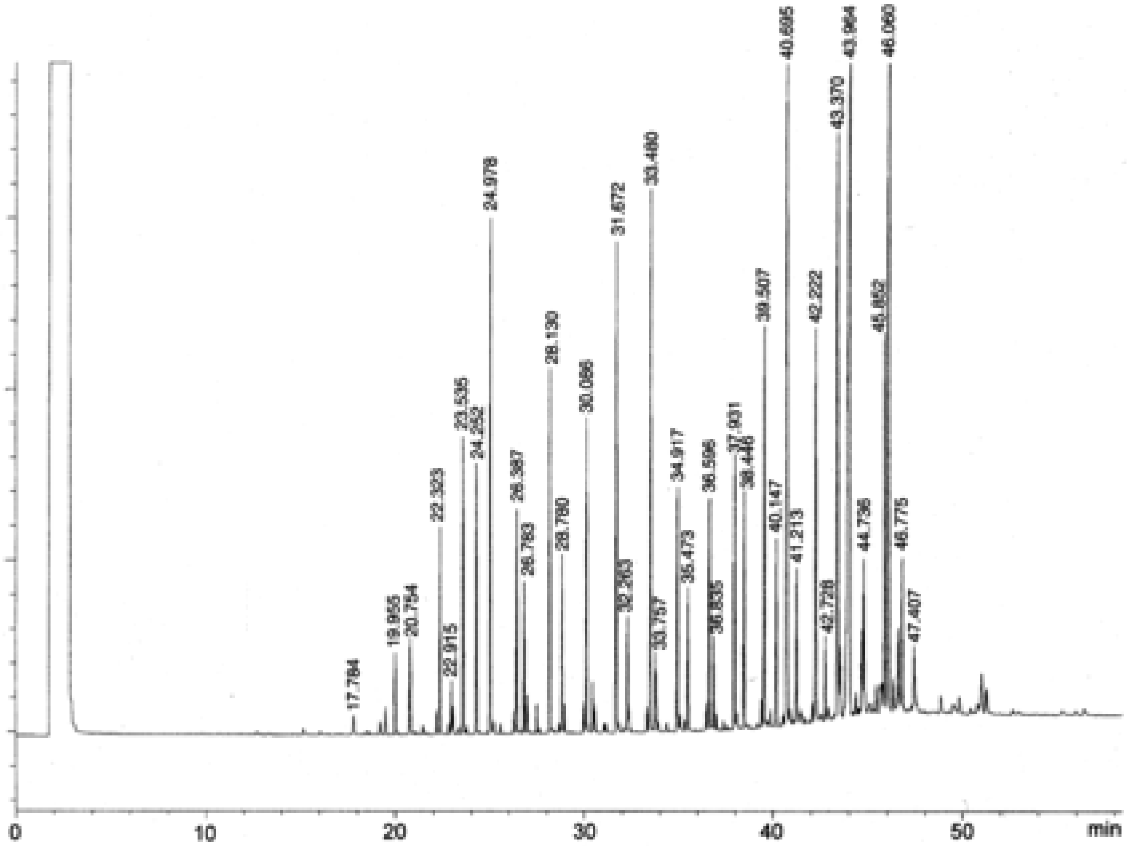

Figure 0969.-1. – *Chromatogram for the test for fatty alcohols and sterols (reference solution (a)) in hydrogenated wool fat*

Heavy metals ***(2.4.8)***

Maximum 10 ppm.

2.0 g complies with limit test C. Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 3.0 per cent, determined on 2.000 g by drying in an oven at 105 °C for 1 h.

Total ash ***(2.4.16)***

Maximum 0.1 per cent, determined on 5.0 g.

STORAGE

In a well-filled container, protected from light.

Ph Eur

Hydrous Wool Fat

General Notices

Lanolin

(Ph Eur monograph 0135)

Ph Eur

DEFINITION

Mixture of 75 per cent *m/m* of wool fat and 25 per cent *m/m* of water. It is obtained by the gradual addition of water to melted wool fat with continuous stirring. It may contain not more than 150 ppm of butylhydroxytoluene.

CHARACTERS

Appearance

Pale yellow, unctuous substance.

IDENTIFICATION

A. In a test-tube, dissolve 0.5 g in 5 ml of *chloroform R* and add 1 ml of *acetic anhydride R* and 0.1 ml of *sulphuric acid R.* A green colour develops.

B. Dissolve 50 mg in 5 ml of *chloroform R*, add 5 ml of *sulphuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer.

TESTS

Water-soluble acid or alkaline substances

Melt 6.7 g on a water-bath and shake vigorously for 2 min with 75 ml of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R.* To 60 ml of the filtrate (which may not be clear) add 0.25 ml of *bromothymol blue solution R1*. Not more than 0.2 ml of *0.02 M hydrochloric acid* or 0.15 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Drop point *(2.2.17)*

38 °C to 44 °C.

To fill the metal cup, melt the residue obtained in the test for wool-fat content on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h.

Water-absorption capacity

Place 10 g of the residue obtained in the test for wool-fat content in a mortar. Add *water R* in portions of 0.2-0.5 ml from a burette, stirring vigorously after each addition to incorporate the *water R*. The end-point is reached when visible droplets remain which cannot be incorporated. Not less than 20 ml of *water R* is absorbed.

Acid value *(2.5.1)*

Maximum 0.8, determined on 5.0 g dissolved in 25 ml of the prescribed mixture of solvents.

Peroxide value *(2.5.5, Method A)*

Maximum 15.

Saponification value *(2.5.6)*

67 to 79, determined on 2.00 g while heating under reflux for 4 h.

Water-soluble oxidisable substances

To 10 ml of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 ml of *dilute sulphuric acid R* and 0.1 ml of *0.02 M potassium permanganate*. After 10 min, the solution is not completely decolourised.

Butylhydroxytoluene

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.2 g of *methyl decanoate R* in carbon *disulphide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of this solution to 10.0 ml with *carbon disulphide R*.

Test solution (a) Dissolve 1.0 g of the residue obtained in the test for wool-fat content in *carbon disulphide R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dissolve 1.0 g of the residue obtained in the test for wool-fat content in *carbon disulphide R*, add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *carbon disulphide R*.

Reference solution Dissolve 0.2 g of *butylhydroxytoluene R* in *carbon disulphide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *carbon disulphide R*. To 1.0 ml of this solution add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *carbon disulphide R*.

Column:

- *size*: *l* = 1.5 m, Ø = 4 mm;
- *stationary phase*: silanised diatomaceous earth *for gas chromatography R* impregnated with 10 per cent m/m of *poly(dimethyl)siloxane R*.

The column is preceded by a column containing silanised glass wool.

Carrier gas *nitrogen for chromatography R.*

Flow rate 40 ml/min.

Temperature:

- *column*: 150 °C;
- *injection port*: 180 °C;
- *detector*: 300 °C.

Detection Flame ionisation.

Limit:

- *butylhydroxytoluene*: maximum 150 ppm.

Paraffins

Maximum 1.0 per cent.

The tap and cotton plugs used must be free from grease. Prepare a column of *anhydrous aluminium oxide* 230 mm long and 20 mm in diameter by adding a slurry of *anhydrous aluminium oxide R* and *light petroleum R1* to a glass tube fitted with a tap and containing *light petroleum R1*. Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the residue obtained in the test for wool-fat content in 50 ml of warm *light petroleum R1*, cool, pass the solution through the column at a rate of 3 ml/min and wash with 250 ml of *light petroleum R1*. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

Chlorides

Maximum 115 ppm.

Boil 1.3 g with 20 ml of *ethanol (90 per cent V/V) R* under a reflux condenser for 5 min. Cool, add 40 ml of *water R* and 0.5 ml of *nitric acid R* and filter. To the filtrate add 0.15 ml of a 10 g/l solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min, protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 ml of a 10 g/l solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 ml of *0.02 M hydrochloric acid*, 20 ml of *ethanol (90 per cent V/V) R*, 40 ml of *water R* and 0.5 ml of *nitric acid R*.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent.

Ignite 5.0 g and use the residue.

Wool-fat content

72.5 per cent to 77.5 per cent.

In a suitable tared dish containing a glass rod, heat 30.0 g to constant mass on a water-bath, stirring continuously. Weigh the residue.

STORAGE

At a temperature not exceeding 25 °C.

LABELLING

The label states, where applicable, the concentration of added butylhydroxytoluene.

Ph Eur

Purified Water

General Notices

(Ph Eur monograph 0008)

H_2O 18.02 *7732-18-5*

Ph Eur

DEFINITION

Water for the preparation of medicines other than those that are required to be both sterile and apyrogenic, unless otherwise justified and authorised.

PURIFIED WATER IN BULK

PRODUCTION

Purified water in bulk is prepared by distillation, by ion exchange, by reverse osmosis or by any other suitable method from water that complies with the regulations on water intended for human consumption laid down by the competent authority.

During production and subsequent storage, appropriate measures are taken to ensure that the total viable aerobic count is adequately controlled and monitored. Appropriate alert and action limits are set so as to detect adverse trends. Under normal conditions, an appropriate action limit is a total viable aerobic count *(2.6.12)* of 100 micro-organisms per millilitre, determined by membrane filtration, using agar medium S and incubating at 30-35 °C for 5 days. The size of the sample is to be chosen in relation to the expected result.

In addition, the test for total organic carbon *(2.2.44)* with a limit of 0.5 mg/l or alternatively the following test for oxidisable substances is carried out: to 100 ml add 10 ml of *dilute sulphuric acid R* and 0.1 ml of *0.02 M potassium permanganate* and boil for 5 min; the solution remains faintly pink.

Conductivity

Determine the conductivity off-line or in-line under the following conditions.

EQUIPMENT

Conductivity cell:

- — electrodes of a suitable material such as stainless steel;
- — cell constant: within 2 per cent of the given value determined using a certified reference solution with a conductivity less than 1500 µS·cm-1.

Conductometer resolution 0.1 µS·cm-1 on the lowest range.

System calibration (conductivity cell and conductometer)

- — against one or more suitable certified standard solutions;
- — accuracy: within 3 per cent of the measured conductivity plus 0.1 µS·cm-1.

Conductometer calibration by means of precision resistors or equivalent devices, after disconnecting the conductivity cell, for all ranges used for conductivity measurement and cell calibration (with an accuracy within 0.1 per cent of the stated value, traceable to the official standard).

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity cell placed close to the cell to be calibrated in the water flow.

PROCEDURE

Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

The water to be examined meets the requirements if the measured conductivity at the recorded temperature is not greater than the value in Table 0008.-1.

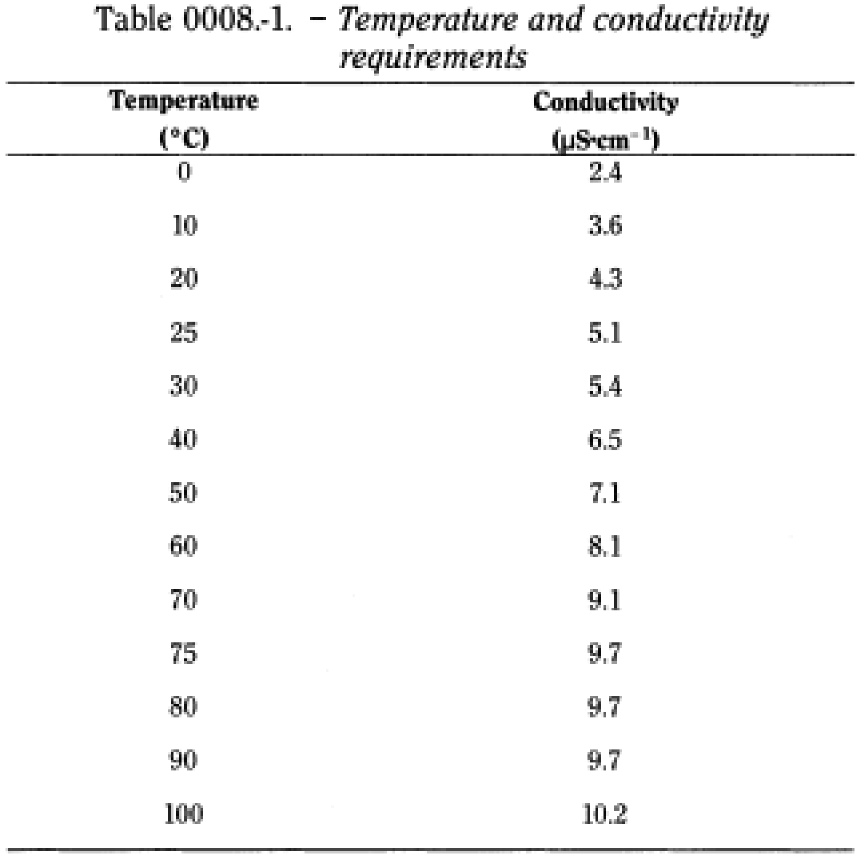

Table 0008.-1. – *Temperature and conductivity requirements*

Temperature (°C)	**Conductivity (µS·cm^{-1})**
0	2.4
10	3.6
20	4.3
25	5.1
30	5.4
40	6.5
50	7.1
60	8.1
70	9.1
75	9.7
80	9.7
90	9.7
100	10.2

For temperatures not listed in Table 0008.-1, calculate the maximal permitted conductivity by interpolation between the next lower and next higher data points in the table.

Purified water in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

CHARACTERS

Appearance

Clear and colourless liquid.

TESTS

Nitrates

Maximum 0.2 ppm.

Place 5 ml in a test-tube immersed in iced water, add 0.4 ml of a 100 g/l solution of *potassium chloride R*, 0.1 ml of *diphenylamine solution R* and, dropwise with shaking, 5 ml of *nitrogen-free sulphuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 ml of *nitrate-free water R* and 0.5 ml of *nitrate standard solution (2 ppm* NO_3*) R.*

Aluminium *(2.4.17)*

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 ml of the water to be examined add 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *distilled water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R.*

Heavy metals *(2.4.8)*

Maximum 0.1 ppm.

Heat 200 ml in a glass evaporating dish on a water-bath until the volume is reduced to 20 ml. 12 ml of the concentrated solution complies with limit test A. Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/ml, if intended for use in the manufacture of dialysis solutions without a further appropriate procedure for removal of bacterial endotoxins.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

PURIFIED WATER IN CONTAINERS

DEFINITION

Purified water in bulk that has been filled and stored in conditions designed to assure the required microbiological quality. It is free from any added substances.

CHARACTERS

Appearance

Clear and colourless liquid.

TESTS

It complies with the tests prescribed in the section on Purified water in bulk and with the following additional tests.

Acidity or alkalinity

To 10 ml, freshly boiled and cooled in a borosilicate glass flask, add 0.05 ml of *methyl red solution R*. The solution is not coloured red.

To 10 ml add 0.1 ml of *bromothymol blue solution R1*. The solution is not coloured blue.

Oxidisable substances

To 100 ml add 10 ml of *dilute sulphuric acid R* and 0.1 ml of *0.02 M potassium permanganate* and boil for 5 min. The solution remains faintly pink.

Chlorides

To 10 ml add 1 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

Sulphates

To 10 ml add 0.1 ml of *dilute hydrochloric acid R* and 0.1 ml of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

Ammonium

Maximum 0.2 ppm.

To 20 ml add 1 ml of *alkaline potassium tetraiodomercurate solution R*. After 5 min, examine the solution down the vertical axis of the tube. The solution is not more intensely coloured than a standard prepared at the same time by adding 1 ml of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 ml of *ammonium standard solution (1 ppm* NH_4*) R* and 16 ml of *ammonium-free water R.*

Calcium and magnesium

To 100 ml add 2 ml of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of mordant black *11 triturate R* and 0.5 ml of *0.01 M sodium edetate*. A pure blue colour is produced.

Residue on evaporation

Maximum 0.001 per cent.

Evaporate 100 ml on a water-bath and dry in an oven at 100-105 °C. The residue weighs a maximum of 1 mg.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^2 micro-organisms per millilitre, determined by membrane filtration, using agar medium B.

LABELLING

The label states, where applicable, that the substance is suitable for use in the manufacture of dialysis solutions.

Ph Eur

Refined Wheat-germ Oil

General Notices

(Ph Eur monograph 1379)

Ph Eur

DEFINITION

Fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or by other suitable mechanical means and/or by extraction. It is then refined. A suitable antioxidant may be added.

CHARACTERS

Appearance

Clear, light yellow liquid.

Solubility

Practically insoluble in water and in alcohol, miscible with light petroleum (40 °C to 60 °C).

Relative density

About 0.925.

Refractive index

About 1.475.

IDENTIFICATION

A. Identification of fatty oils by thin-layer chromatography *(2.3.2)*. The chromatogram obtained is similar to the type chromatogram for wheat-germ oil.

B. It complies with the test for composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Maximum 0.9. If intended for use in the manufacture of parenteral dosage forms: maximum 0.3.

Peroxide value *(2.5.5)*

Maximum 10.0. If intended for use in the manufacture of parenteral dosage forms: maximum 5.0.

Unsaponifiable matter *(2.5.7)*

Maximum 5.0 per cent, determined on 5.0 g.

Alkaline impurities *(2.4.19)*

It complies with the test for alkaline impurities in fatty oils.

Composition of fatty acids

Gas chromatography *(2.4.22, Method C)*. Use the mixture of calibrating substances in Table 2.4.22.-3.

Composition of the fatty-acid fraction of the oil:

— *palmitic acid*: 14.0 per cent to 19.0 per cent;

— *stearic acid*: maximum 2.0 per cent;

— *oleic acid*: 12.0 per cent to 23.0 per cent;

— *linoleic acid*: 52.0 per cent to 59.0 per cent;

— *linolenic acid*: 3.0 per cent to 10.0 per cent;

— *eicosenoic acid:* maximum 2.0 per cent.

Brassicasterol *(2.4.23)*

Maximum 0.3 per cent of brassicasterol in the sterol fraction of the oil.

Water *(2.5.32)*

If intended for use in the manufacture of parenteral dosage forms: maximum 0.1 per cent, determined on 5.00 g. Use a mixture of equal volumes of *methanol R* and *methylene chloride R* as solvent.

STORAGE

In an airtight, well-filled container, protected from light.

LABELLING

The label states:

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms;

— whether the oil is obtained by mechanical means, by extraction or by a combination of the two.

Ph Eur

Virgin Wheat-germ Oil

General Notices

(Ph Eur monograph 1480)

Ph Eur

DEFINITION

Virgin wheat-germ oil is the fatty oil obtained from the germ of the grain of *Triticum aestivum* L. by cold expression or other suitable mechanical means.

CHARACTERS

A clear, light yellow or golden-yellow liquid, practically insoluble in water and in alcohol, miscible with light petroleum (40 °C to 60 °C).

It has a relative density of about 0.925 and a refractive index of about 1.475.

IDENTIFICATION

A. Carry out the identification of fatty oils by thin-layer chromatography *(2.3.2).* The chromatogram obtained is comparable with the typical chromatogram for wheat-germ oil.

B. It complies with test for composition of fatty acids (see Tests).

TESTS

Acid value *(2.5.1)*

Not more than 20.0, determined on 10.0 g.

Peroxide value *(2.5.5)*

Not more than 15.0.

Unsaponifiable matter *(2.5.7)*

Not more than 5.0 per cent, determined on 5.0 g.

Composition of fatty acids *(2.4.22, Method C)*

The fatty-acid fraction of the oil has the following composition:

— *palmitic acid*: 14.0 per cent to 19.0 per cent;

— *stearic acid*: not more than 2.0 per cent;

— *oleic acid*: 12.0 per cent to 23.0 per cent;

— *linoleic acid*: 52.0 per cent to 59.0 per cent;

- *linolenic acid* : 3.0 per cent to 10.0 per cent;
- *eicosenoic acid*: not more than 2.0 per cent.

Brassicasterol *(2.4.23)*

The sterol fraction of the oil contains not more than 0.3 per cent of brassicasterol.

Water *(2.5.32)*

Not more than 0.1 per cent, determined on 5.00 g by the micro-determination of water. Use a mixture of equal volumes of *methanol R* and *methylene chloride R* as solvent.

STORAGE

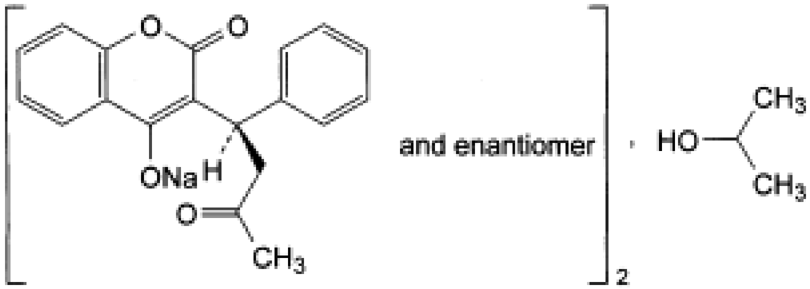
Store in an airtight, well-filled container, protected from light.

Ph Eur

Warfarin Sodium Clathrate

General Notices

(Ph Eur monograph 0699)



Action and use

Vitamin K epoxide reductase inhibitor; oral anticoagulant (coumarin).

Preparation

Warfarin Tablets

Ph Eur

DEFINITION

Mixture, in the form of a clathrate, of warfarin sodium (sodium 2-oxo-3-[(1*RS*)-3-oxo-1-phenylbutyl]-2*H*-1-benzopyran-4-olate) and propan-2-ol in molecular proportions 2:1 (equivalent to about 92 per cent of warfarin sodium).

Content:

- — *warfarin sodium*: 98.0 per cent to 102.0 per cent (anhydrous and propan-2-ol-free substance);
- — *propan-2-ol* : 8.0 per cent to 8.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent), soluble in acetone, very slightly soluble in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *warfarin sodium clathrate CRS.*

B. Dissolve 1 g in 10 ml of *water R*, add 5 ml of *nitric acid R* and filter. To the filtrate add 2 ml of *potassium dichromate solution R1* and shake for 5 min. Allow to stand for 20 min. The solution is greenish-blue when compared with a blank.

C. It gives reaction (b) of sodium *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear (*2.2.1*) and colourless (*2.2.2, Method II*).

Dissolve 1.0 g in *water R* and dilute to 20 ml with the same solvent.

pH *(2.2.3)*

7.6 to 8.6.

Dissolve 1.0 g in *carbon dioxide-free water R* and dilute to 100 ml with the same solvent.

Related substances

Liquid chromatography (*2.2.29*).

Solvent mixture *methanol R*, *water R* (25:75 *V/V*).

Test solution Dissolve 40.0 mg of the substance to be examined in the solvent mixture and dilute to 50.0 ml with the solvent mixture.

Reference solution (a) Dissolve 2 mg of *4-hydroxycoumarin R* (warfarin impurity B) and 2 mg of *benzalacetone R* (warfarin impurity C) in 25 ml of *methanol R* and dilute to 100 ml with *water R*.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the solvent mixture. Dilute 1.0 ml of this solution to 10.0 ml with the solvent mixture.

Column:

— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase*: spherical *nitrile silica gel for chromatography R* (5 µm);

— *temperature*: 30 °C.

Mobile phase *glacial acetic acid R*, acetonitrile R, *water R* (1:25:75 *V/V/V*).

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 260 nm.

Injection 20 µl.

Run time Twice the retention time of warfarin.

Relative retention With reference to warfarin (retention time = about 9 min): impurity B = about 0.4; impurity C = about 0.6.

System suitability Reference solution (a):

— *resolution*: minimum 2.0 between the peaks due to impurities B and C.

Limits:

— *correction factors*: for the calculation of content, multiply the peak areas of the following impurities by the corresponding correction factor: impurity B = 0.5; impurity C = 0.4;

— *impurities B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.10 per cent);

— *total*: not more than 3 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.3 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.05 per cent).

Phenolic ketones

The absorbance (*2.2.25*) is maximum 0.20 measured at 385 nm within 15 min of preparing the solution.

Dissolve 1.25 g in a 20 g/l solution of *sodium hydroxide R* and dilute to 10.0 ml with the same solvent.

Propan-2-ol

Gas chromatography (*2.2.28*).

Internal standard solution Dilute 1.0 ml of *propanol R* to 200.0 ml with *water R*.

Test solution (a) Dissolve 0.250 g of the substance to be examined in *water R* and dilute to 5.0 ml with the same solvent.

Test solution (b) Dissolve 0.50 g of the substance to be examined in the internal standard solution and dilute to 10.0 ml with the internal standard solution.

Reference solution Dilute 0.50 ml of *2-propanol R* to 100.0 ml with the internal standard solution.

Column:

— *size:* *l* = 1.5 m, Ø = 4 mm;

— *stationary phase*: *ethylvinylbenzene-divinylbenzene copolymer R* (125-150 µm).

Carrier gas *nitrogen for chromatography R*.

Flow rate 40 ml/min.

Temperature:

— *column*: 150 °C;

— *injection port*: 180 °C;

— *detector*: 200 °C.

Detection Flame ionisation.

Injection The chosen volume of the test solutions and the reference solution.

Calculate the content of propan-2-ol taking its density at 20 °C to be 0.785 g/ml.

Limit:

— *propan-2-ol* : 8.0 per cent to 8.5 per cent.

Water (*2.5.12*)

Maximum 0.3 per cent, determined on 2.500 g.

ASSAY

Dissolve 0.100 g in *0.01 M sodium hydroxide* and dilute to 100.0 ml with the same solvent. Dilute 10.0 ml of the solution to 100.0 ml with *0.01 M sodium hydroxide*. Dilute 10.0 ml of this solution to 100.0 ml with *0.01 M sodium hydroxide*. Measure the absorbance (*2.2.25*) at the absorption maximum at 308 nm.

Calculate the percentage content of warfarin sodium ($C_{19}H_{15}NaO_4$) taking the specific absorbance to be 431.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities *B, C.*

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): A.*

Ph Eur

Water for Injections

General Notices

(Ph Eur monograph 0169)

H_2O 18.02 *7732-18-5*

Ph Eur

DEFINITION

Water for the preparation of medicines for parenteral administration when water is used as vehicle (water for injections in bulk) and for dissolving or diluting substances or preparations for parenteral administration (sterilised water for injections).

WATER FOR INJECTIONS IN BULK

PRODUCTION

Water for injections in bulk is obtained from water that complies with the regulations on water intended for human consumption laid down by the competent authority or from purified water by distillation in an apparatus of which the parts in contact with the water are of neutral glass, quartz or suitable metal and which is fitted with an effective device to prevent the entrainment of droplets. The correct maintenance of the apparatus is essential. The first portion of the distillate obtained when the apparatus begins to function is discarded and the distillate is collected.

During production and subsequent storage, appropriate measures are taken to ensure that the total viable aerobic count is adequately controlled and monitored. Appropriate alert and action limits are set so as to detect adverse trends. Under normal conditions, an appropriate action limit is a total viable aerobic count *(2.6.12)* of 10 micro-organisms per 100 ml when determined by membrane filtration, using agar medium S, using at least 200 ml of water for injections in bulk and incubating at 30-35 °C for 5 days. For aseptic processing, stricter alert limits may need to be applied.

Total organic carbon *(2.2.44)*

Maximum 0.5 mg/l.

Conductivity

Determine the conductivity off-line or in-line under the following conditions.

EQUIPMENT

Conductivity cell:

— electrodes of a suitable material such as stainless steel;

— cell constant: within 2 per cent of the given value determined using a certified reference solution with a conductivity less than 1500 $\mu S\cdot cm^{-1}$.

Conductometer Resolution 0.1 µS·cm^{-1} on the lowest range.

System calibration (conductivity cell and conductometer):
— against one or more suitable certified standard solutions;

— accuracy: within 3 per cent of the measured conductivity plus 0.1 µS·cm^{-1}.

Conductometer calibration By means of precision resistors or equivalent devices, after disconnecting the conductivity cell, for all ranges used for conductivity measurement and cell calibration (with an accuracy within 0.1 per cent of the stated value, traceable to the official standard).

If in-line conductivity cells cannot be dismantled, system calibration may be performed against a calibrated conductivity cell placed close to the cell to be calibrated in the water flow.

PROCEDURE

Stage 1

1. Measure the conductivity without temperature compensation, recording simultaneously the temperature. Temperature-compensated measurement may be performed after suitable validation.

2. Using Table 0169.-1, find the closest temperature value that is not greater than the measured temperature. The corresponding conductivity value is the limit at that temperature.

3. If the measured conductivity is not greater than the value in Table 0169.-1, the water to be examined meets the requirements of the test for conductivity. If the conductivity is higher than the value in Table 0169.-1, proceed with stage 2.

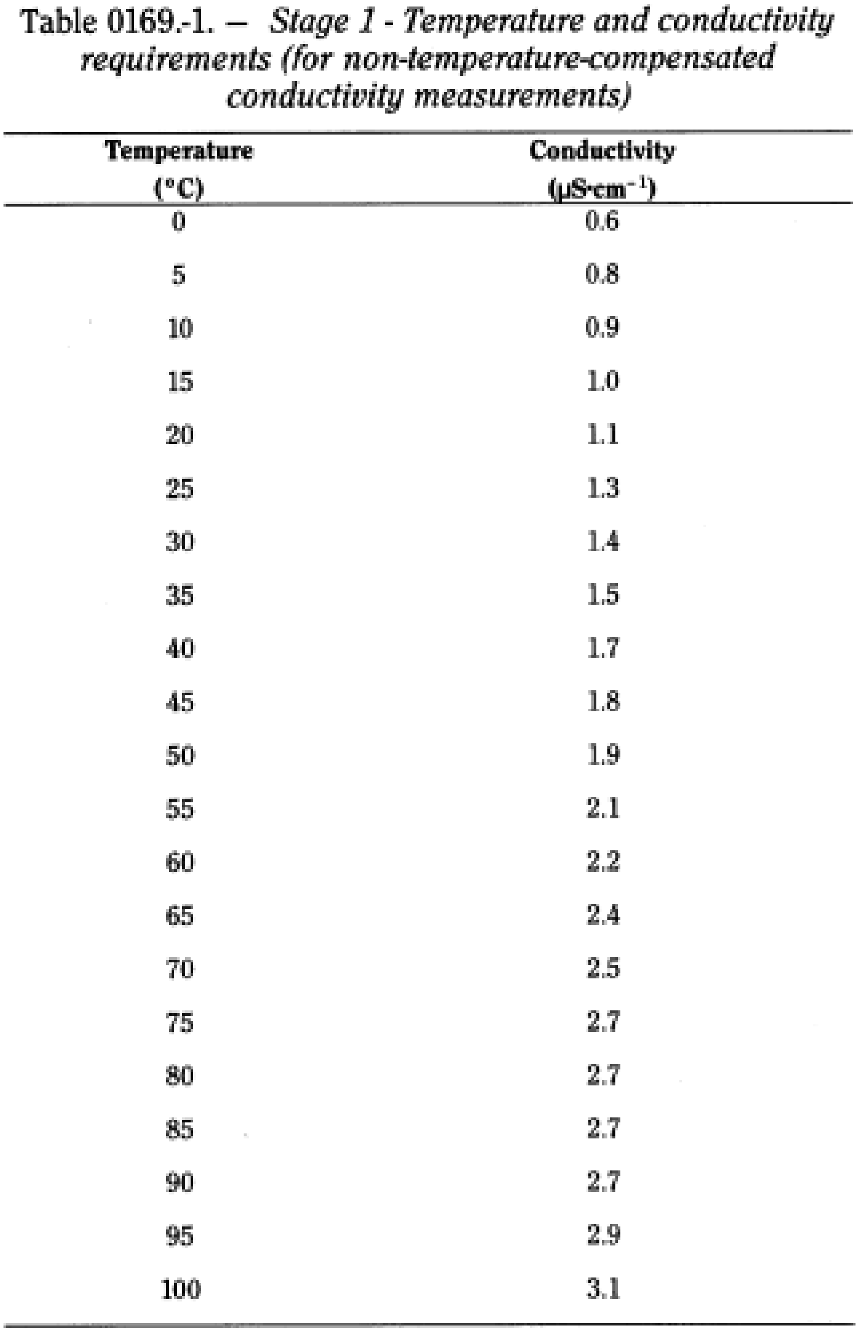

Table 0169.-1. — *Stage 1 - Temperature and conductivity requirements (for non-temperature-compensated conductivity measurements)*

Temperature (°C)	Conductivity (µS·cm^{-1})
0	0.6
5	0.8
10	0.9
15	1.0
20	1.1
25	1.3
30	1.4
35	1.5
40	1.7
45	1.8
50	1.9
55	2.1
60	2.2
65	2.4
70	2.5
75	2.7
80	2.7
85	2.7
90	2.7
95	2.9
100	3.1

Stage 2

4. Transfer a sufficient amount of the water to be examined (100 ml or more) to a suitable container, and stir the test sample. Adjust the temperature, if necessary, and while maintaining it at 25 ± 1 °C, begin vigorously agitating the test sample while periodically observing the conductivity. When the change in conductivity (due to uptake of atmospheric carbon dioxide) is less than 0.1 µS.cm^{-1} per 5 min, note the conductivity.

5. If the conductivity is not greater than 2.1 µS.cm^{-1}, the water to be examined meets the requirements of the test for conductivity. If the conductivity is greater than 2.1 µS.cm^{-1}, proceed with stage 3.

Stage 3

6. Perform this test within approximately 5 min of the conductivity determination in step 5 under stage 2, while maintaining the sample temperature at 25 ± 1 °C. Add a recently prepared saturated solution of *potassium chloride R* to the test sample (0.3 ml per 100 ml of

the test sample), and determine the pH *(2.2.3)* to the nearest 0.1 pH unit.

7. Using Table 0169.-2, determine the conductivity limit at the measured pH value in step 6. If the measured conductivity in step 4 under stage 2 is not greater than the conductivity requirements for the pH determined, the water to be examined meets the requirements of the test for conductivity. If either the measured conductivity is greater than this value or the pH is outside the range of 5.0-7.0, the water to be examined does not meet the requirements of the test for conductivity.

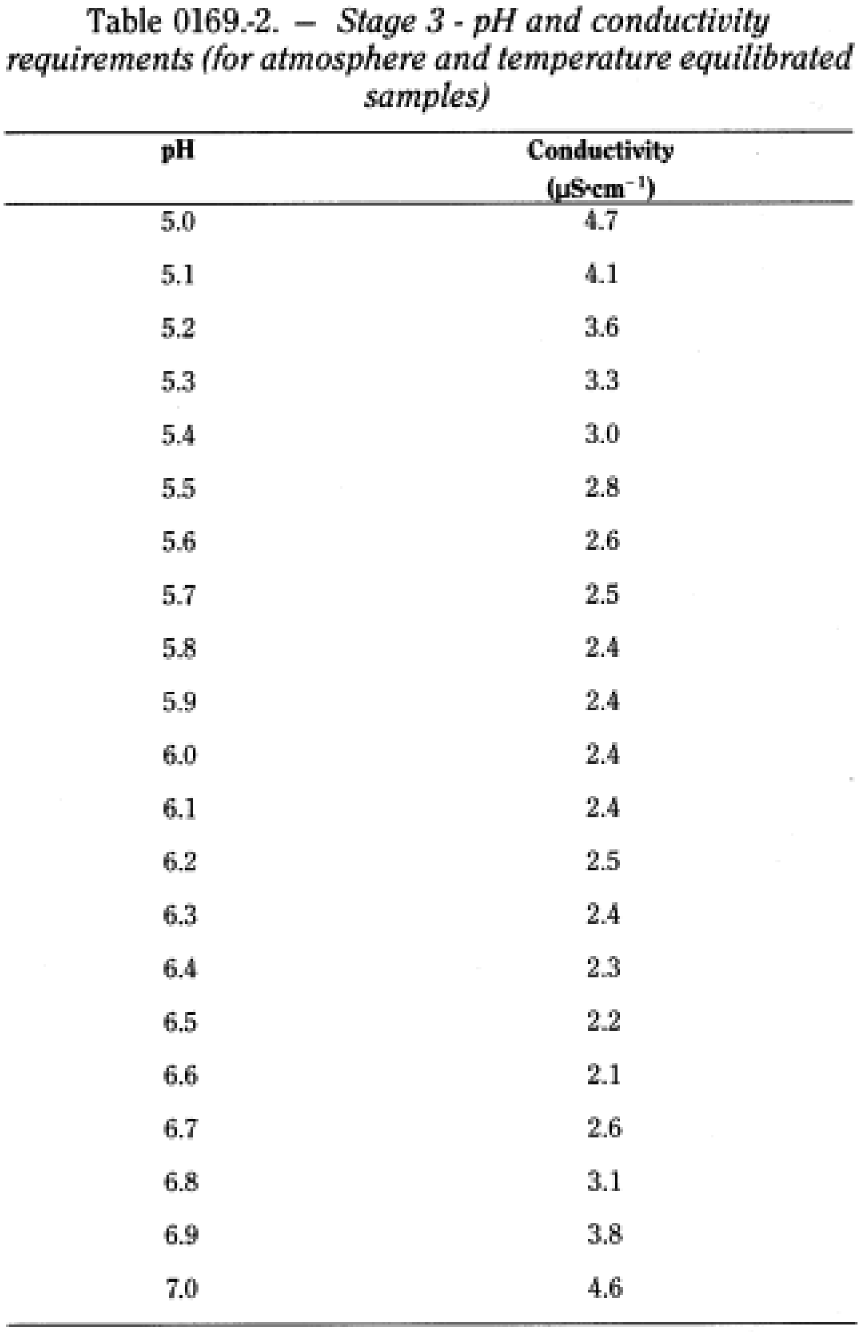

Table 0169.-2. — *Stage 3 - pH and conductivity requirements (for atmosphere and temperature equilibrated samples)*

pH	**Conductivity (µS·cm^{-1})**
5.0	4.7
5.1	4.1
5.2	3.6
5.3	3.3
5.4	3.0
5.5	2.8
5.6	2.6
5.7	2.5
5.8	2.4
5.9	2.4
6.0	2.4
6.1	2.4
6.2	2.5
6.3	2.4
6.4	2.3
6.5	2.2
6.6	2.1
6.7	2.6
6.8	3.1
6.9	3.8
7.0	4.6

In order to ensure the appropriate quality of the water, validated procedures and in-process-monitoring of the electrical conductivity and regular microbial monitoring are applied.

Water for injections in bulk is stored and distributed in conditions designed to prevent growth of micro-organisms and to avoid any other contamination.

CHARACTERS

Appearance

Clear and colourless liquid.

TESTS

Nitrates

Maximum 0.2 ppm.

Place 5 ml in a test-tube immersed in iced water, add 0.4 ml of a 100 g/l solution of *potassium chloride R,* 0.1 ml of *diphenylamine solution R* and, dropwise with shaking, 5 ml of *nitrogen-free sulphuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 ml of *nitrate-free water R* and 0.5 ml of *nitrate standard solution (2 ppm* NO_3*) R*.

Aluminium *(2.4.17)*

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 ml of the water to be examined add 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *distilled water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Heavy metals *(2.4.8)*

Maximum 0.1 ppm.

Heat 200 ml in a glass evaporating dish on a water-bath until the volume is reduced to 20 ml. 12 ml of the concentrated solution complies with limit test A. Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/ml.

STERILISED WATER FOR INJECTIONS

DEFINITION

Water for injections in bulk that has been distributed into suitable containers, closed and sterilised by heat in conditions which ensure that the product still complies with the test for bacterial endotoxins. Sterilised water for injections is free from any added substances.

Examined in suitable conditions of visibility, it is clear and colourless.

Each container contains a sufficient quantity of water for injections to permit the nominal volume to be withdrawn.

TESTS

Acidity or alkalinity

To 20 ml add 0.05 ml of *phenol red solution R.* If the solution is yellow, it becomes red on the addition of 0.1 ml of *0.01 M sodium hydroxide*; if red, it becomes yellow on the addition of 0.15 ml of *0.01 M hydrochloric acid*.

Conductivity

Maximum 25 µS·cm^{-1} for containers with a nominal volume of 10 ml or less; maximum 5 µS·cm^{-1} for containers with a nominal volume greater than 10 ml.

Use equipment and the calibration procedure as defined under Water for injections in bulk, maintaining the sample temperature at 25 ± 1 °C.

Oxidisable substances

Boil 100 ml with 10 ml of *dilute sulphuric acid R*. Add 0.2 ml of *0.02 M potassium permanganate* and boil for 5 min. The solution remains faintly pink.

Chlorides ***(2.4.4)***

Maximum 0.5 ppm for containers with a nominal volume of 100 ml or less.

15 ml complies with the limit test for chlorides. Prepare the standard using a mixture of 1.5 ml of *chloride standard solution (5 ppm Cl) R* and 13.5 ml of *water R*. Examine the solutions down the vertical axes of the tubes.

For containers with a nominal volume greater than 100 ml, use the following test: to 10 ml add 1 ml of *dilute nitric acid R* and 0.2 ml of *silver nitrate solution R2*. The solution shows no change in appearance for at least 15 min.

Nitrates

Maximum 0.2 ppm.

Place 5 ml in a test-tube immersed in iced water, add 0.4 ml of a 100 g/l solution of *potassium chloride R*, 0.1 ml of *diphenylamine solution R* and, dropwise with shaking, 5 ml of *nitrogen-free sulphuric acid R*. Transfer the tube to a water-bath at 50 °C. After 15 min, any blue colour in the solution is not more intense than that in a reference solution prepared at the same time in the same manner using a mixture of 4.5 ml of *nitrate-free water R* and 0.5 ml of *nitrate standard solution (2 ppm* NO_3*) R*.

Sulphates

To 10 ml add 0.1 ml of *dilute hydrochloric acid R* and 0.1 ml of *barium chloride solution R1*. The solution shows no change in appearance for at least 1 h.

Aluminium ***(2.4.17)***

Maximum 10 ppb, if intended for use in the manufacture of dialysis solutions.

Prescribed solution To 400 ml of the water to be examined add 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Reference solution Mix 2 ml of *aluminium standard solution (2 ppm Al) R*, 10 ml of *acetate buffer solution pH 6.0 R* and 98 ml of *distilled water R*.

Blank solution Mix 10 ml of *acetate buffer solution pH 6.0 R* and 100 ml of *distilled water R*.

Ammonium

Maximum 0.2 ppm.

To 20 ml add 1 ml of *alkaline potassium tetraiodomercurate solution R*. After 5 min, examine the solution down the vertical axis of the tube. The solution is not more intensely coloured than a standard prepared at the same time by adding 1 ml of *alkaline potassium tetraiodomercurate solution R* to a mixture of 4 ml of *ammonium standard solution (1 ppm* NH_4*) R* and 16 ml of *ammonium-free water R*.

Calcium and magnesium

To 100 ml add 2 ml of *ammonium chloride buffer solution pH 10.0 R*, 50 mg of *mordant black 11 triturate R* and 0.5 ml of *0.01 M sodium edetate*. A pure blue colour is produced.

Heavy metals *(2.4.8)*

Maximum 0.1 ppm.

Heat 200 ml in a glass evaporating dish on a water-bath until the volume is reduced to 20 ml. 12 ml of the concentrated solution complies with limit test A. Prepare the standard using 10 ml of *lead standard solution (1 ppm Pb) R*.

Residue on evaporation

Maximum 4 mg (0.004 per cent) for containers with a nominal volume of 10 ml or less; maximum 3 mg (0.003 per cent) for containers with a nominal volume greater than 10 ml.

Evaporate 100 ml to dryness on a water-bath and dry in an oven at 100-105 °C.

Particulate contamination

Sub-visible particles *(2.9.19)*. It complies with test A or test B, as appropriate.

Sterility *(2.6.1)*

It complies with the test for sterility.

Bacterial endotoxins *(2.6.14)*

Less than 0.25 IU/ml.

Ph Eur

Wool Alcohols

General Notices

Wool Wax Alcohols

(Ph Eur monograph 0593)

Preparation

Wool Alcohols Ointment

Ph Eur

DEFINITION

Mixture of sterols and higher aliphatic alcohols from wool fat. It may contain not more than 200 ppm of butylhydroxytoluene.

Content

Minimum 30.0 per cent of cholesterol.

CHARACTERS

Appearance

Pale-yellow or brownish-yellow, brittle mass becoming plastic on heating.

Solubility

Practically insoluble in water, soluble in methylene chloride and in boiling ethanol, slightly soluble in alcohol (90 per cent *V/V*).

IDENTIFICATION

Dissolve 50 mg in 5 ml of *methylene chloride R* and add 1 ml of *acetic anhydride R* and 0.1 ml of *sulphuric acid R*. Within a few seconds, a green colour develops.

TESTS

Appearance of solution

To 1.0 g add 10 ml of *light petroleum R1* and shake while warming in a water-bath. The substance dissolves completely. After cooling, the solution is clear *(2.2.1)*.

Alkalinity

Dissolve 2.0 g in 25 ml of hot *alcohol (90 per cent V/V) R* and add 0.5 ml of *phenolphthalein solution R1*. No red colour develops.

Melting point *(2.2.15)*

Minimum 58 °C.

Melt the substance to be examined by heating in a water-bath at a temperature which exceeds the expected melting point by not more than 10 °C; introduce the substance to be examined into the capillary tubes and allow to stand at 15-17 °C for not less than 16 h.

Acid value ***(2.5.1)***

Maximum 2.0.

If necessary, heat in a water-bath under a reflux condenser to dissolve the substance to be examined.

Hydroxyl value ***(2.5.3, Method A)***

120 to 180.

Peroxide value ***(2.5.5, Method A*****)**

Maximum 15.

Take from the substance to be examined wedge-shaped pieces whose base consists of part of the surface. Melt the pieces before carrying out the determination. Before adding 0.5 ml of *saturated potassium iodide solution R*, cool the solution obtained to room temperature.

Saponification value ***(2.5.6)***

Maximum 12.0, determined on 2.00 g. Heat under reflux for 4 h.

Butylhydroxytoluene

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.20 g of methyl *decanoate R* in *carbon disulphide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *carbon disulphide R*.

Test solution (a) Dissolve 1.0 g of the substance to be examined in *carbon disulphide R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dissolve 1.0 g of the substance to be examined in *carbon disulphide R,* add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *carbon disulphide R*.

Reference solution Dissolve 0.20 g of *butylhydroxytoluene R* in *carbon disulphide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *carbon disulphide R*. To 1.0 ml of this solution add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *carbon disulphide R.*

Precolumn Column filled with silanised glass wool.

Column:

- *size:* l = 1.5 m, Ø = 4 mm;
- *stationary phase: silanised diatomaceous earth for gas chromatography R* impregnated with 10 per cent *m/m* of *poly(dimethyl)siloxane R.*

Carrier gas *nitrogen for chromatography R.*

Flow rate 40 ml/min.

Temperature:

— *column*: 150 °C;

— *injection port*: 180 °C;

— *detector*: 300 °C.

Detection Flame ionisation.

Limit:
— *butylhydroxytoluene*: maximum 200 ppm.

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 2.000 g by drying in an oven at 105 °C.

Total ash ***(2.4.16)***

Maximum 0.1 per cent.

Water-absorption capacity

Place 0.6 g of the substance to be examined and 9.4 g of *white soft paraffin R* in a mortar and melt on a water-bath. Allow to cool and incorporate 20 ml of *water R*, added in portions. Within 24 h no water is released from the almost white, ointment-like emulsion.

ASSAY

Dissolve 0.1000 g in 12 ml of hot *alcohol (90 per cent V/V) R*. Allow to stand for 18 h, filter through a sintered-glass filter (16) *(2.1.2)* and wash the filter with 2 quantities, each of 15 ml, of *alcohol (90 per cent V/V) R*. Combine the filtrate and washings, add 20 ml of a freshly prepared 10 g/l solution of *digitonin R* in *alcohol (90 per cent V/V) R* and heat to about 60 °C. Allow to cool, filter through a sintered-glass filter (16) *(2.1.2)*, wash the residue with 10 ml of *alcohol (90 per cent V/V) R* and dry to constant mass at 100-105 °C.

1 g of residue is equivalent to 0.239 g of cholesterol.

STORAGE

In a well-filled container, protected from light.

LABELLING

The label states, where applicable, the concentration of any added butylhydroxytoluene.

Ph Eur

Wool Fat

General Notices

Anhydrous Lanolin

(Ph Eur monograph 0134)

Ph Eur

DEFINITION

Purified, anhydrous, waxy substance obtained from the wool of sheep (*Ovis aries*). It may contain not more than 200 ppm of butylhydroxytoluene.

CHARACTERS

Appearance

Yellow, unctuous substance. When melted, it is a clear or almost clear, yellow liquid. A solution in light petroleum is opalescent.

Solubility

Practically insoluble in water, slightly soluble in boiling anhydrous ethanol.

It has a characteristic odour.

IDENTIFICATION

A. In a test-tube, dissolve 0.5 g in 5 ml of *methylene chloride R* and add 1 ml of acetic anhydride R and 0.1 ml of *sulphuric acid R*. A green colour develops.

B. Dissolve 50 mg in 5 ml of *methylene chloride R*, add 5 ml of *sulphuric acid R* and shake. A red colour develops and an intense green fluorescence appears in the lower layer when examined in daylight, with illumination from the rear of the observer.

TESTS

Water-soluble acid or alkaline substances

Melt 5.0 g on a water-bath and shake vigorously for 2 min with 75 ml of *water R* previously heated to 90-95 °C. Allow to cool and filter through filter paper previously rinsed with *water R.* To 60 ml of the filtrate (which may not be clear) add 0.25 ml of *bromothymol blue solution R1.* Not more than 0.2 ml of *0.02 M hydrochloric acid* or 0.15 ml of *0.02 M sodium hydroxide* is required to change the colour of the indicator.

Drop point *(2.2.17)*

38 °C to 44 °C.

To fill the metal cup, melt the wool fat on a water-bath, cool to about 50 °C, pour into the cup and allow to stand at 15-20 °C for 24 h.

Water-absorption capacity

Place 10 g of molten wool fat in a mortar and allow to cool to room temperature. Weigh the mortar. Add *water R* in portions of 0.2-0.5 ml from a burette, stirring vigorously after each addition to incorporate the *water R*. Instead of a pestle, use a high-density polypropylene cylindrical rod (120 mm long and 10 mm in diameter, for example). The end-point is reached when visible droplets remain which cannot be incorporated. Weigh the mortar again and determine the amount of water absorbed by weight difference. Not less than 20 g of *water R* is absorbed.

Acid value *(2.5.1)*

Maximum 1.0, determined on 5.0 g dissolved in 25 ml of the prescribed mixture of solvents.

Peroxide value *(2.5.5, Method A)*

Maximum 20.

Before adding 0.5 ml of saturated *potassium iodide solution R*, cool the solution obtained to room temperature.

Saponification value *(2.5.6)*

90 to 105, determined on 2.00 g while heating under reflux for 4 h.

Water-soluble oxidisable substances

To 10 ml of the filtrate obtained in the test for water-soluble acid or alkaline substances add 1 ml of *dilute sulphuric acid R* and 0.1 ml of *0.02 M potassium permanganate*. After 10 min, the solution is not completely decolourised.

Butylhydroxytoluene

Gas chromatography *(2.2.28)*.

Internal standard solution Dissolve 0.2 g of *methyl decanoate R* in *carbon disulphide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *carbon disulphide R.*

Test solution (a) Dissolve 1.0 g of the substance to be examined in *carbon disulphide R* and dilute to 10.0 ml with the same solvent.

Test solution (b) Dissolve 1.0 g of the substance to be examined in *carbon disulphide R*, add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *carbon disulphide R*.

Reference solution Dissolve 0.2 g of *butylhydroxytoluene R* in *carbon disulphide R* and dilute to 100.0 ml with the same solvent. Dilute 1.0 ml of the solution to 10.0 ml with *carbon disulphide R*. To 1.0 ml of this solution add 1.0 ml of the internal standard solution and dilute to 10.0 ml with *carbon disulphide R.*

Column:

- *size:* l = 1.5 m, Ø = 4 mm;
- *stationary phase*: silanised diatomaceous earth for *gas chromatography R* impregnated with 10 per cent *m/m* of *poly(dimethyl)siloxane R*.

The column is preceded by a column containing silanised glass wool.

Carrier gas nitrogen for chromatography R.

Flow rate 40 ml/min.

Temperature:
- *column*: 150 °C;
- *injection port:* 180 °C;
- *detector*: 300 °C.

Detection Flame ionisation.

Limit:
- *butylhydroxytoluene*: maximum 200 ppm.

Paraffins

Maximum 1.0 per cent.

The tap and cotton plugs used must be free from grease. Prepare a column of anhydrous aluminium oxide 0.23 m long and 20 mm in diameter by adding a slurry of anhydrous *aluminium oxide R* and *light petroleum R1* to a glass tube fitted with a tap and containing *light petroleum R1* (before use, dehydrate the anhydrous aluminium oxide by heating it in an oven at 600 °C for 3 h). Allow to settle and reduce the depth of the layer of solvent above the column to about 40 mm. Dissolve 3.0 g of the substance to be examined in 50 ml of warm *light petroleum R1*, cool, pass the solution through the column at a flow rate of 3 ml/min and wash with 250 ml of *light petroleum R1*. Concentrate the combined eluate and washings to low bulk by distillation, evaporate to dryness on a water-bath and heat the residue at 105 °C for periods of 10 min until 2 successive weighings do not differ by more than 1 mg. The residue weighs a maximum of 30 mg.

Pesticide residues

Maximum 0.05 ppm for each organochlorine pesticide, 0.5 ppm for each other pesticide and 1 ppm for the sum of all the pesticides.

All glassware used is thoroughly washed using phosphate-free detergent as follows. The glassware is immersed in a bath of detergent solution (5 per cent in deionised water) and allowed to soak for 24 h. The detergent is washed off with copious amounts of acetone and hexane for pesticide analysis. It is important to keep glassware specifically for pesticide analyses, it must not be mixed up with glassware used for other applications. The glassware used must be free of chlorinated solvents, plastics and rubber materials, in particular phthalate plasticisers, oxygenated compounds and nitrogenated solvents such as acetonitrile. Use hexane, toluene and acetone for pesticide analysis. Use HPLC grade reagents for ethyl acetate, cyclohexane and water.

The test consists of the isolation of pesticide residues by size-exclusion chromatography *(2.2.30)* followed by solid phase extraction and identification by gas chromatography coupled with an electron capture detector or a thermionic detector.

ISOLATION OF THE PESTICIDE RESIDUES

As detector, use a UV-visible spectrophotometer set at a wavelength of 254 nm to calibrate the chromatographic column for gel permeation.

Calibration is extremely important in gel permeation chromatography to check that the pressure, solvent flow rate, solvent ratio, temperature and column conditions remain constant. The gel permeation column is to be calibrated at regular intervals using a standard mixture prepared as follows: into a 1000 ml volumetric flask, introduce 50.00 g of *maize oil R*, 2.00 g of *di(2-ethylhexyl) phthalate R*, 0.20 g of *methoxychlor R*, 50.0 mg of *perylene R*, 50.0 mg of *naphthalene R*, and 80.0 mg of *sulphur R*. Dilute to 1000.0 ml with a mixture of equal volumes of *cyclohexane R* and *ethyl acetate R.*

To calibrate the column, set the mobile phase at a flow rate of 5 ml/min with a mixture of equal volumes of *cyclohexane R* and *ethyl acetate R*. Inject 5 ml of the standard mixture and record the resulting chromatogram. The retention times for the analytes must not vary by more than ± 5 per cent between calibrations. If the retention time shift is greater than ± 5 per cent, take corrective action. Excessive retention time shifts may be caused by:

— poor laboratory temperature control;

— the pump containing air; this can be verified by measuring the flow rate: collect 25 ml of column eluate in a volumetric flask and record the time (300 ± 5 s);

— a leak in the system.

Changes in pressure, in mobile phase flow rate or in column temperature conditions, as well as column contamination, can affect pesticide retention times and are to be monitored. If the flow rate or column pressure are outside desired bands the guard column or column is to be replaced.

Test solution In a volumetric flask, dissolve 1 g of wool fat, accurately weighed, in a mixture of 1 volume of ethyl acetate *R* and 7 volumes of *cyclohexane R.* Add 1 ml of an internal standard (2 ppm) *either isodrin R* or *ditalimphos R* and dilute to 20 ml. *The internal standard solutions are used to establish that recoveries of the pesticides from the GPC purification stage, evaporation and solid phase extraction stage are at acceptable levels. Recovery levels of the internal standard solutions from the wool fat are determined by comparing the peak areas of the wool fat extracts with peak areas of solutions of the internal standards.*

Guard column:

— *size*: *l* = 0.075 m, Ø = 21.2 mm;

— *stationary phase: styrene-divinylbenzene copolymer R* (5 µm).

Gel permeation column:

— *size*: *l* = 0.3 m, Ø = 21.2 mm;

— *stationary phase: styrene-divinylbenzene copolymer R* (5 µm).

Mobile phase *ethyl acetate R, cyclohexane R* (1:7 *V/V*).

Flow rate 5 ml/min.

Detection Spectrophotometer at 254 nm.

Inject 5 ml of the test solution. Discard the first 95 ml (19 min) of eluate containing the substance to be examined. Collect the next 155 ml of eluate (31 min) containing any pesticide residues in an evaporating vessel.

Place the 155 ml of the eluate collected from the gel permeation chromatography column into an evaporating vessel. Place this vessel in an autoevaporator setting the water-bath temperature at 45 °C and the nitrogen pressure at 55 kPa. Evaporate the eluate down to 0.5 ml.

To prepare the solid phase extraction cartridges take some magnesium silicate for *pesticide residue analysis R* and heat it in a muffle furnace at 700 °C for 4 h to remove moisture and polychlorinated biphenyls. Subsequently allow the magnesium silicate to cool for 2 h and transfer it directly to an oven at 100-105 °C, and allow to stand for 30 min. Transfer the magnesium silicate to a stoppered glass jar and allow to equilibrate for 48 h. This material may be used for up to 2 weeks. After that period the magnesium silicate is to be reactivated, by heating at 600 °C for 2 h in a muffle furnace. Remove the magnesium silicate from the furnace, cool and store in a stoppered glass jar. The magnesium silicate is deactivated by adding 1 per cent of *water R*. After the water has been added, shake the magnesium silicate intermittently over 15 min just prior to use. The deactivated magnesium silicate is suitable for use for up to 1 week. It is essential that only deactivated magnesium silicate is used.

Take a 6 ml empty solid phase extraction cartridge and weigh into the cartridge 1 g of the deactivated magnesium silicate.

At this stage the GPC fraction still contains about 10 per cent of the substance to be examined, so further clean-up is necessary. A separate isolation procedure is carried out a) for organochlorine and synthetic pyrethroid pesticides and b) for organophosphorus pesticides. Place a preconditioned solid phase extraction cartridge containing I g of deactivated *magnesium silicate for pesticide residue analysis R* onto a vacuum manifold.

Condition the cartridge by adding 10 ml of *toluene R* and allowing the solvent to elute through the cartridge. Place the 0.5 ml of the solvent fraction from the evaporating vessel on the preconditioned cartridge. Elute the pesticide fractions from the cartridges using 20 ml of either of the 2 different solvent systems shown below:

a) for determination of the organochlorine and *synthetic pyrethroid pesticides: toluene R*; a very small amount of the substance to be examined is co-eluted;

b) for determination of the organophosphorus pesticides: a mixture of 2 volumes of *acetone R* and 98 volumes of *toluene R*; this solvent system is used to elute all the pesticides including the more polar organophosphorus pesticides; unfortunately, some of the substance to be examined is co-eluted with this solvent system, which can interfere with the electron capture detector.

Collect the eluate from the extraction cartridges in 25 ml glass vials. Quantitatively transfer the eluate to an evaporating vessel, washing the vial with 3 quantities, each of 10 ml, of *hexane R*.

Place the evaporating vessel on the autoevaporator and evaporate the solid phase extraction fractions down to 0.5 ml. The water-bath temperature is set at 45 °C and the nitrogen pressure is 55 kPa.

Examine the residues by gas chromatography *(2.2.28)* using electron capture and thermionic detectors as described below.

Recovery Calculate the recovery correction factor (R_{cf}) of the internal standards *(ditalimphos R or isodrin R)* added to the test solution using the following expression:

$$\frac{A_2}{A_1} \times 100$$

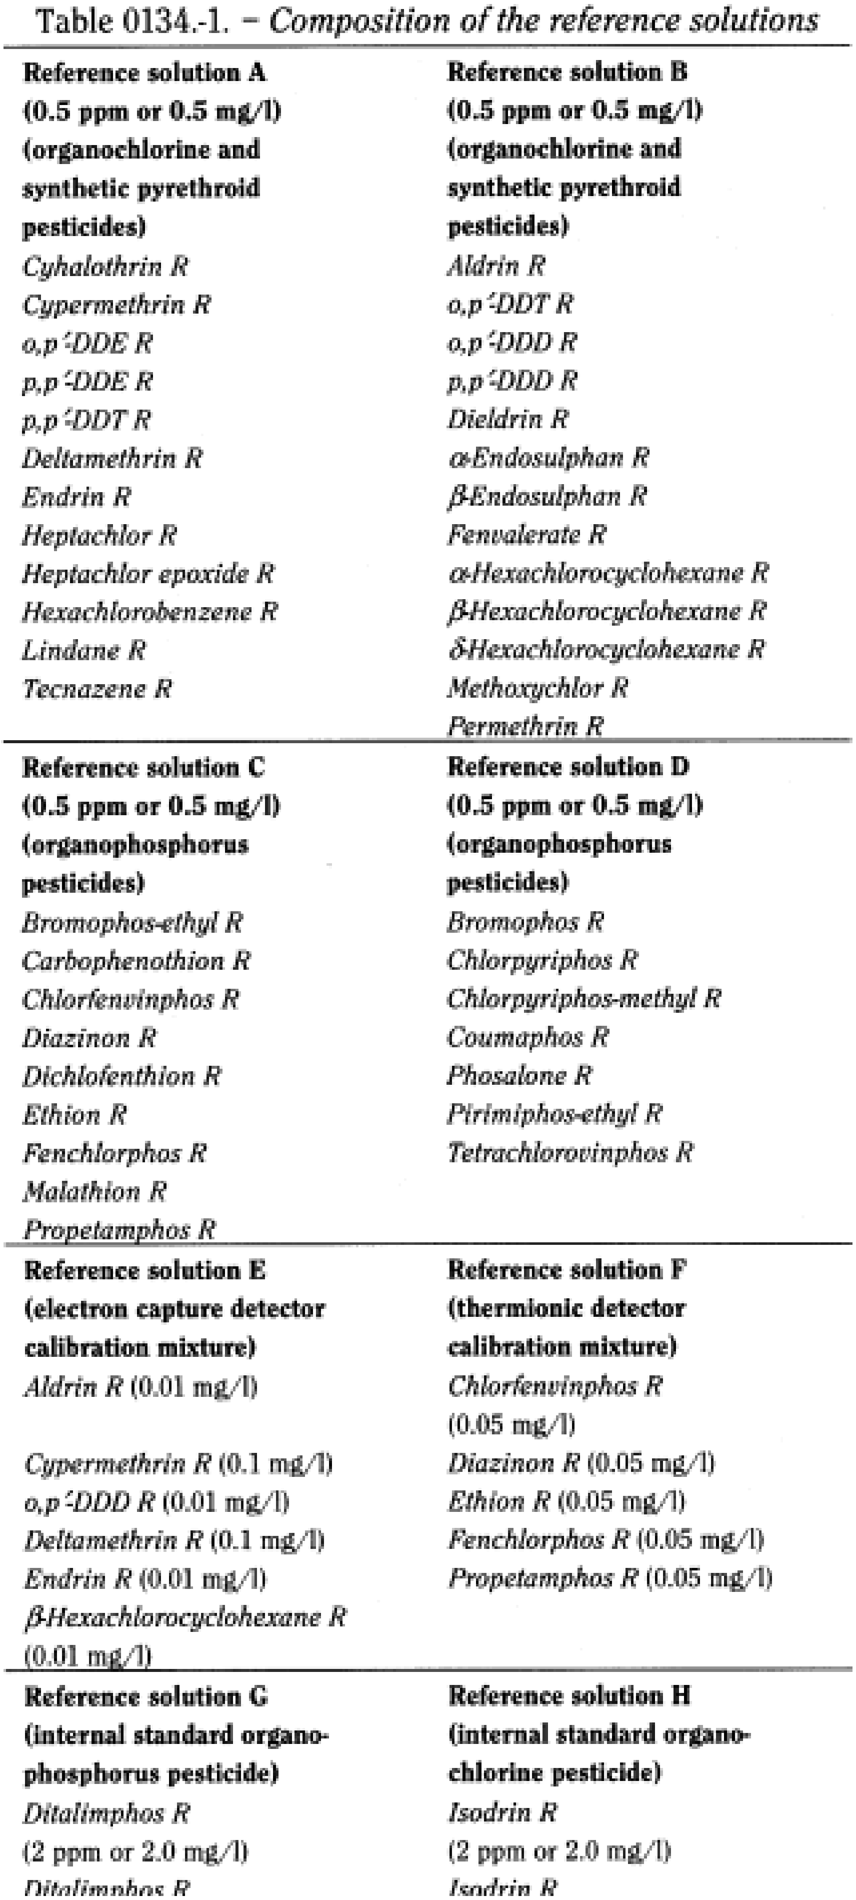
A_1 = peak area of an internal standard 1 ppm in solution

A_2 = peak area of internal standard extracted from the test solution

5 ml of the 20 ml test solution containing 1 ml of 2 ppm internal standard concentrated to 0.5 ml is equivalent to 1 ppm of the internal standard in the solution.

If the recovery of the internal standards falls outside the range of 70 per cent to 110 per cent the test is not valid.

Table 0134.-1. – *Composition of the reference solutions*



Reference solution A (0.5 ppm or 0.5 mg/l) (organochlorine and synthetic pyrethroid pesticides) *Cyhalothrin R* *Cypermethrin R* *o,p′-DDE R* *p,p′-DDE R* *p,p′-DDT R* *Deltamethrin R* *Endrin R* *Heptachlor R* *Heptachlor epoxide R* *Hexachlorobenzene R* *Lindane R* *Tecnazene R*	**Reference solution B (0.5 ppm or 0.5 mg/l) (organochlorine and synthetic pyrethroid pesticides)** *Aldrin R* *o,p′-DDT R* *o,p′-DDD R* *p,p′-DDD R* *Dieldrin R* *α-Endosulphan R* *β-Endosulphan R* *Fenvalerate R* *α-Hexachlorocyclohexane R* *β-Hexachlorocyclohexane R* *δ-Hexachlorocyclohexane R* *Methoxychlor R* *Permethrin R*

Reference solution E (electron capture detector calibration mixture) *Aldrin R* (0.01 mg/l) *Cypermethrin R* (0.1 mg/l) *o,p′-DDD R* (0.01 mg/l) *Deltamethrin R* (0.1 mg/l) *Endrin R* (0.01 mg/l) *β-Hexachlorocyclohexane R* (0.01 mg/l)	**Reference solution F (thermionic detector calibration mixture)** *Chlorfenvinphos R* (0.05 mg/l) *Diazinon R* (0.05 mg/l) *Ethion R* (0.05 mg/l) *Fenchlorphos R* (0.05 mg/l) *Propetamphos R* (0.05 mg/l)
Reference solution G (internal standard organophosphorus pesticide) *Ditalimphos R* (2 ppm or 2.0 mg/l) *Ditalimphos R*	**Reference solution H (internal standard organochlorine pesticide)** *Isodrin R* (2 ppm or 2.0 mg/l) *Isodrin R*

(1 ppm or 1.0 mg/l)	(1 ppm or 1.0 mg/l)

Reference solutions Prepare reference solutions of pesticides using the pesticides standards at a concentration of 0.5 ppm (see composition of reference solutions A to D in Table 0134.-1). Commercially available pesticides may be purchased. The individual standards have a concentration of 10 ppm.

At the same time prepare solutions of pesticides equivalent to the limit of detection of the method (see recommended compositions in Table 0134.-1). These reference solutions are used to optimise the electron capture detector and thermionic detector to achieve the detection limits of the method (reference solutions E and F).

To prepare the reference solutions at the different concentrations use a calibrated pipette and volumetric flasks. To prepare the internal standard solutions G and H use a four-place analytical balance, pipette and volumetric flasks.

IDENTIFICATION AND QUANTIFICATION OF THE PESTICIDE RESIDUES

To identify any pesticide residues compare the chromatograms obtained with chromatograms obtained with reference solutions A to D.

The identity of the pesticides can be confirmed by spiking samples or overlaying chromatograms using an integration package on a computer. The interpretation of pesticides in trace residue analyses is extremely complex. The detectors, particularly the electron capture detector, are prone to interference, both from the substance to be examined itself, and from solvents, reagents and apparatus used in the extraction. These peaks can easily be misinterpreted or quoted as a false positive. Confirmation of pesticides can be achieved by running samples and standards on different capillary columns (see chromatographic systems A or B described below). The peaks can be identified by using the information in Table 0134.-2.

A knowledge of the different responses the pesticides have with the 2 detectors is useful in identification of unknown peaks.

Once the pesticides have been identified, calculate the content of each pesticide using the following expression:

$$C_{\mathrm{P}} = \frac{P_{\mathrm{P}} \times D \times C_{\mathrm{e}}}{P_{\mathrm{e}}} \times \frac{100}{R_{\mathrm{cf}}}$$

C_p = concentration of identified pesticide (ppm)

P_p = peak area of the individual pesticide in the test sample obtained

C_e = concentration of the individual pesticide in the external standard (ppm)

P_e = peak area of the individual pesticide in the external standard

D = dilution factor

R_{cf} = recovery correction factor

The dilution factor (D) can be defined as follows:

$$\frac{V_1}{m \times \frac{V_2}{V_3}}$$

V_1 = volume of sample obtained after the 2nd evaporation stage

m = sample weight

V_2 = GPC injection volume

V_3 = sample volumetric flask volume

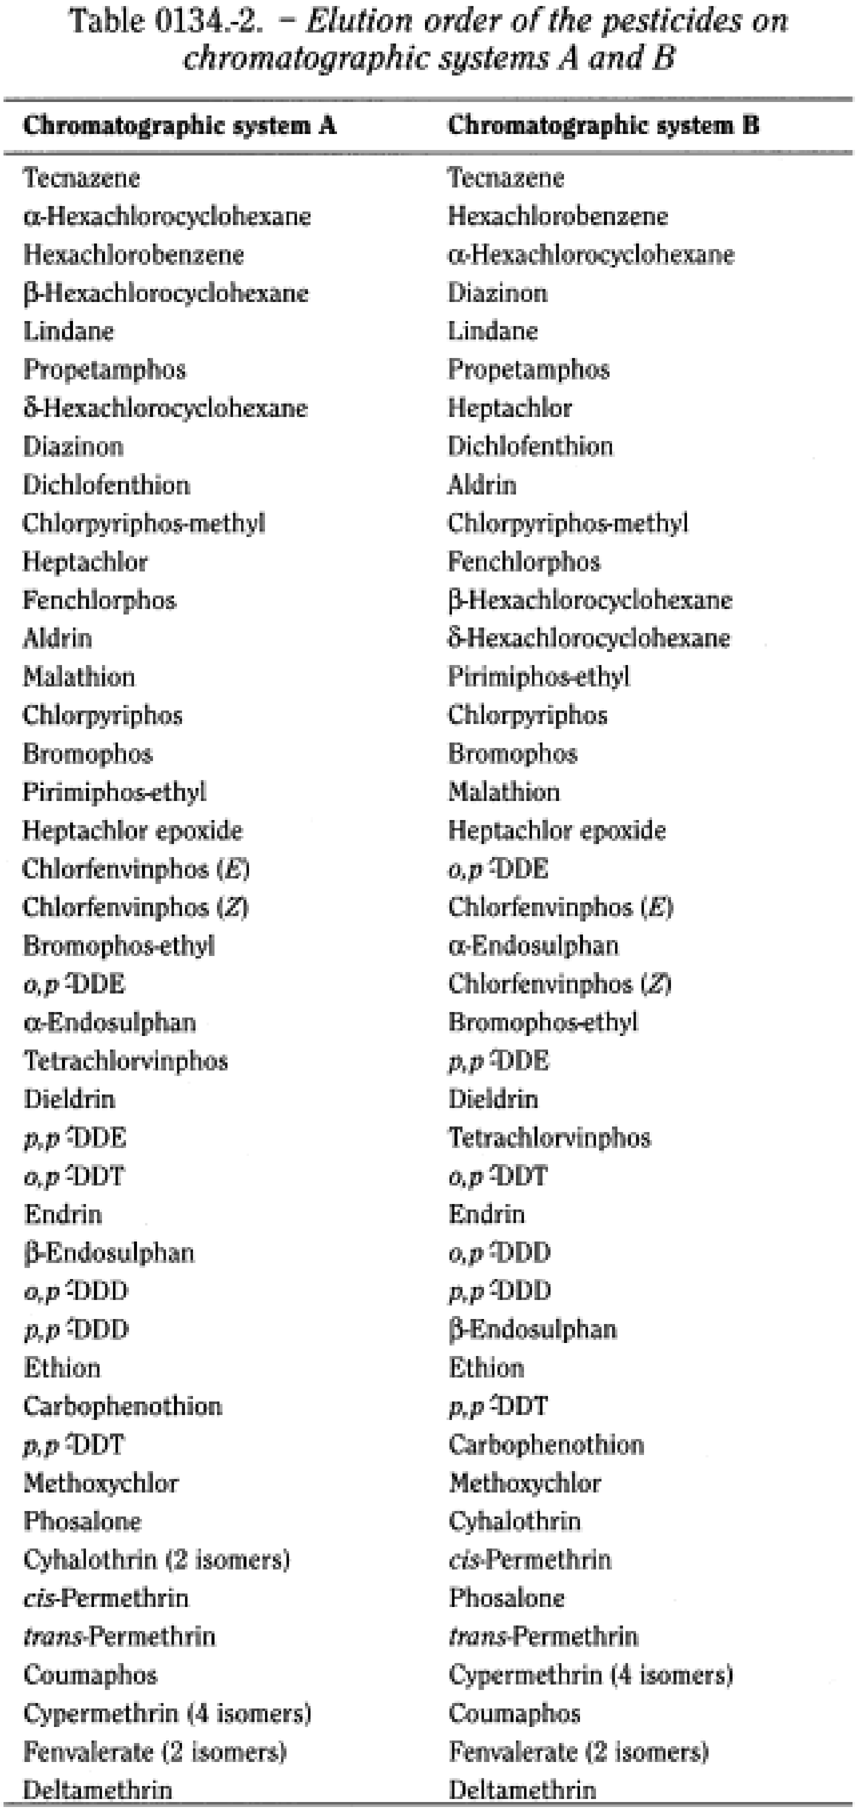

Table 0134.-2. – *Elution order of the pesticides on chromatographic systems A and B*

Chromatographic system A	Chromatographic system B
Tecnazene	Tecnazene
α-Hexachlorocyclohexane	Hexachlorobenzene
Hexachlorobenzene	α-Hexachlorocyclohexane
β-Hexachlorocyclohexane	Diazinon
Lindane	Lindane

Detector		350

Detection Electron capture or thermionic specific detector.

Injection 2 µl.

Chlorides

Maximum 150 ppm.

Boil 1.0 g with 20 ml of *ethanol (90 per cent V/V) R* in a round-bottomed flask fitted with a reflux condenser for 5 min. Cool, add 40 ml of *water R* and 0.5 ml of *nitric acid R* and filter. To the filtrate add 0.15 ml of a 10 g/l solution of *silver nitrate R* in *ethanol (90 per cent V/V) R*. Allow to stand for 5 min protected from light. Any opalescence in the solution is not more intense than that in a standard prepared at the same time by adding 0.15 ml of a 10 g/l solution of *silver nitrate R* in *ethanol (90 per cent V/V) R* to a mixture of 0.2 ml of *0.02 M hydrochloric acid*, 20 ml of *ethanol (90 per cent V/V) R*, 40 ml of *water R* and 0.5 ml of *nitric acid R*.

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C for 1 h.

Sulphated ash *(2.4.14)*

Maximum 0.15 per cent.

Ignite 5.0 g and use the residue to determine the sulphated ash.

STORAGE

At a temperature not exceeding 25 °C.

LABELLING

The label states, where applicable, the concentration of added butylhydroxytoluene.

Ph Eur

Xanthan Gum

General Notices

(Ph Eur monograph 1277)

Action and use

Excipient.

Ph Eur

DEFINITION

High-molecular-mass anionic polysaccharide produced by fermentation of carbohydrates with *Xanthomonas campestris*. It consists of a principal chain of β(1→4)-linked D-glucose units with trisaccharide side chains, on alternating anhydroglucose units, consisting of 1 glucuronic acid unit included between 2 mannose units. Most of the terminal units contain a pyruvate moiety and the mannose unit adjacent to the principal chain may be acetylated at C-6.

Xanthan gum has a relative molecular mass of approximately 1 × 10^6. It exists as the sodium, potassium or calcium salt.

Content

Minimum 1.5 per cent of pyruvoyl groups ($C_3H_3O_2$; M_r 71.1) (dried substance).

CHARACTERS

Appearance

White or yellowish-white, free-flowing powder.

Solubility

Soluble in water giving a highly viscous solution, practically insoluble in organic solvents.

IDENTIFICATION

A. In a flask, suspend 1 g in 15 ml of *0.1 M hydrochloric acid*. Close the flask with a fermentation bulb containing *barium hydroxide solution R* and heat carefully for 5 min. The barium hydroxide solution shows a white turbidity.

B. To 300 ml of *water R*, previously heated to 80 °C and stirred rapidly with a mechanical stirrer in a 400 ml beaker, add, at the point of maximum agitation, a dry blend of 1.5 g of *carob bean gum R* and 1.5 g of the substance to be examined. Stir until the mixture forms a solution, and then continue stirring for 30 min or longer. Do not allow the water temperature to drop below 60 °C during stirring. Discontinue stirring and allow the mixture to stand for at least 2 h. A firm rubbery gel forms after the temperature drops below 40 °C but no such gel forms in a 1 per cent control solution of the sample prepared in the same manner but omitting the carob bean gum.

TESTS

pH *(2.2.3)*

6.0 to 8.0 for a 10.0 g/l solution.

Viscosity *(2.2.10)*

Minimum 600 mPa·s.

Add 3.0 g within 45-90 s into 250 ml of a 12 g/l solution of *potassium chloride R* in a 500 ml beaker stirring with a low-pitch propeller-type stirrer rotating at 800 r/min. When adding the substance take care that agglomerates are destroyed. Add an additional quantity of 44 ml of *water R*, to rinse any adhering residue from the walls of the beaker. Stir the preparation at 800 r/min for 2 h whilst maintaining the temperature at 24 ± 1 °C. Determine the viscosity within 15 min at 24 ± 1 °C using a rotating viscosimeter set at 60 r/min and equipped with a rotating spindle 12.7 mm in diameter and 1.6 mm high which is attached to a shaft 3.2 mm in diameter. The distance from the top of the cylinder to the lower tip of the shaft being 25.4 mm, and the immersion depth being 50.0 mm.

2-Propanol

Gas chromatography *(2.2.28)*.

Internal standard solution Dilute 0.50 g of *2-methyl-2-propanol R* to 500 ml with *water R*.

Test solution To 200 ml of *water R* in a 1000 ml round-bottomed flask, add 5.0 g of the substance to be examined and 1 ml of a 10 g/l emulsion of *dimeticone R* in *liquid paraffin R*, stopper the flask and shake for 1 h. Distil about 90.0 ml, mix the distillate with 4.0 ml of the internal standard solution and dilute to 100.0 ml with *water R*.

Reference solution Dilute a suitable quantity of *2-propanol R*, accurately weighed, with *water R* to obtain a solution having a known concentration of 2-propanol of about 1 mg/ml. To 4.0 ml of this solution add 4.0 ml of the internal standard solution and dilute to 100.0 ml with *water R*.

Column:
- *size:* *l* = 1.8 m, Ø = 4.0 mm;
- *stationary phase*: *styrene-divinylbenzene copolymer R* (149-177 µm).

Carrier gas *helium for chromatography R.*

Flow rate 30 ml/min.

Temperature:
- *column*: 165 °C;
- *injection port and detector*: 200 °C.

Detection Flame ionisation.

Injection 5 µl.

Relative retention With reference to 2-propanol: 2-methyl-2-propanol = about 1.5.

Limit:
- *2-propanol*: maximum 750 ppm.

Other polysaccharides

Thin-layer chromatography *(2.2.27)*.

Test solution To 10 mg of the substance to be examined in a thick-walled centrifuge test tube add 2 ml of a 230 g/l solution of *trifluoroacetic acid R*, shake vigorously to dissolve the forming gel, stopper the test tube, and heat the mixture at 120 °C for 1 h. Centrifuge the hydrolysate, transfer the clear supernatant liquid carefully into a 50 ml flask, add 10 ml of *water R* and evaporate the solution to dryness under reduced pressure. Take up the residue thus obtained in 10 ml of *water R* and evaporate to dryness under reduced pressure. Wash 3 times with 20 ml of *methanol R* and evaporate under reduced pressure. To the resulting clear film which has no odour of acetic acid, add 0.1 ml of *water R* and 1 ml of *methanol R*. Centrifuge to separate the amorphous precipitate. Dilute the supernatant liquid, if necessary, to 1 ml with *methanol R*.

Reference solution Dissolve 10 mg of *glucose R* and 10 mg of *mannose R* in 2 ml of *water R* and dilute to 10 ml with *methanol R*.

Plate *TLC silica gel plate R.*

Mobile phase 16 g/l solution of *sodium dihydrogen phosphate R, butanol R, acetone R* (10:40:50 *V/V/V*).

Application 5 µl, as bands.

Development Over a path of 15 cm.

Detection Spray with a solution of 0.5 g of *diphenylamine R* in 25 ml of *methanol R* to which 0.5 ml of *aniline R* and 2.5 ml of *phosphoric acid R* have been added. Heat for 5 min at 120 °C and examine in daylight.

System suitability Reference solution:

— the chromatogram shows 2 clearly separated greyish-brown zones due to glucose and mannose in the middle third.

Results The chromatogram obtained with the test solution shows 2 zones corresponding to the zones due to glucose and mannose in the chromatogram obtained with the reference solution. In addition, 1 weak reddish and 2 faint bluish-grey bands may be visible just above the starting line. 1 or 2 bluish-grey bands may also be seen in the upper quarter of the chromatogram. No other bands are visible.

Loss on drying *(2.2.32)*

Maximum 15.0 per cent, determined on 1.000 g by drying in an oven at 105 °C for 2.5 h.

Total ash *(2.4.16)*

6.5 per cent to 16.0 per cent.

Microbial contamination

Total viable aerobic count *(2.6.12)* not more than 10^3 bacteria and 10^2 fungi per gram, determined by plate count. It complies with the test for *Escherichia coli* *(2.6.13)*.

ASSAY

Test solution Dissolve a quantity of the substance to be examined corresponding to 120.0 mg of the dried substance in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution Dissolve 45.0 mg of *pyruvic acid R* in *water R* and dilute to 500.0 ml with the same solvent.

Place 10.0 ml of the test solution in a 50 ml round-bottomed flask, add 20.0 ml of *0.1 M hydrochloric acid* and weigh. Boil on a water-bath under a reflux condenser for 3 h. Weigh and adjust to the initial mass with *water R*. In a separating funnel mix 2.0 ml of the solution with 1.0 ml of *dinitrophenylhydrazine-hydrochloric solution R*. Allow to stand for 5 min and add 5.0 ml of *ethyl acetate R*. Shake and allow the solids to settle. Collect the upper layer and shake with 3 quantities, each of 5.0 ml, of *sodium carbonate solution R*. Combine the aqueous layers and dilute to 50.0 ml with *sodium carbonate solution R*. Mix. Treat 10.0 ml of the reference solution at the same time and in the same manner as for the test solution.

Immediately measure the absorbance *(2.2.25)* of the 2 solutions at 375 nm, using *sodium carbonate solution R* as the compensation liquid.

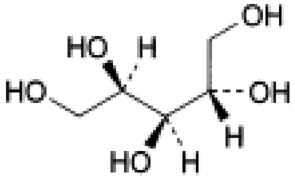
The absorbance of the test solution is not less than that of the reference solution, which corresponds to a content of pyruvic acid of not less than 1.5 per cent.

Ph Eur

Xylitol

General Notices

(Ph Eur monograph 1381)



$C_5H_{12}O_5$ 152.1 *87-99-0*

Action and use

Sweetening agent.

Ph Eur

DEFINITION

Xylitol contains not less than 98.0 per cent and not more than the equivalent of 102.0 per cent of *meso*-xylitol, calculated with reference to the anhydrous substance.

CHARACTERS

White or almost white, crystalline powder or crystals, very soluble in water, sparingly soluble in ethanol (96 per cent).

IDENTIFICATION

First identification B.

Second identification A, C.

A. Melting point *(2.2.14)*: 92 °C to 96 °C.

B. Examine by infrared absorption spectrophotometry *(2.2.24)*, comparing with the spectrum obtained with *xylitol CRS*. Examine the substance prepared as a mull in *liquid paraffin R*.

C. Examine by thin-layer chromatography *(2.2.27)*, using a *TLC silica gel G plate R*.

Test solution Dissolve 25 mg of the substance to be examined in *water R* and dilute to 5.0 ml with the same solvent.

Reference solution (a) Dissolve 25 mg of *xylitol CRS* in *water R* and dilute to 5.0 ml with the same solvent.

Reference solution (b) Dissolve 25 mg of *mannitol CRS* and 25 mg of *xylitol CRS* in *water R* and dilute to 5 ml with the same solvent.

Apply to the plate 2 µl of each solution. Develop over a path of 17 cm using a mixture of 10 volumes of *water R*, 20 volumes of *ethyl acetate R* and 70 volumes of *propanol R*. Allow the plate to dry in air and spray with *4-aminobenzoic acid solution R*. Dry the plate in a current of cold air until the acetone is removed. Heat the plate at 100 °C for 15 min. Allow to cool and spray with a 2 g/l solution of *sodium periodate R*. Dry the plate in a current of cold air. Heat the plate at 100 °C for 15 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 2 clearly separated spots.

TESTS

Appearance of solution

Dissolve 2.5 g in *water R* and dilute to 50.0 ml with the same solvent. The solution is not more opalescent than reference suspension IV *(2.2.1)* and not more intensely coloured than reference solution BY_7 *(2.2.2, Method II).*

Conductivity *(2.2.38)*

Not more than 20 $\mu S \cdot cm^{-1}$.

Dissolve 20.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100.0 ml with the same solvent. Measure the conductivity of the solution while gently stirring with a magnetic stirrer.

Reducing sugars

Dissolve 5.0 g in 6 ml of *water R* with the aid of gentle heat. Cool and add 20 ml of *cupri-citric solution R* and a few glass beads. Heat so that boiling begins after 4 min and maintain boiling for 3 min. Cool rapidly and add 100 ml of a 2.4 per cent *V/V* solution of *glacial acetic acid R* and 20.0 ml of *0.025 M iodine*. With continuous shaking, add 25 ml of a mixture of 6 volumes of *hydrochloric acid R* and 94 volumes of *water R* and, when the precipitate has dissolved, titrate the excess of iodine with *0.05 M sodium thiosulphate* using 1 ml of *starch solution R*, added towards the end of the titration, as indicator. Not less than 12.8 ml of *0.05 M sodium thiosulphate* is required (0.2 per cent, calculated as glucose equivalent).

Related substances

Examine by gas chromatography *(2.2.28)* as described under Assay. The sum of the percentage contents of the related substances in the chromatogram obtained with test solution (a) is not greater than 2.0 per cent.

Lead *(2.4.10)*

It complies with the limit test for lead in sugars (0.5 ppm). Dissolve the substance to be examined in 150.0 ml of the prescribed mixture of solvents.

Nickel *(2.4.15)*

It complies with the limit test for nickel in polyols (1 ppm). Dissolve the substance to be examined in 150.0 ml of the prescribed mixture of solvents.

Water *(2.5.12)*

Not more than 1.0 per cent, determined on 1.00 g.

Bacterial endotoxins *(2.6.14)*

If intended for use in the manufacture of parenteral dosage forms without a further appropriate procedure for the removal of bacterial endotoxins, less than 4 IU/g for parenteral dosage forms having a concentration of less than 100 g/l of xylitol and less than 2.5 IU/g for parenteral dosage forms having a concentration of 100 g/l or more of xylitol.

ASSAY

Examine by gas chromatography *(2.2.28)*, using erythritol as the internal standard.

Internal standard solution Dissolve 5 mg of *erythritol R* in *water R* and dilute to 25.0 ml with the same solvent.

Test solution (a) Dissolve 5.000 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Test solution (b) Dilute 1.0 ml of test solution (a) to 10.0 ml with *water R*.

Reference solution (a) Dissolve 5.0 mg each of *l-arabinitol CRS*, *galactitol CRS*, *mannitol CRS* and *sorbitol CRS* in *water R* and dilute to 20.0 ml with the same solvent.

Reference solution (b) Dissolve 50.0 mg of *xylitol CRS* in *water R* and dilute to 10.0 ml with the same solvent.

The chromatographic procedure may be carried out using:

— a stainless steel column 2 m long and 2 mm in internal diameter packed with acid washed *silanised diatomaceous earth for gas chromatography R* (150-180 µm) and impregnated with 3 per cent *m/m* of *poly[(cyanopropyl)(methyl)][(phenyl)(methyl)]siloxane R*;

— *nitrogen R* as the carrier gas at a flow rate of 30 ml/min;

— a flame-ionisation detector,

maintaining the temperature of the column at 170 °C for 1 min, then raising the temperature at a rate of 6 °C/min to 200 °C and maintaining the temperature of the injection port and of the detector at 250 °C.

Pipet 1.0 ml of reference solutions (a) and (b) and test solutions (a) and (b) into 4 separate 100 ml round-bottomed flasks. Add 1.0 ml of the internal standard solution separately to the flasks with test solution (a) and reference solution (a) and 5.0 ml of the internal standard solution separately to the flasks with test solution (b) and reference solution (b). Evaporate the respective mixtures to dryness in a water-bath at 60 °C with the aid of a rotary evaporator. Dissolve each dry residue in 1 ml of *anhydrous pyridine R* and add 1 ml of *acetic anhydride R* to each flask and boil each solution under reflux for 1 h to complete acetylation.

Inject 1 µl of each of the solutions obtained from the reference solutions and the test solutions.

When the chromatograms are recorded in the prescribed conditions, the relative retentions calculated with reference to xylitol are: erythritol about 0.3, arabinitol about 0.7, mannitol about 1.8, galactitol about 2.0 and sorbitol about 2.2.

Calculate the percentage content of $C_5H_{12}O_5$ from the expression:

$$\mathrm{T} \times \frac{m_t}{m_v} \times \frac{R_v}{R_t}$$

T = declared content of *xylitol CRS* in percentage

m_t = mass of *xylitol CRS* in 1 ml of reference solution (b), in milligrams

m_v = mass of the substance to be examined in 1 ml of test solution (b), in milligrams

R_t = ratio of the areas of the derivatised xylitol peak to the derivatised erythritol peak in the chromatogram obtained with reference solution (b)

R_v = ratio of the areas of the derivatised xylitol peak to the derivatised erythritol peak in the chromatogram obtained with test solution (b)

Calculate the percentage content of each related substance in the substance to be examined from the expression:

$$100 \times \frac{m_s}{m_u} \times \frac{R_u}{R_s}$$

m_s = mass of the respective component in 1 ml of reference solution (a), in milligrams

m_u = mass of the substance to be examined in 1 ml of test solution (a), in milligrams

R_s = ratio of the areas of the derivatised component peak to the derivatised erythritol peak in the chromatogram obtained with reference solution (a)

R_u = ratio of the areas of the derivatised component peak to the derivatised erythritol peak in the chromatogram obtained with test solution (a)

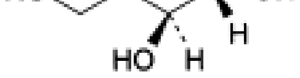
LABELLING

The label states:

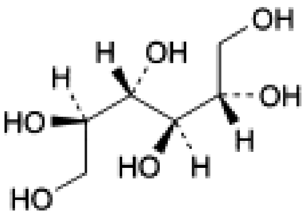
— where applicable, the maximum concentration of bacterial endotoxins;

— where applicable, that the substance is suitable for use in the manufacture of parenteral dosage forms.

IMPURITIES



A. L-arabinitol,



B. *meso*-galactitol,

C. mannitol,

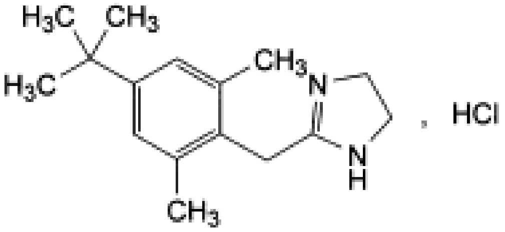
D. sorbitol.

Ph Eur

Xylometazoline Hydrochloride

General Notices

(Ph Eur monograph 1162)



$C_{16}H_{24}N_2$,HCl 280.8 *1218-35-5*

Action and use

Alpha-adrenoceptor agonist.

Preparation

Xylometazoline Nasal Drops

Ph Eur

DEFINITION

2-[4-(1,1-Dimethylethyl)-2,6-dimethylbenzyl]-4,5-dihydro-1*H*-imidazole hydrochloride.

Content

99.0 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Freely soluble in water, in ethanol (96 per cent) and in methanol.

IDENTIFICATION

First identification A, E.

Second identification B, C, D, E.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *xylometazoline hydrochloride CRS.*

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 20 mg of the substance to be examined in *methanol R* and dilute to 5 ml with the same solvent.

Reference solution Dissolve 20 mg of *xylometazoline hydrochloride CRS* in *methanol R* and dilute to 5 ml with the same solvent.

Plate *TLC silica gel G plate R*.

Mobile phase *concentrated ammonia R, methanol R* (5:100 *V/V*).

Application 5 µl.

Development Over 2/3 of the plate.

Drying In air.

Chlorine treatment At the bottom of a chromatography tank place a beaker containing a mixture of 1 volume of *hydrochloric acid R1*, 1 volume of *water R* and 2 volumes of a 15 g/l solution of *potassium permanganate R*. Close the tank and allow to stand for 15 min. Place the dried plate in the tank and reclose the tank. Leave the plate in contact with the chlorine vapour for 5 min. Withdraw the plate and place it in a current of cold air until the excess of chlorine is removed and an area of the coating below the points of application does not give a blue colour with a drop of *potassium iodide and starch solution R*.

Detection Spray with *potassium iodide and starch solution R*.

Results The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with the reference solution.

C. Dissolve about 0.5 mg in 1 ml of *methanol R*. Add 0.5 ml of a freshly prepared 50 g/l solution of *sodium nitroprusside R* and 0.5 ml of a 20 g/l solution of *sodium hydroxide R.* Allow to stand for 10 min and add 1 ml of an 80 g/l solution of *sodium bicarbonate R*. A violet colour develops.

D. Dissolve 0.2 g in 1 ml of *water R*, add 2.5 ml of *ethanol (96 per cent) R* and 2 ml of *1 M sodium hydroxide*. Mix thoroughly and examine in ultraviolet light at 365 nm. The solution shows no fluorescence or at most the same fluorescence as a blank solution prepared in the same manner. The identification is not valid unless a solution prepared in the same manner using *naphazoline hydrochloride CRS* instead of the substance to be examined shows a distinct bluish fluorescence.

E. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 *(2.2.2, Method II)*.

Dissolve 2.5 g in *water R* and dilute to 50.0 ml with the same solvent.

Acidity or alkalinity

Dissolve 0.25 g in *carbon dioxide-free water R* and dilute to 25 ml with the same solvent. Add 0.1 ml of *methyl red solution R* and 0.1 ml of *0.01 M hydrochloric acid*. The solution is red. Not more than 0.2 ml of *0.01 M sodium hydroxide* is required to change the colour of the indicator to yellow.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 50.0 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Allow to stand for 1 h before injection.

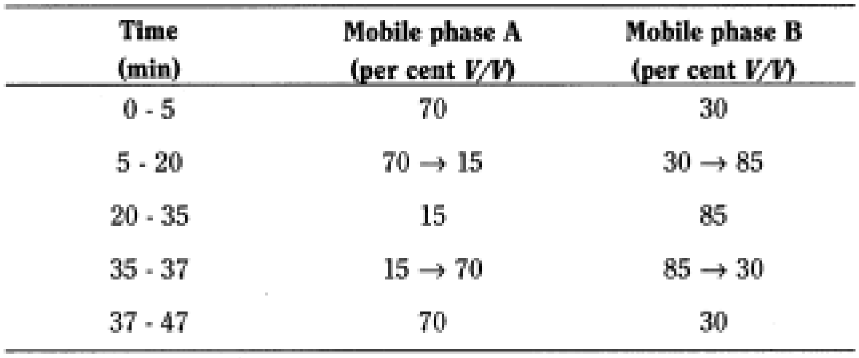
Reference solution (a) Dilute 5.0 ml of the test solution to 100.0 ml with *water R*. Dilute 2.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (b) Dissolve 5.0 mg of *xylometazoline impurity A CRS* and 5 mg of the substance to be examined in *water R* and dilute to 50.0 ml with the same solvent. Dilute 10.0 ml of this solution to 50.0 ml with *water R*.

Reference solution (c) Dilute 5.0 ml of reference solution (b) to 50.0 ml with *water R.*

Column:
- *size*: l = 0.25 m, Ø = 4.6 mm;
- *stationary phase: end-capped octadecylsilyl silica gel for chromatography with polar incorporated groups R (5 µm).*

Mobile phase:
- *mobile phase A*: 1.36 g/l solution of *potassium dihydrogen phosphate R* adjusted to pH 3.0 with *phosphoric acid R*;
- *mobile phase B: acetonitrile R1*;



Time (min)	Mobile phase A (per cent *V/V*)	Mobile phase B (per cent *V/V*)
0 - 5	70	30
5 - 20	70 → 15	30 → 85
20 - 35	15	85
35 - 37	15 → 70	85 → 30
37 - 47	70	30

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 220 nm.

Injection 10 µl.

Relative retention With reference to xylometazoline (retention time = about 7.2 min): impurity A = about 0.79.

System suitability Reference solution (b):

- *resolution:* minimum 2.5 between the peaks due to impurity A and xylometazoline.

Limits:

— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Loss on drying ***(2.2.32)***

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.200 g in 25 ml of *anhydrous acetic acid R* and add 10 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

1 ml of *0.1 M perchloric acid* is equivalent to 28.08 mg of $C_{16}H_{25}ClN_2$.

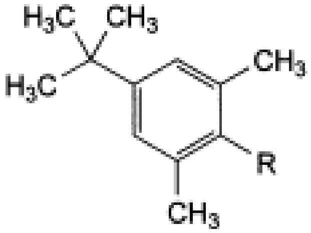
STORAGE

Protected from light.

IMPURITIES

Specified impurities A.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E, F.*



A. R = CH_2-CO-NH-CH_2-CH_2-NH_2: *N*-(2-aminoethyl)-2-[4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetamide,

B. R = CH_2-Cl: 2-(chloromethyl)-5-(1,1-dimethylethyl)-1,3-dimethylbenzene,

C. R = CH_2-CN: [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetonitrile,

D. R = H: 1-(1,1-dimethylethyl)-3,5-dimethylbenzene,

F. CH_2-CO_2H: [4-(1,1-dimethylethyl)-2,6-dimethylphenyl]acetic acid,

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C at a pressure not exceeding 0.7 kPa.

Sulphated ash ***(2.4.14)***

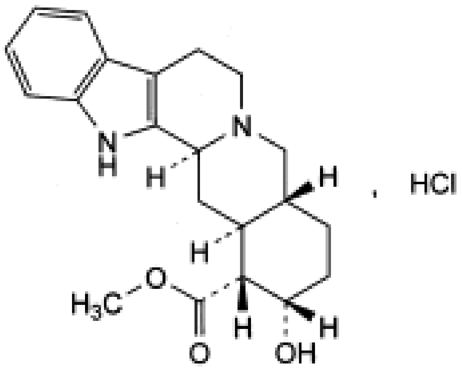
Maximum 0.1 per cent, determined on 1.0 g.

Ph Eur

Yohimbine Hydrochloride

General Notices

(Ph Eur monograph 2172)



$C_{21}H_{26}N_2O_3$,HCl 390.9 *65-19-0*

Ph Eur

DEFINITION

Methyl 17α-hydroxyyohimban-16α-carboxylate hydrochloride.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or slightly yellowish, crystalline powder.

Solubility

Sparingly soluble in water, practically insoluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *yohimbine hydrochloride CRS*.

B. It gives reaction (a) of chlorides *(2.3.1)*.

TESTS

Solution S

Dissolve 0.500 g in *carbon dioxide-free water R* with heating, allow to cool to room temperature and dilute to 50.0 ml with the same solvent.

pH *(2.2.3)*

3.5 to 5.5 for solution S.

Specific optical rotation *(2.2.7)*

+ 101.0 to + 105.0 (dried substance), determined on solution S.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions protected from light*.

Test solution Dissolve 10.0 mg of the substance to be examined in *methanol R* and dilute to 50.0 ml with the same solvent.

Reference solution (a) Dissolve 5.0 mg of *yohimbine hydrochloride CRS* (containing impurities A, F and G) in *methanol R* and dilute to 25.0 ml with the same solvent.

Reference solution (b) Dilute 1.0 ml of reference solution (a) to 100.0 ml with *methanol R*.

Reference solution (c) Dilute 1.0 ml of reference solution (b) to 10.0 ml with *methanol R*.

Column:

- *size*: l = 0.125 m, Ø = 4.0 mm;
- *stationary phase*: *octylsilyl silica gel for chromatography R* (4 µm);
- *temperature*: 40 °C.

Mobile phase Mix 50 ml of a 9.08 g/l solution of *potassium dihydrogen phosphate R*, 100 ml of an 11.88 g/l solution of *disodium hydrogen phosphate dihydrate R*, 285 ml of *acetonitrile R*, 4.0 g of *sodium laurilsulfate R* and 355 ml of *water R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 229 nm.

Injection 10 µl.

Run time 3 times the retention time of yohimbine.

Relative retention With reference to yohimbine (retention time = about 7 min): impurity F = about 0.65; impurity G = about 0.70; impurity A = about 0.75.

System suitability Reference solution (a):

- *peak-to-valley ratio*: minimum 1.3, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity A; and minimum 1.3, where H_p = height above the baseline of the peak due to impurity G and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity F.

Limits:

- *sum of impurities A and G*: not more than the area of the principal peak in the chromatogram obtained with reference solution (b) (1.0 per cent);

— *impurity F*: not more than 4 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.4 per cent);

— *unspecified impurities*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.10 per cent);

— *total*: not more than twice the area of the principal peak in the chromatogram obtained with reference solution (b) (2.0 per cent);

— *disregard limit*: 0.5 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.05 per cent).

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution and reference solution (a).

Calculate the percentage content of $C_{21}H_{27}ClN_2O_3$ from the declared content of *yohimbine hydrochloride CRS*.

STORAGE

In an airtight container , protected from light.

IMPURITIES

Specified impurities *A, F, G*.

Other detectable impurities (The following substances would, if present at a sufficient level, be detected by one or other of the tests in the monograph. They are limited by the general acceptance criterion for other/unspecified impurities and/or by the general monograph *Substances for pharmaceutical use (2034)*. It is therefore not necessary to identify these impurities for demonstration of compliance. See also *5.10. Control of impurities in substances for pharmaceutical use): B, C, D, E.*

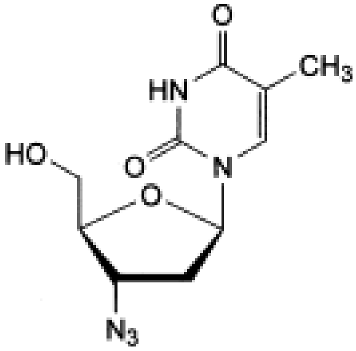
Ph Eur

Zidovudine

General Notices

(Ph Eur monograph 1059)



$C_{10}H_{13}N_5O_4$ 267.2 *30516-87-1*

Action and use

Nucleoside reverse transcriptase inhibitor; antiviral (HIV).

Ph Eur

DEFINITION

1-(3-Azido-2,3-dideoxy-β-D-*erythro*-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione.

Content

97.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or brownish powder.

Solubility

Sparingly soluble in water, soluble in anhydrous ethanol.

mp

About 124 °C.

It shows polymorphism (*5.9*).

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *zidovudine CRS.*

If the spectra obtained in the solid state show differences, dissolve the substance to be examined and the reference substance separately in the minimum volume of *water R*, evaporate to dryness in a desiccator, under high vacuum over *diphosphorus pentoxide R* and record new spectra using the residues.

TESTS

Appearance of solution

The solution is not more intensely coloured than reference solution BY_5 *(2.2.2, Method II)*.

Dissolve 0.5 g in 50 ml of *water R*, heating if necessary.

Specific optical rotation *(2.2.7)*

+ 60.5 to + 63.0 (dried substance).

Dissolve 0.50 g in *anhydrous ethanol R* and dilute to 50.0 ml with the same solvent. Carry out the determination at 25 °C.

Related substances

A. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.20 g of the substance to be examined in *methanol R* and dilute to 10 ml with the same solvent.

Reference solution (a) Dissolve 5 mg of *thymine R* (impurity C), 5 mg of *zidovudine impurity A CRS* and 5 mg of *triphenylmethanol R* (impurity D) in *methanol R,* add 0.25 ml of the test solution and dilute to 25 ml with *methanol R*.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 10 ml with *methanol R.*

Plate *TLC silica gel* F_{254} *plate R.*

Mobile phase *methanol R*, *methylene chloride R* (10:90 *V/V*).

Application 10 µl.

Development Over a path of 12 cm.

Drying In air.

Detection A Examine in ultraviolet light at 254 nm.

Limits:

— *impurity A*: any spot due to impurity A is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.5 per cent);

— *any other impurity*: any other spot apart from the principal spot and any spot due to impurity C (which is limited by liquid chromatography) is not more intense than the spot due to zidovudine in the chromatogram obtained with reference solution (b) (0.5 per cent).

Detection B Spray with a 10 g/l solution of *vanillin R* in *sulphuric acid R*.

Limit:

— *impurity D*: any spot due to impurity D is not more intense than the corresponding spot in the chromatogram obtained with reference solution (b) (0.5 per cent).

System suitability Reference solution (a):

— the chromatogram shows 4 clearly separated spots, due to impurity C, impurity A, zidovudine and impurity D, in order of increasing R_F value.

B. Liquid chromatography *(2.2.29)*.

Test solution (a) Dissolve 50.0 mg of the substance to be examined in the mobile phase and dilute to 50.0 ml with the mobile phase.

Test solution (b) Dilute 10.0 ml of test solution (a) to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 10.0 mg of *zidovudine CRS* in the mobile phase and dilute to 50.0 ml with the mobile phase.

Reference solution (b) Dissolve 10.0 mg of *thymine R* (impurity C) in *methanol R* and dilute to 50.0 ml with the same solvent. Dilute 5.0 ml of this solution to 50.0 ml with the mobile phase.

Reference solution (c) Dissolve 5 mg of *zidovudine impurity B CRS* in 25.0 ml of reference solution (a) and dilute to 50.0 ml with the mobile phase.

Reference solution (d) Dilute 5.0 ml of reference solution (c) to 50.0 ml with the mobile phase.

Reference solution (e) Dilute 0.25 ml of test solution (a) to 50.0 ml with the mobile phase.

Column:
— *size:* *l* = 0.25 m, Ø = 4.6 mm;

— *stationary phase*: *octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase *methanol R*, *water R* (20:80 *V/V*).

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 265 nm.

Equilibration With the mobile phase for about 45 min.

Injection 10 µl of test solution (a) and reference solutions (b), (c), (d) and (e).

Run time 1.5 times the retention time of zidovudine.

Elution order Impurity C, zidovudine, impurity B.

System suitability Reference solution (c):

— *resolution*: minimum 1.0 between the peaks due to zidovudine and impurity B.

Limits:
— *impurity C*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (b) (2 per cent);

— *impurity B*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (d) (1 per cent);

— *any other impurity*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (e) (0.5 per cent);

— *total*: not more than 6 times the area of the principal peak in the chromatogram obtained

with reference solution (e) (3.0 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (e) (0.05 per cent).

Heavy metals ***(2.4.8)***

Maximum 20 ppm.

1.00 g complies with test D. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying ***(2.2.32)***

Maximum 1.0 per cent, determined on 1.000 g by drying in an oven at 105 °C.

Sulphated ash ***(2.4.14)***

Maximum 0.25 per cent, determined on 1.00 g.

ASSAY

Liquid chromatography *(2.2.29)* as described in the test for related substances with the following modification.

Injection Test solution (b) and reference solution (a).

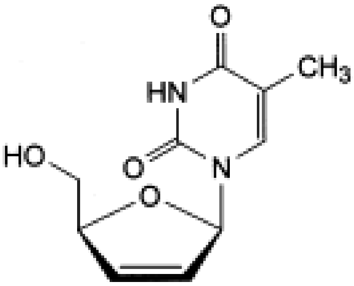
Calculate the content of $C_{10}H_{13}N_5O_4$ from the declared content of *zidovudine CRS*.

STORAGE

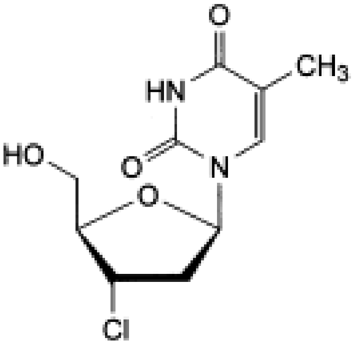
Protected from light.

IMPURITIES

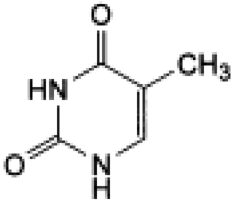
Specified impurities *A, B, C, D.*



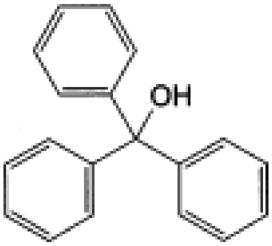
A. 1-[(2*R*,5*S*)-5-(hydroxymethyl)-2,5-dihydrofuran-2-yl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



B. 1-(3-chloro-2,3-dideoxy-β-D-erythro-pentofuranosyl)-5-methylpyrimidine-2,4(1*H*,3*H*)-dione,



C. 5-methylpyrimidine-2,4(1*H*,3*H*)-dione (thymine),



D. triphenylmethanol.

Zinc Acetate

General Notices

(Zinc Acetate Dihydrate, Ph Eur monograph 1482)

$C_4H_6O_4Zn,2H_2O$ 219.5 *5970-45-6*

Action and use

Astringent.

Preparation

Erythromycin and Zinc Acetate Lotion

Ph Eur

DEFINITION

Content

99.0 per cent to 101.0 per cent of $C_4H_6O_4Zn,2H_2O$.

CHARACTERS

Appearance

White or almost white crystalline powder or flakes.

Solubility

Freely soluble in water, soluble in ethanol (96 per cent).

IDENTIFICATION

A. It gives reaction (a) of acetates *(2.3.1)*.

B. It gives the reaction of zinc *(2.3.1)*.

TESTS

Solution S

Dissolve 10.0 g in *carbon dioxide-free water R* prepared from *distilled water R* and dilute to 100 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.8 to 7.0.

Dilute 10 ml of solution S to 20 ml with *carbon dioxide-free water R*.

Reducing substances

Boil for 5 min a mixture of 10 ml of solution S, 90 ml of *water R*, 5 ml of *dilute sulphuric acid R* and 1.5 ml of a 0.3 g/l solution of *potassium permanganate R*. The pink colour of the solution remains.

Chlorides *(2.4.4)*

Maximum 50 ppm.

Dilute 10 ml of solution S with 15 ml of *water R*.

Sulphates *(2.4.13)*

Maximum 100 ppm, determined on solution S.

Aluminium

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 2.50 g in 20 ml of a 200 g/l solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 ml with the same acidic solution.

Reference solutions Prepare the reference solutions using *aluminium standard solution (200 ppm Al) R*, diluted with a 200 g/l solution of *cadmium- and lead-free nitric acid R*.

Source Aluminium hollow-cathode lamp.

Wavelength 309.3 nm.

Atomisation device Air-acetylene or acetylene-nitrous oxide flame.

Arsenic *(2.4.2, Method A)*

Maximum 2 ppm, determined on 0.5 g.

Cadmium

Maximum 2.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Use the solution described in the test for aluminium.

Reference solutions Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R*, diluted with a 200 g/l solution of *cadmium- and lead-free nitric acid R*.

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Air-acetylene flame.

Copper

Maximum 50.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Use the solution described in the test for iron.

Reference solutions Prepare the reference solutions using *copper standard solution (10 ppm Cu) R*, diluted with a 200 g/l solution of *cadmium- and lead-free nitric acid R*.

Source Copper hollow-cathode lamp.

Wavelength 324.8 nm.

Atomisation device Air-acetylene flame.

Iron

Maximum 50.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 1.25 g in 20 ml of a 200 g/l solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 ml with the same acid solution.

Reference solutions Prepare the reference solutions using *iron standard solution (20 ppm Fe) R*, diluted with a 200 g/l solution of *cadmium- and lead-free nitric acid R*.

Source Iron hollow-cathode lamp.

Wavelength 248.3 nm.

Atomisation device air-acetylene flame.

Lead

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method I)*.

Test solution Dissolve 5.00 g in 20 ml of a 200 g/l solution of *cadmium- and lead-free nitric acid R* and dilute to 25.0 ml with the same acid solution.

Reference solutions Prepare the reference solutions using *lead standard solution (0.1 per cent of Pb) R*, diluting with a 200 g/l solution of cadmium- and *lead-free nitric acid R*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm.

Atomisation device Air-acetylene flame.

ASSAY

Dissolve 0.200 g in 5 ml of *dilute acetic acid R*. Carry out the complexometric titration of zinc *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 21.95 mg of $C_4H_6O_4Zn,2H_2O$.

STORAGE

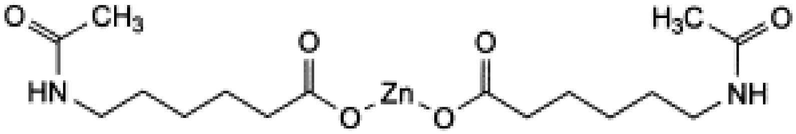
In a non-metallic container.

Ph Eur

Zinc Acexamate

General Notices

(Ph Eur monograph 1279)



$C_{16}H_{28}N_2O_6Zn$ 409.8 *70020-71-2*

Ph Eur

DEFINITION

Zinc 6-(acetylamino)hexanoate.

Content

97.5 per cent to 101.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, crystalline powder.

Solubility

Soluble in water, practically insoluble in acetone and in ethanol (96 per cent). It dissolves in dilute nitric acid.

mp: about 198 °C.

IDENTIFICATION

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation discs.

Comparison *zinc acexamate CRS.*

B. 5 ml of solution S (see Tests) gives the reaction of zinc *(2.3.1)*.

TESTS

Solution S

Dissolve 0.5 g in *carbon dioxide-free water R* and dilute to 20 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension IV *(2.2.1)* and is colourless *(2.2.2, Method II)*.

pH *(2.2.3)*

5.0 to 7.0 for solution S.

Impurity B

Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 0.30 g of the substance to be examined in *water R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 15 mg of *6-aminohexanoic acid R* (impurity B) in *water R* and dilute to 10 ml with the same solvent. Dilute 1 ml of this solution to 10 ml with *water R*.

Plate *TLC silica gel plate R*.

Mobile phase *ammonia R, water R, ethanol (96 per cent) R* (2:30:68 *V/V/V*).

Application 5 µl; allow to dry in air.

Development Over a path of 15 cm.

Drying Iin a current of warm air.

Detection Spray with *ninhydrin solution R* and heat at 100-105 °C for 15 min.

Limit:

— *impurity B*: any spot due to impurity B is not more intense than the corresponding spot in the chromatogram obtained with the reference solution (0.5 per cent).

Related substances

Liquid chromatography (2.2.29).

Test solution (a) Dissolve 0.50 g of the substance to be examined in *water R* and dilute to 100.0 ml with the same solvent.

Test solution (b) To 20.0 ml of test solution (a), add 20 ml of the mobile phase and 0.4 ml of a 100 g/l solution of *phosphoric acid R*, then dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 40 mg of *N-acetyl-∊-caprolactam R* (impurity C) in *water R* and dilute to 100.0 ml with the same solvent.

Reference solution (b) Dilute 5.0 ml of reference solution (a) to 100.0 ml with *water R.*

Reference solution (c) Dissolve 20 mg of *zinc acexamate impurity A CRS* in *water R* and dilute to 50.0 ml with the same solvent.

Reference solution (d) Dissolve 40 mg of *∊-caprolactam R* (impurity D) in *water R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *water R*.

Reference solution (e) To 20.0 ml of test solution (a), add 5.0 ml of reference solution (b), 5.0 ml of reference solution (c), 5.0 ml of reference solution (d) and 0.4 ml of a 100 g/l solution of *phosphoric acid R*, then dilute to 50.0 ml with the mobile phase.

Reference solution (f) To 5.0 ml of reference solution (c), add 5.0 ml of reference solution (b) , 5.0 ml of reference solution (d) and 0.4 ml of a 100 g/l solution of *phosphoric acid R*, then dilute to 50.0 ml with the mobile phase.

Column:
— *size*: *l* = 0.25 m, Ø = 4.0 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm).

Mobile phase Mix 0.2 volumes of *phosphoric acid R*, 8 volumes of *acetonitrile R* and 92 volumes of *water R*, then adjust to pH 4.5 with dilute *ammonia R1*.

Flow rate 1.2 ml/min.

Detection Spectrophotometer at 210 nm.

Injection 20 µl of test solution (b) and reference solutions (e) and (f).

Run time 8 times the retention time of zinc acexamate.

Elution order Zinc acexamate, impurity D, impurity A, impurity C.

System suitability Reference solution (e):

— *resolution*: minimum 3.0 between the peaks due to zinc acexamate and impurity D; if necessary, adjust the mobile phase to pH 4.7 with *dilute ammonia R1*.

Limits:
— *impurity A*: not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (2 per cent);

— *impurities C, D*: for each impurity, not more than the area of the corresponding peak in the chromatogram obtained with reference solution (f) (0.1 per cent);

— *sum of impurities other than A*: not more than 5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.5 per cent);

— *disregard limit*: 0.5 times the area of the peak due to impurity C in the chromatogram obtained with reference solution (f) (0.05 per cent).

Arsenic ***(2.4.2, Method A)***

Maximum 2 ppm, determined on 0.5 g.

Cadmium

Maximum 2.0 ppm.

Ph Eur

Zinc Chloride

General Notices

(Ph Eur monograph 0110)

$ZnCl_2$ 136.3 *7646-85-7*

Ph Eur

DEFINITION

Content

95.0 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or cast in white or almost white sticks, deliquescent.

Solubility

Very soluble in water, freely soluble in ethanol (96 per cent) and in glycerol.

IDENTIFICATION

A. Dissolve 0.5 g in *dilute nitric acid R* and dilute to 10 ml with the same acid. The solution gives reaction (a) of chlorides *(2.3.1)*.

B 5 ml of solution S (see Tests) gives the reaction of zinc *(2.3.1)*.

TESTS

Solution S

To 2.0 g add 38 ml of *carbon dioxide-free water R* prepared from *distilled water R* and add *dilute hydrochloric acid R* dropwise until dissolution is complete. Dilute to 40 ml with *carbon dioxide-free water R* prepared from *distilled water R*.

pH *(2.2.3)*

4.6 to 5.5.

Dissolve 1.0 g in 9 ml of *carbon dioxide-free water R*, ignoring any slight turbidity.

Oxychlorides

Dissolve 1.5 g in 1.5 ml of *carbon dioxide-free water R.* The solution is not more opalescent than reference suspension II *(2.2.1)*. Add 7.5 ml of *ethanol (96 per cent) R*. The solution may become cloudy within 10 min. Any cloudiness disappears on the addition of 0.2 ml of *dilute* *hydrochloric acid R*.

Sulphates *(2.4.13)*

Maximum 200 ppm.

Dilute 5 ml of solution S to 15 ml with *distilled water R*. Prepare the standard using a mixture of 5 ml of *sulphate standard solution (10 ppm SO_4) R* and 10 ml of *distilled water R*.

Aluminium, calcium, heavy metals, iron, magnesium

To 8 ml of solution S add 2 ml of *concentrated ammonia R* and shake. The solution is clear *(2.2.1)* and colourless *(2.2.2, Method II).* Add 1 ml of *disodium hydrogen phosphate solution R.* The solution remains clear for at least 5 min. Add 0.2 ml of *sodium sulphide solution R.* A white precipitate is formed and the supernatant liquid remains colourless.

Ammonium *(2.4.1)*

Maximum 400 ppm.

Dilute 0.5 ml of solution S to 15 ml with *water R*.

ASSAY

Dissolve 0.250 g in 5 ml of *dilute acetic acid R*. Carry out the complexometric titration of zinc *(2.5.11).*

1 ml of *0.1 M sodium edetate* is equivalent to 13.63 mg of $ZnCl_2$.

STORAGE

In a non-metallic container.

Zinc and Coal Tar Paste

Ph Eur

DEFINITION

Content

99.0 per cent to 100.5 per cent (ignited substance).

CHARACTERS

Appearance

Soft, white or faintly yellowish-white, amorphous powder, free from gritty particles.

Solubility

Practically insoluble in water and in ethanol (96 per cent). It dissolves in dilute mineral acids.

IDENTIFICATION

A. It becomes yellow when strongly heated; the yellow colour disappears on cooling.

B. Dissolve 0.1 g in 1.5 ml of *dilute hydrochloric acid R* and dilute to 5 ml with *water R*. The solution gives the reaction of zinc *(2.3.1)*.

TESTS

Alkalinity

Shake 1.0 g with 10 ml of *boiling water R*. Add 0.1 ml of *phenolphthalein solution R* and filter. If the filtrate is red, not more than 0.3 ml of *0.1 M hydrochloric acid* is required to change the colour of the indicator.

Carbonates and substances insoluble in acids

Dissolve 1.0 g in 15 ml of *dilute hydrochloric acid R*. It dissolves without effervescence and the solution is not more opalescent than reference suspension II *(2.2.1)* and is colourless (*2.2.2, Method II).*

Arsenic *(2.4.2, Method A)*

Maximum 5 ppm, determined on 0.2 g.

Cadmium

Maximum 10.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 2.0 g in 14 ml of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 ml with *water R*.

Reference solutions Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Air-acetylene or air-propane flame.

Iron *(2.4.9)*

Maximum 200 ppm.

Dissolve 50 mg in 1 ml of *dilute hydrochloric acid R* and dilute to 10 ml with *water R*. Use in this test 0.5 ml of *thioglycollic acid R*.

Lead

Maximum 50.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dissolve 5.0 g in 24 ml of a mixture of equal volumes of *water R* and *cadmium- and lead-free nitric acid R*, boil for 1 min, cool and dilute to 100.0 ml with *water R.*

Reference solutions Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R*.

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm; 217.0 nm may be used depending on the apparatus.

Atomisation device Air-acetylene flame.

Loss on ignition

Maximum 1.0 per cent, determined on 1.00 g by ignition to constant mass at 500 ± 50 °C.

ASSAY

Dissolve 0.150 g in 10 ml of *dilute acetic acid R*. Carry out the complexometric titration of zinc *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 8.14 mg of ZnO.

Ph Eur

Zinc Stearate

General Notices

(Ph Eur monograph 0306)

$(C_{17}H_{35}CO_2)_2Zn$ 632 *557-05-1*

Action and use

Excipient.

Ph Eur

DEFINITION

Zinc stearate [$(C_{17}H_{35}COO)_2Zn$; M_r 632] may contain varying proportions of zinc palmitate [$(C_{15}H_{31}COO)_2Zn$; M_r 576.2] and zinc oleate [$(C_{17}H_{33}COO)_2Zn$; M_r 628].

Content

10.0 per cent to 12.0 per cent of Zn.

CHARACTERS

Appearance

Light,white or almost white, amorphous powder, free from gritty particles.

Solubility

Practically insoluble in water and in anhydrous ethanol.

IDENTIFICATION

A. Freezing point *(2.2.18)*: minimum 53 °C, determined on the residue obtained in the preparation of solution S (see Tests).

B. Neutralise 5 ml of solution S to *red litmus paper R* with *strong sodium hydroxide solution R*. The solution gives the reaction of zinc *(2.3.1)*.

TESTS

Solution S

To 5.0 g add 50 ml of *ether R* and 40 ml of a 7.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R* in *distilled water R*. Heat under a reflux condenser until dissolution is complete. Allow to cool. In a separating funnel, separate the aqueous layer and shake the ether layer with 2 quantities, each of 4 ml, of *distilled water R*. Combine the aqueous layers, wash with 15 ml of *ether R* and heat on a water-bath until ether is completely eliminated. Allow to cool and dilute to 50.0 ml with *distilled water R* (solution S). Evaporate the ether layer to dryness and dry the residue at 105 °C.

Appearance of solution

Solution S is not more intensely coloured than reference solution Y_6 *(2.2.2, Method II).*

Appearance of solution of fatty acids

Dissolve 0.5 g of the residue obtained in the preparation of solution S in 10 ml of *chloroform R*. The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_5 *(2.2.2, Method II)*.

Acidity or alkalinity

Shake 1.0 g with 5 ml of *ethanol (96 per cent) R* and add 20 ml of *carbon dioxide-free water R* and 0.1 ml of *phenol red solution R*. Not more than 0.3 ml of *0.1 M hydrochloric acid* or 0.1 ml of *0.1 M sodium hydroxide* is required to change the colour of the indicator.

Acid value of the fatty acids *(2.5.1)*

195 to 210.

Dissolve 0.20 g of the residue obtained in the preparation of solution S in 25 ml of the prescribed mixture of solvents.

Chlorides *(2.4.4)*

Maximum 250 ppm.

Dilute 2 ml of solution S to 15 ml with *water R.*

Sulphates *(2.4.13)*

Maximum 0.6 per cent.

Dilute 1 ml of solution S to 50 ml with *distilled water R*. Dilute 12.5 ml of this solution to 15 ml with *distilled water R*.

Cadmium

Maximum 5.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Dilute 20.0 ml of solution S to 50.0 ml with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R.*

Reference solutions Prepare the reference solutions using *cadmium standard solution (0.1 per cent Cd) R* and diluting with a 3.5 per cent *V/V* solution of *cadmium- and lead-free nitric acid R.*

Source Cadmium hollow-cathode lamp.

Wavelength 228.8 nm.

Atomisation device Air-acetylene or an air-propane flame.

Lead

Maximum 25.0 ppm.

Atomic absorption spectrometry *(2.2.23, Method II)*.

Test solution Solution S.

Reference solutions Prepare the reference solutions using *lead standard solution (0.1 per cent Pb) R* and diluting with a 3.5 per cent *V/V* solution *of cadmium- and lead-free nitric acid R.*

Source Lead hollow-cathode lamp.

Wavelength 283.3 nm. Depending on the apparatus the line at 217.0 nm may be used.

Atomisation device Air-acetylene flame.

ASSAY

To 1.000 g add 50 ml of *dilute acetic acid R* and boil for at least 10 min or until the layer of fatty acids is clear, adding more *water R* as necessary to maintain the original volume. Cool and filter. Wash the filter and the flask with *water R* until the washings are no longer acid to *blue litmus paper R*. Combine the filtrate and washings. Carry out the complexometric titration of zinc *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 6.54 mg of Zn.

DEFINITION

Content

99.0 per cent to 104.0 per cent.

CHARACTERS

Appearance

White or almost white, crystalline powder or colourless, transparent crystals, efflorescent.

Solubility

Very soluble in water, practically insoluble in alcohol.

IDENTIFICATION

A. Solution S (see Tests) gives the reactions of sulphates *(2.3.1)*.

B. Solution S gives the reaction of zinc *(2.3.1)*.

C. It complies with the limits of the assay.

TESTS

Solution S

Dissolve 2.5 g in *carbon dioxide-free water R* and dilute to 50 ml with the same solvent.

Appearance of solution

Solution S is clear *(2.2.1)* and colourless *(2.2.2, Method II)*.

pH ***(2.2.3)***

4.4 to 5.6 for solution S.

Chlorides ***(2.4.4)***

Maximum 300 ppm.

3.3 ml of solution S diluted to 15 ml with *water R* complies with the limit test for chlorides.

Iron ***(2.4.9)***

Maximum 100 ppm.

2 ml of solution S diluted to 10 ml with *water R* complies with the limit test for iron. Use in this test 0.5 ml of *thioglycollic acid R*.

ASSAY

Dissolve 0.200 g in 5 ml of *dilute acetic acid R*. Carry out the complexometric titration of zinc *(2.5.11)*.

1 ml of *0.1 M sodium edetate* is equivalent to 28.75 mg of $ZnSO_4,7H_20$.

STORAGE

In a non-metallic, airtight container .

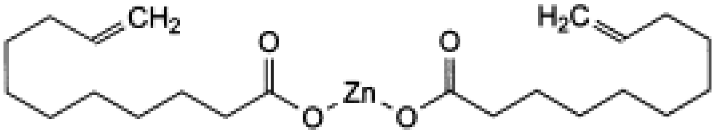
Zinc Undecenoate

General Notices

(Zinc Undecylenate, Ph Eur monograph 0539)



$C_{22}H_{38}O_4Zn$ 431.9 *557-08-4*

Action and use

Used topically in treatment of fungal infections.

Ph Eur

DEFINITION

Zinc di(undec-10-enoate).

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

White or almost white, fine powder.

Solubility

Practically insoluble in water and in ethanol (96 per cent).

mp: 116 °C to 121 °C, it may leave a slight solid residue.

IDENTIFICATION

A. To 2.5 g add 10 ml of *water R* and 10 ml of *dilute sulphuric acid R*. Shake with 2 quantities, each of 10 ml, of *ether R*. Reserve the aqueous layer for identification test C. Wash the combined ether layers with *water R* and evaporate to dryness. To the residue add 2 ml of freshly *distilled aniline R* and boil under a reflux condenser for 10 min. Allow to cool and add 30 ml of *ether R*. Shake with 3 quantities, each of 20 ml, of *dilute hydrochloric acid R* and then with 20 ml of *water R*. Evaporate the organic layer to dryness on a water-bath. The residue, after recrystallisation twice from *ethanol (70 per cent V/V) R* and drying *in vacuo* for 3 h, melts *(2.2.14)* at 66 °C to 68 °C.

B. Dissolve 0.1 g in a mixture of 2 ml of *dilute sulphuric acid R* and 5 ml of *glacial acetic acid R*. Add dropwise 0.25 ml of *potassium permanganate solution R*. The colour of the potassium permanganate solution is discharged.

C. A mixture of 1 ml of the aqueous layer obtained in identification test A and 4 ml of *water R* gives the reaction of zinc *(2.3.1)*.

TESTS

Alkalinity

Mix 1.0 g with 5 ml of *ethanol (96 per cent) R* and 0.5 ml of *phenol red solution R*. Add 50 ml of *carbon dioxide-free water R* and examine immediately. No reddish colour appears.

Alkali and alkaline-earth metals

Maximum 2.0 per cent.

To 1.0 g add 25 ml of *water R* and 5 ml of *hydrochloric acid R* and heat to boiling. Filter whilst hot. Wash the filter and the residue with 25 ml of *hot water R*. Combine the filtrate and washings and add *concentrated ammonia R* until alkaline. Add 7.5 ml of *thioacetamide solution R* and heat on a water-bath for 30 min. Filter and wash the precipitate with 2 quantities, each of 10 ml, of *water R*. Combine the filtrate and washings, evaporate to dryness on a water-bath and ignite. The residue weighs a maximum of 20 mg.

Sulphates *(2.4.13)*

Maximum 500 ppm.

To 0.1 g add a mixture of 2 ml of *dilute hydrochloric acid R* and 10 ml of *distilled water R* and heat to boiling. Cool, filter and dilute to 15 ml with *distilled water R.* Prepare the standard using 5 ml of *sulphate standard solution (10 ppm* SO_4*) R* and 10 ml of *distilled water R*.

Loss on drying *(2.2.32)*

Maximum 1.5 per cent, determined on 0.500 g by drying in an oven at 105 °C.

Degree of unsaturation

Dissolve 0.100 g in a mixture of 5 ml of *dilute hydrochloric acid R* and 30 ml of *glacial acetic acid R*. Using 0.05 ml indigo *carmine solution R1*, added towards the end of the titration as indicator. Titrate with *0.0167 M bromide-bromate* until the colour changes from blue to yellow. 9.1 ml to 9.4 ml of *0.0167 M bromide-bromate* is required. Carry out a blank titration.

ASSAY

To 0.350 g add 25 ml of *dilute acetic acid R* and heat to boiling. Carry out the complexometric titration of zinc *(2.5.11)*.

1 ml of 0*.1 M sodium edetate* is equivalent to 43.19 mg of $C_{22}H_{38}O_4Zn$.

STORAGE

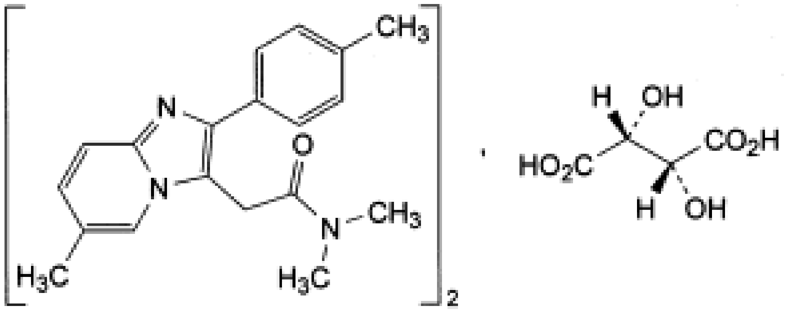
Protected from light.

Ph Eur

Zolpidem Tartrate

General Notices

(Ph Eur monograph 1280)



$C_{42}H_{48}N_6O_8$ *765* *99294-93-6*

Action and use

Non-benzodiazepine hypnotic.

Ph Eur

DEFINITION

Bis[*N*,*N*-dimethyl-2-[6-methyl-2-(4-methylphenyl)imidazo[1,2-*a*]pyridin-3-yl]acetamide] (2*R*,3*R*)-2,3-dihydroxybutanedioate.

Content

98.5 per cent to 101.0 per cent (anhydrous substance).

CHARACTERS

Appearance

White or almost white, hygroscopic, crystalline powder.

Solubility

Slightly soluble in water, sparingly soluble in methanol, practically insoluble in methylene chloride.

IDENTIFICATION

First identification A, C.

Second identification B, C.

A. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Dissolve 0.10 g in 10 ml of *0.1 M hydrochloric acid*. Add 10 ml of *water R*. Add dropwise with stirring 1 ml of *dilute ammonia R2*. Filter and collect the resulting precipitate. Wash the precipitate with *water R* and then dry at 100-105 °C for 2 h. Examine the precipitate as a disc.

Comparison Repeat the operations using 0.10 g of *zolpidem tartrate CRS*.

B. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 50 mg of the substance to be examined in 5 ml of *methanol R*, add 0.1 ml of *diethylamine R* and dilute to 10 ml with *methanol R*.

Reference solution (a) Dissolve 50 mg of *zolpidem tartrate CRS* in 5 ml of *methanol R*, add 0.1 ml of *diethylamine R* and dilute to 10 ml with *methanol R.*

Reference solution (b) Dissolve 50 mg of *flunitrazepam CRS* in 5 ml of *methylene chloride R* and dilute to 10 ml with the same solvent. Mix 1 ml of this solution with 1 ml of reference solution (a).

Plate *TLC silica gel F_{254} plate R*.

Mobile phase *diethylamine R, cyclohexane R, ethyl acetate R* (10:45:45 *V/V/V*).

Application 5 µl.

Development Over a path of 12 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

System suitability Reference solution (b):

— the chromatogram shows 2 clearly separated spots.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with reference solution (a).

C. Dissolve about 0.1 g in 1 ml of *methanol R* heating gently. 0.1 ml of this solution gives reaction (b) of tartrates *(2.3.1)*.

TESTS

Appearance of solution

The solution is clear *(2.2.1)* and not more intensely coloured than reference solution Y_6 or BY_6 *(2.2.2, Method II)*. *Prepare the solutions protected from light and carry out the test as rapidly as possible*.

Triturate 0.25 g with 0.125 g of *tartaric acid R*. Dissolve the mixture in 20 ml of *water R* and dilute to 25 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*.

Test solution Dissolve 25.0 mg of the substance to be examined in the mobile phase and

dilute to 50.0 ml with the mobile phase.

Reference solution (a) Dissolve 5 mg of *zolpidem impurity A CRS* in the mobile phase and dilute to 50 ml with the mobile phase.

Reference solution (b) Dissolve 5 mg of the substance to be examined in the mobile phase and dilute to 50 ml with the mobile phase. To 10 ml of this solution, add 10 ml of reference solution (a).

Reference solution (c) Dilute 2.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Column:

— *size*: *l* = 0.15 m, Ø = 3.9 mm;

— *stationary phase: octadecylsilyl silica gel for chromatography R* (4 µm).

Mobile phase Mix 18 volumes of *acetonitrile R*, 23 volumes of *methanol R* and 59 volumes of a 5.6 g/l solution of *phosphoric acid R* adjusted to pH 5.5 with *triethylamine R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 254 nm.

Injection 20 µl.

System suitability Reference solution (b):

— *resolution*: minimum 2.0 between the peaks due to impurity A and zolpidem.

Limits:

— *total*: not more than the area of the principal peak in the chromatogram obtained with reference solution (c) (0.2 per cent);

— *disregard limit*: 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (c) (0.02 per cent); disregard any peak due to tartaric acid (with a relative retention with reference to zolpidem of 0.16).

Water *(2.5.12)*

Maximum 3.0 per cent, determined on 0.50 g.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.300 g in a mixture of 20 ml of *anhydrous acetic acid R* and 20 ml of *acetic anhydride R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically (*2.2.20*). Carry out a blank titration.

1 ml of *0.1 M perchloric acid* is equivalent to 38.24 mg of $C_{42}H_{48}N_6O_8$.

STORAGE

In an airtight container, protected from light.

Ph Eur

DEFINITION

(5*RS*)-6-(5-Chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate.

Content

98.5 per cent to 100.5 per cent.

CHARACTERS

Appearance

White or slightly yellowish powder.

Solubility

Practically insoluble in water, freely soluble in methylene chloride, sparingly soluble in acetone, practically insoluble in ethanol (96 per cent). It dissolves in dilute mineral acids.

mp: about 177 °C, with decomposition.

IDENTIFICATION

First identification *B.*

Second identification *A, C.*

A. Ultraviolet and visible absorption spectrophotometry *(2.2.25)*.

Test solution Dissolve 50.0 mg in a 3.5 g/l solution of *hydrochloric acid R* and dilute to 100.0 ml with the same solvent. Dilute 2.0 ml of this solution to 100.0 ml with a 3.5 g/l solution of *hydrochloric acid R.*

Spectral range 220-350 nm.

Absorption maximum At 303 nm.

Specific absorbance at the absorption maximum 340 to 380.

B. Infrared absorption spectrophotometry *(2.2.24)*.

Preparation Discs.

Comparison *zopiclone CRS*.

C. Thin-layer chromatography *(2.2.27)*.

Test solution Dissolve 10 mg of the substance to be examined in *methylene chloride R* and dilute to 10 ml with the same solvent.

Reference solution Dissolve 10 mg of *zopiclone CRS* in *methylene chloride R* and dilute to 10 ml with the same solvent.

Plate *TLC silica gel* GF_{254} *plate R.*

Mobile phase *triethylamine R, acetone R, ethyl acetate R* (2:50:50 *V/V/V*).

Application 10 µl.

Development Over a path of 15 cm.

Drying In air.

Detection Examine in ultraviolet light at 254 nm.

Results The principal spot in the chromatogram obtained with the test solution is similar in position and size to the principal spot in the chromatogram obtained with the reference solution.

TESTS

Solution S

Dissolve 1.0 g in *dimethylformamide R* and dilute to 20.0 ml with the same solvent.

Appearance of solution

Solution S is not more opalescent than reference suspension II *(2.2.1)* and not more intensely coloured than intensity 5 of the range of reference solutions of the most appropriate colour *(2.2.2, Method II)*.

Optical rotation ***(2.2.7)***

- 0.05° to + 0.05°.

Dilute 10.0 ml of solution S to 50.0 ml with *dimethylformamide R*.

Related substances

Liquid chromatography *(2.2.29)*. *Prepare the solutions immediately before use.*

Test solution Dissolve 40.0 mg of the substance to be examined in the mobile phase and dilute to 10.0 ml with the mobile phase.

Reference solution (a) Dilute 3.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (b) Dilute 1.0 ml of the test solution to 100.0 ml with the mobile phase. Dilute 1.0 ml of this solution to 10.0 ml with the mobile phase.

Reference solution (c) Dissolve 4.0 mg of *zopiclone oxide CRS* (impurity A) in the mobile phase and dilute to 10.0 ml with the mobile phase. To 10.0 ml of this solution, add 1.0 ml of the test solution and dilute to 100.0 ml with the mobile phase.

Column:

- *size*: *l* = 0.25 m, Ø = 4.6 mm;
- *stationary phase: octadecylsilyl silica gel for chromatography R* (5 µm);
- *temperature*: 30 °C.

Mobile phase Mix 38 volumes of *acetonitrile R* and 62 volumes of a solution containing 8.1 g/l of *sodium laurilsulfate R* and 1.6 g/l of *sodium dihydrogen phosphate R* adjusted to pH 3.5 with a 10 per cent *V/V* solution of *phosphoric acid R*.

Flow rate 1.5 ml/min.

Detection Spectrophotometer at 303 nm.

Injection 20 µl.

Run time 1.5 times the retention time of zopiclone.

Retention time Zopiclone = 27 min to 31 min; if necessary, adjust the concentration of acetonitrile in the mobile phase (increasing the concentration decreases the retention times).

System suitability Reference solution (c):

- *resolution*: minimum 3.0 between the peaks due to impurity A and zopiclone; if necessary, adjust the mobile phase to pH 4.0 with a 10 per cent *V/V* solution of *phosphoric acid R*.

Limits:

- *impurities A, B, C*: for each impurity, not more than the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent) and not more than 2 such peaks have an area greater than the area of the principal peak in the chromatogram obtained with reference solution (b) (0.1 per cent).

2-Propanol

Gas chromatography *(2.2.28).*

Internal standard solution Dilute 5 ml of *ethanol R1* to 100 ml with *ethylene chloride R*. Dilute 1 ml of this solution to 10 ml with *ethylene chloride R*.

A. (5*RS*)-6-(5-chloropyridin-2-yl)-7-oxo-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-yl 4-methylpiperazine-1-carboxylate 4-oxide (zopiclone oxide),

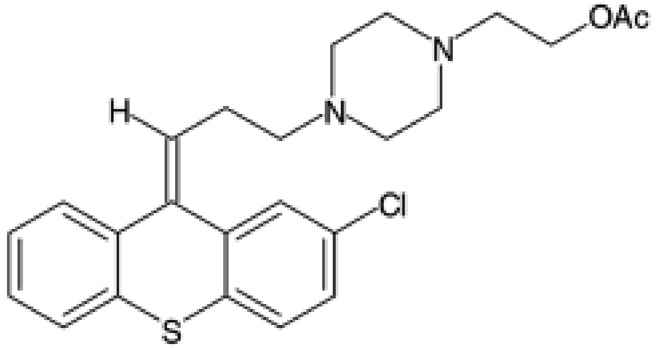
B. R-OH and enantiomer: (7*RS*)-6-(5-chloropyridin-2-yl)-7-hydroxy-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-one,

C. R-H: 6-(5-chloropyridin-2-yl)-6,7-dihydro-5*H*-pyrrolo[3,4-*b*]pyrazin-5-one.

Ph Eur

Zuclopenthixol Acetate

General Notices



$C_{24}H_{27}ClN_2O_2S$ 443.0 *85721-05-7*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Zuclopenthixol Acetate Injection

DEFINITION

Zuclopenthixol Acetate is (*Z*)-2-4-[3-(2-chlorothioxanthene-9-ylidene)propyl]piperazin-1-ylethyl acetate. It contains not less than 98.0% and not more than 102.0% of $C_{24}H_{27}ClN_2O_2S$, calculated with reference to the dried substance.

CHARACTERISTICS

A yellowish, viscous oil.

Very slightly soluble in *water*; very soluble in *dichloromethane*, in *ethanol (96%)* and in *ether*.

IDENTIFICATION

A. The *light absorption* of a 0.0015% w/v solution in *ethanol (96%)*, Appendix II B, in the range 210 to 350 nm exhibits two maxima at 230 and 268 nm. The *absorbances* at the maxima are about 1.18 and 0.51 respectively.

B. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of zuclopenthixol acetate *(RS 363)*.

TESTS

Heavy metals

1.0 g complies with *limit test C for heavy metals*, Appendix VII (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb)*.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, protected from light, using a silica gel F_{254} precoated plate (Merck silica gel 60 F_{254} plates are suitable), a mixture of 10 volumes of *diethylamine*, 40 volumes of *dichloromethane* and 50 volumes of *cyclohexane* as the mobile phase but using an unlined tank. Apply separately to the plate 4 µl of each of the following solutions. Solutions (1) to (3) contain (1) 0.250% w/v, (2) 0.00025% w/v and (3) 0.000125% w/v respectively of the substance being examined in *dichloromethane*. Solution (4) contains 0.00050% w/v of *2-chlorothioxanthone BPCRS* in *dichloromethane*. Solution (5) contains 0.000625% w/v of *zuclopenthixol hydrochloride BPCRS* in *dichloromethane* containing a few drops of *diethylamine*. After removal of the plate, allow it to dry in air, spray with a mixture of equal volumes of *sulphuric acid* and *absolute ethanol*, heat at 110° for 5 minutes and examine under *ultraviolet light (365 nm)* immediately. In the chromatogram obtained with solution (1) any spot corresponding to 2-chlorothioxanthone is not more intense than the spot in the chromatogram obtained with solution (4) (0.2%) and any spot corresponding to zuclopenthixol is not more intense than the spot in the chromatogram obtained with solution (5) (0.25%). Any other *secondary spot* in the chromatogram obtained with solution (1) is not more intense than the spot in the chromatogram obtained with solution (2) (0.1%) and not more than three such spots are more intense than the spot in the chromatogram obtained with solution (3) (0.05%).

***trans*-Isomer**

Carry out the method for *liquid chromatography*, Appendix III D, protected from light, using three solutions in *dichloromethane* containing (1) 0.040% w/v of the substance being examined, (2) 0.00046% w/v of trans-*clopenthixol acetate dihydrochloride BPCRS* (equivalent to 0.00040% w/v of *trans*-clopenthixol acetate) and (3) 0.020% w/v of the substance being examined and 0.023% w/v of trans-*clopenthixol acetate dihydrochloride BPCRS*.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *silica gel for chromatography* (5 µm) (Spherisorb S 5W is suitable), (b) a mixture of 0.03 volume of 13.5M *ammonia,* 45 volumes of *dichloromethane*, 45 volumes of *heptane* and 50 volumes of *acetonitrile* as the mobile phase with a flow rate of 2 ml per minute and (c) a detection wavelength of 254 nm.

Inject 15 µl of each solution. The test is not valid unless the *resolution factor* between the principal peaks in the chromatogram obtained with solution (3) is at least 2.6.

In the chromatogram obtained with solution (1) the area of any peak corresponding to *trans*-clopenthixol acetate is not greater than the area of the peak in the chromatogram obtained with solution (2) (1%).

Loss on drying

When dried at 60° at a pressure not exceeding 0.7 kPa for 3 hours, loses not more than 0.4% of its weight. Use 1 g.

Sulphated ash

Not more than 0.1%, Appendix IX A.

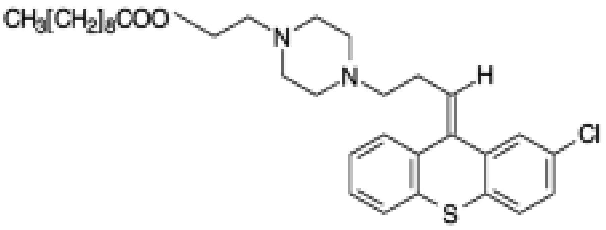
ASSAY

Dissolve 0.2 g in 50 ml of *anhydrous acetic acid* and carry out Method I for *non-aqueous* *titration*, Appendix VIII A, determining the end point potentiometrically. Each ml of 0.1M *perchloric acid VS* is equivalent to 22.15 mg of $C_{24}H_{27}ClN_2O_2S$.

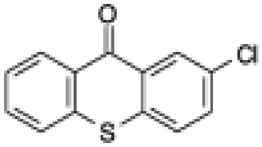
STORAGE

Zuclopenthixol Acetate should be protected from light and stored at a temperature not exceeding -20°.

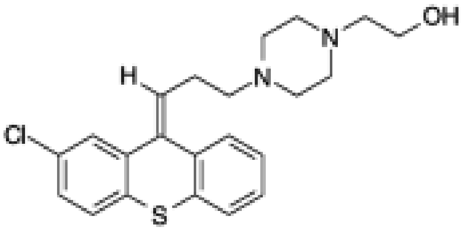
IMPURITIES



A. *trans*-clopenthixol acetate*(*trans*-isomer)*



B. 2-chlorothioxanthone

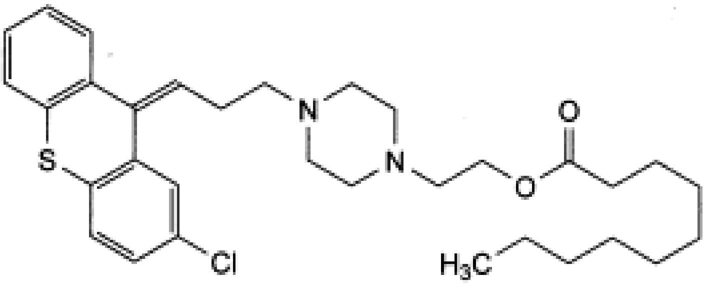


C. zuclopenthixol

Zuclopenthixol Decanoate

General Notices

(Ph Eur monograph 1707)



$C_{32}H_{43}ClN_2O_2S$ 555.2 *64053-00-5*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Zuclopenthixol Decanoate Injection

Ph Eur

DEFINITION

2-[4-[3-[(9*Z*)-2-Chloro-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethyl decanoate.

Content

98.0 per cent to 102.0 per cent (dried substance).

CHARACTERS

Appearance

Yellow, viscous, oily liquid.

Solubility

Very slightly soluble in water, very soluble in ethanol (96 per cent) and in methylene chloride.

IDENTIFICATION

Infrared absorption spectrophotometry *(2.2.24)*.

Comparison *Ph. Eur. reference spectrum of zuclopenthixol decanoate*.

TESTS

Appearance of solution

The solution is clear *(2.2.1).*

Using an ultrasonic bath, dissolve 1.0 g in *ethanol (96 per cent) R* and dilute to 20.0 ml with the same solvent.

Related substances

Liquid chromatography *(2.2.29)*

Carry out the test protected from light and prepare the solutions immediately before use.

Solution A Dissolve 8.89 g of *docusate sodium R* in *water R*, stirring for about 6-8 h, and dilute to 1000 ml with the same solvent.

Test solution Dissolve 25.0 mg of the substance to be examined in *acetonitrile R* and dilute to 100.0 ml with the same solvent.

Reference solution (a) Dilute 1.0 ml of the test solution to 100.0 ml with *acetonitrile R.*

Reference solution (b) Dissolve 5.0 mg of *zuclopenthixol impurity B CRS* in *acetonitrile R* and dilute to 100.0 ml with the same solvent. Dilute 5.0 ml of this solution to 100.0 ml with *acetonitrile R.*

Reference solution (c) Dissolve the contents of a vial of *zuclopenthixol for system suitability CRS* (zuclopenthixol decanoate containing impurities A, B and C) in 1 ml of *methanol R.*

Column:

— *size*: l = 0.25 m, Ø = 4.6 mm;

— *stationary phase:* spherical *end-capped octadecylsilyl silica gel for chromatography R* (5 µm);

— *temperature*: 40 °C.

Mobile phase Mix 25 volumes of solution A and 75 volumes of *anhydrous ethanol R*, then add 0.1 volumes of *phosphoric acid R*.

Flow rate 1.0 ml/min.

Detection Spectrophotometer at 270 nm.

Injection 20 µl.

Run time Twice the retention time of zuclopenthixol decanoate.

Identification of impurities Use the chromatogram supplied with *zuclopenthixol for system suitability CRS* and the chromatograms obtained with reference solutions (b) and (c) to identify the peaks due to impurities A, B and C.

Relative retention With reference to zuclopenthixol decanoate (retention time = about 12 min): impurity C = about 0.4; impurity B = about 0.5; impurity A = about 1.1.

System suitability Reference solution (c):

— *peak-to-valley ratio*: minimum 2.0, where H_p = height above the baseline of the peak due to impurity C and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to impurity B; and minimum 2.5, where H_p = height above the baseline of the peak due to impurity A and H_v = height above the baseline of the lowest point of the curve separating this peak from the peak due to zuclopenthixol decanoate.

Limits:

— *impurity A*: not more than 1.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.3 per cent);

— *impurity B*: not more than 0.2 times the area of the principal peak in the chromatogram obtained with reference solution (b) (0.2 per cent);

— *impurity C*: not more than 0.3 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.3 per cent);

— *unspecified impurities*: for each impurity, not more than 0.1 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.10 per cent);

— *total*: not more than 1.5 times the area of the principal peak in the chromatogram obtained with reference solution (a) (1.5 per cent);

— *disregard limit:* 0.05 times the area of the principal peak in the chromatogram obtained with reference solution (a) (0.05 per cent).

Heavy metals *(2.4.8)*

Maximum 20 ppm.

1.0 g complies with test C. Prepare the reference solution using 2 ml of *lead standard solution (10 ppm Pb) R.*

Loss on drying *(2.2.32)*

Maximum 0.5 per cent, determined on 1.000 g by drying in an oven at 60 °C at a pressure not exceeding 0.7 kPa for 3 h.

Sulphated ash *(2.4.14)*

Maximum 0.1 per cent, determined on 1.0 g.

ASSAY

Dissolve 0.250 g in 50 ml of *anhydrous acetic acid R*. Titrate with *0.1 M perchloric acid*, determining the end-point potentiometrically *(2.2.20)*.

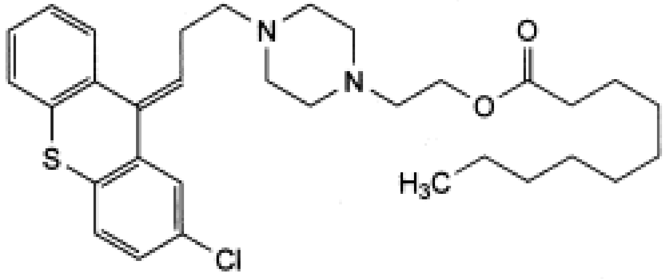
1 ml of *0.1 M perchloric acid* is equivalent to 27.76 mg of $C_{32}H_{43}ClN_2O_2S$.

STORAGE

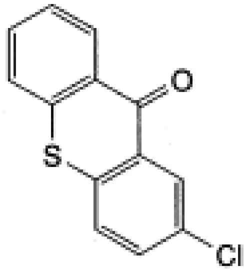
Under an inert gas in an airtight container, protected from light, at a temperature not exceeding - 20 °C.

IMPURITIES

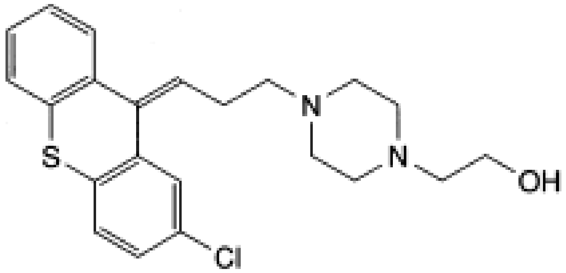
Specified impurities A, B, C.



A. 2-[4-[3-[(9*E*)-2-chloro-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethyl decanoate,



B. 2-chloro-9*H*-thioxanthen-9-one,

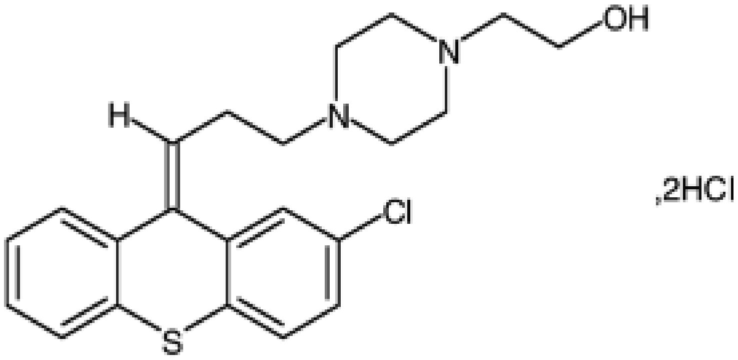


C. 2-[4-[3-[(9*Z*)-2-chloro-9*H*-thioxanthen-9-ylidene]propyl]piperazin-1-yl]ethanol.

Ph Eur

Zuclopenthixol Hydrochloride

General Notices



$C_{22}H_{25}ClN_2OS,2HCl$ 473.9 *633-59-0*

Action and use

Dopamine receptor antagonist; neuroleptic.

Preparation

Zuclopenthixol Tablets

DEFINITION

Zuclopenthixol Hydrochloride is (*Z*)-2-4-[3-(2-chlorothioxanthene-9-ylidene)propyl]piperazin-1-ylethanol dihydrochloride. It contains not less than 98.0% and not more than 101.0% of $C_{22}H_{25}ClN_2OS,2HCl$, calculated with reference to the anhydrous substance.

CHARACTERISTICS

An off-white, granular powder.

Very soluble in *water*; sparingly soluble in *ethanol (96%)*; very slightly soluble in *ether*.

IDENTIFICATION

A. The *light absorption* of a 0.0015% w/v solution in *ethanol (96%)*, Appendix II B, in the range 210 to 350 nm exhibits two maxima at 230 and 268 nm. The *absorbances* at the maxima are about 1.05 and 0.42, respectively.

B. The *infrared absorption spectrum*, Appendix II A, is concordant with the *reference spectrum* of zuclopenthixol hydrochloride *(RS 365)*.

C. Yields reaction A characteristic of *chlorides*, Appendix VI.

TESTS

Acidity

pH of a 1% w/v solution, 2.0 to 3.0, Appendix V L.

Heavy metals

1.0 g complies with *limit test C for heavy metals*, Appendix VII (20 ppm). Prepare the standard using 2 ml of *lead standard solution (10 ppm Pb)*.

Related substances

Carry out the method for *thin-layer chromatography*, Appendix III A, protected from light, using a *TLC silica gel* F_{254} *plate* (Merck plates are suitable), a mixture of 10 volumes of *ethyl acetate* and 90 volumes of *cyclohexane* as the mobile phase but using an unlined tank and allowing the mobile phase to ascend 10 cm above the line of application. Apply separately to the plate 4 µl of each of the following solutions. Solutions (1) to (3) contain (1) 2.5% w/v, (2) 0.0025% w/v and (3) 0.00125% w/v respectively of the substance being examined in *methanol* containing a few drops of *diethylamine*. Solution (4) contains 0.0025% w/v of *2-chlorothioxanthone BPCRS* in *methanol*. Solution (5) contains 0.0025% w/v of *9-allyl-2-chlorothioxanthen-9-ol BPCRS* in *methanol*. After removal of the plate, allow it to dry in air, spray with a mixture of equal volumes of *sulphuric acid* and *absolute ethanol*, heat at 110° for 5 minutes and examine under *ultraviolet light (365 nm)* immediately. In the chromatogram obtained with solution (1) any spots corresponding to 2-chlorothioxanthone and to 9-allyl-2-chlorothioxanthenol are not more intense than the spots in the chromatograms obtained with solutions (4) and (5) respectively (0.1% each), any other *secondary spot* is not more intense than the spot in the chromatogram obtained with solution (2) (0.1%) and not more than four such spots are more intense than the spot in the chromatogram obtained with solution (3) (0.05%).

Free amine

Carry out the method for *thin-layer chromatography*, Appendix III A, protected from light, using a silica gel F_{254} precoated plate (Merck silica gel 60 F_{254} plates are suitable) and a mixture of 2 volumes of *water*, 10 volumes of 13.5M *ammonia*, 20 volumes of *butan-1-ol* and 65 volumes of *acetone* as the mobile phase. Apply separately to the plate 4 µl of each of the following solutions. Solution (1) is a 0.25% w/v solution of the substance being examined in *ethanol (96%)*; add a few drops of *diethylamine* to aid dissolution. For solution (2), dilute 1 volume of solution (1) to 400 volumes with *ethanol (96%)*. After removal of the plate, allow it to dry in air, spray with a mixture of equal volumes of *sulphuric acid* and *absolute ethanol*, heat at 110° for 5 minutes and examine under *ultraviolet light (365 nm)* immediately. In the chromatogram obtained with solution (1) any *secondary spot* of the same colour and at an Rf value lower than that of the principal spot is not more intense than the spot in the chromatogram obtained solution (2) (0.25%).

***trans*-Isomer**

Carry out the method for *liquid chromatography,* Appendix III D, protected from light, using the following solutions. For solution (1) dissolve 10 mg of the substance being examined in 5 ml of *water*, add 25 ml of the mobile phase, shake thoroughly for 1 minute and dilute to 50 ml with the mobile phase; use the upper layer. For solution (2) prepare a 0.004% w/v solution of *trans-clopenthixol hydrochloride BPCRS* in *water*, shake 5 ml of this solution with 25 ml of the mobile phase for 1 minute and dilute to 50 ml with the mobile phase; use the upper layer. For solution (3) dissolve 10 mg of the substance being examined in 5 ml of a 0.004% w/v solution of *trans-clopenthixol hydrochloride BPCRS*, add 25 ml of the mobile phase, shake thoroughly for 1 minute, dilute to 50 ml with the mobile phase and use the upper layer.

The chromatographic procedure may be carried out using (a) a stainless steel column (25 cm × 4.6 mm) packed with *silica gel for chromatography* (5 µm) (Spherisorb S 5W is suitable), (b) a mixture of 0.2 volume of *water*, 0.3 volume of 13.5M *ammonia,* 15 volumes of *propan-2-ol* and 85 volumes of n-*heptane* as the mobile phase with a flow rate of 1.5 ml per minute and (c) and a detection wavelength of 254 nm.

The test is not valid unless the chromatogram obtained with solution (3) shows a similar resolution to that in the reference chromatogram supplied with *trans-clopenthixol hydrochloride BPCRS.*

In the chromatogram obtained with solution (1) the area of any peak corresponding to *trans*-clopenthixol hydrochloride is not greater than 1.5 times the area of the peak in the chromatogram obtained with solution (2) (3%).

Water

Not more than 2.5%, determined on 0.5 g, Appendix IX C.

Sulphated ash

Not more than 0.1%, Appendix IX A.

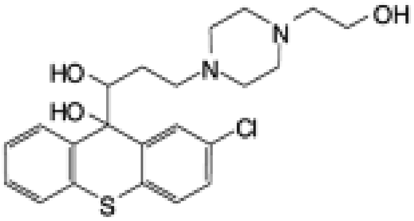
ASSAY

Dissolve 0.5 g in 50 ml of *anhydrous acetic acid* and carry out Method I for *non-aqueous titration*, Appendix VIII A, using *crystal violet solution* as indicator. Each ml of 0.1M *perchloric acid VS* is equivalent to 23.70 mg of $C_{22}H_{27}Cl_3N_2OS$.

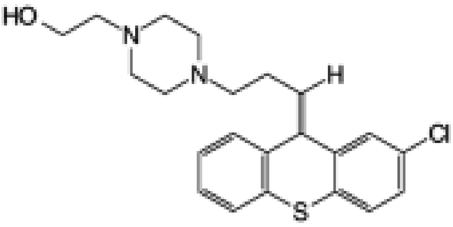
STORAGE

Zuclopenthixol Hydrochloride should be protected from light.

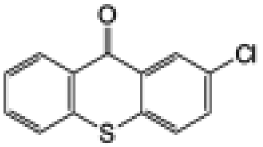
IMPURITIES



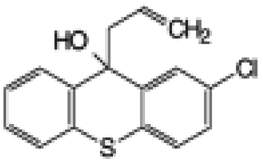
A. 2-chloro-9-(1-hydroxy-3-(4-(2-hydroxyethyl)]piperazin-1-ylpropyl)thioxanthen9-ol,



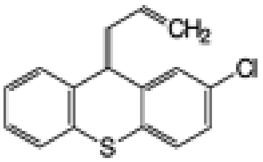
B. *trans*-clopenthixol,



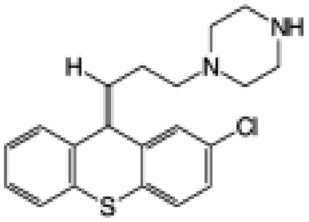
C. 2-chlorothioxanthone,



D. 9-allyl-2-chlorothioxanthen-9-ol,



E. 9-allylidene-2-chlorothioxanthene,



F. 2-chloro-9-(3-piperazin-1-ylpropylidene)thioxanthene.

AROMATIC WATERS

General Notices

DEFINITION

Aromatic Waters are saturated solutions of volatile oils or other aromatic substances in water, usually employed for their flavouring rather than their medicinal properties. Aromatic Waters prepared as described below contain a small amount of Ethanol.

PRODUCTION

Aromatic Waters are normally prepared by diluting a concentrated, ethanolic solution of the aromatic substance with Water.

LABELLING

The label states (1) the date after which the Aromatic Water is not intended to be used; (2) the conditions under which the Aromatic Water should be stored.

Capsules of the British Pharmacopoeia

General Notices

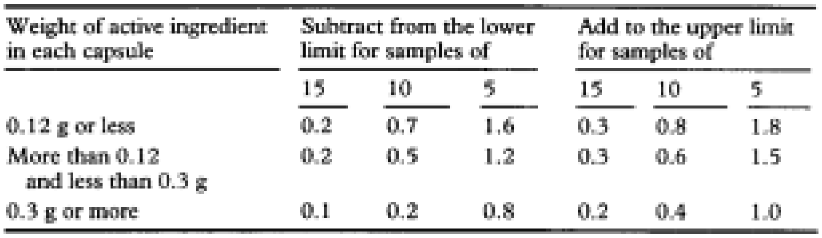
In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those capsules that are the subject of an individual monograph in the British Pharmacopoeia.

When presented as granules the contents of the requisite number of capsules should be mixed and powdered before performing the Assay and tests described in the monograph.

Content of active ingredient in capsules

The range for the content of active ingredient stated in the monograph is based on the requirement that 20 capsules, or such other number as may be indicated in the monograph, are used in the Assay. In the circumstances where 20 capsules cannot be obtained, a smaller number, which must not be less than 5, may be used, but to allow for sampling errors the tolerances are widened in accordance with Table I.

Table I



Weight of active ingredient in each capsule	Subtract from the lower limit for samples of			Add to the upper limit for samples of		
	15	10	5	15	10	5
0.12 g or less	0.2	0.7	1.6	0.3	0.8	1.8
More than 0.12 and less than 0.3 g	0.2	0.5	1.2	0.3	0.6	1.5
0.3 g or more	0.1	0.2	0.8	0.2	0.4	1.0

The requirements of Table I apply when the stated limits are 90 to 110%. For limits other than 90 to 110%, proportionately smaller or larger allowances should be made.

Disintegration

Comply with the *disintegration test for tablets and capsules,* Appendix XII A1, unless otherwise stated in the individual monographs.

For those Hard Capsules or Soft Capsules for which a requirement for Dissolution is included in the individual monograph, the requirement for Disintegration does not apply.

Uniformity of content

Details of the analytical method to be employed for determining the content of active ingredient may be included in certain monographs. Unless otherwise stated in the monograph the limits are as given in test B for *uniformity of content*, Appendix XII C3.

Any capsules that when examined individually show a gross deviation from the prescribed or stated content are not official.

LABELLING

The label states (1) the quantity of the active ingredient contained in each Capsule; (2) the date after which the Capsules are not intended to be used; (3) the conditions under which the Capsules should be stored.

CAPSULES

General Notices

(Ph Eur monograph 0016)

Capsules comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

The requirements of this monograph do not necessarily apply to preparations that are presented as capsules intended for use other than by oral administration. Requirements for such preparations may be found, where appropriate, in other general monographs, for example Rectal preparations (1145) and Vaginal preparations (1164).

DEFINITION

Capsules are solid preparations with hard or soft shells of various shapes and capacities, usually containing a single dose of active substance(s). They are intended for oral administration.

The capsule shells are made of gelatin or other substances, the consistency of which may be adjusted by the addition of substances such as glycerol or sorbitol. Excipients such as surface-active agents, opaque fillers, antimicrobial preservatives, sweeteners, colouring matter authorised by the competent authority and flavouring substances may be added. The capsules may bear surface markings.

The contents of capsules may be solid, liquid or of a paste-like consistency. They consist of one or more active substances with or without excipients such as solvents, diluents, lubricants and disintegrating agents. The contents do not cause deterioration of the shell. The shell, however, is attacked by the digestive fluids and the contents are released.

Where applicable, containers for capsules comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of capsules may be distinguished:

- — hard capsules;
- — soft capsules;
- — gastro-resistant capsules;
- — modified-release capsules;
- — cachets.

PRODUCTION

In the manufacture, packaging, storage and distribution of capsules, suitable measures are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

TESTS

Uniformity of dosage units

Capsules comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, capsules with a content of active substance less than 2 mg or less than 2 per cent of the fill mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those ingredients which correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Capsules comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Dissolution

A suitable test may be carried out to demonstrate the appropriate release of the active substance(s), for example one of the tests described in *Dissolution test for solid dosage forms (2.9.3)*.

Where a dissolution test is prescribed, a disintegration test may not be required.

STORAGE

Store at a temperature not exceeding 30 °C.

LABELLING

The label states the name of any added antimicrobial preservative.

HARD CAPSULES

DEFINITION

Hard capsules have shells consisting of 2 prefabricated, cylindrical sections, each of which has one rounded, closed end and one open end.

PRODUCTION

The active substance(s), usually in solid form (powder or granules), are filled into one of the sections that is then closed by slipping the other section over it. The security of the closure may be strengthened by suitable means.

TESTS

Disintegration

Hard capsules comply with the test for disintegration of tablets and capsules *(2.9.1)*. Use *water R* as the liquid medium. When justified and authorised, *0.1 M hydrochloric acid* or *artificial gastric juice R* may be used as the liquid medium. If the capsules float on the surface of the water, a disc may be added. Operate the apparatus for 30 min, unless otherwise justified and authorised.

SOFT CAPSULES

DEFINITION

Soft capsules have thicker shells than those of hard capsules. The shells consist of a single part and are of various shapes.

PRODUCTION

Soft capsules are usually formed, filled and sealed in one operation, but for extemporaneous use the shell may be prefabricated. The shell material may contain an active substance.

Liquids may be enclosed directly; solids are usually dissolved or dispersed in a suitable vehicle to give a solution or dispersion of a paste-like consistency.

There may be partial migration of the constituents from the capsule contents into the shell and vice versa because of the nature of the materials and the surfaces in contact.

TESTS

Disintegration

Soft capsules comply with the test for disintegration of tablets and capsules *(2.9.1)*. Use *water R* as the liquid medium. When justified and authorised, *0.1 M hydrochloric acid* or *artificial gastric juice R* may be used as the liquid medium. Add a disc to each tube. Liquid active substances dispensed in soft capsules may attack the disc; in such circumstances and where authorised, the disc may be omitted. Operate the apparatus for 30 min, unless otherwise justified and authorised. If the capsules fail to comply because of adherence to the discs, the results are invalid. Repeat the test on a further 6 capsules omitting the discs.

MODIFIED-RELEASE CAPSULES

DEFINITION

Modified-release capsules are hard or soft capsules in which the contents or the shell or both contain special excipients or are prepared by a special process designed to modify the rate, the place or the time at which the active substance(s) are released.

Modified-release capsules include prolonged-release capsules and delayed-release capsules.

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) .

GASTRO-RESISTANT CAPSULES

DEFINITION

Gastro-resistant capsules are delayed-release capsules that are intended to resist the gastric fluid and to release their active substance or substances in the intestinal fluid. Usually they are prepared by filling capsules with granules or with particles covered with a gastro-resistant coating, or in certain cases, by providing hard or soft capsules with a gastro-resistant shell (enteric capsules).

PRODUCTION

For capsules filled with granules or filled with particles covered with a gastro-resistant coating, a suitable test is carried out to demonstrate the appropriate release of the active substance(s) .

TESTS

Disintegration

For capsules with a gastro-resistant shell carry out the test for disintegration *(2.9.1)* with the following modifications. Use *0.1 M hydrochloric acid* as the liquid medium and operate the apparatus for 2 h, or other such time as may be authorised, without the discs. Examine the state of the capsules. The time of resistance to the acid medium varies according to the formulation of the capsules to be examined. It is typically 2 h to 3 h but even with authorised deviations it must not be less than 1 h. No capsule shows signs of disintegration or rupture permitting the escape of the contents. Replace the acid by *phosphate buffer solution pH 6.8 R*. When justified and authorised, a buffer solution of pH 6.8 with added pancreas powder (for example, 0.35 g of *pancreas powder R* per 100 ml of buffer solution) may be used. Add a disc to each tube. Operate the apparatus for 60 min. If the capsules fail to comply because of adherence to the discs, the results are invalid. Repeat the test on a further 6 capsules omitting the discs.

Dissolution

For capsules prepared from granules or particles already covered with a gastro-resistant coating, a suitable test is carried out to demonstrate the appropriate release of the active substance(s), for example the test described in *Dissolution test for solid dosage forms (2.9.3)*.

CACHETS

DEFINITION

Cachets are solid preparations consisting of a hard shell containing a single dose of one or more active substances. The cachet shell is made of unleavened bread usually from rice flour and consists of 2 prefabricated flat cylindrical sections. Before administration, the cachets are immersed in water for a few seconds, placed on the tongue and swallowed with a draught of water.

LABELLING

The label states the method of administration of the cachets.

Ph Eur

Ear Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any ear drops or ear spray that is the subject of an individual monograph in the British Pharmacopoeia.

EAR DROPS

STORAGE

Ear Drops are supplied in containers of glass or suitable plastic that are fitted with an integral dropper or with a screw cap of suitable materials incorporating a dropper and rubber or plastic teat. Alternatively, such a cap assembly is supplied separately.

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the Ear Drops are intended for external use only.

EAR SPRAYS

LABELLING

The label states (1) the instructions for using the spray; (2) the amount of active ingredients delivered by each actuation of the valve; (3) the number of deliveries available from the container; (4) that the Ear Spray is intended for external use only.

EAR PREPARATIONS

General Notices

(Ph Eur monograph 0652)

Ear Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Ear preparations are liquid, semi-solid or solid preparations intended for instillation, for spraying, for insufflation, for application to the auditory meatus or as an ear wash.

Ear preparations usually contain 1 or more active substances in a suitable vehicle. They may contain excipients, for example, to adjust tonicity or viscosity, to adjust or stabilise the pH, to increase the solubility of the active substances, to stabilise the preparation or to provide adequate antimicrobial properties. The excipients do not adversely affect the intended medicinal action of the preparation or, at the concentrations used, cause toxicity or undue local irritation.

Preparations for application to the injured ear, particularly where the eardrum is perforated, or prior to surgery are sterile, free from antimicrobial preservatives and supplied in single-dose containers.

Ear preparations are supplied in multi-dose or single-dose containers, provided, if necessary, with a suitable administration device which may be designed to avoid the introduction of contaminants.

Unless otherwise justified and authorised, aqueous ear preparations supplied in multidose containers contain a suitable antimicrobial preservative at a suitable concentration, except where the preparation itself has adequate antimicrobial properties.

Where applicable, containers for ear preparations comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of ear preparations may be distinguished:

— ear drops and sprays;

— semi-solid ear preparations;

— ear powders;

— ear washes;

— ear tampons.

PRODUCTION

During development of an ear preparation whose formulation contains an antimicrobial preservative, the need for and the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in the text on *Efficacy of antimicrobial preservation (5.1.3)*.

During development of ear washes, it must be demonstrated that the nominal content can be withdrawn from the container of preparations presented in single-dose containers.

In the manufacture, packaging, storage and distribution of ear preparations, suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

Sterile ear preparations are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products (5.1.1)*.

In the manufacture of ear preparations containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Uniformity of dosage units

Single-dose ear preparations comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose ear preparations with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those ingredients that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Single-dose ear preparations comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Sterility *(2.6.1)*

Where the label indicates that the ear preparation is sterile, it complies with the test for sterility.

STORAGE

If the preparation is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

— the name of any added antimicrobial preservative;

— where applicable, that the preparation is sterile;

— for multidose containers, the period after opening the container after which the contents must not be used. This period does not exceed 4 weeks, unless otherwise justified and authorised.

EAR DROPS AND EAR SPRAYS

DEFINITION

Ear drops and ear sprays are solutions, emulsions or suspensions of one or more active substances in liquids suitable for application to the auditory meatus without exerting harmful pressure on the eardrum (for example, water, glycols or fatty oils). They may also be placed in the auditory meatus by means of a tampon impregnated with the liquid.

Emulsions may show evidence of phase separation but are readily redispersed on shaking. Suspensions may show a sediment which is readily dispersed on shaking to give a suspension which remains sufficiently stable to enable the correct dose to be delivered.

Ear drops are usually supplied in multidose containers of glass or suitable plastic material that are fitted with an integral dropper or with a screw cap of suitable materials incorporating a dropper and rubber or plastic teat. Alternatively, such a cap assembly is supplied separately. Ear sprays are usually supplied in multi-dose containers fitted with an appropriate applicator. When ear sprays are supplied in pressurised containers, these comply with the requirements of the monograph on *Pressurised pharmaceutical preparations (0523).*

SEMI-SOLID EAR PREPARATIONS

DEFINITION

Semi-solid ear preparations are intended for application to the external auditory meatus, if necessary by means of a tampon impregnated with the preparation.

Semi-solid ear preparations comply with the requirements of the monograph on *Semi-solid preparations for cutaneous application (0132).*

They are supplied in containers fitted with a suitable applicator.

EAR POWDERS

DEFINITION

Ear powders comply with the requirements of the monograph on *Powders for cutaneous application (1166).*

They are supplied in containers fitted with a suitable device for application or insufflation.

EAR WASHES

DEFINITION

Ear washes are preparations intended to cleanse the external auditory meatus. They are usually aqueous solutions with a pH within physiological limits.

Ear washes intended for application to injured parts or prior to a surgical operation are sterile.

EAR TAMPONS

DEFINITION

Ear tampons are intended to be inserted into the external auditory meatus. They comply with the requirements of the monograph on *Medicated tampons (1155).*

Ph Eur

Eye Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any eye drops, eye lotion or eye ointment that is the subject of an individual monograph in the British Pharmacopoeia.

EYE DROPS

DEFINITION

Definition of particular Eye Drops as a solution or suspension in Purified Water does not preclude the inclusion of suitable additional substances where necessary for the purposes referred to above under the requirements of the European Pharmacopoeia. However if buffering agents are used in preparations intended for use in surgical procedures great care should be taken to ensure that the nature and concentration of the chosen agent are suitable.

Where the active ingredient is susceptible to oxidative degradation appropriate precautions such as the addition of a suitable antioxidant should be taken. If an antioxidant is added care should be taken to ensure compatibility between the antioxidant and the antimicrobial preservative.

PRODUCTION

Methods of sterilisation that may be used in the manufacture of Eye Drops are described in Appendix XVIII.

STORAGE

Eye Drops are supplied in tamper-evident containers. The compatibility of plastic or rubber components should be confirmed before use.

Containers for multi-dose Eye Drops are fitted with an integral dropper or with a sterile screw cap of suitable materials incorporating a dropper and rubber or plastic teat. Alternatively such a cap assembly is supplied, sterilised, separately.

LABELLING

The label states (1) the names and percentages of the active ingredients; (2) the date after which the Eye Drops are not intended to be used; (3) the conditions under which the Eye Drops should be stored.

For multi-dose containers the label states that care should be taken to avoid contamination of the contents during use.

Single-dose containers that because of their size bear only an indication of the active ingredient and the strength of the preparation do so by use of an approved code, Appendix XXI C, together with an expression of the percentage present. When a code is used on the container, the code is also stated on the package.

EYE OINTMENTS

DEFINITION

Eye Ointments of the British Pharmacopoeia that are intended to be used solely or primarily as a suitable eye-ointment basis contain no active ingredient.

PRODUCTION

Methods of sterilisation that may be used in the manufacture of Eye Ointments are described in Appendix XVIII.

In preparing Eye Ointments in tropical or subtropical countries where the prevailing high temperatures otherwise make the basis too soft for convenient use, the proportions of Yellow Soft Paraffin and Liquid Paraffin specified in the individual monograph may be varied, or Hard Paraffin may be added but the proportions of active ingredients must not be changed.

STORAGE

Single-dose containers for Eye Ointments, or the nozzles of tubes, are of such a shape as to facilitate administration without contamination. The former type of container is individually wrapped. Tubes are tamper-evident.

LABELLING

The label states (1) the names and percentages of the active ingredients; (2) the date after which the Eye Ointment is not intended to be used; (3) the conditions under which the Eye Ointment should be stored.

EYE PREPARATIONS

General Notices

(Ph Eur monograph 1163)

Eye Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Eye preparations are sterile liquid, semi-solid or solid preparations intended for administration upon the eyeball and/or to the conjunctiva, or for insertion in the conjunctival sac.

Where applicable, containers for eye preparations comply with the requirements of materials used for the manufacture of containers *(3.1 and subsections)* and containers *(3.2 and subsections)*.

Several categories of eye preparations may be distinguished:

- — eye drops;
- — eye lotions;
- — powders for eye drops and powders for eye lotions;
- — semi-solid eye preparations;
- — ophthalmic inserts.

PRODUCTION

During the development of an eye preparation whose formulation contains an antimicrobial preservative, the necessity for and the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in chapter *5.1.3*. *Efficacy of antimicrobial preservation*.

Eye preparations are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in chapter *5.1.1*. *Methods of preparation of sterile products.*

In the manufacture of eye preparations containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

During development, it must be demonstrated that the nominal contents can be withdrawn from the container of liquid and semi-solid eye preparations supplied in single-dose containers.

TESTS

Sterility *(2.6.1)*

Eye preparations comply with the test. Applicators supplied separately also comply with the test. Remove the applicator with aseptic precautions from its package and transfer it to a tube of culture medium so that it is completely immersed. Incubate and interpret the results as described in the test.

STORAGE

Unless otherwise justified and authorised, store in a sterile, tamper-proof container.

LABELLING

The label states the name of any added antimicrobial preservative.

EYE DROPS

DEFINITION

Eye drops are sterile aqueous or oily solutions, emulsions or suspensions of one or more active substances intended for instillation into the eye.

Eye drops may contain excipients, for example, to adjust the tonicity or the viscosity of the preparation, to adjust or stabilise the pH, to increase the solubility of the active substance, or to stabilise the preparation. These substances do not adversely affect the intended medicinal action or, at the concentrations used, cause undue local irritation.

Aqueous preparations supplied in multidose containers contain a suitable antimicrobial preservative in appropriate concentration except when the preparation itself has adequate antimicrobial properties. The antimicrobial preservative chosen must be compatible with the other ingredients of the preparation and must remain effective throughout the period of time during which eye drops are in use.

If eye drops do not contain antimicrobial preservatives they are supplied in single-dose containers or in multidose containers preventing microbial contamination of the contents after opening.

Eye drops intended for use in surgical procedures do not contain antimicrobial preservatives.

Eye drops that are solutions, examined under suitable conditions of visibility, are practically clear and practically free from particles.

Eye drops that are suspensions may show a sediment that is readily redispersed on shaking to give a suspension which remains sufficiently stable to enable the correct dose to be delivered.

Multidose preparations are supplied in containers that allow successive drops of the preparation to be administered. The containers contain at most 10 ml of the preparation, unless otherwise justified and authorised.

TESTS

Particle size

Unless otherwise justified and authorised, eye drops in the form of a suspension comply with the following test: introduce a suitable quantity of the suspension into a counting cell or with a micropipette onto a slide, as appropriate, and scan under a microscope an area corresponding to 10 µg of the solid phase. For practical reasons, it is recommended that the whole sample is first scanned at low magnification (e.g. × 50) and particles greater than 25 µm are identified. These larger particles can then be measured at a larger magnification (e.g. × 200 to × 500). For each 10 µg of solid active substance, not more than 20 particles have a maximum dimension greater than 25 µm, and not more than 2 of these particles have a maximum dimension greater than 50 µm. None of the particles has a maximum dimension greater than 90 µm.

LABELLING

The label states, for multidose containers, the period after opening the container after which the contents must not be used. This period does not exceed 4 weeks, unless otherwise justified and authorised.

EYE LOTIONS

DEFINITION

Eye lotions are sterile aqueous solutions intended for use in rinsing or bathing the eye or for impregnating eye dressings.

Eye lotions may contain excipients, for example to adjust the tonicity or the viscosity of the preparation or to adjust or stabilise the pH. These substances do not adversely affect the intended action or, at the concentrations used, cause undue local irritation.

Eye lotions supplied in multidose containers contain a suitable antimicrobial preservative in appropriate concentration except when the preparation itself has adequate antimicrobial properties. The antimicrobial preservative chosen is compatible with the other ingredients of the preparation and remains effective throughout the period of time during which the eye lotions are in use.

If eye lotions do not contain antimicrobial preservatives, they are supplied in single-dose containers. Eye lotions intended for use in surgical procedures or in first-aid treatment do not contain an antimicrobial preservative and are supplied in single-dose containers.

Eye lotions, examined under suitable conditions of visibility, are practically clear and practically free from particles.

The containers for multidose preparations do not contain more than 200 ml of eye lotion, unless otherwise justified and authorised.

LABELLING

The label states:

— where applicable, that the contents are to be used on one occasion only;

— for multidose containers, the period after opening the container after which the contents must not be used; this period does not exceed 4 weeks, unless otherwise justified and authorised.

POWDERS FOR EYE DROPS AND POWDERS FOR EYE LOTIONS

DEFINITION

Powders for the preparation of eye drops and eye lotions are supplied in a dry, sterile form to be dissolved or suspended in an appropriate liquid vehicle at the time of administration. They may contain excipients to facilitate dissolution or dispersion, to prevent caking, to adjust the tonicity, to adjust or stabilise the pH or to stabilise the preparation.

After dissolution or suspension in the prescribed liquid, they comply with the requirements for eye drops or eye lotions, as appropriate.

TESTS

Uniformity of dosage units *(2.9.40)*

Single-dose powders for eye drops and eye lotions comply with the test or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose powders for eye drops and eye lotions with a content of active substance less then 2 mg or less than 2 per cent of the total mass comply with test B. If the preparation has more than one active substance, the requirement applies only to those substances that correspond to the above condition.

Uniformity of mass *(2.9.5)*

Single-dose powders for eye drops and eye lotions comply with the test. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

SEMI-SOLID EYE PREPARATIONS

DEFINITION

Semi-solid eye preparations are sterile ointments, creams or gels intended for application to the conjunctiva or to the eyelids. They contain one or more active substances dissolved or dispersed in a suitable basis. They have a homogeneous appearance.

Semi-solid eye preparations comply with the requirements of the monograph *Semi-solid preparations for cutaneous application (0132).* The basis is non-irritant to the conjunctiva.

Semi-solid eye preparations are packed in small, sterilised collapsible tubes fitted or provided with a sterilised cannula. The containers contain at most 10 g of the preparation, unless otherwise justified and authorised. The tubes must be well-closed to prevent microbial contamination. Semi-solid eye preparations may also be packed in suitably designed single-dose containers. The containers, or the nozzles of tubes, are of such a shape as to facilitate administration without contamination.

TESTS

Particle size

Semi-solid eye preparations containing dispersed solid particles comply with the following test: spread gently a quantity of the preparation corresponding to at least 10 µg of solid active substance as a thin layer. Scan under a microscope the whole area of the sample. For practical reasons, it is recommended that the whole sample is first scanned at a small magnification (e.g. × 50) and particles greater than 25 µm are identified. These larger particles can then be measured at a larger magnification (e.g. × 200 to × 500). For each 10 µg of solid active substance, not more than 20 particles have a maximum dimension greater than 25 µm, and not more than 2 of these particles have a maximum dimension greater than 50 µm. None of the particles has a maximum dimension greater than 90 µm.

LABELLING

The label states, for multidose containers, the period after opening the container after which the contents must not be used. This period does not exceed 4 weeks, unless otherwise justified and authorised.

OPHTHALMIC INSERTS

DEFINITION

Ophthalmic inserts are sterile, solid or semi-solid preparations of suitable size and shape, designed to be inserted in the conjunctival sac, to produce an ocular effect. They generally consist of a reservoir of active substance embedded in a matrix or bounded by a rate-controlling membrane. The active substance, which is more or less soluble in lacrymal liquid, is released over a determined period of time.

Ophthalmic inserts are individually distributed into sterile containers.

PRODUCTION

In the manufacture of ophthalmic inserts, measures are taken to ensure a suitable dissolution behaviour.

TESTS

Uniformity of dosage units *(2.9.40)*

Ophthalmic inserts comply with the test or, where justified and authorised, with the test for uniformity of content shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Ophthalmic inserts comply, where applicable, with test A.

LABELLING

The label states:

- — where applicable, the total quantity of active substance per insert;
- — where applicable, the dose released per unit time.

Ph Eur

GLOSSARY

General Notices

(Ph Eur monograph 1502)

A glossary of terms relating to formulated preparations is included in the European Pharmacopoeia. The glossary is reproduced below.

Ph Eur

The following introductory text provides definitions and/or explanations of terms that may be found in, or used in association with, the general monographs on dosage forms, but that are not defined within them. Where relevant, reference is made to other equivalent terms that may be found in other publications or contexts.

This glossary is published for information.

Standard Term

Standard Terms for describing the pharmaceutical form of a medicinal product, the routes of administration and the containers used have been established by the European Pharmacopoeia Commission and are provided in a separate publication on Standard Terms.

Active substance

Equivalent terms: active ingredient, drug substance, medicinal substance, active pharmaceutical ingredient.

Vehicle

A vehicle is the carrier, composed of one or more excipients, for the active substance(s) in a liquid preparation.

Basis

A basis is the carrier, composed of one or more excipients, for the active substance(s) in semi-solid and solid preparations.

Conventional-release dosage forms

Conventional-release dosage forms are preparations showing a release of the active substance(s) which is not deliberately modified by a special formulation design and/or manufacturing method. In the case of a solid dosage form, the dissolution profile of the active substance depends essentially on its intrinsic properties. Equivalent term: immediate-release dosage form.

Modified-release dosage forms

Modified-release dosage forms are preparations where the rate and/or place of release of the active substance(s) is different from that of a conventional-release dosage form administered by the same route. This deliberate modification is achieved by a special formulation design and/or manufacturing method. Modified-release dosage forms include prolonged-release, delayed-release and pulsatile-release dosage forms.

Prolonged-release dosage forms

Prolonged-release dosage forms are modified-release dosage forms showing a slower release of the active substance(s) than that of a conventional-release dosage form administered by the same route. Prolonged-release is achieved by a special formulation design and/or manufacturing method. Equivalent term: extended-release dosage form.

Delayed-release dosage forms

Delayed-release dosage forms are modified-release dosage forms showing a release of the active substance(s) which is delayed. Delayed release is achieved by a special formulation design and/or manufacturing method. Delayed-release dosage forms include gastro-resistant preparations as defined in the general monographs on solid oral dosage forms.

Pulsatile-release dosage forms

Pulsatile-release dosage forms are modified-release dosage forms showing a sequential release of the active substance(s). Sequential release is achieved by a special formulation design and/or manufacturing method.

Large-volume parenterals

Infusions and injections supplied in containers with a nominal content of more than 100 ml.

Small-volume parenterals

Infusions and injections supplied in containers with a nominal content of 100 ml or less.

Ph Eur

Granules of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those granules that are the subject of an individual monograph in the British Pharmacopoeia.

LABELLING

For single-dose containers the label states the name and amount of active ingredient per container and for multi-dose containers the label states the name and amount of active ingredient in a suitable quantity by weight.

The label also states (1) the date after which the Granules are not intended to be used; (2) the conditions under which the Granules should be stored; (3) the instructions for using the Granules.

GRANULES

General Notices

(Ph Eur monograph 0499)

Granules comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

Requirements for granules to be used for the preparation of oral solutions or suspensions are given in the monograph on Liquid preparations for oral use (0672). Where justified and authorised, the requirements of this monograph do not apply to granules for veterinary use.

DEFINITION

Granules are preparations consisting of solid, dry aggregates of powder particles sufficiently resistant to withstand handling. They are intended for oral administration. Some are swallowed as such, some are chewed and some are dissolved or dispersed in water or another suitable liquid before being administered.

Granules contain one or more active substances with or without excipients and, if necessary, colouring matter authorised by the competent authority and flavouring substances.

Granules are presented as single-dose or multidose preparations. Each dose of a multidose preparation is administered by means of a device suitable for measuring the quantity prescribed. For single-dose granules, each dose is enclosed in an individual container, for example a sachet or a vial.

Where applicable, containers for granules comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of granules may be distinguished:

— effervescent granules,

— coated granules,

— gastro-resistant granules,

— modified-release granules.

PRODUCTION

In the manufacture, packaging, storage and distribution of granules, suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

TESTS

Uniformity of dosage units

Single-dose granules comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose granules with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those substances which correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Single-dose granules except for coated granules comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Uniformity of mass of delivered doses from multidose containers *(2.9.27)*

Granules supplied in multidose containers comply with the test.

STORAGE

If the preparation contains volatile ingredients or the contents have to be protected, store in an airtight container.

EFFERVESCENT GRANULES

DEFINITION

Effervescent granules are uncoated granules generally containing acid substances and carbonates or hydrogen carbonates which react rapidly in the presence of water to release carbon dioxide. They are intended to be dissolved or dispersed in water before administration.

TESTS

Disintegration

Place one dose of the effervescent granules in a beaker containing 200 ml of *water R* at 15-25 °C; numerous bubbles of gas are evolved. When the evolution of gas around the individual grains ceases, the granules have disintegrated, being either dissolved or dispersed in the water. Repeat the operation on 5 other doses. The preparation complies with the test if each of the 6 doses used disintegrates within 5 min.

STORAGE

In an airtight container.

COATED GRANULES

DEFINITION

Coated granules are usually multidose preparations and consist of granules coated with one or more layers of mixtures of various excipients.

PRODUCTION

The substances used as coatings are usually applied as a solution or suspension in conditions in which evaporation of the vehicle occurs.

TESTS

Dissolution

A suitable test may be carried out to demonstrate the appropriate release of the active substance(s), for example one of the tests described in *Dissolution test for solid dosage forms (2.9.3)*.

MODIFIED-RELEASE GRANULES

DEFINITION

Modified-release granules are coated or uncoated granules which contain special excipients or which are prepared by special procedures, or both, designed to modify the rate, the place or the time at which the active substance or substances are released.

Modified-release granules include prolonged-release granules and delayed-release granules.

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) .

TESTS

Dissolution

Carry out a suitable test to demonstrate the appropriate release of the active substance(s), for example the test described in *Dissolution test for solid dosage forms (2.9.3)*.

GASTRO-RESISTANT GRANULES

DEFINITION

Gastro-resistant granules are delayed-release granules that are intended to resist the gastric fluid and to release the active substance(s) in the intestinal fluid. These properties are achieved by covering the granules with a gastro-resistant material (enteric-coated granules) or by other suitable means.

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) .

TESTS

Dissolution

Carry out a suitable test to demonstrate the appropriate release of the active substance(s), for example the test described in *Dissolution test for solid dosage forms (2.9.3)*.

INFUSIONS

General Notices

DEFINITION

Infusions are dilute solutions containing the readily-soluble constituents of crude drugs. They are usually prepared by diluting one volume of a concentrated Infusion to ten volumes with Water.

For dispensing purposes, Infusions should be used within 12 hours of their preparation.

LABELLING

The label states (1) the time after which the Infusion is not intended to be used; (2) the conditions under which the Infusion should be stored.

Liquids for Cutaneous Application of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any application, collodion, liniment, lotion or paint that is the subject of an individual monograph in the British Pharmacopoeia and to the solutions listed below.

APPLICATIONS

LABELLING

The label states (1) that the Application is intended for external use only; (2) the date after which the Application is not intended to be used; (3) the conditions under which the Application should be stored; (4) the directions for using the Application; (5) any special precautions associated with the use of the Application.

COLLODIONS

DEFINITION

Collodions are Liquids for Cutaneous Application, usually containing Pyroxylin in a mixture of Ether and Ethanol. When they are allowed to dry, a flexible film is formed at the site of application.

STORAGE

Collodions should be stored remote from fire.

LABELLING

The label states (1) that the Collodion is intended for external use only; (2) the date after which the Collodion is not intended to be used; (3) the conditions under which the Collodion should be stored; (4) the directions for using the Collodion; (5) any special precautions associated with the use of the Collodion.

LINIMENTS

DEFINITION

Liniments are Liquids for Cutaneous Application that are intended to be applied to the unbroken skin with friction.

STORAGE

Certain plastic containers, such as those made from polystyrene, are unsuitable for Liniments.

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the

Liniment is intended for external use only; (3) if appropriate, that the contents of the container should be shaken before use; (4) the date after which the Liniment is not intended to be used; (5) the conditions under which the Liniment should be stored; (6) the directions for using the Liniment; (7) any special precautions associated with the use of the Liniment.

LOTIONS

DEFINITION

Lotions are Liquids for Cutaneous Application that are intended to be applied to the unbroken skin without friction.

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the Lotion is intended for external use only; (3) that the Lotion should be shaken before use; (4) the date after which the Lotion is not intended to be used; (5) the conditions under which the Lotion should be stored; (6) the directions for using the Lotion; (7) any special precautions associated with the use of the Lotion.

POWDERS FOR LOTIONS

DEFINITION

Powders for Lotions are preparations consisting of solid, loose, dry particles containing one or more active substances, with or without excipients, intended for reconstitution using a suitable solvent prior to cutaneous application. They may contain colouring matter if authorised by the competent authority.

Powders for Lotions are presented for use as single-dose or multi-dose preparations.

TESTS

Uniformity of Content

Unless otherwise prescribed or justified and authorised, single-dose Powders for Lotions with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content, Appendix XII C3. If the preparation has more than one active substance, the requirement applies only to those substances which correspond to the above conditions.

Uniformity of Mass

Single-dose Powders for Lotions comply with the test for uniformity of weight (mass), Appendix XII C1. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

LABELLING

The label states (1) that the Powder for Lotion is intended for reconstitution and external use only; (2) the names and amounts of active ingredients contained in the sealed container; (3) the directions for preparation of the Lotion; (4) the date after which the Powder for Lotion is not intended to be used; (5) the conditions under which the Powder for Lotion should be stored; (6) any special precautions associated with the use of the Powder for Lotion.

NAIL SOLUTIONS

LABELLING

The label states (1) the name and concentration of the active ingredient; (2) that the Nail Solution is intended for external use only; (3) the date after which the Nail Solution is not intended to be used; (4) the conditions under which the Nail Solution should be stored; (5) the directions for using the Nail Solution; (6) any special precautions associated with use of the Nail Solution.

PAINTS

DEFINITION

Paints are solutions or dispersions of one or more active ingredients. They are intended for application to the skin or, in some cases, mucous membranes.

STORAGE

Paints should be kept in airtight containers.

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) the date after which the Paint is not intended to be used; (3) the conditions under which the Paint should be stored; (4) the directions for using the Paint; (5) any special precautions associated with the use of the Paint.

LIQUIDS FOR CUTANEOUS APPLICATION

General Notices

(Liquid Preparations for Cutaneous Application, Ph Eur monograph 0927)

Liquids for Cutaneous Application comply with the requirements of the European Pharmacopoeia monograph for Liquid Preparations for Cutaneous Application. These requirements are reproduced below.

Ph Eur

Where justified and authorised, the requirements of this monograph do not apply to preparations intended for systemic and veterinary use.

DEFINITION

Liquid preparations for cutaneous application are preparations of a variety of viscosities intended for local or transdermal delivery of active ingredients. They are solutions, emulsions or suspensions that may contain 1 or more active substances in a suitable vehicle. They may contain suitable antimicrobial preservatives, antioxidants and other excipients such as stabilisers, emulsifiers and thickeners.

Emulsions may show evidence of phase separation but are readily redispersed on shaking. Suspensions may show a sediment that is readily dispersed on shaking to give a suspension that is sufficiently stable to enable a homogeneous preparation to be delivered.

Where applicable, containers for liquid preparations for cutaneous application comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

When liquid preparations for cutaneous application are dispensed in pressurised containers, the containers comply with the requirements of the monograph on *Pressurised pharmaceutical preparations (0523)*.

Preparations specifically intended for use on severely injured skin are sterile.

Several categories of liquid preparations for cutaneous application may be distinguished, for example:

- — shampoos;
- — cutaneous foams.

PRODUCTION

During development of a liquid preparation for cutaneous application whose formulation contains an antimicrobial preservative, the need for and the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in the text on *Efficacy of antimicrobial preservation (5.1.3)*.

During development, it must be demonstrated that the nominal content can be withdrawn from the container of liquid preparations for cutaneous application presented in single-dose containers.

In the manufacture, packaging, storage and distribution of liquid preparations for cutaneous application, suitable measures are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

Sterile liquid preparations for cutaneous application are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products (5.1.1)*.

In the manufacture of liquid preparations for cutaneous application containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Sterility *(2.6.1)*

Where the label indicates that the preparation is sterile, it complies with the test for sterility.

STORAGE

If the preparation is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

— the name of any added antimicrobial preservative;

— where applicable, that the preparation is sterile.

SHAMPOOS

DEFINITION

Shampoos are liquid or, occasionally, semi-solid preparations intended for application to the scalp and subsequent washing away with water. Upon rubbing with water they usually form a foam.

They are emulsions, suspensions or solutions. Shampoos normally contain surface active agents.

CUTANEOUS FOAMS

DEFINITION

Cutaneous foams comply with the requirements of the monograph on *Medicated foams (1105).*

Ph Eur

MEDICATED CHEWING GUMS

General Notices

(Ph Eur monograph 1239)

Medicated Chewing Gums comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Medicated chewing gums are solid, single-dose preparations with a base consisting mainly of gum that are intended to be chewed but not swallowed.

They contain one or more active substances which are released by chewing. After dissolution or dispersion of the active substances in saliva, chewing gums are intended to be used for:

— local treatment of mouth diseases,

— systemic delivery after absorption through the buccal mucosa or from the gastrointestinal tract.

PRODUCTION

Medicated chewing gums are made with a tasteless masticatory gum base that consists of natural or synthetic elastomers. They may contain other excipients such as fillers, softeners, sweetening agents, flavouring substances, stabilisers and plasticisers and authorised colouring matter.

Medicated chewing gums are manufactured by compression or by softening or melting the gum bases and adding successively the other substances. In the latter case, chewing gums are then further processed to obtain the desired gum presentation. The medicated chewing gums may be coated, for example, if necessary to protect from humidity and light.

Unless otherwise justified and authorised, a suitable test is carried out to demonstrate the appropriate release of the active substance(s). The method *Dissolution test for medicated chewing gums* (*2.9.25*) may be used to that purpose.

In the manufacture, packaging, storage and distribution of medicated chewing gums, suitable means must be taken to ensure their microbial quality; recommendations related to this aspect are provided in the general chapter on *Microbiological quality of pharmaceutical preparations* (*5.1.4*).

TESTS

Uniformity of dosage units

Medicated chewing gums comply with the test for uniformity of dosage units (*2.9.40*) or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content (*2.9.6*)

Unless otherwise prescribed or justified and authorised, medicated chewing gums with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test A for uniformity of content of single-dose preparations. If the preparation contains more than one active substance, the requirement applies only to those active substances which correspond to the above conditions.

Uniformity of mass (*2.9.5*)

Uncoated medicated chewing gums and, unless otherwise justified and authorised, coated medicated chewing gums comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

STORAGE

Store uncoated medicated chewing gums protected from humidity and light.

Ph Eur

Medicated Foams of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any medicated foam that is the subject of an individual monograph in the British Pharmacopoeia.

LABELLING

The label states (1) the name and concentration of the active ingredient; (2) that the Medicated Foam is intended for external use only; (3) the date after which the Medicated Foam is not intended to be used; (4) the conditions under which the Medicated Foam should be stored; (5) the directions for using the Medicated Foam; (6) any special precautions associated with the use of the Medicated Foam.

MEDICATED FOAMS

General Notices

(Ph Eur monograph 1105)

Medicated Foams comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

Additional requirements for medicated foams may be found, where appropriate, in other general monographs, for example on Rectal preparations (1145), Vaginal preparations (1164) and Liquid preparations for cutaneous application (0927).

DEFINITION

Medicated foams are preparations consisting of large volumes of gas dispersed in a liquid generally containing one or more active substances, a surfactant ensuring their formation and various other excipients. Medicated foams are usually intended for application to the skin or mucous membranes.

Medicated foams are usually formed at the time of administration from a liquid preparation in a pressurised container. The container is equipped with a device consisting of a valve and a push button suitable for the delivery of the foam.

Medicated foams intended for use on severely injured skin and on large open wounds are sterile.

Medicated foams supplied in pressurised containers comply with the requirements of the monograph on *Pressurised pharmaceutical preparations (0523)*.

PRODUCTION

Sterile medicated foams are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products (5.1.1)*.

TESTS

Relative foam density

Maintain the container at about 25 °C for at least 24 h. Taking care not to warm the container, fit a rigid tube 70 mm to 100 mm long and about 1 mm in internal diameter onto the push button. Shake the container to homogenise the liquid phase of the contents and dispense 5 ml to 10 ml of foam to waste. Tare a flat-bottomed dish with a volume of about 60 ml and about 35 mm high. Place the end of the rigid tube attached to the push button in the corner of the dish, press the push button and fill the dish uniformly, using a circular motion. After the foam has completely expanded, level off by removing the excess foam with a slide. Weigh. Determine the mass of the same volume of *water R* by filling the same dish with *water R*.

The relative foam density is equivalent to the ratio:

$$\frac{m}{e}$$

m = mass of the test sample of foam, in grams,

e = mass of same volume of *water R*, in grams.

Carry out three measurements. None of the individual values deviate by more than 20 per cent from the mean value.

Duration of expansion

The apparatus (Figure 1105.-1) consists of a 50 ml burette, 15 mm in internal diameter, with 0.1 ml graduations and fitted with a 4 mm single bore stopcock. The graduation corresponding to 30 ml is at least 210 mm from the axis of the stopcock. The lower part of the burette is connected by means of a plastic tube not longer than 50 mm and 4 mm in internal diameter to the foam-generating container equipped with a push button fitted to this connection. Maintain the container at about 25 °C for at least 24 h. Shake the container, taking care not to warm it, to homogenise the liquid phase of the contents and dispense 5 ml to 10 ml of the foam to waste. Connect the push button to the outlet of the burette. Press the button and introduce about 30 ml of foam in a single delivery. Close the stopcock and at the same time start the chronometer and read the volume of foam in the burette. Every 10 s read the growing volume until the maximum volume is reached.

Carry out three measurements. None of the times needed to obtain the maximum volume is more than 5 min.

Sterility ***(2.6.1)***

When the label indicates that the preparation is sterile, it complies with the test for sterility.

LABELLING

The label states, where applicable, that the preparation is sterile.

Ph Eur

MEDICATED TAMPONS

General Notices

(Ph Eur monograph 1155)

Medicated Tampons comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

Additional requirements for medicated tampons may be found, where appropriate, in other general monographs, for example Rectal preparations (1145), Vaginal preparations (1164) and Ear preparations (0652).

DEFINITION

Medicated tampons are solid, single-dose preparations intended to be inserted into the body cavities for a limited period of time. They consist of a suitable material such as cellulose, collagen or silicone impregnated with one or more active substances.

PRODUCTION

In the manufacture, packaging, storage and distribution of medicated tampons, suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

LABELLING

The label states the quantity of active substance(s) per tampon.

Ph Eur

Nasal Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any intranasal solution, intranasal suspension, nasal drops, nasal ointment or nasal spray that is the subject of an individual monograph in the British Pharmacopoeia.

INTRANASAL SOLUTIONS AND INTRANASAL SUSPENSIONS

DEFINITION

Intranasal Solutions and Intranasal Suspensions are intended for administration to the nostrils for local or systemic effects. When supplied in a container fitted with a spray mechanism, they may be entitled Nasal Spray.

LABELLING

The label states (1) the name and quantity of the active ingredient; (2) the name and quantity of any added substance; (3) that the preparation is for intranasal administration; (4) the date after which the preparation is not intended to be used; (5) the conditions under which the preparation should be stored.

NASAL DROPS

LABELLING

The label states (1) the name and quantity of the active ingredient; (2) the instructions for using the Nasal Drops; (3) the date after which the Nasal Drops are not intended to be used; (4) the conditions under which the Nasal Drops should be stored.

NASAL PREPARATIONS

General Notices

(Ph Eur monograph 0676)

Nasal Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Nasal preparations are liquid, semi-solid or solid preparations intended for administration to the nasal cavities to obtain a systemic or local effect. They contain one or more active substances. Nasal preparations are as far as possible non-irritating and do not adversely affect the functions of the nasal mucosa and its cilia. Aqueous nasal preparations are usually isotonic and may contain excipients, for example, to adjust the viscosity of the preparation, to adjust or stabilise the pH, to increase the solubility of the active substance, or to stabilise the preparation.

Nasal preparations are supplied in multidose or single-dose containers, provided, if necessary, with a suitable administration device, which may be designed to avoid the introduction of contaminants.

Unless otherwise justified and authorised, aqueous nasal preparations supplied in multidose containers contain a suitable antimicrobial preservative in an appropriate concentration, except where the preparation itself has adequate antimicrobial properties.

Where applicable, the containers comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of nasal preparations may be distinguished:

— nasal drops and liquid nasal sprays;

— nasal powders;

— semi-solid nasal preparations;

— nasal washes;

— nasal sticks.

PRODUCTION

During the development of a nasal preparation whose formulation contains an antimicrobial preservative, the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in the text on *Efficacy of antimicrobial preservation (5.1.3)*.

In the manufacture, packaging, storage and distribution of nasal preparations, suitable measures are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

Sterile nasal preparations are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products (5.1.1)*.

In the manufacture of nasal preparations containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Sterility (*2.6.1*)

Where the label states that the preparation is sterile, it complies with the test for sterility.

STORAGE

If the preparation is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

- — the name of any added antimicrobial preservative;
- — where applicable, that the preparation is sterile.

NASAL DROPS AND LIQUID NASAL SPRAYS

DEFINITION

Nasal drops and liquid nasal sprays are solutions, emulsions or suspensions intended for instillation or spraying into the nasal cavities.

Emulsions may show evidence of phase separation but are easily redispersed on shaking. Suspensions may show a sediment, which is readily dispersed on shaking to give a suspension that remains sufficiently stable to enable the correct dose to be delivered.

Nasal drops are usually supplied in multidose containers provided with a suitable applicator.

Liquid nasal sprays are supplied in containers with atomising devices or in pressurised containers fitted with a suitable adapter and with or without a metering dose valve, which comply with the requirements of the monograph on *Pressurised pharmaceutical preparations (0523).*

The size of droplets of the spray is such as to localise their deposition in the nasal cavity.

TESTS

Unless otherwise prescribed or justified and authorised, nasal drops supplied in single-dose containers and single doses of metered-dose nasal sprays, both intended for systemic action, comply with the following tests.

NASAL DROPS IN SINGLE DOSE CONTAINERS

Uniformity of dosage units

Nasal drops in single-dose containers comply with the test for uniformity of dosage units

(2.9.40) or, where justified and authorised, with the test for uniformity of mass or uniformity of content shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of mass

Nasal drops that are solutions comply with the following test. Weigh individually the contents of 10 containers emptied as completely as possible, and determine the average mass. Not more than 2 of the individual masses deviate by more than 10 per cent from the average mass, and none deviate by more than 20 per cent.

Uniformity of content *(2.9.6)*

Nasal drops that are suspensions or emulsions comply with the following test. Empty each container as completely as possible and carry out the test on the individual contents. They comply with test B for uniformity of content.

METERED-DOSE NASAL SPRAYS

Uniformity of dosage units

Metered-dose nasal sprays comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of mass or the test for uniformity of delivered dose shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

In the case of metered-dose nasal sprays that are solutions, proceed as follows. Discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. Weigh the container, discharge once to waste and weigh the container again. Calculate the difference between the 2 masses. Repeat the procedure for a further 9 containers. Determine the mass variation *(2.9.40)*.

In the case of metered-dose nasal sprays that are suspensions or emulsions, proceed as follows. Use an apparatus capable of quantitatively retaining the dose leaving the actuator of the atomising device. Shake the container for 5 s and discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. After 2 s, fire 1 dose of the metered-dose nasal spray into the collecting vessel by actuating the atomising device. Collect the contents of the collecting vessel by successive rinses. Determine the content of active substance in the combined rinses. Repeat the procedure for a further 9 containers. Determine the content uniformity *(2.9.40)*.

Uniformity of mass

Metered-dose nasal sprays that are solutions comply with the following test. Discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. Weigh the container, discharge once to waste and weigh the container again. Calculate the difference between the 2 masses. Repeat the procedure for a further 9 containers.

The preparation complies with the test if not more than 2 of the individual values deviate by more than 25 per cent from the average value and none deviate by more than 35 per cent.

Uniformity of delivered dose

Metered-dose nasal sprays that are suspensions or emulsions comply with the following test.

Use an apparatus capable of quantitatively retaining the dose leaving the actuator of the atomising device. Shake the container for 5 s and discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. After 2 s, fire 1 dose of the metered-dose nasal spray into the collecting vessel by actuating the atomising device. Collect the contents of the collecting vessel by successive rinses. Determine the content of active substance in the combined rinses. Repeat the procedure for a further 9 containers.

Unless otherwise justified and authorised, the preparation complies with the test if not more than 1 of the individual contents is outside the limits of 75 per cent to 125 per cent and none are outside the limits of 65 per cent to 135 per cent of the average content.

If 2 or at most 3 individual contents are outside the limits of 75 per cent to 125 per cent but within the limits of 65 per cent to 135 per cent, repeat the test for 20 more containers. The preparation complies with the test if not more than 3 individual contents of the 30 individual contents are outside the limits of 75 per cent to 125 per cent and none are outside the limits of 65 per cent to 135 per cent of the average content.

NASAL POWDERS

DEFINITION

Nasal powders are powders intended for insufflation into the nasal cavity by means of a suitable device.

They comply with the requirements of the monograph on *Powders for cutaneous application (1166).*

The size of the particles is such as to localise their deposition in the nasal cavity and is verified by adequate methods of particle-size determination.

SEMI-SOLID NASAL PREPARATIONS

DEFINITION

Semi-solid nasal preparations comply with the requirements of the monograph on *Semi-solid preparations for cutaneous application (0132)*.

The containers are adapted to deliver the product to the site of application.

NASAL WASHES

DEFINITION

Nasal washes are generally aqueous isotonic solutions intended to cleanse the nasal cavities.

Nasal washes intended for application to injured parts or prior to a surgical operation are sterile.

PRODUCTION

During development, it must be demonstrated that the nominal content can be withdrawn from the container, for nasal washes presented in single-dose containers.

NASAL STICKS

DEFINITION

Nasal sticks comply with the monograph on *Sticks (1154).*

Ph Eur

Oral Liquids of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any elixir, linctus, mixture, oral drops, oral emulsion, oral solution, oral suspension or syrup that is the subject of an individual monograph in the British Pharmacopoeia.

DEFINITION

The vehicle for any particular Oral Liquid should be chosen having regard to the nature of the active ingredient or ingredients and to provide organoleptic characteristics appropriate to the intended use of the preparation.

Oral Liquids other than Oral Emulsions may be supplied as liquids or prepared just before issue for use by dissolving or dispersing granules or powder in the liquid stated on the label.

LABELLING

The label states (1) the date after which the Oral Liquid is not intended to be used; (2) the conditions under which the Oral Liquid should be stored; (3) for Oral Emulsions, Oral Suspensions and, where appropriate, for Mixtures, that the bottle should be shaken before use.

If the Oral Liquid is supplied as granules or powder to be constituted just before issue for use the label states (1) that the contents of the container are granules or powder for the preparation of an Oral Liquid; (2) the strength as the amount of the active ingredient in a suitable dose-volume of the constituted preparation; (3) the directions for preparing the Oral Liquid including the nature and quantity of liquid to be used.

ELIXIRS

DEFINITION

Elixirs are clear, flavoured Oral Liquids containing one or more active ingredients dissolved in a vehicle that usually contains a high proportion of Sucrose or a suitable polyhydric alcohol or alcohols and may also contain Ethanol (96 per cent) or a Dilute Ethanol.

LINCTUSES

DEFINITION

Linctuses are viscous Oral Liquids that may contain one or more active ingredients in solution. The vehicle usually contains a high proportion of Sucrose, other sugars or a suitable polyhydric alcohol or alcohols. Linctuses are intended for use in the treatment or relief of cough, and are sipped and swallowed slowly without the addition of water.

MIXTURES

DEFINITION

Mixtures are Oral Liquids containing one or more active ingredients dissolved, suspended or dispersed in a suitable vehicle. Suspended solids may separate slowly on standing but are easily redispersed on shaking.

ORAL DROPS

DEFINITION

Oral Drops are Oral Liquids that are intended to be administered in small volumes with the aid of a suitable measuring device.

ORAL EMULSIONS

DEFINITION

Oral Emulsions are Oral Liquids containing one or more active ingredients. They are stabilised oil-in-water dispersions, either or both phases of which may contain dissolved solids. Solids may also be suspended in Oral Emulsions.

When issued for use, Oral Emulsions should be supplied in wide-mouthed bottles.

Extemporaneous preparation

In Oral Emulsions prepared according to the formula and directions given for Extemporaneous preparation, the quantity of emulsifying agent specified in individual monographs may be reduced to yield a preparation of suitable consistency provided that by so doing the stability of the preparation is not adversely affected.

ORAL SOLUTIONS

DEFINITION

Oral Solutions are Oral Liquids containing one or more active ingredients dissolved in a suitable vehicle.

ORAL SUSPENSIONS

DEFINITION

Oral Suspensions are Oral Liquids containing one or more active ingredients suspended in a suitable vehicle. Suspended solids may slowly separate on standing but are easily redispersed.

SYRUPS

DEFINITION

Syrups do not contain active ingredients. They are not intended to be administered as such but are used as vehicle ingredients for their flavouring and sweetening properties.

PRODUCTION

Syrups should be recently prepared unless they contain suitable antimicrobial preservatives.

STORAGE

Syrups should be stored at temperatures not exceeding 30^{c}.

LABELLING

The label states (1) the date after which the Syrup is not intended to be used; (2) the conditions under which the Syrup should be stored.

ORAL LIQUIDS

General Notices

(Liquid Preparations for Oral Use, Ph Eur monograph 0672)

Oral Liquids comply with the requirements of the European Pharmacopoeia monograph for Liquid Preparations for Oral Use. These requirements are reproduced below.

Ph Eur

Where justified and authorised, the requirements of this monograph do not apply to liquid preparations for oral use intended for veterinary use.

DEFINITION

Liquid preparations for oral use are usually solutions, emulsions or suspensions containing one or more active substances in a suitable vehicle; they may, however, consist of liquid active substances used as such (oral liquids).

Some preparations for oral use are prepared by dilution of concentrated liquid preparations, or from powders or granules for the preparation of oral solutions or suspensions, for oral drops or for syrups, using a suitable vehicle.

The vehicle for any preparations for oral use is chosen having regard to the nature of the active substance(s) and to provide organoleptic characteristics appropriate to the intended use of the preparation.

Liquid preparations for oral use may contain suitable antimicrobial preservatives, antioxidants and other excipients such as dispersing, suspending, thickening, emulsifying, buffering, wetting, solubilising, stabilising, flavouring and sweetening agents and colouring matter, authorised by the competent authority.

Emulsions may show evidence of phase separation but are readily redispersed on shaking. Suspensions may show a sediment, which is readily dispersed on shaking to give a suspension that remains sufficiently stable to enable the correct dose to be delivered.

Where applicable, containers for liquid preparations for oral use comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of preparations may be distinguished;

— oral solutions, emulsions and suspensions;

— powders and granules for oral solutions and suspensions;

— oral drops;

— powders for oral drops;

— syrups;

— powders and granules for syrups.

PRODUCTION

During development of a preparation for oral use whose formulation contains an antimicrobial preservative, the need for and the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in the text on *Efficacy of antimicrobial preservation (5.1.3)*.

During development, it must be demonstrated that the nominal content can be withdrawn from the container, for liquid preparations for oral use presented in single-dose containers.

In the manufacturing, packaging, storage and distribution of liquid preparations for oral use, suitable measures are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

In the manufacture of liquid preparations for oral use containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Uniformity of dosage units

Solutions, suspensions and emulsions in single-dose containers comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of content or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose preparations that are suspensions comply with the following test. After shaking, empty each container as completely as possible and carry out the test on the individual contents. They comply with test B for uniformity of content of single-dose preparations.

Uniformity of mass

Single-dose preparations that are solutions or emulsions comply with the following test: weigh individually the contents of 20 containers, emptied as completely as possible, and determine the average mass. Not more than 2 of the individual masses deviate by more than 10 per cent from the average mass and none deviate by more than 20 per cent.

Dose and uniformity of dose of oral drops

Into a suitable graduated cylinder, introduce by means of the dropping device the number of drops usually prescribed for one dose, or introduce by means of the measuring device the usually prescribed quantity. The dropping speed does not exceed 2 drops per second. Weigh the liquid, repeat the addition, weigh again and carry on repeating the addition and weighing until a total of 10 masses are obtained. No single mass deviates by more than 10 per cent from the average mass. The total of 10 masses does not differ by more than 15 per cent from the nominal mass of 10 doses. If necessary, measure the total volume of 10 doses. The volume does not differ by more than 15 per cent from the nominal volume of 10 doses.

Uniformity of mass of delivered doses from multidose containers *(2.9.27)*

Liquid preparations for oral use supplied in multidose containers comply with the test. Oral drops are not subject to the provisions of this test.

LABELLING

The label states the name of any added antimicrobial preservative.

ORAL SOLUTIONS, EMULSIONS AND SUSPENSIONS

DEFINITION

Oral solutions, emulsions and suspensions are supplied in single-dose or multidose containers. Each dose from a multidose container is administered by means of a device suitable for measuring the prescribed volume. The device is usually a spoon or a cup for volumes of 5 ml or multiples thereof or an oral syringe for other volumes.

POWDERS AND GRANULES FOR ORAL SOLUTIONS AND SUSPENSIONS

DEFINITION

Powders and granules for the preparation of oral solutions or suspensions generally conform to the definitions in the monographs on *Oral powders (1165)* or *Granules (0499)* as appropriate. They may contain excipients, in particular to facilitate dispersion or dissolution and to prevent caking.

After dissolution or suspension, they comply with the requirements for oral solutions or oral suspensions, as appropriate.

TESTS

Uniformity of dosage units

Single-dose powders and single-dose granules comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose powders and single-dose granules with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those substances that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Single-dose powders and single-dose granules comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

LABELLING

The label states:

— the method of preparation of the solution or suspension;

— the conditions and the duration of storage after reconstitution.

ORAL DROPS

DEFINITION

Oral drops are solutions, emulsions or suspensions that are administered in small volumes such as drops by the means of a suitable device.

LABELLING

The label states the number of drops per millilitre of preparation or per gram of preparation if the dose is measured in drops.

POWDERS FOR ORAL DROPS

DEFINITION

Powders for the preparation of oral drops generally conform to the definition of *Oral powders (1165).* They may contain excipients to facilitate dissolution or suspension in the prescribed liquid or to prevent caking.

After dissolution or suspension, they comply with the requirements for oral drops.

TESTS

Uniformity of dosage units

Single-dose powders for oral drops comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose powders for oral drops with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those substances that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Single-dose powders for oral drops comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

SYRUPS

DEFINITION

Syrups are aqueous preparations characterised by a sweet taste and a viscous consistency. They may contain sucrose at a concentration of at least 45 per cent *m/m*. The sweet taste can also be obtained by using other polyols or sweetening agents. Syrups usually contain aromatic or other flavouring agents. Each dose from a multidose container is administered by means of a device suitable for measuring the prescribed volume. The device is usually a spoon or a cup for volumes of 5 ml or multiples thereof.

LABELLING

The label states the name and concentration of the polyol or sweetening agent.

POWDERS AND GRANULES FOR SYRUPS

DEFINITION

Powders and granules for syrups generally conform to the definitions in the monograph on *Oral powders (1165)* or *Granules (0499)*. They may contain excipients to facilitate dissolution.

After dissolution, they comply with the requirements for syrups.

TESTS

Uniformity of dosage units

Single-dose powders and granules for syrups comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose powders and granules for syrups with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those substances that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Single-dose powders and granules for syrups comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Ph Eur

Oral Powders of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those oral powders that are the subject of an individual monograph in the British Pharmacopoeia.

LABELLING

For single dose containers the label states the name and quantity of active ingredient per container. For multi-dose containers the label states the name and quantity of active ingredient in a suitable amount by weight.

The label also states (1) the name and proportions of any antimicrobial preservative; (2) the directions for use of the Oral Powder; (3) the date after which the Oral Powder is not intended to be used; (4) the conditions under which the Oral Powder should be stored.

ORAL POWDERS

General Notices

(Ph Eur monograph 1165)

Oral Powders comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

Requirements for powders to be used for the preparation of oral solutions or suspensions are given in the monograph for Liquid preparations for oral use (0672). Where justified and authorised, the requirements of this monograph do not apply to oral powders intended for veterinary use.

DEFINITION

Oral powders are preparations consisting of solid, loose, dry particles of varying degrees of fineness. They contain one or more active substances, with or without excipients and, if necessary, colouring matter authorised by the competent authority and flavouring substances. They are generally administered in or with water or another suitable liquid. They may also be swallowed directly. They are presented as single-dose or multidose preparations.

Where applicable, containers for oral powders comply with the requirements of *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Multidose oral powders require the provision of a measuring device capable of delivering the quantity prescribed. Each dose of a single-dose powder is enclosed in an individual container, for example a sachet or a vial.

PRODUCTION

In the manufacture of oral powders, means are taken to ensure a suitable particle size with regard to the intended use.

In the manufacture, packaging, storage and distribution of oral powders, suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

TESTS

Uniformity of dosage units

Single-dose oral powders comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose oral powders with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those substances which correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Single-dose oral powders comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Uniformity of mass of delivered doses from multidose containers *(2.9.27)*

Oral powders supplied in multidose containers comply with the test.

STORAGE

If the preparation contains volatile ingredients, or the contents have to be protected, store in an airtight container.

EFFERVESCENT POWDERS

Effervescent powders are presented as single-dose or multidose preparations and generally contain acid substances and carbonates or hydrogen carbonates which react rapidly in the presence of water to release carbon dioxide. They are intended to be dissolved or dispersed in water before administration.

STORAGE

In an airtight container.

Ph Eur

Oromucosal Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any mouthwash, oromucosal solution, oromucosal suspension, oromucosal gel, oromucosal paste, oromucosal spray, sublingual spray, lozenges, pastilles, buccal tablets or sublingual tablets that are the subject of an individual monograph in the British Pharmacopoeia.

MOUTHWASHES

LABELLING

The label states (1) the directions for dilution of the Mouthwash, if appropriate; (2) that large quantities of the Mouthwash should not be swallowed; (3) the date after which the Mouthwash is not intended to be used; (4) the conditions under which it should be stored.

OROMUCOSAL GELS

LABELLING

The label states (1) the directions for use of the Oromucosal Gel; (2) the date after which the Oromucosal Gel is not intended to be used; (3) the conditions under which it should be stored.

OROMUCOSAL PASTES

LABELLING

The label states (1) the directions for use of the Oromucosal Paste; (2) the date after which the Oromucosal Paste is not intended to be used; (3) the conditions under which it should be stored.

OROMUCOSAL SPRAYS

LABELLING

The label states (1) the directions for use of the Oromucosal Spray; (2) the date after which the Oromucosal Spray is not intended to be used; (3) the conditions under which it should be stored.

For Oromucosal Sprays that are presented in metered-dose containers, the label also states (1) the amount of active ingredient per delivered dose; (2) the number of deliveries in the container.

SUBLINGUAL SPRAYS

LABELLING

The label states (1) the amount of active ingredient per delivered dose; (2) the number of deliveries in the container; (3) the directions for use of the Sublingual Spray; (4) the date after which the Sublingual Spray is not intended to be used; (5) the conditions under which it should be stored.

LOZENGES

LABELLING

The label states (1) the directions for use of the Lozenges; (2) the date after which the Lozenges are not intended to be used; (3) the conditions under which they should be stored.

PASTILLES

LABELLING

The label states (1) the directions for use of the Pastilles; (2) the date after which the Pastilles are not intended to be used; (3) the conditions under which they should be stored.

BUCCAL TABLETS

LABELLING

The label states (1) the directions for use of the Buccal Tablets; (2) the date after which the Buccal Tablets are not intended to be used; (3) the conditions under which they should be stored.

SUBLINGUAL TABLETS

LABELLING

The label states (1) the directions for use of the Sublingual Tablets; (2) the date after which the Sublingual Tablets are not intended to be used; (3) the conditions under which they should be stored.

OROMUCOSAL PREPARATIONS

General Notices

(Ph Eur monograph 1807)

Oromucosal Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

This monograph does not apply to dental preparations or to preparations such as chewable tablets (0478), medicated chewing gums (1239), oral lyophilisates and other solid or semi-solid preparations that are intended to be chewed or dispersed in the saliva before being swallowed. Where justified and authorised, this monograph does not apply to preparations for veterinary use.

DEFINITION

Oromucosal preparations are solid, semi-solid or liquid preparations, containing one or more active substances intended for administration to the oral cavity and/or the throat to obtain a local or systemic effect. Preparations intended for a local effect may be designed for application to a specific site within the oral cavity such as the gums (gingival preparations) or the throat (oropharyngeal preparations). Preparations intended for a systemic effect are designed to be absorbed primarily at one or more sites on the oral mucosa (e.g. sublingual preparations). Mucoadhesive preparations are intended to be retained in the oral cavity by adhesion to the mucosal epithelium and may modify systemic drug absorption at the site of application. For many oromucosal preparations, it is likely that some proportion of the active substance(s) will be swallowed and may be absorbed via the gastrointestinal tract.

Oromucosal preparations may contain suitable antimicrobial preservatives and other excipients such as dispersing, suspending, thickening, emulsifying, buffering, wetting, solubilising, stabilising, flavouring and sweetening agents. Solid preparations may in addition contain glidants, lubricants and excipients capable of modifying the release of the active substance(s).

Where applicable, containers for oromucosal preparations comply with the requirements for *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of preparations for oromucosal use may be distinguished:

- — gargles;
- — mouthwashes;
- — gingival solutions;
- — oromucosal solutions and oromucosal suspensions;
- — semi-solid oromucosal preparations (including for example gingival gel, gingival paste, oromucosal gel, oromucosal paste);

— oromucosal drops, oromucosal sprays and sublingual sprays (including oropharyngeal sprays);

— lozenges and pastilles;

— compressed lozenges;

— sublingual tablets and buccal tablets;

— oromucosal capsules;

— mucoadhesive preparations.

PRODUCTION

During the development of an oromucosal preparation containing an antimicrobial preservative, the effectiveness of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with the criteria for judging the preservative properties of the formulation are provided in *5.1.3 Efficacy of antimicrobial preservation.*

In the manufacture, packaging, storage and distribution of oromucosal preparations, suitable means are taken to ensure their microbiological quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

In the manufacture of semi-solid and liquid oromucosal preparations containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Uniformity of dosage units

Single-dose oromucosal preparations comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose oromucosal preparations with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test A (compressed and moulded dosage forms) or test B (capsules) for the uniformity of content of single-dose preparations. If the preparation contains more than one active substance, this requirement applies only to those substances that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Solid single-dose oromucosal preparations comply with the test for uniformity of mass. If the test for the uniformity of content is prescribed, or justified and authorised, for all active substances, the test for uniformity of mass is not required.

LABELLING

The label states the name of any added antimicrobial preservative.

GARGLES

DEFINITION

Gargles are aqueous solutions intended for gargling to obtain a local effect. They are not to be swallowed. They are supplied as ready-to-use solutions or concentrated solutions to be diluted. They may also be prepared from powders or tablets to be dissolved in water before use.

Gargles may contain excipients to adjust the pH which, as far as possible, is neutral.

MOUTHWASHES

DEFINITION

Mouthwashes are aqueous solutions intended for use in contact with the mucous membrane of the oral cavity. They are not to be swallowed. They are supplied as ready-to-use solutions or concentrated solutions to be diluted. They may also be prepared from powders or tablets to be dissolved in water before use.

Mouthwashes may contain excipients to adjust the pH which, as far as possible, is neutral.

GINGIVAL SOLUTIONS

DEFINITION

Gingival solutions are intended for administration to the gingivae by means of a suitable applicator.

OROMUCOSAL SOLUTIONS AND OROMUCOSAL SUSPENSIONS

DEFINITION

Oromucosal solutions and oromucosal suspensions are liquid preparations intended for administration to the oral cavity by means of a suitable applicator.

Oromucosal suspensions may show a sediment which is readily dispersible on shaking to give a suspension which remains sufficiently stable to enable the correct dose to be delivered.

SEMI-SOLID OROMUCOSAL PREPARATIONS

DEFINITION

Semi-solid oromucosal preparations are hydrophilic gels or pastes intended for administration to the oral cavity or to a specific part of the oral cavity such as the gingivae (gingival gel, gingival paste). They may be provided as single-dose preparations.

Semi-solid oromucosal preparations comply with the requirements of the monograph on *Semi-solid preparations for cutaneous use (0132).*

OROMUCOSAL DROPS, OROMUCOSAL SPRAYS AND SUBLINGUAL SPRAYS

DEFINITION

Oromucosal drops, oromucosal sprays and sublingual sprays are solutions, emulsions or suspensions intended for local or systemic effect. They are applied by instillation or spraying into the oral cavity or onto a specific part of the oral cavity such as spraying under the tongue (sublingual spray) or into the throat (oropharyngeal spray).

Emulsions may show evidence of phase separation but are readily redispersed on shaking.

Suspensions may show a sediment which is readily dispersed on shaking to give a suspension which remains sufficiently stable to enable the correct dose to be delivered.

Liquid oromucosal sprays are supplied in containers with atomising devices or in pressurised containers having a suitable adaptor, with or without a metering dose valve, which comply with the requirements of the monograph on *Pressurised pharmaceutical preparations (0523).*

The size of the droplets of the spray is such as to localise their deposition in the oral cavity or the throat as intended.

TESTS

Unless otherwise prescribed or justified and authorised, oromucosal drops supplied in single-dose containers, single doses of metered-dose oromucosal sprays and sublingual sprays, all intended for systemic action, comply with the following tests.

OROMUCOSAL DROPS IN SINGLE-DOSE CONTAINERS

Uniformity of dosage units

Oromucosal drops in single-dose containers comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of mass or uniformity of content shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of mass

Oromucosal drops that are solutions comply with the following test. Weigh individually the contents of 10 containers emptied as completely as possible, and determine the average mass. Maximum 2 of the individual masses deviate by more than 10 per cent from the average mass and none deviates by more than 20 per cent.

Uniformity of content *(2.9.6)*

Oromucosal drops that are suspensions or emulsions comply with the following test. Empty each container as completely as possible and carry out the test on the individual contents. They comply with test B of uniformity of content.

METERED-DOSE OROMUCOSAL SPRAYS AND SUBLINGUAL SPRAYS

Uniformity of dosage units

Metered-dose oromucosal sprays and sublingual sprays comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of mass or the test for uniformity of delivered dose shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

In the case of metered-dose oromucosal sprays and sublingual sprays that are solutions, proceed as follows. Discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. Weigh the container, discharge once to waste and weigh the container again. Calculate the difference between the 2 masses. Repeat the procedure for a further 9 containers. Determine the mass variation *(2.9.40)*.

In the case of metered-dose oromucosal sprays and sublingual sprays that are suspensions or emulsions proceed as follows. Use an apparatus capable of quantitatively retaining the dose leaving the actuator of the atomising device.

Shake the container for 5 s and discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. After 2 s, fire 1 dose of the metered-dose spray into the collecting vessel by actuating the atomising device. Collect the contents of the collecting vessel by successive rinses. Determine the content of active substance in the combined rinses. Repeat the procedure for a further 9 containers. Determine the content uniformity *(2.9.40)*.

Uniformity of mass

Metered-dose oromucosal sprays and sublingual sprays that are solutions comply with the following test. Discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. Weigh the container, discharge once to waste and weigh the container again. Calculate the difference between the 2 masses. Repeat the procedure for a further 9 containers.

The preparation complies with the test if maximum 2 of the individual values deviate by more than 25 per cent from the average value and none deviates by more than 35 per cent.

Uniformity of delivered dose

Metered-dose oromucosal sprays and sublingual sprays that are suspensions or emulsions comply with the following test. Use an apparatus capable of quantitatively retaining the dose leaving the actuator of the atomising device.

Shake the container for 5 s and discharge once to waste. Wait for a minimum of 5 s, shake for 5 s and discharge again to waste. Repeat this procedure for a further 3 actuations. After 2 s, fire 1 dose of the metered-dose spray into the collecting vessel by actuating the atomising device. Collect the contents of the collecting vessel by successive rinses. Determine the content of active substance in the combined rinses. Repeat the procedure for a further 9 containers.

Unless otherwise justified and authorised, the preparation complies with the test if maximum 1 of the individual contents is outside the limits of 75 per cent to 125 per cent and none is outside the limits of 65 per cent to 135 per cent of the average content.

If 2 or maximum 3 individual contents are outside the limits of 75 per cent to 125 per cent but within the limits of 65 per cent to 135 per cent, repeat the test for 20 more containers. The preparation complies with the test if maximum 3 individual contents of the 30 individual contents are outside the limits of 75 per cent to 125 per cent and none is outside the limits of 65 per cent to 135 per cent of the average content.

LOZENGES AND PASTILLES

DEFINITION

Lozenges and pastilles are solid, single-dose preparations intended to be sucked to obtain, usually, a local effect in the oral cavity and the throat. They contain one or more active substances, usually in a flavoured and sweetened base, and are intended to dissolve or disintegrate slowly in the mouth when sucked.

Lozenges are hard preparations prepared by moulding. Pastilles are soft, flexible preparations prepared by moulding of mixtures containing natural or synthetic polymers or gums and sweeteners.

COMPRESSED LOZENGES

DEFINITION

Compressed lozenges are solid, single-dose preparations intended to be sucked to obtain a local or systemic effect. They are prepared by compression and are often rhomboid in shape.

Compressed lozenges conform with the general definition of tablets.

PRODUCTION

In the manufacture of compressed lozenges, measures are taken to ensure that they possess suitable mechanical strength to resist handling without crumbling or breaking. This may be demonstrated by examining the *Friability of uncoated tablets (2.9.7)* and the *Resistance to crushing of tablets (2.9.8)*.

TESTS

Dissolution

For compressed lozenges intended for a systemic effect, a suitable test is carried out to demonstrate the appropriate release of the active substance(s).

SUBLINGUAL TABLETS AND BUCCAL TABLETS

DEFINITION

Sublingual tablets and buccal tablets are solid, single-dose preparations to be applied under the tongue or to the buccal cavity, respectively, to obtain a systemic effect. They are prepared by compression of mixtures of powders or granulations into tablets with a shape suited for the intended use.

Sublingual tablets and buccal tablets conform to the general definition of tablets.

PRODUCTION

In the manufacture of sublingual tablets and buccal tablets, measures are taken to ensure that they possess suitable mechanical strength to resist handling without crumbling or breaking. This may be demonstrated by examining the *Friability of uncoated tablets (2.9.7)* and the *Resistance to crushing of tablets (2.9.8)*.

TESTS

Dissolution

Unless otherwise justified and authorised, a suitable test is carried out to demonstrate the appropriate release of the active substance(s).

OROMUCOSAL CAPSULES

DEFINITION

Oromucosal capsules are soft capsules to be chewed or sucked.

MUCOADHESIVE PREPARATIONS

DEFINITION

Mucoadhesive preparations contain one or more active substances intended for systemic absorption through the buccal mucosa over a prolonged period of time. They may be supplied as mucoadhesive buccal tablets or as other mucoadhesive solid or semi-solid preparations.

Mucoadhesive buccal tablets are prepared by compression of mono- or multi-layered tablets. They usually contain hydrophilic polymers, which on wetting with the saliva produce a flexible hydrogel that adheres to the buccal mucosa.

PRODUCTION

In the manufacture of mucoadhesive buccal tablets, measures are taken to ensure that they possess suitable mechanical strength to resist handling without crumbling or breaking. This may be demonstrated by examining the *Friability of uncoated tablets (2.9.7)* and the *Resistance to crushing of tablets (2.9.8)*.

TESTS

Dissolution

Unless otherwise justified and authorised, a suitable test is carried out to demonstrate the appropriate release of the active substance(s).

Ph Eur

Parenteral Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any injection, intravenous infusion or implant that is the subject of an individual monograph in the British Pharmacopoeia.

DEFINITION

Definition of a particular Parenteral Preparation as a solution, emulsion or suspension in Water for Injections does not preclude the inclusion of suitable excipients where necessary for the purposes referred to in the requirements of the European Pharmacopoeia above. In particular, aqueous Parenteral Preparations for administration by the subcutaneous, intradermal, intramuscular, or, in the case of larger volumes, intravenous route, should if possible be made isotonic with blood by the addition of Sodium Chloride or other suitable substances. However if buffering agents are used in preparations intended for intra-ocular or intracardiac injection, or in preparations that may gain access to the cerebrospinal fluid, great care should be taken to ensure that the nature and concentration of the chosen agent are suitable for the intended route of administration.

Where the active ingredient is susceptible to oxidative degradation appropriate precautions, such as the addition of a suitable antioxidant or storage under oxygen-free nitrogen or other suitable inert gas, should be taken.

PRODUCTION

Methods of sterilisation that may be used in the manufacture of Parenteral Preparations are described in Appendix XVIII.

Where a direction is given to use Water for Injections in the manufacture of a Parenteral Preparation, Water for Injections in bulk is used. Where the use of Water for Injections free from dissolved air or Water for Injections free from dissolved carbon dioxide is specified, water freshly prepared by the process described under Water for Injections is boiled for at least 10 minutes with as little exposure to air as possible, cooled with precautions to exclude air and carbon dioxide, and sterilised by *heating in an autoclave*.

STORAGE

Closures used for containers of oily parenteral preparations should be made of oil-resistant materials.

LABELLING

Where appropriate the label states the strength of the parenteral preparation in terms of the amount of active ingredient in a suitable dose-volume.

The label also states (1) the name of any added substance; (2) the date after which the Parenteral Preparation is not intended to be used; (3) the conditions under which the Parenteral Preparation should be stored.

The label of a single-dose parenteral preparation states that any portion of the contents remaining should be discarded.

INTRAVENOUS INFUSIONS

LABELLING

The label states the nominal volume of the contents.

POWDERS FOR INJECTIONS

Uniformity of weight

When required for the Assay of a powder for injection, determine the weight of the contents of 10 containers as described in the test for *uniformity of weight*, Appendix XII C1.

LABELLING

The label states (1) that, when dissolved or suspended, the contents of the sealed container are intended for parenteral use; (2) the amount of active ingredient contained in the sealed container ; (3) the directions for the preparation of the Injection or Intravenous Infusion.

If a container of the liquid for constituting the parenteral preparation is supplied with the powder for injections, the label of this container states the composition of this liquid.

CONCENTRATED SOLUTIONS FOR INJECTIONS

LABELLING

The label states (1) the name of the concentrated solution; (2) that the solution must be diluted before use; (3) the directions for the preparation of the Injection or Intravenous Infusion.

PARENTERAL PREPARATIONS

General Notices

(Ph Eur monograph 0520)

Parenteral Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

The requirements of this monograph do not necessarily apply to products derived from human blood, to immunological preparations, or radiopharmaceutical preparations. Special requirements may apply to preparations for veterinary use depending on the species of animal for which the preparation is intended.

DEFINITION

Parenteral preparations are sterile preparations intended for administration by injection, infusion or implantation into the human or animal body.

Parenteral preparations may require the use of excipients, for example to make the preparation isotonic with respect to blood, to adjust the pH, to increase solubility, to prevent deterioration of the active substances or to provide adequate antimicrobial properties, but not to adversely affect the intended medicinal action of the preparation or, at the concentrations used, to cause toxicity or undue local irritation.

Containers for parenteral preparations are made as far as possible from materials that are sufficiently transparent to permit the visual inspection of the contents, except for implants and in other justified and authorised cases.

Where applicable, the containers for parenteral preparations comply with the requirements for *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Parenteral preparations are supplied in glass containers *(3.2.1)* or in other containers such as plastic containers *(3.2.2, 3.2.2.1 and 3.2.9)* and prefilled syringes. The tightness of the container is ensured by suitable means. Closures ensure a good seal, prevent the access of micro-organisms and other contaminants and usually permit the withdrawal of a part or the whole of the contents without removal of the closure. The plastic materials or elastomers *(3.2.9)* used to manufacture the closures are sufficiently firm and elastic to allow the passage of a needle with the least possible shedding of particles. Closures for multidose containers are sufficiently elastic to ensure that the puncture is resealed when the needle is withdrawn.

Several categories of parenteral preparations may be distinguished:

— injections,

— infusions,

— concentrates for injections or infusions,

— powders for injections or infusions,

— gels for injections,

— implants.

PRODUCTION

During the development of a parenteral preparation, the formulation for which contains an antimicrobial preservative, the effectiveness of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided under *Efficacy of antimicrobial preservation (5.1.3)*.

Parenteral preparations are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms. Recommendations on this aspect are provided in the text on *Methods of preparation of sterile products (5.1.1)*.

Water used in the manufacture of parenteral preparations complies with the requirements of water for injections in bulk stated in the monograph on *Water for injections (0169).*

TESTS

Particulate contamination: sub-visible particles (2.9.19)

For preparations for human use, solutions for infusion or solutions for injection comply with the test.

In the case of preparations for subcutaneous or intramuscular injection, higher limits may be appropriate. Radiopharmaceutical preparations are exempt from these requirements. Preparations for which the label states that the product is to be used with a final filter are exempt from these requirements, providing it has been demonstrated that the filter delivers a solution that complies with the test.

For preparations for veterinary use, when supplied in containers with a nominal content of more than 100 ml and when the content is equivalent to a dose of more than 1.4 ml per kilogram of body mass, solutions for infusion or solutions for injection comply with the test for particulate contamination: sub-visible particles.

Sterility *(2.6.1)*

Parenteral preparations comply with the test for sterility.

STORAGE

In a sterile, airtight, tamper-proof container .

LABELLING

The label states:

— the name and concentration of any added antimicrobial preservative,

— where applicable, that the solution is to be used in conjunction with a final filter,

— where applicable, that the preparation is free from bacterial endotoxins or that it is apyrogenic.

INJECTIONS

DEFINITION

Injections are sterile solutions, emulsions or suspensions. They are prepared by dissolving, emulsifying or suspending the active substance(s) and any added excipients in water, in a suitable non-aqueous liquid, that may be non-sterile where justified, or in a mixture of these vehicles.

Solutions for injection, examined under suitable conditions of visibility, are clear and practically free from particles.

Emulsions for injection do not show any evidence of phase separation. Suspensions for injection may show a sediment which is readily dispersed on shaking to give a suspension which remains sufficiently stable to enable the correct dose to be withdrawn.

Multidose preparations Multidose aqueous injections contain a suitable antimicrobial preservative at an appropriate concentration except when the preparation itself has adequate antimicrobial properties. When a preparation for parenteral use is presented in a multidose container , the precautions to be taken for its administration and more particularly for its storage between successive withdrawals are given.

Antimicrobial preservatives Aqueous preparations which are prepared using aseptic precautions and which cannot be terminally sterilised may contain a suitable antimicrobial preservative in an appropriate concentration.

No antimicrobial preservative is added when:

— the volume to be injected in a single dose exceeds 15 ml, unless otherwise justified,

— the preparation is intended for administration by routes where, for medical reasons, an antimicrobial preservative is not acceptable, such as intracisternally, epidurally, intrathecally or by any route giving access to the cerebrospinal fluid, or intra- or retro-ocularly.

Such preparations are presented in single-dose containers.

PRODUCTION

In the manufacture of injections containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

Single-dose preparations The volume of the injection in a single-dose container is sufficient to permit the withdrawal and administration of the nominal dose using a normal technique *(2.9.17)*.

TESTS

Uniformity of dosage units

Single-dose suspensions for injection comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of content shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, single-dose suspensions for injection with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test A for uniformity of content of single-dose preparations. If the preparation contains more than one active substance, the requirement applies only to those substances that correspond to the above conditions.

Bacterial endotoxins – pyrogens

A test for bacterial endotoxins *(2.6.14)* is carried out or, where justified and authorised, the test for pyrogens *(2.6.8)*. Recommendations on the limits for bacterial endotoxins are given in chapter *2.6.14*.

Preparations for veterinary use When the volume to be injected in a single dose is 15 ml or more and is equivalent to a dose of 0.2 ml or more per kilogram of body mass, the preparation complies with a test for bacterial endotoxins *(2.6.14)* or with the test for pyrogens *(2.6.8)*.

Any preparation Where the label states that the preparation is free from bacterial endotoxins or apyrogenic, respectively, the preparation complies with a test for bacterial endotoxins *(2.6.14)* or with the test for pyrogens *(2.6.8)*, respectively.

INFUSIONS

DEFINITION

Infusions are sterile, aqueous solutions or emulsions with water as the continuous phase. They are usually made isotonic with respect to blood. They are principally intended for administration in large volume. Infusions do not contain any added antimicrobial preservative.

Solutions for infusion, examined under suitable conditions of visibility are clear and practically free from particles.

Emulsions for infusion do not show any evidence of phase separation.

PRODUCTION

In the manufacture of infusions containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

The volume of the infusion in the container is sufficient to permit the withdrawal and administration of the nominal dose using a normal technique *(2.9.17)*.

TESTS

Bacterial endotoxins – pyrogens

They comply with a test for bacterial endotoxins *(2.6.14)* or, where justified and authorised, with the test for pyrogens *(2.6.8)*. For the latter test inject 10 ml per kilogram of body mass into each rabbit, unless otherwise justified and authorised.

CONCENTRATES FOR INJECTIONS OR INFUSIONS

DEFINITION

Concentrates for injections or infusions are sterile solutions intended for injection or infusion after dilution. They are diluted to a prescribed volume with a prescribed liquid before administration. After dilution, they comply with the requirements for injections or for infusions.

TESTS

Bacterial endotoxins – pyrogens

They comply with the requirements prescribed for injections or for infusions, after dilution to a suitable volume.

POWDERS FOR INJECTIONS OR INFUSIONS

DEFINITION

Powders for injections or infusions are solid, sterile substances distributed in their final containers and which, when shaken with the prescribed volume of a prescribed sterile liquid rapidly form either clear and practically particle-free solutions or uniform suspensions. After dissolution or suspension, they comply with the requirements for injections or for infusions.

Freeze-dried products for parenteral use are considered as powders for injections or infusions.

PRODUCTION

The uniformity of content and uniformity of mass of freeze-dried products for parenteral use are ensured by the in-process control of the amount of the solution prior to freeze-drying.

TESTS

Uniformity of dosage units

Powders for injections or infusions comply with the test for uniformity of dosage units (*2.9.40*) or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, powders for injections or infusions with a content of active substance less than 2 mg or less than 2 per cent of the total mass, or with a unit mass equal to or less than 40 mg comply with test A for uniformity of content of single-dose preparations. If the preparation contains more than one active substance, the requirement applies only to those substances that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Powders for injections or infusions comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Bacterial endotoxins – pyrogens

They comply with the requirements prescribed for injections or for infusions, after dissolution or suspension in a suitable volume of liquid.

LABELLING

The label states the instructions for the preparation of injections and infusions.

GELS FOR INJECTIONS

DEFINITION

Gels for injections are sterile gels with a viscosity suitable to guarantee a modified release of the active substance(s) at the site of injection.

IMPLANTS

DEFINITION

Implants are sterile, solid preparations of a size and shape suitable for parenteral implantation and release of the active substance(s) over an extended period of time. Each dose is provided in a sterile container.

Ph Eur

Preparations for Inhalation of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any inhalation, powder for inhalation, pressurised inhalation or solution for nebulisation that is the subject of an individual monograph in the British Pharmacopoeia.

INHALATIONS

DEFINITION

Inhalations are solutions or dispersions of one or more active ingredients which may contain an inert, suspended, diffusing agent. They are intended to release volatile constituents for inhalation either when placed on a pad or when added to hot, but not boiling, water.

LABELLING

The label on the container states (1) the names and concentrations of the active ingredients; (2) that the Inhalation is not to be taken by mouth; (3) the date after which the Inhalation is not intended to be used; (4) the conditions under which the Inhalation should be stored.

POWDERS FOR INHALATION

LABELLING

The label on the container states (1) the date after which the Powder for Inhalation is not intended to be used; (2) the conditions under which the Powder for Inhalation should be stored.

Where the Powder for Inhalation is supplied in a capsule, the label also states (3) the quantity of the active ingredient contained in each capsule; (4) that the capsules are intended for use in an inhaler and are not to be swallowed.

PRESSURISED INHALATIONS

DEFINITION

Pressurised Inhalations are Pressurised Metered-dose Preparations for Inhalation. They are intended to be inhaled in controlled amounts.

PRODUCTION

The formulation of the inhalation and the components of the delivery device (that is the pressurised container with its integral metering valve and the actuator) should be designed and, where appropriate, the particle size of the active ingredient should be controlled so that, when the pressurised inhalation is used in accordance with the manufacturer's recommendations, an adequate proportion of the active ingredient is made available for inhalation. A proportion of the active ingredient is deposited on the inner surface of the actuator; the amount available for inhalation is therefore less than the amount released by actuation of the valve.

Pressurised Inhalations should be manufactured in conditions designed to minimise microbial and particulate contamination.

Content of active ingredient delivered by actuation of the valve

Remove the pressurised container from the actuator and remove all labels and markings which may be present on the container with a suitable solvent. Dry the container, replace in its actuator, shake for about 30 seconds and prime the metering valve as follows. Discharge once to waste, wait for not less than 5 seconds and discharge again to waste. Remove the pressurised container from its actuator, clean the valve stem (internally and externally) and the valve ferrule by washing with a suitable solvent. Dry the complete valve assembly using an air line fitted with an appropriate narrow jet to ensure that all solvent is removed from the inside of the valve stem.

Place a stainless steel base plate that has three legs and a central circular indentation with a hole about 1.5 mm in diameter in a small vessel suitable for shaking and add the volume of solvent specified in the monograph. The size of the vessel is such that when the pressurised inhalation is discharged into the specified volume of solvent as described below the discharge takes place not less than 25 mm below the surface of the solvent.

Shake the pressurised container for about 30 seconds and place it inverted in the vessel. Discharge 10 deliveries below the surface of the solvent actuating the valve at intervals of not less than 5 seconds, maintaining the pressurised container in the vertical plane and discharging the pressurised inhalation through the hole in the centre of the base plate. (It may be necessary because of the nature of the formulation to shake the pressurised container between each actuation of the valve; where this is the case shaking should be carried out without removing the pressurised container from its inverted position in the vessel.) Remove the pressurised container, wash it with the specified solvent and dilute the combined solution and washings to the volume specified in the monograph. Determine the amount of active ingredient by the method described under the Assay and calculate the amount delivered from each actuation of the valve. The result lies within the range for the content of active ingredient stated in the monograph.

STORAGE

Pressurised Inhalations are supplied in suitable containers fitted with an appropriate metering valve that forms an integral part of the container. Metal containers comply with the relevant requirements of BS 3914:1991 (Non-refillable metal aerosol dispensers of 50 ml to 1400 ml capacity and up to 85 mm diameter). The containers are usually supplied with an appropriate actuator.

LABELLING

The label states (1) the name of the active ingredient or ingredients; (2) the amount of active ingredient or ingredients delivered by each actuation of the valve and the number of deliveries available from the container; (3) the instructions for using the Pressurised Inhalation; (4) the date after which the Pressurised Inhalation is not intended to be used; (5) the conditions under which the Pressurised Inhalation should be stored; (6) any special precautions associated with the use of the Pressurised Inhalation.

SOLUTIONS FOR NEBULISATION

LABELLING

The label states (1) the date after which the solution for nebulisation is not intended to be used; (2) the conditions under which the solution for nebulisation should be stored.

PREPARATIONS FOR INHALATION

General Notices

(Ph Eur monograph 0671)

Preparations for Inhalation comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Preparations for inhalation are liquid or solid preparations intended for administration as vapours or aerosols to the lung in order to obtain a local or systemic effect. They contain one or more active substances which may be dissolved or dispersed in a suitable vehicle.

Preparations for inhalation may, depending on the type of preparation, contain propellants, cosolvents, diluents, antimicrobial preservatives, solubilising and stabilising agents, etc. These excipients do not adversely affect the functions of the mucosa of the respiratory tract or its cilia.

Preparations for inhalation are supplied in multidose or single-dose containers. When supplied in pressurised containers, they comply with the requirements of the monograph on *Pressurised pharmaceutical preparations (0523*).

Preparations intended to be administered as aerosols (dispersions of solid or liquid particles in a gas) are administered by one of the following devices:

— nebuliser,

— pressurised metered-dose inhaler,

— powder inhaler.

PRODUCTION

During the development of a preparation for inhalation which contains an antimicrobial preservative, the effectiveness of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with the criteria for judging the preservative properties of the formulation are described in the text on *Efficacy of antimicrobial preservation (5.1.3)*.

The size of aerosol particles to be inhaled is controlled so that a significant fraction is deposited in the lung. The fine-particle characteristics of preparations for inhalation are determined by the method for *Aerodynamic assessment of fine particles (2.9.18)*.

In assessing the uniformity of delivered dose of a multidose inhaler, it is not sufficient to test a single inhaler. Manufacturers must substitute procedures which take both inter- and intra-inhaler dose uniformity into account. A suitable procedure based on the intra-inhaler test would be to collect each of the specified doses at the beginning, middle and end of the number of doses stated on the label from separate inhalers.

Pressurised metered-dose inhalers are tested for leakage. All inhalers are tested for extraneous particulate contamination.

LABELLING

For metered-dose preparations the label states:

— the delivered dose, except for preparations for which the dose has been established as a metered-dose or as a predispensed-dose,

— where applicable, the number of deliveries from the inhaler to provide the minimum recommended dose,

— the number of deliveries per inhaler.

The label states, where applicable, the name of any added antimicrobial preservative.

LIQUID PREPARATIONS FOR INHALATION

3 categories of liquid preparations for inhalation may be distinguished:

A. preparations intended to be converted into vapour,

B. liquid preparations for nebulisation,

C. pressurised metered-dose preparations for inhalation.

Liquid preparations for inhalation are solutions or dispersions.

Dispersions are readily dispersible on shaking and they remain sufficiently stable to enable the correct dose to be delivered. Suitable excipients may be used.

A. PREPARATIONS INTENDED TO BE CONVERTED INTO VAPOUR

DEFINITION

Preparations intended to be converted into vapour are solutions, dispersions or solid preparations. They are usually added to hot water and the vapour generated is inhaled.

B. LIQUID PREPARATIONS FOR NEBULISATION

DEFINITION

Liquid preparations for inhalation intended to be converted into aerosols by continuously operating nebulisers or metered-dose nebulisers are solutions, suspensions or emulsions. Suitable cosolvents or solubilisers may be used to increase the solubility of the active substances.

Liquid preparations for nebulisation in concentrated form for use in continuously operating nebulisers are diluted to the prescribed volume with the prescribed liquid before use. Liquids for nebulisation may also be prepared from powders.

The pH of the liquid preparations for use in continuously operating nebulisers is not lower than 3 and not higher than 8.5.

Suspensions and emulsions are readily dispersible on shaking and they remain sufficiently stable to enable the correct dose to be delivered.

Aqueous preparations for nebulisation supplied in multidose containers may contain a suitable antimicrobial preservative at a suitable concentration except where the preparation itself has adequate antimicrobial properties.

Continuously operating nebulisers are devices that convert liquids into aerosols by high-pressure gases, ultrasonic vibration or other methods. They allow the dose to be inhaled at an appropriate rate and particle size which ensures deposition of the preparation in the lungs.

Metered-dose nebulisers are devices that convert liquids into aerosols by high-pressure gases, ultrasonic vibration or other methods. The volume of liquid to be nebulised is metered so that the aerosol dose can be inhaled with one breath.

C. PRESSURISED METERED-DOSE PREPARATIONS FOR INHALATION

DEFINITION

Pressurised metered-dose preparations for inhalation are solutions, suspensions or emulsions supplied in containers equipped with a metering valve and which are held under pressure with suitable propellants or suitable mixtures of liquefied propellants, which can act also as solvents. Suitable cosolvents, solubilisers and stabilisers may be added.

The delivered dose is the dose delivered from the inhaler to the patient. For some preparations, the dose has been established as a metered dose. The metered dose is determined by adding the amount deposited on the inhaler to the delivered dose. It may also be determined directly.

TESTS

For breath-operated pressurised metered-dose inhalers, the test conditions described below may need to be modified to ensure that breath actuation occurs for the inhaler under test.

Uniformity of delivered dose

Containers usually operate in a valve-down position. For containers that operate in a valve-up position, an equivalent test is applied using methods that ensure the complete collection of the delivered dose. In all cases, prepare the inhaler as directed in the instructions to the patient.

The dose collection apparatus must be capable of quantitatively capturing the delivered dose.

The following apparatus (Figure 0671.-1) and procedure may be used.

Metered-dose inhaler

Figure 0671.-1. – *Dose collection apparatus for pressurised metered-dose inhalers*
Dimensions in millimetres

The apparatus consists of a filter-support base with an open-mesh filter-support, such as a stainless steel screen, a collection tube that is clamped or screwed to the filter-support base, and a mouthpiece adapter to ensure an airtight seal between the collection tube and the mouthpiece. Use a mouthpiece adapter which ensures that the front face of the inhaler mouthpiece is flush with the front face or the 2.5 mm indented shoulder of the sample collection tube, as appropriate. The vacuum connector is connected to a system comprising a vacuum source and a flow regulator. The source should be adjusted to draw air through the complete assembly, including the filter and the inhaler to be tested, at 28.3 litres/min (± 5 per cent). Air should be drawn continuously through the apparatus to avoid loss of the active substance into the atmosphere. The filter-support base is designed to accommodate 25 mm diameter filter disks. The filter disk and other materials used in the construction of the apparatus must be compatible with the active substance and solvents that are used to extract the active substance from the filter. One end of the collection tube is designed to hold the filter disk tightly against the filter-support base. When assembled, the joints between the components of the apparatus are airtight so that when a vacuum is applied to the base of the filter, all of the air drawn through the collection tube passes through the inhaler.

Unless otherwise prescribed in the instructions to the patient, shake the inhaler for 5 s and discharge one delivery to waste. Fire the inverted inhaler into the apparatus, depressing the valve for a sufficient time to ensure complete discharge. Repeat the procedure until the number of deliveries that constitute the minimum recommended dose have been sampled. Quantitatively collect the contents of the apparatus and determine the amount of active substance.

Repeat the procedure for a further 2 doses.

Discharge the device to waste, waiting not less than 5 s between actuations until (n/2)+1 deliveries remain, where n is the number of deliveries stated on the label. Collect 4 doses using the procedure described above.

Discharge the device to waste, waiting not less than 5 s between actuations until 3 doses remain. Collect these 3 doses using the procedure described above.

For preparations containing more than one active substance, carry out the test for uniformity of delivered dose for each active substance.

Unless otherwise justified and authorised, the preparation complies with the test if 9 out of 10 results lie between 75 per cent and 125 per cent of the average value and all lie between 65 per cent and 135 per cent. If 2 or 3 values lie outside the limits of 75 per cent to 125 per cent, repeat the test for 2 more inhalers. Not more than 3 of the 30 values lie outside the limits of 75 per cent to 125 per cent and no value lies outside the limits of 65 per cent to 135 per cent.

Fine particle dose

Using an apparatus and procedure described in *Aerodynamic assessment of fine particles (2.9.18 - Apparatus C, D or E)*, calculate the fine particle dose.

Number of deliveries per inhaler

Take one inhaler and discharge the contents to waste, actuating the valve at intervals of not less than 5 s. The total number of deliveries so discharged from the inhaler is not less than the number stated on the label (this test may be combined with the test for uniformity of delivered dose).

POWDERS FOR INHALATION

DEFINITION

Powders for inhalation are presented as single-dose powders or multidose powders. To facilitate their use, active substances may be combined with a suitable carrier. They are generally administered by powder inhalers. For pre-metered inhalers, the inhaler is loaded with powders pre-dispensed in capsules or other suitable pharmaceutical forms. For inhalers using a powder reservoir, the dose is created by a metering mechanism within the inhaler.

The delivered dose is the dose delivered from the inhaler. For some preparations, the dose has been established as a metered dose or as a predispensed dose. The metered dose is determined by adding the amount deposited on the inhaler to the delivered dose. It may also be determined directly.

TESTS

Uniformity of delivered dose

In all cases, prepare the inhaler as directed in the instructions to the patient. The dose collection apparatus must be capable of quantitatively capturing the delivered dose. A dose collection apparatus similar to that described for the evaluation of pressurised metered-dose inhalers may be used provided that the dimensions of the tube and the filter can accommodate the measured flow rate. A suitable tube is defined in Table 0671.-1. Connect the tube to a flow system according to the scheme specified in Figure 0671.-2 and Table 0671.-1.

Unless otherwise stated, determine the test flow rate and duration using the dose collection tube, the associated flow system, a suitable differential pressure meter and a suitable volumetric flowmeter, calibrated for the flow leaving the meter, according to the following procedure.

Prepare the inhaler for use and connect it to the inlet of the apparatus using a mouthpiece adapter to ensure an airtight seal. Use a mouthpiece adapter which ensures that the front face of the inhaler mouthpiece is flush with the front face of the sample collection tube. Connect one port of a differential pressure meter to the pressure reading point, P1, in Figure 0671.-2 and let the other be open to the atmosphere. Switch on the pump, open the 2-way solenoid valve and adjust the flow control valve until the pressure drop across the inhaler is 4.0 kPa (40.8 cm H_2O) as indicated by the differential pressure meter. Remove the inhaler from the mouthpiece adapter and without touching the flow control valve, connect a flowmeter to the inlet of the sampling apparatus. Use a flowmeter calibrated for the volumetric flow leaving the meter, or calculate the volumetric flow leaving the meter (Q_{out}) using the ideal gas law. For a meter calibrated for the entering volumetric flow (Q_{in}), use the following expression:

$$Q_{out} = \frac{Q_{in} \times P_0}{P_0 - \Delta P}$$

D
Mouthpiece adaptor

Figure 0671.-2. – ***Apparatus suitable for measuring the uniformity of delivered dose for powder inhalers***

P_0 = atmospheric pressure,

ΔP = pressure drop over the meter.

If the flow rate is above 100 litres/min adjust the flow control valve to obtain a flow rate of 100 litres/min (± 5 per cent). Note the volumetric airflow rate exiting the meter and define this as the test flow rate, Q_{out}, in litres per minute. Define the test flow duration, T, in seconds so that a volume of 4 litres of air is drawn from the mouthpiece of the inhaler at the test flow rate, Q_{out}.

Ensure that critical flow occurs in the flow control valve by the following procedure; with the inhaler in place and the test flow rate Q_{out}, measure the absolute pressure on both sides of the control valve (pressure reading points P2 and P3 in Figure 0671.-2). A ratio P3/P2 of less than or equal to 0.5 indicates critical flow. Switch to a more powerful pump and re-measure the test flow rate if critical flow is not indicated.

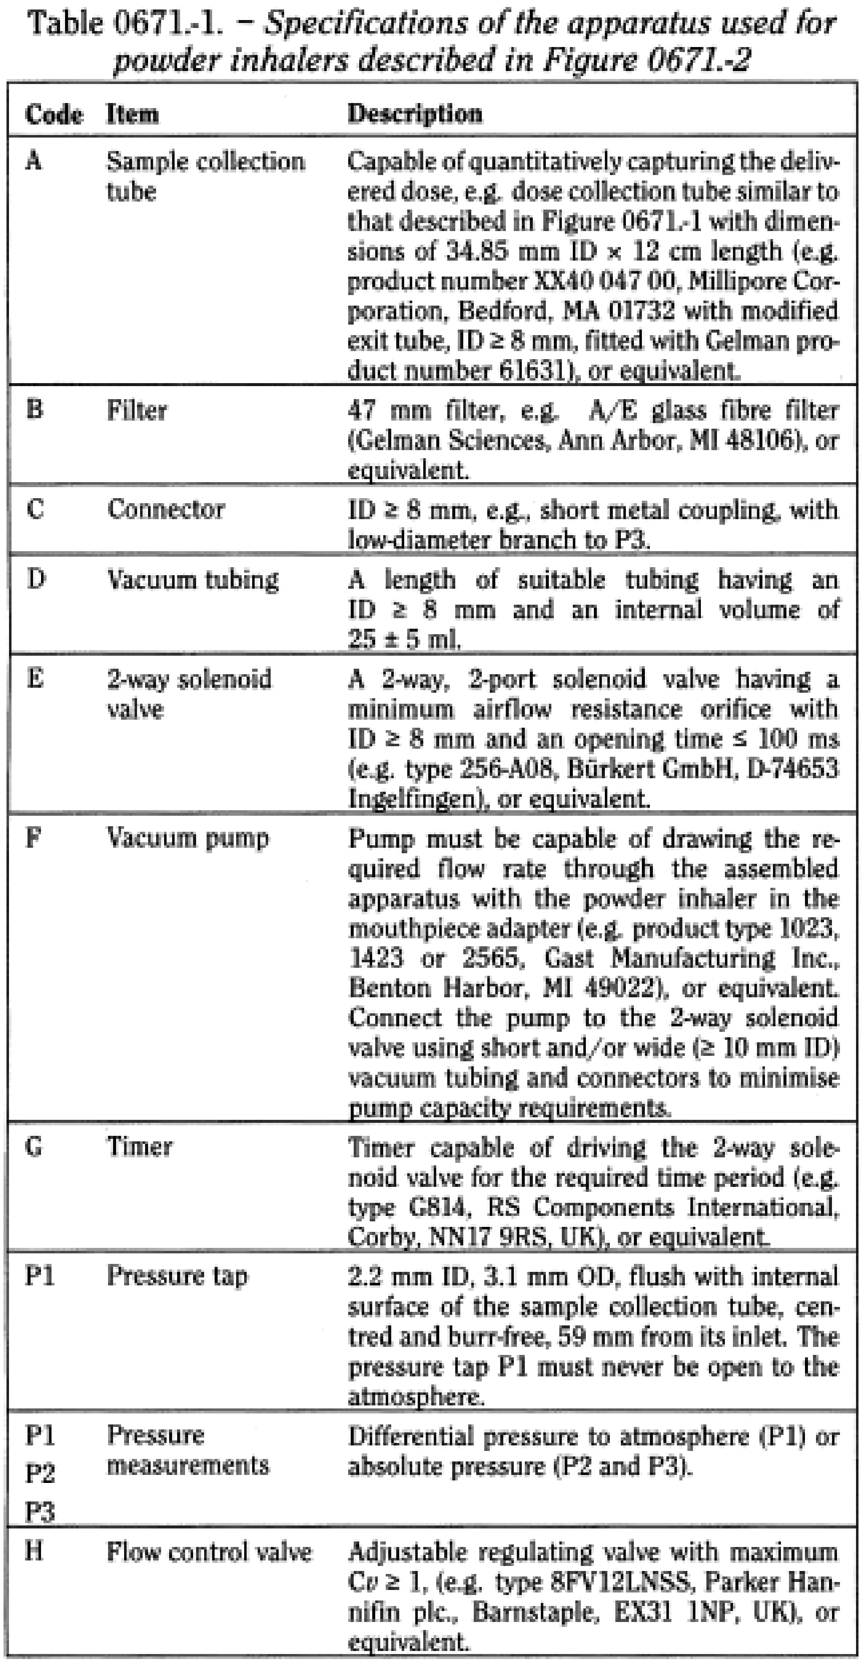

Table 0671.-1. – *Specifications of the apparatus used for powder inhalers described in Figure 0671.-2*

Code	Item	Description
A	Sample collection tube	Capable of quantitatively capturing the delivered dose, e.g. dose collection tube similar to that described in Figure 0671.-1 with dimensions of 34.85 mm ID × 12 cm length (e.g. product number XX40 047 00, Millipore Corporation, Bedford, MA 01732 with modified exit tube, ID ≥ 8 mm, fitted with Gelman product number 61631), or equivalent.
B	Filter	47 mm filter, e.g. A/E glass fibre filter (Gelman Sciences, Ann Arbor, MI 48106), or equivalent.
C	Connector	ID ≥ 8 mm, e.g., short metal coupling, with low-diameter branch to P3.
D	Vacuum tubing	A length of suitable tubing having an ID ≥ 8 mm and an internal volume of 25 ± 5 ml.
E	2-way solenoid valve	A 2-way, 2-port solenoid valve having a minimum airflow resistance orifice with ID ≥ 8 mm and an opening time ≤ 100 ms (e.g. type 256-A08, Bürkert GmbH, D-74653 Ingelfingen), or equivalent.
F	Vacuum pump	Pump must be capable of drawing the required flow rate through the assembled apparatus with the powder inhaler in the mouthpiece adapter (e.g. product type 1023, 1423 or 2565, Gast Manufacturing Inc., Benton Harbor, MI 49022), or equivalent. Connect the pump to the 2-way solenoid valve using short and/or wide (≥ 10 mm ID) vacuum tubing and connectors to minimise pump capacity requirements.
G	Timer	Timer capable of driving the 2-way solenoid valve for the required time period (e.g. type G814, RS Components International, Corby, NN17 9RS, UK), or equivalent.
P1	Pressure tap	2.2 mm ID, 3.1 mm OD, flush with internal surface of the sample collection tube, centred and burr-free, 59 mm from its inlet. The pressure tap P1 must never be open to the atmosphere.
P1 P2 P3	Pressure measurements	Differential pressure to atmosphere (P1) or absolute pressure (P2 and P3).
H	Flow control valve	Adjustable regulating valve with maximum C*v* ≥ 1, (e.g. type 8FV12LNSS, Parker Hannifin plc., Barnstaple, EX31 1NP, UK), or equivalent.

Predispensed systems Prepare the inhaler as directed in the instructions to the patient and connect it to the apparatus using an adapter which ensures a good seal. Draw air through the inhaler using the predetermined conditions. Repeat the procedure until the number of deliveries which constitute the minimum recommended dose have been sampled.

Quantitatively collect the contents of the apparatus and determine the amount of active substance.

Repeat the procedure for a further 9 doses.

Reservoir systems Prepare the inhaler as directed in the instructions to the patient and connect it to the apparatus using an adapter which ensures a good seal. Draw air through the inhaler under the predetermined conditions. Repeat the procedure until the number of deliveries which constitute the minimum recommended dose have been sampled. Quantitatively collect the contents of the apparatus and determine the amount of active substance.

Repeat the procedure for a further 2 doses.

Discharge the device to waste until (*n*/2)+1 deliveries remain, where n is the number of deliveries stated on the label. If necessary, store the inhaler to discharge electrostatic charges. Collect 4 doses using the procedure described above.

Discharge the device to waste until 3 doses remain. If necessary, store the inhaler to discharge electrostatic charges. Collect 3 doses using the procedure described above.

For preparations containing more than one active substance, carry out the test for uniformity of delivered dose for each active substance.

Results The preparation complies with the test if 9 out of 10 results lie between 75 per cent and 125 per cent of the average value and all lie between 65 per cent and 135 per cent. If 2 or 3 values lie outside the limits of 75 per cent to 125 per cent, repeat the test for 2 more inhalers. Not more than 3 of the 30 values lie outside the limits of 75 per cent to 125 per cent and no value lies outside the limits of 65 per cent to 135 per cent.

In justified and authorised cases, these ranges may be extended but no value should be greater than 150 per cent or less than 50 per cent of the average value.

Fine particle dose

Using the apparatus and procedure described in *Aerodynamic assessment of fine particles (2.9.18 - Apparatus C, D or E)*, calculate the fine particle dose.

Number of deliveries per inhaler for multidose inhalers

Discharge doses from the inhaler until empty, at the predetermined flow rate. Record the deliveries discharged. The total number of doses delivered is not less than the number stated on the label (this test may be combined with the test for uniformity of delivered dose).

Ph Eur

Preparations for Irrigation of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those irrigation solutions that are the subject of an individual monograph in the British Pharmacopoeia.

Water for Irrigation

When the term 'Water for Irrigation' is used within the individual monographs of the British Pharmacopoeia, it has the meaning defined in the requirements of the European Pharmacopoeia above.

IRRIGATION SOLUTIONS

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) the date after which the Irrigation Solution is not intended to be used; (3) the conditions under which the irrigation solution should be stored.

PREPARATIONS FOR IRRIGATION

General Notices

(Ph Eur monograph 1116)

Preparations for Irrigation comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Preparations for irrigation are sterile, aqueous, large-volume preparations intended to be used for irrigation of body cavities, wounds and surfaces, for example during surgical procedures.

Preparations for irrigation are either solutions prepared by dissolving one or more active substances, electrolytes or osmotically active substances in water complying with the requirements for *Water for injections (0169)* or they consist of such water alone. In the latter case, the preparation may be labelled as 'water for irrigation'. Irrigation solutions are usually adjusted to make the preparation isotonic with respect to blood.

Examined in suitable conditions of visibility, preparations for irrigation are clear and practically free from particles.

Preparations for irrigation are supplied in single-dose containers. The containers and closures comply with the requirements for containers for preparations for parenteral use (*3.2.1* and *3.2.2*), but the administration port of the container is incompatible with intravenous administration equipment and does not allow the preparation for irrigation to be administered with such equipment.

PRODUCTION

Preparations for irrigation are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products* (*5.1.1*).

During development, it must be demonstrated that the nominal content can be withdrawn from the container.

TESTS

Sterility (*2.6.1*)

Preparations for irrigation comply with the test for sterility.

Bacterial endotoxins (*2.6.14*)

Less than 0.5 IU/ml.

Pyrogens (*2.6.8*)

Preparations for which a validated test for bacterial endotoxins cannot be carried out comply with the test for pyrogens. Inject per kilogram of the rabbit's mass 10 ml of the preparation, unless otherwise justified and authorised.

LABELLING

The label states:

— that the preparation is not to be used for injection;

— that the preparation is to be used on one occasion only and that any unused portion of the preparation is to be discarded.

Ph Eur

PRESSURISED PHARMACEUTICAL PREPARATIONS

General Notices

(Ph Eur monograph 0523)

Pressurised Pharmaceutical Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

Additional requirements for preparations presented in pressurised containers may be found, where appropriate, in other general monographs, for example Preparations for inhalation (0671), Liquid preparations for cutaneous application (0927), Powders for cutaneous application (1166), Nasal preparations (0676) and Ear preparations (0652).

DEFINITION

Pressurised pharmaceutical preparations are presented in special containers under pressure of a gas and contain one or more active substances. The preparations are released from the container, upon actuation of an appropriate valve, in the form of an aerosol (dispersion of solid or liquid particles in a gas, the size of the particles being adapted to the intended use) or of a liquid or semisolid jet such as a foam. The pressure for the release is generated by suitable propellants.

The preparations consist of a solution, an emulsion or a suspension and are intended for local application to the skin or to mucous membranes of various body orifices, or for inhalation. Suitable excipients may also be used, for example solvents, solubilisers, emulsifying agents, suspending agents and lubricants for the valve to prevent clogging.

Propellants The propellants are either gases liquefied under pressure or compressed gases or low-boiling liquids. Liquefied gases are, for example, fluorinated hydrocarbons and low-molecular-mass hydrocarbons (such as propane and butane). Compressed gases are, for example, carbon dioxide, nitrogen and nitrous oxide.

Mixtures of these propellants may be used to obtain optimal solution properties and desirable pressure, delivery and spray characteristics.

Containers The containers are tight and resistant to the internal pressure and may be made of metal, glass, plastic or combinations of these materials. They are compatible with their contents. Glass containers are protected with a plastic coating.

Spraying device The valve keeps the container tightly closed when not in use and regulates the delivery of the contents during use. The spray characteristics are influenced by the type of spraying device, in particular by the dimensions, number and location of orifices. Some valves provide a continuous release, others ("metering dose valves") deliver a defined quantity of product upon each valve actuation.

The various valve materials in contact with the contents are compatible with them.

Requirements for pressurised pharmaceutical preparations

Pressurised preparations are provided with a delivery device appropriate for the intended application.

Special requirements may be necessary for the selection of propellants, for particle size and the single-dose delivered by the metering valves.

LABELLING

The label states:

— the method of use,

— any precautions to be taken,

— for a container with a metering dose valve, the amount of active substance in a unit-spray.

Ph Eur

Rectal Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any enema, rectal solution or suppositories that is the subject of an individual monograph in the British Pharmacopoeia.

ENEMAS

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the preparation should not be swallowed; (3) the date after which the Enema is not intended to be used; (4) the conditions under which the Enema should be stored; (5) the directions for using the Enema.

RECTAL SOLUTIONS

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the preparation should not be swallowed; (3) the date after which the Rectal Solution is not intended to be used; (4) the conditions under which the Rectal Solution should be stored; (5) the directions for using the Rectal Solution.

SUPPOSITORIES

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the preparation should not be swallowed; (3) the date after which the Suppositories are not intended to be used; (4) the conditions under which the Suppositories should be stored.

RECTAL PREPARATIONS

General Notices

(Ph Eur monograph 1145)

Rectal Preparations comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Rectal preparations are intended for rectal use in order to obtain a systemic or local effect, or they may be intended for diagnostic purposes.

Where applicable, containers for rectal preparations comply with the requirements for materials used for the manufacture of containers *(3.1 and subsections)* and containers *(3.2 and subsections)*.

Several categories of rectal preparations may be distinguished:

— suppositories;

— rectal capsules;

— rectal solutions, emulsions and suspensions;

— powders and tablets for rectal solutions and suspensions;

— semi-solid rectal preparations;

— rectal foams;

— rectal tampons.

PRODUCTION

During the development of a rectal preparation whose formulation contains an antimicrobial preservative, the need for and the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in chapter *5.1.3 Efficacy of antimicrobial preservation.*

During development, it must be demonstrated that the nominal contents can be withdrawn from the container of liquid and semi-solid rectal preparations presented in single-dose containers.

In the manufacture, packaging, storage and distribution of rectal preparations, suitable measures are taken to ensure their microbial quality; recommendations on this aspect are provided in chapter *5.1.4 Microbiological quality of pharmaceutical preparations.*

In the manufacture of semi-solid and liquid rectal preparations containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Uniformity of dosage units *(2.9.40)*

Liquid and semi-solid single-dose rectal preparations comply with the test. Solid single-dose rectal preparations comply with the test or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, solid single-dose rectal preparations with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test A (tablets) or test B (suppositories, rectal capsules). If the preparation contains more than one active substance, this requirement applies only to those substances that correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Solid single-dose rectal preparations comply with the test. If the test for uniformity of content is prescribed for all active substances, the test for uniformity of mass is not required.

Dissolution

A suitable test may be required to demonstrate the appropriate release of the active substance(s) from solid single-dose rectal preparations, for example *2.9.42 Dissolution test for lipophilic solid dosage forms.*

Where a dissolution test is prescribed, a disintegration test may not be required.

LABELLING

The label states the name of any added antimicrobial preservative.

SUPPOSITORIES

DEFINITION

Suppositories are solid, single-dose preparations. The shape, volume and consistency of suppositories are suitable for rectal administration.

They contain 1 or more active substances dispersed or dissolved in a suitable basis that may be soluble or dispersible in water or may melt at body temperature. Excipients such as diluents, adsorbents, surface-active agents, lubricants, antimicrobial preservatives and colouring matter, authorised by the competent authority, may be added if necessary.

PRODUCTION

Suppositories are prepared by compression or moulding. If necessary, the active substance (s) are previously ground and sieved through a suitable sieve. When prepared by moulding, the medicated mass, sufficiently liquefied by heating, is poured into suitable moulds. The suppository solidifies on cooling. Various excipients are available for this process, such as hard fat, macrogols, cocoa butter, and various gelatinous mixtures consisting of, for example, gelatin, water and glycerol. The determination of the softening time of lipophilic suppositories *(2.9.22)* is carried out.

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) from suppositories intended for modified release or for prolonged local action.

In the manufacture of suppositories containing dispersed active substances, measures are taken to ensure a suitable and controlled particle size.

TESTS

Disintegration *(2.9.2)*

Unless intended for modified release or for prolonged local action, they comply with the test. For suppositories with a fatty base, examine after 30 min, and for suppositories with a water-soluble base, examine after 60 min, unless otherwise justified and authorised.

RECTAL CAPSULES

DEFINITION

Rectal capsules (shell suppositories) are solid, single-dose preparations generally similar to soft capsules as defined in the monograph *Capsules (0016)* except that they may have lubricating coatings. They are of elongated shape, are smooth and have a uniform external appearance.

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) from rectal capsules intended for modified release or for prolonged local action.

TESTS

Disintegration *(2.9.2)*

Unless intended for modified release or for prolonged local action, they comply with the test. Examine the state of the capsules after 30 min, unless otherwise justified and authorised.

RECTAL SOLUTIONS, EMULSIONS AND SUSPENSIONS

DEFINITION

Rectal solutions, emulsions and suspensions are liquid preparations intended for rectal use in order to obtain a systemic or local effect, or they may be intended for diagnostic purposes.

Rectal solutions, emulsions and suspensions are supplied in single-dose containers and contain 1 or more active substances dissolved or dispersed in water, glycerol or macrogols or other suitable solvents. Emulsions may show evidence of phase separation but are readily redispersed on shaking. Suspensions may show a sediment that is readily dispersible on shaking to give a suspension that remains sufficiently stable to enable the correct dose to be delivered.

Rectal solutions, emulsions and suspensions may contain excipients, for example to adjust the viscosity of the preparation, to adjust or stabilise the pH, to increase the solubility of the active substance(s) or to stabilise the preparation. These substances do not adversely affect the intended medical action or, at the concentrations used, cause undue local irritation.

Rectal solutions, emulsions and suspensions are supplied in containers containing a volume in the range of 2.5 ml to 2000 ml. The container is adapted to deliver the preparation to the rectum or is accompanied by a suitable applicator.

POWDERS AND TABLETS FOR RECTAL SOLUTIONS AND SUSPENSIONS

DEFINITION

Powders and tablets intended for the preparation of rectal solutions or suspensions are single-dose preparations that are dissolved or dispersed in water or other suitable solvents at the time of administration. They may contain excipients to facilitate dissolution or dispersion or to prevent aggregation of the particles.

After dissolution or suspension, they comply with the requirements for rectal solutions or rectal suspensions, as appropriate.

TESTS

Disintegration *(2.9.1)*

Tablets for rectal solutions or suspensions comply with the test, but using *water R* at 15-25 °C and 6 tablets. Examine the state of the tablets after 3 min. The tablets comply with the test if all 6 have disintegrated.

LABELLING

The label states:

- — the method of preparation of the rectal solution or suspension;
- — the conditions and duration of storage of the solution or suspension after constitution.

SEMI-SOLID RECTAL PREPARATIONS

DEFINITION

Semi-solid rectal preparations are ointments, creams or gels.

They are often supplied as single-dose preparations in containers provided with a suitable applicator.

Semi-solid rectal preparations comply with the requirements of the monograph *Semi-solid preparations for cutaneous application (0132).*

RECTAL FOAMS

DEFINITION

Rectal foams comply with the requirements of the monograph *Medicated foams (1105)*.

RECTAL TAMPONS

DEFINITION

Rectal tampons are solid, single-dose preparations intended to be inserted into the lower part of the rectum for a limited time.

They comply with the requirements of the monograph *Medicated tampons (1155).*

Ph Eur

SPIRITS

General Notices

DEFINITION

Spirits are solutions of one or more substances in Ethanol (96 per cent) or a Dilute Ethanol. They may contain a proportion of Water.

STORAGE

Spirits should be kept in well-closed containers of glass or other suitable materials.

LABELLING

The label states (1) the date after which the Spirit is not intended to be used; (2) the conditions under which the Spirit should be stored.

STICKS

General Notices

(Ph Eur monograph 1154)

Sticks comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

Additional requirements for sticks may be found, where appropriate, in other general monographs, for example Nasal preparations (0676).

DEFINITION

Sticks are solid preparations intended for local application. They are rod-shaped or conical preparations consisting of one or more active substances alone or which are dissolved or dispersed in a suitable basis which may dissolve or melt at body temperature.

Urethral sticks and sticks for insertion into wounds are sterile.

PRODUCTION

In the manufacture, packaging, storage and distribution of sticks, suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations* (*5.1.4*).

Urethral sticks and other sterile sticks are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products* (*5.1.1*).

In the manufacture of sticks means are taken to ensure that the preparation complies with a test for mass uniformity or, where appropriate, a test for uniformity of content.

TESTS

Sterility (*2.6.1*)

Urethral sticks and sticks for insertion into wounds comply with the test for sterility.

LABELLING

The label states:

— the quantity of active substance(s) per stick,

— for urethral sticks and sticks to be inserted into wounds that they are sterile.

Ph Eur

Tablets of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those tablets that are the subject of an individual monograph in the British Pharmacopoeia.

DEFINITION

Tablets of the British Pharmacopoeia may contain flavouring only when indicated in the individual monograph.

Tablets that are the subject of individual monographs in the British Pharmacopoeia may be uncoated, compression-coated, film-coated or sugar-coated unless otherwise indicated in the monograph. Tablets for which the monograph states 'They are coated' are compression-coated or film-coated or sugar-coated. Tablets may be made gastro-resistant by enteric-coating or by other means only where this is specifically indicated in the monograph.

When presented as coated formulations, where justified and authorised, it may be necessary to remove the coating before performing a test described in a monograph. Removal of a coating is not permitted where it affects the functionality of the product, for example in dissolution or disintegration tests.

In preparing Tablets for which Chocolate Basis is specified, the active ingredient may be incorporated with a mixture of 15 parts of non-alkalinised cocoa powder of commerce, 15 parts of Sucrose and 70 parts of Lactose.

Content of active ingredient of tablets

The range for the content of active ingredient stated in the monograph is based on the requirement that 20 tablets, or such other number as may be indicated in the monograph, are used in the Assay. In circumstances where 20 tablets cannot be obtained, a smaller number, which must not be less than five, may be used, but to allow for sampling errors the tolerances are widened in accordance with Table I.

The requirements of Table I apply when the stated limits are 90 to 110%. For limits other than 90 to 110%, proportionately smaller or larger allowances should be made.

Table I

Weight of active ingredients in each tablet	Subtract from the lower limit for samples of			Add to the upper limit for samples of		
	15	10	5	15	10	5
0.12 g or less	0.2	0.7	1.6	0.3	0.8	1.8
More than 0.12 g and less than 0.3 g	0.2	0.5	1.2	0.3	0.6	1.5

0.3 g or more	0.1	0.2	0.8	0.2	0.4	1.0

Disintegration

Comply with the *disintegration test for tablets and capsules,* Appendix XII A1, unless otherwise stated in the individual monographs.

For those Uncoated or Coated Tablets for which a requirement for Dissolution is included in the individual monograph, the requirement for Disintegration does not apply.

Uniformity of content

Details of the analytical method to be employed for determining the content of active ingredient may be included in certain monographs. Unless otherwise stated in the monograph the limits are as given in test A for *Uniformity of content*, Appendix XII C3.

Any tablets that when examined individually show a gross deviation from the prescribed or stated content are not official.

LABELLING

The label states (1) the quantity of the active ingredient contained in each tablet; (2) 'enteric-coated' for tablets coated in this manner; (3) the date after which the Tablets are not intended to be used; (4) the conditions under which the Tablets should be stored.

TABLETS

General Notices

(Ph Eur monograph 0478)

Tablets comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

The requirements of this monograph do not necessarily apply to preparations that are presented as tablets intended for use other than by oral administration. Requirements for such preparations may be found, where appropriate, in other general monographs; for example Rectal preparations (1145), Vaginal preparations (1164) and Oromucosal preparations (1807). This monograph does not apply to lozenges, oral pastes and oral gums. Where justified and authorised, the requirements of this monograph do not apply to tablets for veterinary use.

DEFINITION

Tablets are solid preparations each containing a single dose of one or more active substances. They are obtained by compressing uniform volumes of particles or by another suitable manufacturing technique, such as extrusion, moulding or freeze-drying (lyophilisation). Tablets are intended for oral administration. Some are swallowed whole, some after being chewed, some are dissolved or dispersed in water before being administered and some are retained in the mouth where the active substance is liberated.

The particles consist of one or more active substances with or without excipients such as diluents, binders, disintegrating agents, glidants, lubricants, substances capable of modifying the behaviour of the preparation in the digestive tract, colouring matter authorised by the competent authority and flavouring substances.

Tablets are usually straight, circular solid cylinders, the end surfaces of which are flat or convex and the edges of which may be bevelled. They may have break-marks and may bear a symbol or other markings. Tablets may be coated.

Where applicable, containers for tablets comply with the requirements for materials used for the manufacture of containers *(3.1 and subsections)* and containers *(3.2 and subsections).*

Several categories of tablets for oral use may be distinguished:

- — uncoated tablets;
- — coated tablets;
- — effervescent tablets;
- — soluble tablets;
- — dispersible tablets;
- — orodispersible tablets;

— gastro-resistant tablets;

— modified-release tablets;

— tablets for use in the mouth;

— oral lyophilisates.

PRODUCTION

Tablets are usually prepared by compressing uniform volumes of particles or particle aggregates produced by granulation methods. In the manufacture of tablets, means are taken to ensure that they possess a suitable mechanical strength to avoid crumbling or breaking on handling or subsequent processing. This may be demonstrated using the tests described in chapters *2.9.7*. *Friability of uncoated tablets* and *2.9.8*. *Resistance to crushing of tablets*. Chewable tablets are prepared to ensure that they are easily crushed by chewing.

Subdivision of tablets Tablets may bear a break-mark or break-marks and may be subdivided in parts, either to ease the intake of the medicinal product or to comply with the posology. In the latter case, subdivision must be assessed and authorised by the competent authority. In order to ensure that the patient will receive the intended dose, the efficacy of the break-mark(s) must be assessed during the development of the product, in respect of uniformity of mass of the subdivided parts. Each authorised dose must be tested using the following test.

Take 30 tablets at random, break them by hand and, from all the parts obtained from 1 tablet, take 1 part for the test and reject the other part(s). Weigh each of the 30 parts individually and calculate the average mass. The tablets comply with the test if not more than 1 individual mass is outside the limits of 85 per cent to 115 per cent of the average mass. The tablets fail to comply with the test if more than 1 individual mass is outside these limits, or if 1 individual mass is outside the limits of 75 per cent to 125 per cent of the average mass.

In the manufacture, packaging, storage and distribution of tablets, suitable means are taken to ensure their microbiological quality; recommendations on this aspect are provided in chapter *5.1.4*. *Microbiological quality of pharmaceutical preparations*.

TESTS

Uniformity of dosage units *(2.9.40)*

Tablets comply with the test or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, tablets with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test A. If the preparation has more than 1 active substance, the requirement applies only to those substances that correspond to the above conditions.

Unless otherwise justified and authorised, coated tablets other than film-coated tablets comply with test A irrespective of their content of active substance(s).

Uniformity of mass *(2.9.5)*

Uncoated tablets and, unless otherwise justified and authorised, film-coated tablets comply with the test. If the test for uniformity of content is prescribed or justified and authorised for all the active substances, the test for uniformity of mass is not required.

Dissolution

A suitable test may be carried out to demonstrate the appropriate release of the active substance(s), for example one of the tests described in chapter *2.9.3. Dissolution test for solid dosage forms.*

Where a dissolution test is prescribed, a disintegration test may not be required.

UNCOATED TABLETS

DEFINITION

Uncoated tablets include single-layer tablets resulting from a single compression of particles and multi-layer tablets consisting of concentric or parallel layers obtained by successive compression of particles of different composition. The excipients used are not specifically intended to modify the release of the active substance in the digestive fluids.

Uncoated tablets conform to the general definition of tablets. A broken section, when examined under a lens, shows either a relatively uniform texture (single-layer tablets) or a stratified texture (multi-layer tablets) but no signs of coating.

TESTS

Disintegration *(2.9.1)*

Uncoated tablets comply with the test. Use *water R* as the liquid. Add a disc to each tube. Operate the apparatus for 15 min, unless otherwise justified and authorised, and examine the state of the tablets. If the tablets fail to comply because of adherence to the discs, the results are invalid. Repeat the test on a further 6 tablets omitting the discs.

Chewable tablets are not required to comply with the test.

COATED TABLETS

DEFINITION

Coated tablets are tablets covered with one or more layers of mixtures of various substances such as natural or synthetic resins, gums, gelatin, inactive and insoluble fillers, sugars, plasticisers, polyols, waxes, colouring matter authorised by the competent authority and sometimes flavouring substances and active substances. The substances used as coatings are usually applied as a solution or suspension in conditions in which evaporation of the vehicle occurs. When the coating is a very thin polymeric coating, the tablets are known as film-coated tablets.

Coated tablets have a smooth surface, which is often coloured and may be polished; a broken section, when examined under a lens, shows a core surrounded by one or more continuous layers with a different texture.

PRODUCTION

Where justified, uniformity of mass or uniformity of content of coated tablets other than film-coated tablets may be ensured by control of the cores.

TESTS

Disintegration *(2.9.1)*

Coated tablets other than film-coated tablets comply with the test. Use *water R* as the liquid. Add a disc to each tube. Operate the apparatus for 60 min, unless otherwise justified and authorised, and examine the state of the tablets. If any of the tablets has not disintegrated, repeat the test on a further 6 tablets, replacing *water R* with *0.1 M hydrochloric acid*.

Film-coated tablets comply with the disintegration test prescribed above except that the apparatus is operated for 30 min, unless otherwise justified and authorised.

If coated tablets or film-coated tablets fail to comply because of adherence to the discs, the results are invalid. Repeat the test on a further 6 tablets omitting the discs.

Chewable coated tablets are not required to comply with the test.

EFFERVESCENT TABLETS

DEFINITION

Effervescent tablets are uncoated tablets generally containing acid substances and carbonates or hydrogen carbonates, which react rapidly in the presence of water to release carbon dioxide. They are intended to be dissolved or dispersed in water before administration.

TESTS

Disintegration

Place 1 tablet in a beaker containing 200 ml of *water R* at 15-25 °C; numerous bubbles of gas are evolved. When the evolution of gas around the tablet or its fragments ceases the tablet has disintegrated, being either dissolved or dispersed in the water so that no agglomerates of particles remain. Repeat the operation on 5 other tablets. The tablets comply with the test if each of the 6 tablets used disintegrates in the manner prescribed within 5 min, unless otherwise justified and authorised.

SOLUBLE TABLETS

DEFINITION

Soluble tablets are uncoated or film-coated tablets. They are intended to be dissolved in water before administration. The solution produced may be slightly opalescent due to the added excipients used in the manufacture of the tablets.

TESTS

Disintegration *(2.9.1)*

Soluble tablets disintegrate within 3 min, using *water R* at 15-25 °C.

DISPERSIBLE TABLETS

DEFINITION

Dispersible tablets are uncoated or film-coated tablets intended to be dispersed in water before administration, giving a homogeneous dispersion.

TESTS

Disintegration *(2.9.1)*

Dispersible tablets disintegrate within 3 min, using *water R* at 15-25 °C.

Fineness of dispersion

Place 2 tablets in 100 ml of *water R* and stir until completely dispersed. A smooth dispersion is produced, which passes through a sieve screen with a nominal mesh aperture of 710 µm.

ORODISPERSIBLE TABLETS

DEFINITION

Orodispersible tablets are uncoated tablets intended to be placed in the mouth where they disperse rapidly before being swallowed.

TESTS

Disintegration *(2.9.1)*

Orodispersible tablets disintegrate within 3 min.

MODIFIED-RELEASE TABLETS

DEFINITION

Modified-release tablets are coated or uncoated tablets that contain special excipients or are prepared by special procedures, or both, designed to modify the rate, the place or the time at which the active substance(s) are released.

Modified-release tablets include prolonged-release tablets, delayed-release tablets and pulsatile-release tablets.

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) .

GASTRO-RESISTANT TABLETS

DEFINITION

Gastro-resistant tablets are delayed-release tablets that are intended to resist the gastric fluid and to release their active substance(s) in the intestinal fluid. Usually they are prepared from granules or particles already covered with a gastro-resistant coating or in certain cases by covering tablets with a gastro-resistant coating (enteric-coated tablets).

Tablets covered with a gastro-resistant coating conform to the definition of coated tablets.

PRODUCTION

For tablets prepared from granules or particles already covered with a gastro-resistant coating, a suitable test is carried out to demonstrate the appropriate release of the active substance(s).

TESTS

Disintegration *(2.9.1)*

For tablets covered with a gastro-resistant coating, carry out the test with the following modifications. Use *0.1 M hydrochloric acid* as the liquid. Operate the apparatus for 2 h, or another such time as may be justified and authorised, without the discs and examine the state of the tablets. The time of resistance to the acid medium varies according to the formulation of the tablets to be examined. It is typically 2 h to 3 h but even with authorised deviations is not less than 1 h. No tablet shows signs of either disintegration (apart from fragments of coating) or cracks that would allow the escape of the contents. Replace the acid by *phosphate buffer solution pH 6.8 R* and add a disc to each tube. Operate the apparatus for 60 min and examine the state of the tablets. If the tablets fail to comply because of adherence to the discs, the results are invalid. Repeat the test on a further 6 tablets omitting the discs.

Dissolution

For tablets prepared from granules or particles already covered with a gastro-resistant coating, a suitable test is carried out to demonstrate the appropriate release of the active substance(s), for example the test described in chapter *2.9.3*. *Dissolution test for solid dosage forms.*

TABLETS FOR USE IN THE MOUTH

DEFINITION

Tablets for use in the mouth are usually uncoated tablets. They are formulated to effect a slow release and local action of the active substance(s) or the release and absorption of the active substance(s) at a defined part of the mouth. They comply with the requirements of the monograph *Oromucosal preparations (1807).*

ORAL LYOPHILISATES

DEFINITION

Oral lyophilisates are solid preparations intended either to be placed in the mouth or to be dispersed (or dissolved) in water before administration.

PRODUCTION

Oral lyophilisates are obtained by freeze-drying (lyophilisation), involving division into single doses, freezing, sublimation and drying of usually aqueous, liquid or semi-solid preparations.

TESTS

Disintegration

Place 1 oral lyophilisate in a beaker containing 200 ml of *water R* at 15-25 °C. It disintegrates within 3 min. Repeat the test on 5 other oral lyophilisates. They comply with the test if all 6 have disintegrated.

Water *(2.5.12)*

Oral lyophilisates comply with the test; the limits are approved by the competent authority.

Ph Eur

Topical Powders of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those dusting powders that are the subject of an individual monograph in the British Pharmacopoeia.

DUSTING POWDERS

DEFINITION

Dusting Powders are finely divided powders that are intended to be applied to the skin for therapeutic, prophylactic or lubricant purposes.

STORAGE

Dusting Powders should be stored in a dry place.

LABELLING

The label states (1) the date after which the Dusting Powder is not intended to be used; (2) the conditions under which the Dusting Powder should be stored.

TOPICAL POWDERS

General Notices

POWDERS FOR CUTANEOUS APPLICATION

(Ph Eur monograph 1166)

Topical Powders comply with the requirements of the European Pharmacopoeia monograph for Powders for Cutaneous Application. These requirements are reproduced below.

Ph Eur

Where justified and authorised, the requirements of this monograph do not apply to powders for cutaneous application intended for veterinary use.

DEFINITION

Powders for cutaneous application are preparations consisting of solid, loose, dry particles of varying degrees of fineness. They contain one or more active substances, with or without excipients and, if necessary, colouring matter authorised by the competent authority.

Powders for cutaneous application are presented as single-dose powders or multidose powders. They are free from grittiness. Powders specifically intended for use on large open wounds or on severely injured skin are sterile.

Multidose powders for cutaneous application may be dispensed in sifter-top containers, containers equipped with a mechanical spraying device or in pressurised containers.

Powders dispensed in pressurised containers comply with the requirements of *Pressurised pharmaceutical preparations (0523).*

Where applicable, containers for powders comply with the requirements of *Materials used for the manufacture of containers* (*3.1* and subsections) and *Containers* (*3.2* and subsections).

PRODUCTION

In the manufacture of powders for cutaneous application, measures are taken to ensure a suitable particle size with regard to the intended use.

In the manufacture, packaging, storage and distribution of powders for cutaneous application, suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations* (5.1.4).

Sterile powders for cutaneous application are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this aspect are provided in the text on *Methods of preparation of sterile products* (*5.1.1*).

TESTS

Fineness

If prescribed, the fineness of a powder is determined by the sieve test (*2.9.12*) or another appropriate method.

Uniformity of dosage units

Single-dose powders for cutaneous application comply with the test for uniformity of dosage units (*2.9.40*) or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content (*2.9.6*)

Unless otherwise prescribed or justified and authorised, single-dose powders for cutaneous application with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test B for uniformity of content of single-dose preparations. If the preparation has more than one active substance, the requirement applies only to those substances which correspond to the above conditions.

Uniformity of mass (*2.9.5*)

Single-dose powders for cutaneous application comply with the test for uniformity of mass of single-dose preparations. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Sterility (*2.6.1*)

Where the label indicates that the preparation is sterile, it complies with the test for sterility.

LABELLING

The label states:

— that the preparation is for external use,

— where applicable, that the preparation is sterile.

Ph Eur

Topical Semi-solid Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to any cream, gel, ointment, paste or poultice that is the subject of an individual monograph in the British Pharmacopoeia. Eye ointments are described in the monograph on Eye Preparations.

CREAMS

DEFINITION

Creams are formulated to provide preparations that are essentially miscible with the skin secretion. They are intended to be applied to the skin or certain mucous membranes for protective, therapeutic or prophylactic purposes especially where an occlusive effect is not necessary.

Creams should not normally be diluted. However, should dilution be necessary care should be taken, in particular, to prevent microbial contamination. The appropriate diluent should be used and heating should be avoided during mixing. Excessive dilution may affect the stability of some creams. If diluted, creams should normally be used within two weeks of their preparation.

STORAGE

Creams should not be allowed to freeze.

LABELLING

The label states (1) the date after which the Cream is not intended to be used; (2) the conditions under which the Cream should be stored.

GELS

STORAGE

Gels should not be allowed to freeze.

LABELLING

The label states (1) the date after which the Gel is not intended to be used; (2) the conditions under which the Gel should be stored.

OINTMENTS

DEFINITION

Ointments are formulated to provide preparations that are immiscible, miscible or emulsifiable with the skin secretion. Hydrophobic ointments and water-emulsifying ointments are intended to be applied to the skin or certain mucous membranes for emollient, protective, therapeutic or prophylactic purposes where a degree of occlusion is desired. Hydrophilic ointments are miscible with the skin secretion and are less emollient as a consequence.

In tropical and subtropical countries varying quantities of Arachis Oil, White Beeswax, Wool Fat, Hard Paraffin, White Soft Paraffin, Yellow Soft Paraffin or Liquid Paraffin may be used in the preparation of the Ointments of the Pharmacopoeia when prevailing high temperatures otherwise make them too soft for convenient use, but the specified proportions of the active ingredients must be maintained.

Ointments should not normally be diluted. However, should dilution be necessary care should be taken in the selection of diluents to avoid risk of incompatibility or instability.

LABELLING

The label states (1) the date after which the Ointment is not intended to be used; (2) the conditions under which the Ointment should be stored.

PASTES

DEFINITION

Pastes are usually intended to be applied to small, localised areas of the skin.

LABELLING

The label states (1) the date after which the Paste is not intended to be used; (2) the conditions under which the Paste should be stored.

TOPICAL SEMI-SOLID PREPARATIONS

General Notices

(Semi-solid Preparations for Cutaneous Application, Ph Eur monograph 0132)

Topical Semi-solid Preparations comply with the requirements of the European Pharmacopoeia monograph for Semi-solid Preparations for Cutaneous Application. These requirements are reproduced below.

Ph Eur

The requirements of this monograph apply to all semi-solid preparations for cutaneous application. Where appropriate, additional requirements specific to semi-solid preparations intended to be applied to particular surfaces or mucous membranes may be found in other general monographs, for example Ear preparations (0652), Nasal preparations (0676), Rectal preparations (1145), Eye preparations (1163) and Vaginal preparations (1164).

DEFINITION

Semi-solid preparations for cutaneous application are intended for local or transdermal delivery of active substances, or for their emollient or protective action. They are of homogeneous appearance.

Semi-solid preparations for cutaneous application consist of a simple or compound basis in which, usually, 1 or more active substances are dissolved or dispersed. According to its composition, the basis may influence the activity of the preparation.

The basis may consist of natural or synthetic substances and may be single phase or multiphase. According to the nature of the basis, the preparation may have hydrophilic or hydrophobic properties; it may contain suitable excipients such as antimicrobial preservatives, antioxidants, stabilisers, emulsifiers, thickeners and penetration enhancers.

Semi-solid preparations for cutaneous application intended for use on severely injured skin are sterile.

Where applicable, containers for semi-solid preparations for cutaneous application comply with the requirements for *Materials used for the manufacture of containers (3.1 and subsections)* and *Containers (3.2 and subsections)*.

Several categories of semi-solid preparations for cutaneous application may be distinguished:

- ointments;
- creams;
- gels;
- pastes;
- poultices;
- medicated plasters.

According to their structure, ointments, creams and gels generally show viscoelastic behaviour and are non-Newtonian in character e.g. plastic, pseudoplastic or thixotropic type flow at high shear rates. Pastes frequently exhibit dilatancy.

PRODUCTION

During development of semi-solid preparations for cutaneous application whose formulation contains an antimicrobial preservative, the need for and the efficacy of the chosen preservative shall be demonstrated to the satisfaction of the competent authority. A suitable test method together with criteria for judging the preservative properties of the formulation are provided in *Efficacy of antimicrobial preservation (5.1.3)*. In the manufacture, packaging, storage and distribution of semi-solid preparations for cutaneous application, suitable steps are taken to ensure their microbiological quality; recommendations on this are provided in *Microbiological Quality of Pharmaceutical Preparations (5.1.4)*. Sterile semi-solid preparations for cutaneous application are prepared using materials and methods designed to ensure sterility and to avoid the introduction of contaminants and the growth of micro-organisms; recommendations on this are provided in *Methods of Preparation of Sterile Products (5.1.1)*.

During development, it must be demonstrated that the nominal content can be withdrawn from the container of semi-solid preparations for cutaneous application presented in single-dose containers.

In the manufacture of semi-solid preparations for cutaneous application, suitable measures are taken to ensure that the defined rheological properties are fulfilled. Where appropriate, the following non-mandatory tests may be carried out: measurement of consistency by penetrometry *(2.9.9)*, viscosity (apparent viscosity) *(2.2.10)* and a suitable test to demonstrate the appropriate release of the active substance(s).

In the manufacture of semi-solid preparations for cutaneous application containing 1 or more active substances that are not dissolved in the basis (e.g. emulsions or suspensions), measures are taken to ensure appropriate homogeneity of the preparation to be delivered.

In the manufacture of semi-solid preparations for cutaneous application containing dispersed particles, measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TESTS

Sterility *(2.6.1)*

Where the label indicates that the preparation is sterile, it complies with the test for sterility.

STORAGE

If the preparation contains water or other volatile ingredients, store in an airtight container. If the preparation is sterile, store in a sterile, airtight, tamper-proof container.

LABELLING

The label states:

— the name of any added antimicrobial preservative;

— where applicable, that the preparation is sterile.

OINTMENTS

DEFINITION

An ointment consists of a single-phase basis in which solids or liquids may be dispersed.

Hydrophobic Ointments Hydrophobic ointments can absorb only small amounts of water. Typical bases used for their formulation are hard, liquid and light liquid paraffins, vegetable oils, animal fats, synthetic glycerides, waxes and liquid polyalkylsiloxanes.

Water-emulsifying Ointments Water-emulsifying ointments can absorb larger amounts of water and thereby produce water-in-oil or oil-in-water emulsions depending on the nature of the emulsifiers: water-in-oil emulsifying agents such as wool alcohols, sorbitan esters, monoglycerides and fatty alcohols, or oil-in-water emulsifying agents such as sulphated fatty alcohols, polysorbates, macrogol cetostearyl ether or esters of fatty acids with macrogols may be used for this purpose. Their bases are those of the hydrophobic ointments.

Hydrophilic Ointments Hydrophilic ointments are preparations having bases that are miscible with water. The bases usually consist of mixtures of liquid and solid macrogols (polyethylene glycols). They may contain appropriate amounts of water.

CREAMS

DEFINITION

Creams are multiphase preparations consisting of a lipophilic phase and an aqueous phase.

Lipophilic Creams Lipophilic creams have as the continuous phase the lipophilic phase. They contain water-in-oil emulsifying agents such as wool alcohols, sorbitan esters and monoglycerides.

Hydrophilic Creams Hydrophilic creams have as the continuous phase the aqueous phase. They contain oil-in-water emulsifying agents such as sodium or trolamine soaps, sulphated fatty alcohols, polysorbates and polyoxyl fatty acid and fatty alcohol esters combined, if necessary, with water-in-oil emulsifying agents.

GELS

DEFINITION

Gels consist of liquids gelled by means of suitable gelling agents.

Lipophilic Gels Lipophilic gels (oleogels) are preparations whose bases usually consist of liquid paraffin with polyethylene or fatty oils gelled with colloidal silica or aluminium or zinc soaps.

Hydrophilic Gels Hydrophilic gels (hydrogels) are preparations whose bases usually consist of water, glycerol or propylene glycol gelled with suitable gelling agents such as starch, cellulose derivatives, carbomers and magnesium-aluminium silicates.

PASTES

DEFINITION

Pastes are semi-solid preparations for cutaneous application containing large proportions of solids finely dispersed in the basis.

POULTICES

DEFINITION

Poultices consist of a hydrophilic heat-retentive basis in which solid or liquid active substances are dispersed. They are usually spread thickly on a suitable dressing and heated before application to the skin.

MEDICATED PLASTERS

DEFINITION

Medicated plasters are flexible preparations containing 1 or more active substances. They are intended to be applied to the skin. They are designed to maintain the active substance(s) in close contact with the skin such that these may be absorbed slowly, or act as protective or keratolytic agents.

Medicated plasters consist of an adhesive basis, which may be coloured, containing 1 or more active substances, spread as a uniform layer on an appropriate support made of natural or synthetic material. It is not irritant or sensitising to the skin. The adhesive layer is covered by a suitable protective liner, which is removed before applying the plaster to the skin. When removed, the protective liner does not detach the preparation from the outer, supporting layer.

Medicated plasters are presented in a range of sizes directly adapted to their intended use or as larger sheets to be cut before use. Medicated plasters adhere firmly to the skin when gentle pressure is applied and can be peeled off without causing appreciable injury to the skin or detachment of the preparation from the outer, supporting layer.

TESTS

Dissolution

A suitable test may be required to demonstrate the appropriate release of the active substance(s), for example one of the tests described in *Dissolution test for transdermal* patches *(2.9.4)*.

Ph Eur

Transdermal Patches of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those preparations that are the subject of an individual monograph in the British Pharmacopoeia.

LABELLING

The label states (1) the date after which the Transdermal Patches are not intended to be used; (2) the conditions under which the Transdermal Patches should be stored; (3) the directions for using the Transdermal Patches.

TRANSDERMAL PATCHES

General Notices

(Ph Eur monograph 1011)

Transdermal Patches comply with the requirements of the European Pharmacopoeia. These requirements are reproduced below.

Ph Eur

DEFINITION

Transdermal patches are flexible pharmaceutical preparations of varying sizes, containing one or more active substances. They are intended to be applied to the unbroken skin in order to deliver the active substance(s) to the systemic circulation after passing through the skin barrier.

Transdermal patches normally consist of an outer covering which supports a preparation which contains the active substance(s). The transdermal patches are covered on the site of the release surface of the preparation by a protective liner, which is removed before applying the patch to the skin.

The outer covering is a backing sheet impermeable to the active substance(s) and normally impermeable to water, designed to support and protect the preparation. The outer covering may have the same dimensions as the preparation or it may be larger. In the latter case the overlapping border of the outer covering is covered by pressure-sensitive adhesive substances which assure the adhesion of the patch to the skin.

The preparation contains the active substance(s) together with excipients such as stabilisers, solubilisers or substances intended to modify the release rate or to enhance transdermal absorption. It may be a single layer or multi-layer solid or semi-solid matrix, and in this case it is the composition and structure of the matrix which determines the diffusion pattern of the active substance(s) to the skin. The matrix may contain pressure-sensitive adhesives which assure the adhesion of the preparation to the skin. The preparation may exist as a semi-solid reservoir one side of which is a membrane which may control the release and the diffusion of the active substance(s) from the preparation. The pressure-sensitive adhesive substances may, in this case, be applied to some or all parts of the membrane, or only around the border of the membrane of the outer covering.

When applied to the dried, clean and unbroken skin, the transdermal patch adheres firmly to the skin by gentle pressure of the hand or the fingers and can be peeled off without causing appreciable injury to the skin or detachment of the preparation from the outer covering. The patch must not be irritant or sensitising to the skin, even after repeated applications.

The protective liner generally consists of a sheet of plastic or metal material. When removed, the protective liner does not detach the preparation (matrix or reservoir) or the adhesive from the patch.

Transdermal patches are normally individually enclosed in sealed sachets.

PRODUCTION

In the manufacture, packaging, storage and distribution of transdermal patches suitable means are taken to ensure their microbial quality; recommendations on this aspect are provided in the text on *Microbiological quality of pharmaceutical preparations (5.1.4)*.

TESTS

Uniformity of dosage units

Transdermal patches comply with the test for uniformity of dosage units *(2.9.40)* or, where justified and authorised, with the test for uniformity of content shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, transdermal patches comply with test C for uniformity of content of single-dose preparations.

Dissolution

A suitable test may be required to demonstrate the appropriate release of the active substance(s), for example one of the tests described in *Dissolution test for transdermal patches (2.9.4)*. The disc assembly method, the cell method or the rotating cylinder method may be used, as suitable, according to the composition, dimensions and shape of the patch.

A membrane may be used. It can be of various materials, such as inert porous cellulose or silicones, and must not affect the release kinetics of the active substance(s) from the patch. Furthermore, it must be free of substances that may interfere with its performance (for example grease). The membrane may be suitably treated before the tests, for example, by maintaining it in the medium to be used in the test for 24 h. Apply the membrane above the releasing surface of the patch, avoiding the formation of air bubbles.

The test conditions and the requirements are to be authorised by the competent authority.

STORAGE

Store at room temperature, unless otherwise indicated.

LABELLING

The label states, where applicable, the total quantity of active substance(s) per patch, the dose released per unit time and the area of the releasing surface.

Ph Eur

Unlicensed Medicines

General Notices

This monograph describes the minimum quality standards required for Unlicensed Medicines for human use. The statements in this monograph are intended to be read in conjunction with individual monographs for unlicensed medicines or formulated preparations in the Pharmacopoeia, together with relevant General Notices, Appendices and Supplementary Chapters.

Individual monographs are intended to apply throughout the period for which the formulation is expected to be satisfactory for use.

DEFINITION

An unlicensed medicine is one which is prepared, at the request of an authorised healthcare professional, to address patient medicinal requirements, unmet by current licensed medicines, according to the Medicines Act 1968 (see Supplementary Chapter V). Such products will be manufactured under a manufacturing specials licence or prepared extemporaneously under the supervision of a pharmacist.

SCOPE

This general monograph applies to those dosage forms that are routinely manufactured or prepared as unlicensed medicines and are usually presented as conventional-release formulations. These include:

— Capsules

— Liquids for Cutaneous Application

— Ear Drops and Lotions

— Eye Drops

— Preparations for Irrigation

— Nasal Preparations

— Oral Liquids

— Oral Powders

— Parenteral Preparations

— Rectal Preparations

— Tablets

— Topical Semi-solid Preparations

— Vaginal Preparations

PRODUCTION

The production of unlicensed medicines should only be undertaken by competent staff, within suitable facilities and using equipment appropriate for the scale of manufacture and the specific dosage form.

In the UK, batch manufacture should be undertaken in facilities holding a UK Manufacturers Specials Licence in compliance with the standards of Good Manufacturing Practice.

LABELLING

The following requirements are applicable to unlicensed medicines manufactured or prepared in accordance with medicines legislation. They are not intended to apply to repackaging and assembly activities. The requirements were previously included as guidance in Supplementary Chapter V of the British Pharmacopoeia 2007.

Best practice guidance on the labelling and packaging of medicines advises that certain items of information are deemed critical for the safe use of the medicine (see MHRA Guidance Note No. 25: Best Practice Guidance on Labelling and Packaging of Medicines). These critical items of information, which should be located together on the pack and appear in the same field of view, are: name, strength, route of administration, dosage and warnings (highlighted in bold).

1. **The common name of the product.**
2. **A statement of the active ingredients expressed qualitatively and quantitatively per dosage unit or for a given volume or weight.**
3. **Route of administration.**
4. **Instructions for use, including any special warnings.**
5. The pharmaceutical form.
6. The contents of the container by weight, volume or by number of doses.
7. Excipients of known effect. For injectable, topical (including inhalation products) and ophthalmic medicines, all excipients.
8. 'Keep out of reach and sight of children'. [Note 1]
9. The expiry date expressed in unambiguous terms (dd/mm/yy).
10. Any special storage precautions.
11. The manufacturer's ML number, where appropriate.
12. The manufacturer's name and address.
13. The batch number.
14. Statutory warnings required by SI 1994/3144 for particular actives, eg aspirin, paracetamol, etc.

For small containers certain details may be omitted, but the label should contain, as a minimum, the following information:

1. **The common name of the product.**
2. **A statement of the active ingredients expressed qualitatively and quantitatively per dosage unit or for a given volume or weight.**
3. **Route of administration.**

6. The contents of the container by weight, volume or by number of doses.

9. The expiry date expressed in unambiguous terms (dd/mm/yy).

13. The batch number.

In such cases, the label for the outer packaging should contain all the relevant label information.

Note 1: This is a statutory requirement for relevant medicinal products.

MEDICINAL SUBSTANCES AND EXCIPIENTS

Where such a monograph is available, the medicinal substance and any excipients must comply with the specific monograph requirements of the Pharmacopoeia.

The medicinal substance and any excipients must also comply with the General Monograph for Substances for Pharmaceutical Use and, where appropriate, the provisions of Supplementary Chapter IV J on the Control of Impurities in Substances for Pharmaceutical Use and the General Monograph for Products with Risk of Transmitting Agents of Animal Spongiform Encephalopathies.

FORMULATED PREPARATIONS

Unlicensed medicines must comply with the requirements of the General Monograph for Unlicensed Medicines and with the requirements of the relevant General Monograph for the specific dosage form. Where a BP monograph for a formulated preparation is available, the product must comply. In addition, where specified, they must comply with the following tests.

ORAL LIQUIDS

PRODUCTION

In the manufacturing, packaging and storage of oral liquids, suitable measures are taken to ensure their microbial quality complies with Pharmacopoeial requirements throughout shelf-life; recommendations for microbial limits are provided in the section on *Microbiological Quality of Pharmaceutical Preparations (Appendix XVI D)*. If necessary, an antimicrobial preservative may be added unless the formulation is required to be preservative-free.

During the preparation, storage and use of preservative-free oral liquids, due consideration should be given to the additional risks of microbial contamination that exist for such preparations. Numbers of viable organisms in starting materials and primary packaging materials should be minimised. Storage conditions of the finished product should prevent contamination and inhibit microbiological proliferation. The product shelf life during storage and use should be based on the risk and probability that the product may fail to meet the requirements of Appendix XVI D.

ORAL SUSPENSIONS

Dissolution

Carry out the test for dissolution described under *dissolution test for tablets and capsules*, Appendix XII B1, using Apparatus 2. Unless otherwise stated in the individual monograph use 900 ml of an appropriate dissolution medium (as suggested in Supplementary Chapter I E, Table 2.9.3.-5) and rotate the paddle at 50 rpm.

Shake the container containing the oral suspension being examined for 30 seconds and accurately remove 5 ml at a depth of 1 cm below the meniscus. Introduce the dose to the media in the dissolution vessel. If sink conditions cannot be obtained, testing a partial dose of the suspension (10% to 20% of the usual dose) is preferable to using a surfactant.

Operate the apparatus at the specified rate. Within the time interval specified, or at each of the times stated, withdraw a specimen from a zone midway between the surface of the dissolution medium and the top of the rotating paddle, not less than 1 cm from the vessel wall. Where multiple sampling times are specified, replace the aliquots withdrawn for analysis with equal volumes of fresh dissolution medium at 37° or, where it can be shown that replacement of the medium is not necessary, correct for the volume change in the calculation. Keep the vessel covered for the duration of the test and verify the temperature of the medium at suitable times. Perform the analysis using a suitable assay method. Repeat the test with a further five additional doses.

Unless otherwise specified in the individual monograph, the value of Q is 75% of the stated amount at 45 minutes.

Homogeneity of Suspension

Allow a suitable volume of the oral suspension being examined to settle, undisturbed, for 24 hours. Shake the container for 30 seconds and accurately remove one dose (usually 5 to 10 ml) at a depth of 1 cm below the meniscus. Shake the container again for 10 seconds and remove another dose. Repeat this procedure until 10 doses of the suspension have been removed. Assay the 10 doses individually according to the method specified in the individual monograph.

The preparation complies with the test if each individual dose is between 85% and 115% of the average dose. The preparation fails to comply with the test if more than one individual dose is outside these limits or if one individual dose is outside the limits of 75% to 125% of the average content.

Vaginal Preparations of the British Pharmacopoeia

General Notices

In addition to the above requirements of the European Pharmacopoeia, the following statements apply to those pessaries that are the subject of an individual monograph in the British Pharmacopoeia.

PESSARIES

LABELLING

The label states (1) the names and concentrations of the active ingredients; (2) that the preparation should not be swallowed; (3) the date after which the Pessaries are not intended to be used; (4) the conditions under which the Pessaries should be stored.

VAGINAL PREPARATIONS

General Notices

(Ph Eur monograph 1164)

Ph Eur

DEFINITION

Vaginal preparations are liquid, semi-solid or solid preparations intended for administration to the vagina usually in order to obtain a local effect. They contain 1 or more active substances in a suitable basis.

Where appropriate, containers for vaginal preparations comply with the requirements for materials used for the manufacture of containers *(3.1 and subsections)* and containers *(3.2 and subsections)*.

Several categories of vaginal preparations may be distinguished:

— pessaries;

— vaginal tablets;

— vaginal capsules;

— vaginal solutions, emulsions and suspensions;

— tablets for vaginal solutions and suspensions;

— semi-solid vaginal preparations;

— vaginal foams;

— medicated vaginal tampons.

PRODUCTION

During development, it must be demonstrated that the nominal contents can be withdrawn from the container of liquid and semi-solid vaginal preparations presented in single-dose containers.

In the manufacturing, packaging, storage and distribution of vaginal preparations, suitable measures are taken to ensure their microbial quality; recommendations on this aspect are provided in chapter *5.1.4*. *Microbiological quality of pharmaceutical preparations*.

TESTS

Uniformity of dosage units *(2.9.40)*

Liquid and semi-solid single-dose vaginal preparations comply with the test. Solid single-dose vaginal preparations comply with the test or, where justified and authorised, with the tests for uniformity of content and/or uniformity of mass shown below. Herbal drugs and herbal drug preparations present in the dosage form are not subject to the provisions of this paragraph.

Uniformity of content *(2.9.6)*

Unless otherwise prescribed or justified and authorised, solid single-dose vaginal preparations with a content of active substance less than 2 mg or less than 2 per cent of the total mass comply with test A (vaginal tablets) or test B (pessaries, vaginal capsules). If the preparation has more than one active substance, the requirement applies only to those substances which correspond to the above conditions.

Uniformity of mass *(2.9.5)*

Solid single-dose vaginal preparations comply with the test. If the test for uniformity of content is prescribed for all the active substances, the test for uniformity of mass is not required.

Dissolution

A suitable test may be carried out to demonstrate the appropriate release of the active substance(s) from solid single-dose vaginal preparations, for example one of the tests described in chapter *2.9.3*. *Dissolution test for solid dosage forms* or in 2.9.42. *Dissolution test for lipophilic solid dosage forms.*

When a dissolution test is prescribed, a disintegration test may not be required.

PESSARIES

DEFINITION

Pessaries are solid, single-dose preparations. They have various shapes, usually ovoid, with a volume and consistency suitable for insertion into the vagina. They contain 1 or more active substances dispersed or dissolved in a suitable basis that may be soluble or dispersible in water or may melt at body temperature. Excipients such as diluents, adsorbents, surface-active agents, lubricants, antimicrobial preservatives and colouring matter authorised by the competent authority may be added, if necessary.

PRODUCTION

Pessaries are usually prepared by moulding. Where appropriate in the manufacture of pessaries, measures are taken to ensure a suitable and controlled particle size of the active substance(s). If necessary, the active substance(s) are previously ground and sieved through a suitable sieve.

When prepared by moulding, the medicated mass, sufficiently liquefied by heating, is poured into suitable moulds. The pessary solidifies on cooling. Various excipients are available for this process, such as hard fat, macrogols, cocoa butter, and various gelatinous mixtures consisting, for example, of gelatin, water and glycerol.

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) from pessaries intended for prolonged local action.

TESTS

Disintegration *(2.9.2)*

Unless intended for prolonged local action, they comply with the test. Examine the state of the pessaries after 60 min, unless otherwise justified and authorised.

VAGINAL TABLETS

DEFINITION

Vaginal tablets are solid, single-dose preparations. They generally conform to the definitions of uncoated or film-coated tablets given in the monograph *Tablets (0478).*

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) from vaginal tablets intended for prolonged local action.

TESTS

Disintegration ***(2.9.2)***

Unless intended for prolonged local action, they comply with the test (special method for vaginal tablets). Examine the state of the tablets after 30 min, unless otherwise justified and authorised.

VAGINAL CAPSULES

DEFINITION

Vaginal capsules (shell pessaries) are solid, single-dose preparations. They are generally similar to soft capsules as defined in the monograph *Capsules (0016),* differing only in their shape and size. Vaginal capsules have various shapes, usually ovoid. They are smooth and have a uniform external appearance.

PRODUCTION

A suitable test is carried out to demonstrate the appropriate release of the active substance(s) from vaginal capsules intended for prolonged local action.

TESTS

Disintegration ***(2.9.2)***

Unless intended for prolonged local action, they comply with the test. Examine the state of the capsules after 30 min, unless otherwise justified and authorised.

VAGINAL SOLUTIONS, EMULSIONS AND SUSPENSIONS

DEFINITION

Vaginal solutions, emulsions and suspensions are liquid preparations intended for a local effect, for irrigation or for diagnostic purposes. They may contain excipients, for example to adjust the viscosity of the preparation, to adjust or stabilise the pH, to increase the solubility of the active substance(s) or to stabilise the preparation. The excipients do not adversely affect the intended medical action or, at the concentrations used, cause undue local irritation.

Vaginal emulsions may show evidence of phase separation but are readily redispersed on shaking. Vaginal suspensions may show a sediment that is readily dispersed on shaking to give a suspension that remains sufficiently stable to enable a homogeneous preparation to be delivered.

They are supplied in single-dose containers. The container is adapted to deliver the preparation to the vagina or it is accompanied by a suitable applicator.

PRODUCTION

In the manufacture of vaginal suspensions measures are taken to ensure a suitable and controlled particle size with regard to the intended use.

TABLETS FOR VAGINAL SOLUTIONS AND SUSPENSIONS

DEFINITION

Tablets intended for the preparation of vaginal solutions and suspensions are single-dose preparations that are dissolved or dispersed in water at the time of administration. They may contain excipients to facilitate dissolution or dispersion or to prevent caking.

Apart from the test for disintegration, tablets for vaginal solutions or suspensions conform with the definition for *Tablets (0478).*

After dissolution or dispersion, they comply with the requirements for vaginal solutions or vaginal suspensions, as appropriate.

TESTS

Disintegration *(2.9.1)*

Tablets for vaginal solutions or suspensions comply with the test, but using *water R* at 15-25 °C and 6 tablets. Examine the state of the tablets after 3 min. The tablets comply with the test if all 6 have disintegrated.

LABELLING

The label states:

- — the method of preparation of the vaginal solution or suspension;
- — the conditions and duration of storage of the solution or suspension after constitution.

SEMI-SOLID VAGINAL PREPARATIONS

DEFINITION

Semi-solid vaginal preparations are ointments, creams or gels.

They are often supplied in single-dose containers. The container is provided with a suitable applicator.

Semi-solid vaginal preparations comply with the requirements of the monograph *Semi-solid preparations for cutaneous application (0132).*

VAGINAL FOAMS

DEFINITION

Vaginal foams comply with the requirements of the monograph *Medicated foams (1105).*

MEDICATED VAGINAL TAMPONS

DEFINITION

Medicated vaginal tampons are solid, single-dose preparations intended to be inserted in the vagina for a limited time.

They comply with the requirements of the monograph *Medicated tampons (1155).*

Ph Eur

Albumin Solution

General Notices

Albumin; Human Albumin

(Human Albumin Solution, Ph Eur monograph 0255)

Ph Eur

DEFINITION

Human albumin solution is an aqueous solution of protein obtained from plasma that complies with the requirements of the monograph on *Plasma for fractionation, human (0853).*

PRODUCTION

Separation of the albumin is carried out under controlled conditions, particularly of pH, ionic strength and temperature so that in the final product not less than 95 per cent of the total protein is albumin. Human albumin solution is prepared as a concentrated solution containing 150-250 g/l of total protein or as an isotonic solution containing 35-50 g/l of total protein. A suitable stabiliser against the effects of heat, such as sodium caprylate (sodium octanoate) or *N*-acetyltryptophan or a combination of these 2, at a suitable concentration, may be added but no antimicrobial preservative is added at any stage during preparation. The solution is passed through a bacteria-retentive filter and distributed aseptically into sterile containers which are then closed so as to prevent contamination. The solution in its final container is heated to 60 ± 1.0 °C and maintained at this temperature for not less than 10 h. The containers are then incubated at 30-32 °C for not less than 14 days or at 20-25 °C for not less than 4 weeks and examined visually for evidence of microbial contamination.

CHARACTERS

A clear, slightly viscous liquid; it is almost colourless, yellow, amber or green.

IDENTIFICATION

Examine by a suitable immunoelectrophoresis technique. Using antiserum to normal human serum, compare normal human serum and the preparation to be examined, both diluted to contain 10 g/l of protein. The main component of the preparation to be examined corresponds to the main component of normal human serum. The preparation may show the presence of small quantities of other plasma proteins.

TESTS

pH (*2.2.3*)

6.7 to 7.3.

Dilute the preparation to be examined with a 9 g/l solution of *sodium chloride R* to obtain a solution containing 10 g/l of protein.

Total protein

Dilute the preparation to be examined with a 9 g/l solution of *sodium chloride R* to obtain a solution containing about 15 mg of protein in 2 ml. To 2.0 ml of this solution in a round-bottomed centrifuge tube add 2 ml of a 75 g/l solution of *sodium molybdate R* and 2 ml of a mixture of 1 volume of *nitrogen-free sulphuric acid R* and 30 volumes of *water R*. Shake, centrifuge for 5 min, decant the supernatant liquid and allow the inverted tube to drain on filter paper. Determine the nitrogen in the residue by the method of sulphuric acid digestion (*2.5.9*) and calculate the quantity of protein by multiplying by 6.25. The preparation contains not less than 95 per cent and not more than 105 per cent of the quantity of protein stated on the label.

Protein composition

Zone electrophoresis (*2.2.31*).

Use strips of suitable cellulose acetate gel or agarose gel as the supporting medium and *barbital buffer solution pH 8.6 R1* as the electrolyte solution.

If cellulose acetate is the supporting material, the method described below can be used. If agarose gels are used, and because they are normally part of an automated system, the manufacturer's instructions are followed instead.

Test solution Dilute the preparation to be examined with a 9 g/l solution of *sodium chloride R* to a protein concentration of 20 g/l.

Reference solution Dilute *human albumin for electrophoresis BRP* with a 9 g/l solution of *sodium chloride R* to a protein concentration of 20 g/l.

To a strip apply 2.5 µl of the test solution as a 10 mm band or apply 0.25 µl per millimetre if a narrower strip is used. To another strip, apply in the same manner the same volume of the reference solution. Apply a suitable electric field such that the most rapid band migrates at least 30 mm. Treat the strips with *amido black 10B solution R* for 5 min. Decolorise with a mixture of 10 volumes of *glacial acetic acid R* and 90 volumes of *methanol R* until the background is just free of colour. Develop the transparency of the strips with a mixture of 19 volumes of *glacial acetic acid R* and 81 volumes of *methanol R.* Measure the absorbance of the bands at 600 nm in an instrument having a linear response over the range of measurement. Calculate the result as the mean of 3 measurements of each strip.

System suitability In the electropherogram obtained with the reference solution on cellulose acetate or on agarose gels, the proportion of protein in the principal band is within the limits stated in the leaflet accompanying the reference preparation.

Results In the electropherogram obtained with the test solution on cellulose acetate or on agarose gels, not more than 5 per cent of the protein has a mobility different from that of the principal band.

Molecular size distribution

Liquid chromatography (*2.2.29*).

Test solution Dilute the preparation to be examined with a 9 g/l solution of *sodium chloride R* to a concentration suitable for the chromatographic system used. A concentration in the range of 4-12 g/l and injection of 50-600 µg of protein are usually suitable.

Column:

— *size*: *l* = 0.6 m, Ø = 7.5 mm, or l = 0.3 m, Ø = 7.8 mm;

— *stationary phase*: *hydrophilic silica gel for chromatography R*, of a grade suitable for fractionation of globular proteins with relative molecular masses in the range 10 000 to 500

000.

Mobile phase Dissolve 4.873 g of *disodium hydrogen phosphate dihydrate R*, 1.741 g of *sodium dihydrogen phosphate monohydrate R*, 11.688 g of *sodium chloride R* and 50 mg of *sodium azide R* in 1 litre of *water R*.

Flow rate 0.5 ml/min.

Detection Spectrophotometer at 280 nm.

The peak due to polymers and aggregates is located in the part of the chromatogram representing the void volume. Disregard the peak due to the stabiliser. The area of the peak due to polymers and aggregates is not greater than 10 per cent of the total area of the chromatogram (corresponding to about 5 per cent of polymers and aggregates).

Haem

Dilute the preparation to be examined using a 9 g/l solution of *sodium chloride R* to obtain a solution containing 10 g/l of protein. The absorbance (*2.2.25*) of the solution measured at 403 nm using *water R* as the compensation liquid is not greater than 0.15.

Prekallikrein activator (*2.6.15*)

Maximum 35 IU/ml.

Aluminium

Maximum 2.0 × 102 µg/l.

Atomic absorption spectrometry (*2.2.23, Method I or II*).

Use a furnace as atomic generator.

Use plastic containers for preparation of the solutions and use plastic equipment where possible. Wash glassware (or equipment) in nitric acid (200 g/l HNO_3) before use.

Test solution Use the preparation to be examined, diluted if necessary.

Reference solutions Prepare at least 3 reference solutions in a range spanning the expected aluminium concentration of the preparation to be examined, for example by diluting *aluminium standard solution (10 ppm Al) R* with a 1 g/l solution of *octoxinol 10 R*.

Monitor solution Add *aluminium standard solution (10 ppm Al) R* or a suitable certified reference material to the test solution in a sufficient amount to increase the aluminium concentration by 20 µg/l.

Blank solution 1 g/l solution of *octoxinol 10 R*.

Wavelength 309.3 nm or other suitable wavelength.

Slit width 0.5 nm.

Tube Pyrolytically coated, with integrated platform.

Background corrector Off.

Atomisation device Furnace; fire between readings.

The operating conditions in Table 0255.-1 are cited as an example of conditions found suitable for a given apparatus; they may be modified to obtain optimum conditions.

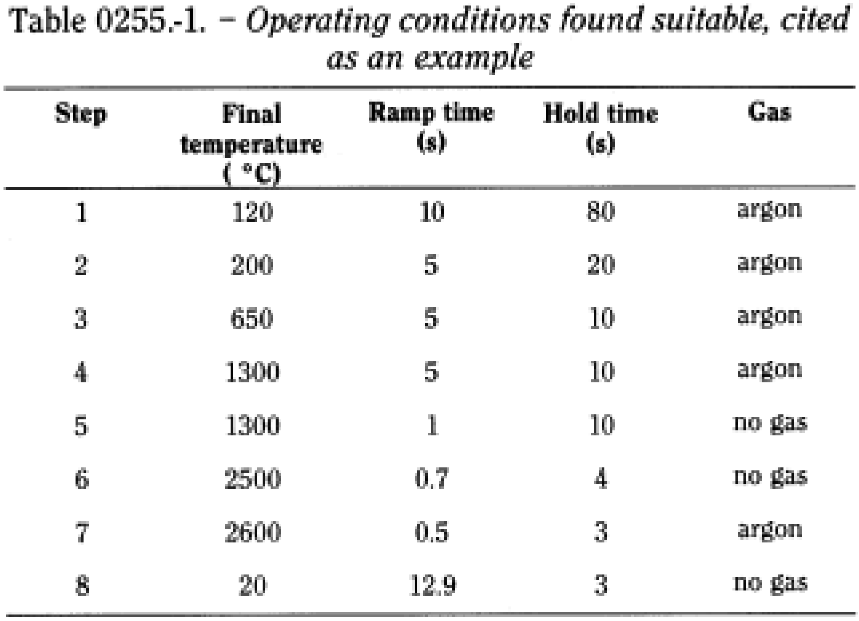

Table 0255.-1. – *Operating conditions found suitable, cited as an example*

Step	Final temperature (°C)	Ramp time (s)	Hold time (s)	Gas
1	120	10	80	argon
2	200	5	20	argon
3	650	5	10	argon
4	1300	5	10	argon
5	1300	1	10	no gas
6	2500	0.7	4	no gas
7	2600	0.5	3	argon
8	20	12.9	3	no gas

Injection Each of the following solutions 3 times: blank solution, reference solutions, test solution and monitor solution.

System suitability:

- — the recovery of aluminium added in preparation of the monitor solution is within the range 80-120 per cent.

Prepare a calibration curve from the mean of the readings obtained with the reference solutions and determine the aluminium content of the preparation to be examined using the calibration curve.

Potassium

Maximum 0.05 mmol of K per gram of protein.

Atomic emission spectrometry (*2.2.22, Method I*).

Wavelength 766.5 nm.

Sodium

Maximum 1.60 × 10^2 mmol/l and not less than 95 per cent and not more than 105 per cent of the content of Na stated on the label.

Atomic emission spectrometry (*2.2.22, Method I*).

Wavelength 589 nm.

Sterility (*2.6.1*)

It complies with the test for sterility.

Pyrogens (*2.6.8*)

It complies with the test for pyrogens. For a solution containing 35-50 g/l of protein, inject per kilogram of the rabbit's mass 10 ml of the preparation to be examined. For a solution containing 150-250 g/l of protein, inject per kilogram of the rabbit's mass 5 ml of the preparation to be examined.

STORAGE

Protected from light.

LABELLING

The label states:

— the name of the preparation;

— the volume of the preparation;

— the content of protein expressed in grams per litre;

— the content of sodium expressed in millimoles per litre;

— that the product is not to be used if it is cloudy or if a deposit has formed;

— the name and concentration of any added substance (for example stabiliser).

Ph Eur

Anticoagulant and Preservative Solutions for Blood

General Notices

(Anticoagulant and Preservative Solutions for Human Blood, Ph Eur monograph 0209)

Ph Eur

DEFINITION

Anticoagulant and preservative solutions for human blood are sterile and pyrogen-free solutions prepared with water for injections, filtered, distributed in the final containers and sterilised. The content of sodium citrate ($C_6H_5Na_3O_7,2H_2O$), glucose monohydrate ($C_6H_{12}O_6,H_2O$) or anhydrous glucose ($C_6H_{12}O_6$) and sodium dihydrogen phosphate dihydrate ($NaH_2PO_4,2H_2O$) is not less than 95.0 per cent and not more than 105.0 per cent of that stated in the formulae below. The content of citric acid monohydrate ($C_6H_8O_7,H_2O$) or anhydrous citric acid ($C_6H_8O_7$) is not less than 90.0 per cent and not more than 110.0 per cent of that stated in the formulae below. Subject to agreement by the competent authority, other substances, such as red-cell preservatives, may be included in the formula provided that their name and concentration are stated on the label.

Anticoagulant and preservative solutions for human blood are presented in airtight, tamper-proof containers of glass (*3.2.1*) or plastic (*3.2.3*).

ANTICOAGULANT ACID-CITRATE-GLUCOSE SOLUTIONS (ACD)

	A	B
Sodium citrate (0412)	22.0 g	13.2 g
Citric acid monohydrate (0456)	8.0 g	4.8 g
or *Citric acid, anhydrous (0455)*	7.3 g	4.4 g
*Glucose monohydrate (0178)**	24.5 g	14.7 g
or *Glucose, anhydrous (0177)**	22.3 g	13.4 g
Water for injections (0169) to	1000.0 ml	1000.0 ml
Volume to be used per 100 ml of blood	15.0 ml	25.0 ml

*The competent authority may require that the substances comply with the test for pyrogens given in the monographs on *Glucose monohydrate (0178)* and *Glucose, anhydrous (0177)*, respectively.

CHARACTERS

A colourless or faintly yellow, clear liquid, practically free from particles.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dilute 2 ml of the solution to be examined (for formula A) or 3 ml (for formula B) to 100 ml with a mixture of 2 volumes of *water R* and 3 volumes of *methanol R*.

Reference solution (a) Dissolve 10 mg of *glucose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg each of *glucose CRS*, *lactose CRS*, *fructose CRS* and *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Apply separately to the plate 2 µl of each solution and thoroughly dry the starting points. Develop over a path of 15 cm using a mixture of 10 volumes of *water R*, 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*. The volumes of solvents have to be measured accurately since a slight excess of water produces cloudiness. Dry the plate in a current of warm air. Repeat the development immediately, after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *alcohol R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To 2 ml add 5 ml of *cupri-citric solution R*. Heat to boiling. An orange precipitate is formed and the solution becomes yellow.

C. To 2 ml (for formula A) add 3 ml of *water R* or to 4 ml (for formula B) add 1 ml of *water R*. The solution gives the reaction of citrates (*2.3.1*).

D. 0.5 ml gives reaction (b) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*)

The pH of the solution to be examined is 4.7 to 5.3.

Hydroxymethylfurfural

To 2.0 ml add 5.0 ml of a 100 g/l solution of *p-toluidine R* in *2-propanol R* containing 10 per cent *V/V* of *glacial acetic acid R* and 1.0 ml of a 5 g/l solution of *barbituric acid R*. The absorbance (*2.2.25*), determined at 550 nm after allowing the mixture to stand for 2 min to 3 min, is not greater than that of a standard prepared at the same time in the same manner using 2.0 ml of a solution containing 5 ppm of *hydroxymethylfurfural R* for formula A or 3 ppm of *hydroxymethylfurfural R* for formula B.

Sterility (*2.6.1*)

They comply with the test for sterility.

Pyrogens (*2.6.8*)

They comply with the test for pyrogens. Dilute with a pyrogen-free, 9 g/l solution of *sodium chloride R* to obtain a solution containing approximately 5 g/l of sodium citrate. Inject 10 ml of the diluted solution per kilogram of the rabbit's mass.

ASSAY

Citric acid

To 10.0 ml (for formula A) or to 20.0 ml (for formula B) add 0.1 ml of *phenolphthalein solution R1*. Titrate with *0.2 M sodium hydroxide* until a pink colour is obtained.

1 ml of *0.2 M sodium hydroxide* is equivalent to 14.01 mg of $C_6H_8O_7,H_2O$ or to 12.81 mg of $C_6H_8O_7$.

Sodium citrate

Prepare a chromatography column 0.10 m long and 10 mm in internal diameter and filled with *strongly acidic ion-exchange resin R* (300 µm to 840 µm). Maintain a 1 cm layer of liquid above the resin at all times. Wash the column with 50 ml of de-ionised *water R* at a flow rate of 12-14 ml/min.

Dilute 10.0 ml of the solution to be examined (for formula A) or 15.0 ml (for formula B) to about 40 ml with de-ionised *water R* in a beaker and transfer to the column reservoir, washing the beaker 3 times with a few millilitres of de-ionised *water R*. Allow the solution to run through the column at a flow rate of 12-14 ml/min and collect the eluate. Wash the column with 2 quantities, each of 30 ml, and with one quantity of 50 ml, of de-ionised *water R*. The column can be used for 3 successive determinations before regeneration with 3 times its volume of *dilute hydrochloric acid R*. Titrate the combined eluate and washings (about 150 ml) with *0.2 M sodium hydroxide*, using 0.1 ml of *phenolphthalein solution R1* as indicator.

Calculate the content of sodium citrate in grams per litre from the following expressions:

For formula A: $1.961n - 1.40C$

or $1.961n - 1.53C'$

For formula B: $1.307n - 1.40C$

or $1.307n - 1.53C'$

n = number of millilitres of *0.2 M sodium hydroxide* used in the titration,

C = content of citric acid monohydrate in grams per litre determined as prescribed above,

C' = content of anhydrous citric acid in grams per litre determined as prescribed above.

Reducing sugars

Dilute 5.0 ml (for formula A) or 10.0 ml (for formula B) to 100.0 ml with *water R*. Introduce 25.0 ml of the solution into a 250 ml conical flask with ground-glass neck and add 25.0 ml of *cupri-citric solution R1*. Add a few pieces of porous material, attach a reflux condenser, heat so that boiling begins within 2 min and boil for exactly 10 min. Cool and add 3 g of *potassium iodide R* dissolved in 3 ml of *water R*. Add 25 ml of a 25 per cent *m/m* solution of *sulphuric acid R* with caution and in small quantities. Titrate with *0.1 M sodium thiosulphate* using 0.5 ml of *starch solution R*, added towards the end of the titration, as indicator (n_1 ml). Carry out a blank titration using 25.0 ml of *water R* (n_2 ml).

Calculate the content of reducing sugars as anhydrous glucose or as glucose monohydrate, as appropriate, from the Table 0209.-1.

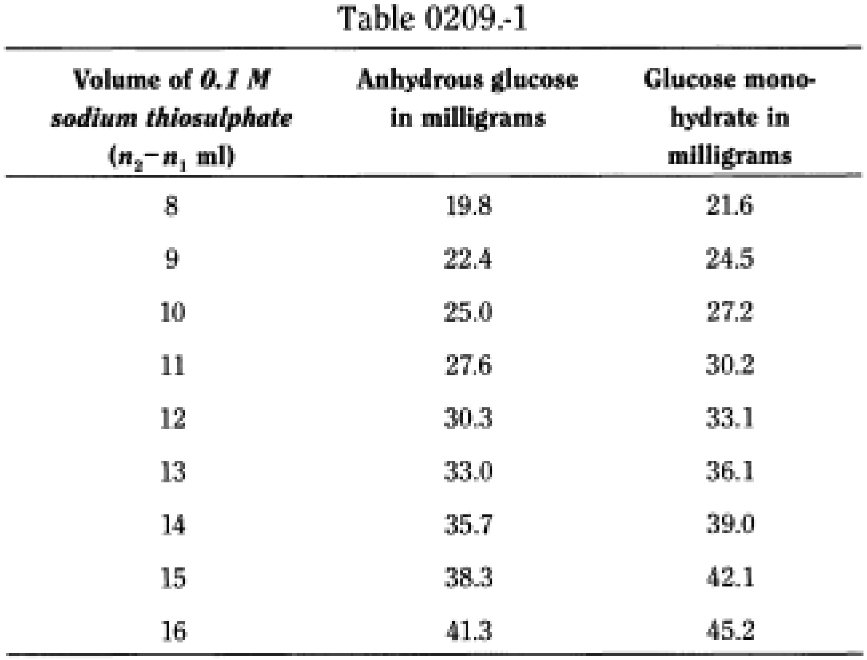

Table 0209.-1

Volume of *0.1 M sodium thiosulphate* (n_2-n_1 ml)	Anhydrous glucose in milligrams	Glucose monohydrate in milligrams
8	19.8	21.6
9	22.4	24.5
10	25.0	27.2
11	27.6	30.2
12	30.3	33.1
13	33.0	36.1
14	35.7	39.0
15	38.3	42.1
16	41.3	45.2

STORAGE

Store in an airtight, tamper-proof container, protected from light.

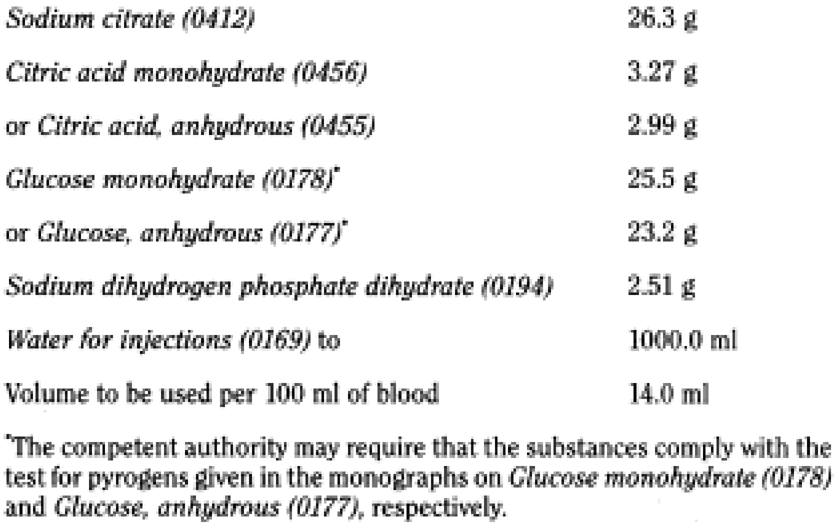
LABELLING

The label states:

— the composition and volume of the solution,

— the maximum amount of blood to be collected in the container.

ANTICOAGULANT CITRATE-PHOSPHATE-GLUCOSE SOLUTION (CPD)



Sodium citrate (0412)	26.3 g
Citric acid monohydrate (0456)	3.27 g
or *Citric acid, anhydrous (0455)*	2.99 g
Glucose monohydrate (0178)[*]	25.5 g
or *Glucose, anhydrous (0177)*[*]	23.2 g
Sodium dihydrogen phosphate dihydrate (0194)	2.51 g
Water for injections (0169) to	1000.0 ml
Volume to be used per 100 ml of blood	14.0 ml

[*] The competent authority may require that the substances comply with the test for pyrogens given in the monographs on *Glucose monohydrate (0178)* and *Glucose, anhydrous (0177)*, respectively.

CHARACTERS

A colourless or faintly yellow, clear liquid, practically free from particles.

IDENTIFICATION

A. Examine by thin-layer chromatography (*2.2.27*), using *silica gel G R* as the coating substance.

Test solution Dilute 2 ml of the solution to be examined to 100 ml with a mixture of 2 volumes of *water R* and 3 volumes of *methanol R.*

Reference solution (a) Dissolve 10 mg of *glucose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Reference solution (b) Dissolve 10 mg each of *glucose CRS*, *lactose CRS*, *fructose CRS* and *sucrose CRS* in a mixture of 2 volumes of *water R* and 3 volumes of *methanol R* and dilute to 20 ml with the same mixture of solvents.

Apply separately to the plate 2 µl of each solution and thoroughly dry the starting points. Develop over a path of 15 cm using a mixture of 10 volumes of *water R,* 15 volumes of *methanol R*, 25 volumes of *anhydrous acetic acid R* and 50 volumes of *ethylene chloride R*. The volumes of solvents have to be measured accurately since a slight excess of water produces cloudiness. Dry the plate in a current of warm air. Repeat the development immediately, after renewing the mobile phase. Dry the plate in a current of warm air and spray evenly with a solution of 0.5 g of *thymol R* in a mixture of 5 ml of *sulphuric acid R* and 95 ml of *alcohol R*. Heat at 130 °C for 10 min. The principal spot in the chromatogram obtained with the test solution is similar in position, colour and size to the principal spot in the chromatogram obtained with reference solution (a). The test is not valid unless the chromatogram obtained with reference solution (b) shows 4 clearly separated spots.

B. To 2 ml add 5 ml of *cupri-citric solution R*. Heat to boiling. An orange precipitate is formed and the solution becomes yellow.

C. To 2 ml add 3 ml of *water R*. The solution gives the reaction of citrates (*2.3.1*).

D. 1 ml gives reaction (b) of phosphates (*2.3.1*).

E. 0.5 ml gives reaction (b) of sodium (*2.3.1*).

TESTS

pH (*2.2.3*)

The pH of the solution is 5.3 to 5.9.

Hydroxymethylfurfural

To 2.0 ml add 5.0 ml of a 100 g/l solution of *p-toluidine R* in *2-propanol R* containing 10 per cent *V/V* of *glacial acetic acid R* and 1.0 ml of a 5 g/l solution of *barbituric acid R*. The absorbance (*2.2.25*), determined at 550 nm after allowing the mixture to stand for 2 min to 3 min, is not greater than that of a standard prepared at the same time in the same manner using 2.0 ml of a solution containing 5 ppm of *hydroxymethylfurfural R*.

Sterility (*2.6.1*)

They comply with the test for sterility.

Pyrogens (*2.6.8*)

They comply with the test for pyrogens. Dilute with a pyrogen-free, 9 g/l solution of *sodium chloride R* to obtain a solution containing approximately 5 g/l of sodium citrate. Inject 10 ml of the diluted solution per kilogram of the rabbit's mass.

ASSAY

Sodium dihydrogen phosphate

Dilute 10.0 ml to 100.0 ml with *water R*. To 10.0 ml of this solution add 10.0 ml of *nitro-vanado-molybdic reagent R*. Mix and allow to stand at 20 °C to 25 °C for 30 min. At the same time and in the same manner, prepare a reference solution using 10.0 ml of a standard solution containing 0.219 g of *potassium dihydrogen phosphate R* per litre. Measure the absorbance (*2.2.25*) of the 2 solutions at 450 nm using as the compensation liquid a solution prepared in the same manner using 10 ml of *water R*. Calculate the content of sodium dihydrogen phosphate dihydrate (*P*) in grams per litre from the expression:

$$\frac{11.46 \times C \times A_1}{A_2}$$

C = concentration of *potassium dihydrogen phosphate R* in the standard solution in grams per litre,

A_1 = absorbance of the test solution,

A_2 = absorbance of the reference solution.

Citric acid

To 20.0 ml add 0.1 ml of *phenolphthalein solution R1* and titrate with *0.2 M sodium hydroxide*.

Calculate the content of citric acid monohydrate (C), or anhydrous citric acid (C'), in grams per litre from the equations:

$$C = 0.7005n - 0.4490P$$

$$C' = 0.6404n - 0.4105P$$

n = number of millilitres of *0.2 M sodium hydroxide* used in the titration,

P = content of sodium dihydrogen phosphate dihydrate in grams per litre determined as prescribed above.

Sodium citrate

Prepare a chromatography column 0.10 m long and 10 mm in internal diameter and filled with *strongly acidic ion-exchange resin R* (300 µm to 840 µm). Maintain a 1 cm layer of liquid above the resin at all times. Wash the column with 50 ml of de-ionised *water R* at a flow rate of 12-14 ml/min.

Dilute 10.0 ml of the solution to be examined to about 40 ml with de-ionised *water R* in a beaker and transfer to the column reservoir, washing the beaker 3 times with a few millilitres of de-ionised *water R.* Allow the solution to run through the column at a flow rate of 12-14 ml/min and collect the eluate. Wash the column with 2 quantities, each of 30 ml, and with one quantity of 50 ml, of de-ionised *water R.* The column can be used for 3 successive determinations before regeneration with 3 times its volume of *dilute hydrochloric acid R*. Titrate the combined eluate and washings (about 150 ml) with *0.2 M sodium hydroxide*, using 0.1 ml of *phenolphthalein solution R1* as indicator.

Calculate the content of sodium citrate in grams per litre from the following expressions:

$$1.961n - 1.257P - 1.40C$$

$$1.961n - 1.257P - 1.53C'$$

n = number of millilitres *of 0.2 M sodium hydroxide* used in the titration,

P = content of sodium dihydrogen phosphate dihydrate in grams per litre determined as prescribed above,

C = content of citric acid monohydrate in grams per litre determined as prescribed above

C' = content of anhydrous citric acid in grams per litre determined as prescribed above.

Reducing sugars

Dilute 5.0 ml to 100.0 ml with *water R*. Introduce 25.0 ml of the solution into a 250 ml conical flask with ground-glass neck and add 25.0 ml of *cupri-citric solution R1*. Add a few pieces of porous material, attach a reflux condenser, heat so that boiling begins within 2 min and boil for exactly 10 min. Cool and add 3 g of *potassium iodide R* dissolved in 3 ml of *water R*. Add 25 ml of a 25 per cent m/m solution of *sulphuric acid R* with caution and in small quantities. Titrate with *0.1 M sodium thiosulphate* using 0.5 ml of *starch solution R*, added towards the end of the titration, as indicator (n_1 ml). Carry out a blank titration using 25.0 ml of *water R* (n_2 ml).

Calculate the content of reducing sugars as anhydrous glucose or as glucose monohydrate, as appropriate, from the Table 0209.-1.

STORAGE

Store in an airtight, tamper-proof container , protected from light.

LABELLING

The label states:

— the composition and volume of the solution,

— the maximum amount of blood to be collected in the container.

Ph Eur

Anti-D (Rh_0) Immunoglobulin

General Notices

(Human Anti-D Immunoglobulin, Ph Eur monograph 0557)

Ph Eur

DEFINITION

Human anti-D immunoglobulin is a liquid or freeze-dried preparation containing immunoglobulins, mainly immunoglobulin G. The preparation is intended for intramuscular administration. It contains specific antibodies against erythrocyte D-antigen and may also contain small quantities of other blood-group antibodies. *Human normal immunoglobulin (0338)* and/or *Human albumin solution (0255)* may be added.

It complies with the monograph *Human normal immunoglobulin (0338)*, except for the minimum number of donors and the minimum total protein content.

The test for anti-D antibodies *(2.6.26)* prescribed in the monograph *Human normal immunoglobulin (0338)* is not carried out, since it is replaced by the assay of human anti-D immunoglobulin *(2.7.13)* as prescribed below under Potency.

For products prepared by a method that eliminates immunoglobulins with specificities other than anti-D, where authorised, the test for antibodies to hepatitis B surface antigen is not required.

PRODUCTION

Human anti-D immunoglobulin is preferably obtained from the plasma of donors with a sufficient titre of previously acquired anti-D antibodies. Where necessary, in order to ensure an adequate supply of human anti-D immunoglobulin, it is obtained from plasma derived from donors immunised with D-positive erythrocytes that are compatible in relevant blood group systems in order to avoid formation of undesirable antibodies.

ERYTHROCYTE DONORS

Erythrocyte donors comply with the requirements for donors prescribed in the monograph *Human plasma for fractionation (0853)*.

IMMUNISATION

Immunisation of the plasma donor is carried out under proper medical supervision. Recommendations concerning donor immunisation, including testing of erythrocyte donors, have been formulated by the World Health Organisation (*Requirements for the collection, processing and quality control of blood, blood components and plasma derivatives*, WHO Technical Report Series, No. 840, 1994 or subsequent revision).

POOLED PLASMA

To limit the potential B19 virus burden in plasma pools used for the manufacture of anti-D immunoglobulin, the plasma pool is tested for B19 virus using validated nucleic acid amplification techniques *(2.6.21)*.

B19 virus DNA

Maximum 10.0 IU/µl.

A positive control with 10.0 IU of B19 virus DNA per microlitre and, to test for inhibitors, an internal control prepared by addition of a suitable marker to a sample of the plasma pool are included in the test. The test is invalid if the positive control is non-reactive or if the result obtained with the internal control indicates the presence of inhibitors.

B19 virus DNA for NAT testing BRP is suitable for use as a positive control.

If *Human normal immunoglobulin (0338)* and/or *Human albumin solution (0255)* are added to the preparation, the plasma pool or pools from which they are derived comply with the above requirement for B19 virus DNA.

POTENCY

Carry out the assay of human anti-D immunoglobulin *(2.7.13, Method A)*. The estimated potency is not less than 90 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 120 per cent of the estimated potency.

Method B or C *(2.7.13)* may be used for potency determination if a satisfactory correlation with the results obtained by Method A has been established for the particular product.

STORAGE

See *Human normal immunoglobulin (0338)*.

LABELLING

See *Human normal immunoglobulin (0338)*.

The label states the number of International Units per container.

Ph Eur

Anti-D Immunoglobulin for Intravenous Use

General Notices

(Human Anti-D Immunoglobulin for Intravenous Administration, Ph Eur monograph 1527)

Ph Eur

DEFINITION

Human anti-D immunoglobulin for intravenous administration is a liquid or freeze-dried preparation containing immunoglobulins, mainly immunoglobulin G. It contains specific antibodies against erythrocyte D-antigen and may also contain small quantities of other blood-group antibodies. *Human normal immunoglobulin for intravenous administration (0918)* and/or *Human albumin solution (0255)* may be added.

It complies with the monograph *Human normal immunoglobulin for intravenous administration (0918)* , except for the minimum number of donors, the minimum total protein content, the limit for osmolality and the limit for prekallikrein activator.

The test for anti-D antibodies (*2.6.26*) prescribed in the monograph *Human normal immunoglobulin for intravenous administration (0918)* is not carried out, since it is replaced by the assay of human anti-D immunoglobulin (*2.7.13*) as prescribed below under Potency.

For products prepared by a method that eliminates immunoglobulins with specificities other than anti-D: where authorised, the test for antibodies to hepatitis B surface antigen is not required; a suitable test for Fc function is carried out instead of that described in chapter *2.7.9*, which is not applicable to such a product.

PRODUCTION

Human anti-D immunoglobulin is preferably obtained from the plasma of donors with a sufficient titre of previously acquired anti-D antibodies. Where necessary, in order to ensure an adequate supply of human anti-D immunoglobulin, it is obtained from plasma derived from donors immunised with D-positive erythrocytes that are compatible in relevant blood group systems in order to avoid formation of undesirable antibodies.

ERYTHROCYTE DONORS

Erythrocyte donors comply with the requirements for donors prescribed in the monograph *Human plasma for fractionation (0853) .*

IMMUNISATION

Immunisation of the plasma donor is carried out under proper medical supervision. Recommendations concerning donor immunisation, including testing of erythrocyte donors, have been formulated by the World Health Organisation (*Requirements for the collection, processing and quality control of blood, blood components and plasma derivatives*, WHO Technical Report Series, No. 840, 1994 or subsequent revision).

POOLED PLASMA

To limit the potential B19 virus burden in plasma pools used for the manufacture of anti-D immunoglobulin, the plasma pool is tested for B19 virus using validated nucleic acid amplification techniques (*2.6.21*).

B19 virus DNA

Maximum 10.0 IU/µl.

A positive control with 10.0 IU of B19 virus DNA per microlitre and, to test for inhibitors, an internal control prepared by addition of a suitable marker to a sample of the plasma pool are included in the test. The test is invalid if the positive control is non-reactive or if the result obtained with the internal control indicates the presence of inhibitors.

B19 virus DNA for NAT testing BRP is suitable for use as a positive control.

If *Human normal immunoglobulin for intravenous administration (0918)* and/or *Human albumin solution (0255)* are added to the preparation, the plasma pool or pools from which they are derived comply with the above requirement for B19 virus DNA.

POTENCY

Carry out the assay of human anti-D immunoglobulin (*2.7.13*, Method A). The estimated potency is not less than 90 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 120 per cent of the estimated potency.

Method B or C (*2.7.13*) may be used for potency determination if a satisfactory correlation with the results obtained by Method A has been established for the particular product.

STORAGE

See *Human normal immunoglobulin for intravenous administration (0918)*.

The label states the number of International Units per container.

Ph Eur

Antithrombin III Concentrate

General Notices

(Human Antithrombin III Concentrate, Ph Eur monograph 0878)

Action and use

Anticoagulant factor.

Ph Eur

DEFINITION

Human antithrombin III concentrate is a preparation of a glycoprotein fraction obtained from human plasma that inactivates thrombin in the presence of an excess of heparin. It is obtained from plasma that complies with the requirements of the monograph on *Human plasma for fractionation (0853).*

When reconstituted in the volume of solvent stated on the label, the potency is not less than 25 IU of antithrombin III per millilitre.

PRODUCTION

The method of preparation includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for inactivation of viruses during production, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and any residues are such as not to compromise the safety of the preparation for patients.

The antithrombin III is purified and concentrated and a suitable stabiliser may be added. The specific activity is not less than 3 IU of antithrombin III per milligram of total protein, excluding albumin. The antithrombin III concentrate is passed through a bacteria-retentive filter, distributed aseptically into its final, sterile containers and immediately frozen. It is then freeze-dried and the containers are closed under vacuum or in an atmosphere of inert gas. No antimicrobial preservative is added at any stage of production.

VALIDATION TEST

It shall be demonstrated that the manufacturing process yields a product that consistently complies with the following test.

Heparin-binding fraction Examine by agarose gel electrophoresis (*2.2.31*). Prepare a 10 g/l solution of *agarose for electrophoresis R* containing 15 IU of *heparin R* per millilitre in *barbital buffer solution pH 8.4 R*. Pour 5 ml of this solution onto a glass plate 5 cm square. Cool at 4 °C for 30 min. Cut 2 wells 2 mm in diameter 1 cm and 4 cm from the side of the plate and 1 cm from the cathode. Introduce into one well 5 µl of the preparation to be examined, diluted to an activity of about 1 IU of antithrombin III per millilitre. Introduce into the other well 5 µl of a solution of a marker dye such as *bromophenol blue R*. Allow the electrophoresis to proceed at 4 °C, using a constant electric field of 7 V/cm, until the dye reaches the anode.

Cut across the agarose gel 1.5 cm from that side of the plate on which the preparation to be examined was applied and remove the larger portion of the gel leaving a band 1.5 cm wide containing the material to be examined. Replace the removed portion with an even layer consisting of 3.5 ml of a 10 g/l solution of *agarose for electrophoresis R* in *barbital buffer solution pH 8.4 R,* containing a rabbit anti-human antithrombin III antiserum at a suitable concentration, previously determined, to give adequate peak heights of at least 1.5 cm. Place the plate with the original gel at the cathode so that a second electrophoretic migration can occur at right angles to the first. Allow this second electrophoresis to proceed using a constant electric field of 2 V/cm for 16 h. Cover the plates with filter paper and several layers of thick lint soaked in a 9 g/l solution of *sodium chloride R* and compress for 2 h, renewing the saline several times. Rinse with *water R*, dry the plates and stain with *acid blue 92 solution R*.

Calculate the fraction of antithrombin III bound to heparin, which is the peak closest to the anode, with respect to the total amount of antithrombin III, by measuring the area defined by the 2 precipitation peaks.

The fraction of antithrombin III able to bind to heparin is not less than 60 per cent.

CHARACTERS

A white or almost white, hygroscopic, friable solid or a powder.

Reconstitute the preparation to be examined as stated on the label immediately before carrying out the identification, the tests (except those for solubility, total protein and water), and the assay.

IDENTIFICATION

It complies with the limits of the assay.

TESTS

pH (*2.2.3*)

6.0 to 7.5.

Solubility. It dissolves completely under gentle swirling within 10 min in the volume of the solvent stated on the label, forming a clear or slightly turbid, colourless solution.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Total protein

If necessary, dilute an accurately measured volume of the preparation to be examined with *water R* to obtain a solution containing about 15 mg of protein in 2 ml. To 2.0 ml of the solution in a round-bottomed centrifuge tube add 2 ml of a 75 g/l solution of *sodium molybdate R* and 2 ml of a mixture of 1 volume of *nitrogen-free sulphuric acid R* and 30 volumes of *water R*. Shake, centrifuge for 5 min, decant the supernatant liquid and allow the inverted tube to drain on filter paper. Determine the nitrogen in the residue by the method of sulphuric acid digestion (*2.5.9*) and calculate the amount of protein by multiplying the result by 6.25.

Heparin (*2.7.5*)

Maximum 0.1 IU of heparin activity per International Unit of antithrombin III activity. It is necessary to validate the method for assay of heparin for each specific preparation to be examined to allow for interference by antithrombin III.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near infrared spectrophotometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

It complies with the test for sterility.

Pyrogens (*2.6.8*)

It complies with the test for pyrogens. Inject per kilogram of the rabbit's mass a volume of the preparation to be examined equivalent to 50 IU of antithrombin III, calculated from the activity stated on the label.

ASSAY

Assay of human antithrombin III (*2.7.17*).

The estimated potency is not less than 80 per cent and not more than 120 per cent of the potency stated on the label. The confidence limits ($P = 0.95$) are not less than 90 per cent and not more than 110 per cent of the estimated potency.

STORAGE

Protected from light, in an airtight container.

LABELLING

The label states:

— the content of antithrombin III expressed in International Units per container.

— the name and volume of solvent to be used to reconstitute the preparation,

— where applicable, the amount of albumin present as a stabiliser.

Ph Eur

Dried Factor IX Fraction

General Notices

(Human Coagulation Factor IX, Ph Eur monograph 1223)

Action and use

Coagulation factor IX substitute.

Ph Eur

DEFINITION

Human coagulation factor IX is a plasma protein fraction containing coagulation factor IX, prepared by a method that effectively separates factor IX from other prothrombin complex factors (factors II, VII and X). It is obtained from human plasma that complies with the monograph on *Human plasma for fractionation (0853).*

The potency of the preparation, reconstituted as stated on the label, is not less than 20 IU of factor IX per millilitre.

PRODUCTION

The method of preparation is designed to maintain functional integrity of factor IX, to minimise activation of any coagulation factor (to minimise potential thrombogenicity) and includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for inactivation of viruses during production, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and that any residues are such as not to compromise the safety of the preparation for patients.

The specific activity is not less than 50 IU of factor IX per milligram of total protein, before the addition of any protein stabiliser.

The factor IX fraction is dissolved in a suitable liquid. Heparin, antithrombin and other auxiliary substances such as a stabiliser may be included. No antimicrobial preservative is added. The solution is passed through a bacteria-retentive filter, distributed aseptically into the final containers and immediately frozen. It is subsequently freeze-dried and the containers are closed under vacuum or under an inert gas.

CONSISTENCY OF THE METHOD OF PRODUCTION

The consistency of the method of production is evaluated by suitable analytical procedures that are determined during process development and which normally include:

— assay of factor IX,

— determination of activated coagulation factors,

— determination of activities of factors II, VII and X which shall be shown to be not more than 5 per cent of the activity of factor IX.

CHARACTERS

A white or pale yellow, hygroscopic powder or friable solid.

Reconstitute the preparation to be examined as stated on the label, immediately before carrying out the identification, tests (except those for solubility and water) and assay.

IDENTIFICATION

It complies with the limits of the assay.

TESTS

pH (*2.2.3*)

6.5 to 7.5.

Solubility

To a container of the preparation to be examined add the volume of the liquid stated on the label at the recommended temperature. The preparation dissolves completely with gentle swirling within 10 min, giving a clear or slightly opalescent, colourless solution.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Total protein

If necessary, dilute an accurately measured volume of the preparation to be examined with a 9 g/l solution of *sodium chloride R*, to obtain a solution which may be expected to contain about 15 mg of protein in 2 ml. To 2.0 ml of that solution, in a round-bottomed centrifuge tube, add 2 ml of a 75 g/l solution of *sodium molybdate R* and 2 ml of a mixture of 1 volume of *nitrogen-free sulphuric acid R* and 30 volumes of *water R*. Shake, centrifuge for 5 min, decant the supernatant liquid and allow the inverted tube to drain on filter paper. Determine the nitrogen in the residue by the method of sulphuric acid digestion (*2.5.9*) and calculate the amount of protein by multiplying the result by 6.25.

For some products, especially those without a protein stabiliser such as albumin, this method may not be applicable. Another validated method for protein determination must therefore be performed.

Activated coagulation factors (*2.6.22*)

If necessary, dilute the preparation to be examined to contain 20 IU of factor IX per millilitre. For each of the dilutions the coagulation time is not less than 150 s.

Heparin

If heparin has been added during preparation, determine the amount by the assay of heparin in coagulation factor concentrates (*2.7.12*). The preparation to be examined contains not more than the amount of heparin stated on the label and in any case not more than 0.5 IU of heparin per International Unit of factor IX.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near infrared spectrophotometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

It complies with the test for sterility.

Pyrogens (*2.6.8*)

It complies with the test for pyrogens. Inject per kilogram of the rabbit's mass a volume equivalent to not less than 50 IU of factor IX.

ASSAY

Assay of human blood coagulation factor IX (*2.7.11*).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

In an airtight container , protected from light.

LABELLING

The label states:

— the number of International Units of factor IX per container,

— the amount of protein per container,

— the name and quantity of any added substances including, where applicable, heparin,

— the name and volume of the liquid to be used for reconstitution,

— that the transmission of infectious agents cannot be totally excluded when medicinal products prepared from human blood or plasma are administered.

Ph Eur

Dried Factor VII Fraction

General Notices

(Human Coagulation Factor VII, Ph Eur monograph 1224)

Action and use

Coagulation factor VII substitute.

Ph Eur

DEFINITION

Human coagulation factor VII is a plasma protein fraction that contains the single-chain glycoprotein factor VII and may also contain small amounts of the activated form, the two-chain derivative factor VIIa. It may also contain coagulation factors II, IX and X and protein C and protein S. It is obtained from human plasma that complies with the monograph on *Human plasma for fractionation (0853).*

The potency of the preparation, reconstituted as stated on the label, is not less than 15 IU of factor VII per millilitre.

PRODUCTION

The method of preparation is designed to minimise activation of any coagulation factor (to minimise potential thrombogenicity) and includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for inactivation of viruses during production, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and that any residues are such as not to compromise the safety of the preparation for patients.

The specific activity is not less than 2 IU of factor VII per milligram of total protein, before the addition of any protein stabiliser.

The factor VII fraction is dissolved in a suitable liquid. Heparin, antithrombin and other auxiliary substances such as a stabiliser may be added. No antimicrobial preservative is added. The solution is passed through a bacteria-retentive filter, distributed aseptically into the final containers and immediately frozen. It is subsequently freeze-dried and the containers are closed under vacuum or under an inert gas.

CONSISTENCY OF THE METHOD OF PRODUCTION

The consistency of the method of production with respect to the activities of factors II, IX and X of the preparation, expressed in International Units relative to the activity of factor VII, shall be demonstrated.

The consistency of the method of production with respect to the activity of factor VIIa of the preparation shall be demonstrated. The activity of factor VIIa may be determined, for example, using a recombinant soluble tissue factor that does not activate factor VII but possesses a cofactor function specific for factor VIIa; after incubation of a mixture of the recombinant soluble tissue factor with phospholipids reagent and the dilution of the test sample in factor VII-deficient plasma, calcium chloride is added and the clotting time determined; the clotting time is inversely related to the factor VIIa activity of the test sample.

CHARACTERS

A hygroscopic powder or friable solid that may be white or almost white, pale yellow, green or blue.

Reconstitute the preparation to be examined as stated on the label immediately before carrying out the identification, tests (except those for solubility and water) and assay.

IDENTIFICATION

It complies with the limits of the assay.

TESTS

Solubility

To a container of the preparation to be examined add the volume of liquid stated on the label at the recommended temperature. The preparation dissolves completely with gentle swirling within 10 min, giving a clear or slightly opalescent solution that may be coloured.

pH (*2.2.3*)

6.5 to 7.5.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Total protein

If necessary, dilute an accurately measured volume of the reconstituted preparation with a 9 g/l solution of *sodium chloride R* to obtain a solution expected to contain about 15 mg of protein in 2 ml. To 2.0 ml of the solution in a round-bottomed centrifuge tube add 2 ml of a 75 g/l solution of *sodium molybdate R* and 2 ml of a mixture of 1 volume of *nitrogen-free sulphuric acid R* and 30 volumes of *water R*. Shake, centrifuge for 5 min, decant the supernatant liquid and allow the inverted tube to drain on filter paper. Determine the nitrogen in the residue by the method of sulphuric acid digestion (*2.5.9*) and calculate the amount of protein by multiplying the result by 6.25.

Activated coagulation factors (*2.6.22*)

For each of the dilutions, the coagulation time is not less than 150 s.

Heparin

If heparin has been added during preparation, determine the amount present by the assay of heparin in coagulation factor concentrates (*2.7.12*). The preparation to be examined contains not more than the amount of heparin stated on the label and in any case not more than 0.5 IU of heparin per International Unit of factor VII.

Thrombin

If the preparation to be examined contains heparin, determine the amount present as described in the test for heparin and neutralise the heparin by addition of *protamine sulphate*

R (10 µg of protamine sulphate neutralises 1 IU of heparin). In each of 2 test-tubes, mix equal volumes of the reconstituted preparation and a 3 g/l solution of *fibrinogen R*. Keep one of the tubes at 37 °C for 6 h and the other at room temperature for 24 h. In a third tube, mix a volume of the fibrinogen solution with an equal volume of a solution of *human thrombin R* (1 IU/ml) and place the tube in a water-bath at 37 °C. No coagulation occurs in the tubes containing the preparation to be examined. Coagulation occurs within 30 s in the tube containing thrombin.

Factor II

Carry out the assay of human coagulation factor II (*2.7.18*).

The estimated content is not more than 125 per cent of the stated content. The confidence limits (*P* = 0.95) are not less than 90 per cent and not more than 111 per cent of the estimated potency.

Factor IX

Carry out the assay of human coagulation factor IX (*2.7.11*).

The estimated content is not more than 125 per cent of the stated content. The confidence limits (*P* = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

Factor X

Carry out the assay of human coagulation factor X (*2.7.19*).

The estimated content is not more than 125 per cent of the stated content. The confidence limits (*P* = 0.95) are not less than 90 per cent and not more than 111 per cent of the estimated potency.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near-infrared spectrometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

It complies with the test for sterility.

Pyrogens (*2.6.8*)

It complies with the test for pyrogens. Inject per kilogram of the rabbit's mass a volume equivalent to not less than 30 IU of factor VII.

ASSAY

Assay of human coagulation factor VII (*2.7.10*).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits (*P* = 0.95) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

In an airtight container, protected from light.

LABELLING

The label states:

— the number of International Units of factor VII per container,

— the maximum content of International Units of factor II, factor IX and factor X per container,

— the amount of protein per container,

— the name and quantity of any added substances, including where applicable, heparin,

— the name and volume of the liquid to be used for reconstitution,

— that the transmission of infectious agents cannot be totally excluded when medicinal products prepared from human blood or plasma are administered.

Ph Eur

Dried Factor VIII (rDNA)

General Notices

(Human Coagulation Factor VIII (rDNA), Ph Eur monograph 1643)

Action and use

Coagulation factor VIII substitute.

Ph Eur

DEFINITION

Human coagulation factor VIII (rDNA) is a freeze-dried preparation of glycoproteins having the same activity as coagulation factor VIII in human plasma. It acts as a cofactor of the activation of factor X in the presence of factor IXa, phospholipids and calcium ions.

Human coagulation factor VIII circulates in plasma mainly as a two-chain glycosylated protein with 1 heavy (relative molecular mass of about 200 000) and 1 light (relative molecular mass 80 000) chain held together by divalent metal ions. Human coagulation factor VIII (rDNA) is prepared as full-length factor VIII (octocog alfa), or as a shortened two-chain structure (relative molecular mass 90 000 and 80 000), in which the B-domain has been deleted from the heavy chain (moroctocog alfa).

Full-length human rDNA coagulation factor VIII contains 25 potential *N*-glycosylation sites, 19 in the B domain of the heavy chain, 3 in the remaining part of the heavy chain (relative molecular mass 90 000) and 3 in the light chain (relative molecular mass 80 000). The different products are characterised by their molecular size and post-translational modification and/or other modifications.

PRODUCTION

Human coagulation factor VIII (rDNA) is produced by recombinant DNA technology in mammalian cell culture. It is produced under conditions designed to minimise microbial contamination.

Purified bulk factor VIII (rDNA) may contain added human albumin and/or other stabilising agents, as well as other auxiliary substances to provide, for example, correct pH and osmolality.

The specific activity is not less than 2000 IU of factor VIII:C per milligram of total protein before the addition of any protein stabiliser, and varies depending on purity and the type of modification of molecular structure of factor VIII.

The quality of the bulk preparation is controlled using one or more manufacturer's reference preparations as reference.

MANUFACTURER'S REFERENCE PREPARATIONS

During development, reference preparations are established for subsequent verification of batch consistency during production, and for control of bulk and final preparation. They are derived from representative batches of purified bulk factor VIII (rDNA) that are extensively characterised by tests including those described below and whose procoagulant and other relevant functional properties have been ascertained and compared, wherever possible, with the International Standard for factor VIII concentrate. The reference preparations are suitably characterised for their intended purpose and are stored in suitably sized aliquots under conditions ensuring their stability.

PURIFIED BULK FACTOR VIII (RDNA)

The purified bulk complies with a suitable combination of the following tests for characterisation of integrity of the factor VIII (rDNA). Where any substance added during preparation of the purified bulk interferes with a test, the test is carried out before addition of that substance. Where applicable, the characterisation tests may alternatively be carried out on the finished product.

Specific biological activity or ratio of factor VIII activity to factor VIII antigen

Carry out the assay of human coagulation factor VIII (*2.7.4*). The protein content, or where a protein stabiliser is present, the factor VIII antigen content, is determined by a suitable method and the specific biological activity or the ratio of factor VIII activity to factor VIII antigen is calculated.

Protein composition

The protein composition is determined by a selection of appropriate characterisation techniques which may include peptide mapping, Western blots, HPLC, gel electrophoresis, capillary electrophoresis, mass spectrometry or other techniques to monitor integrity and purity. The protein composition is comparable to that of the manufacturer's reference preparation.

Molecular size distribution

Using size-exclusion chromatography (*2.2.30*), the molecular size distribution is comparable to that of the manufacturer's reference preparation.

Peptide mapping (*2.2.55*)

There is no significant difference between the test protein and the manufacturer's reference preparation.

Carbohydrates/sialic acid

To monitor batch-to-batch consistency, the monosaccharide content and the degree of sialylation or the oligosaccharide profile are monitored and correspond to those of the manufacturer's reference preparation.

FINAL LOT

It complies with the requirements under Identification, Tests and Assay.

Excipients

80 per cent to 120 per cent of the stated content, determined by a suitable method, where applicable.

CHARACTERS

Appearance

White or slightly yellow powder or friable mass.

IDENTIFICATION

A. It complies with the limits of the assay.

B. The distribution of characteristic peptide bands corresponds with that of the manufacturer's reference preparation (SDS-PAGE or Western blot).

TESTS

Reconstitute the preparation as stated on the label immediately before carrying out the tests (except those for solubility and water) and assay.

Solubility

It dissolves within 5 min at 20-25 °C, giving a clear or slightly opalescent solution.

pH (*2.2.3*)

6.5 to 7.5.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near infrared spectrophotometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

It complies with the test for sterility.

Bacterial endotoxins (*2.6.14*)

Less than 3 IU in the volume that contains 100 IU of factor VIII activity.

ASSAY

Carry out the assay of human coagulation factor VIII (*2.7.4*).

The estimated potency is not less than 80 per cent and not more than 125 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 120 per cent of the estimated potency.

STORAGE

Protected from light.

LABELLING

The label states:

— the factor VIII content in International Units,

- the name and amount of any excipient,
- the composition and volume of the liquid to be used for reconstitution.

Ph Eur

Dried Factor VIII Fraction

General Notices

(Human Coagulation Factor VIII, Ph Eur monograph 0275)

Action and use

Coagulation factor VIII substitute.

Ph Eur

DEFINITION

Human coagulation factor VIII is a preparation of a plasma protein fraction that contains the glycoprotein coagulation factor VIII together with varying amounts of von Willebrand factor, depending on the method of preparation. It is prepared from human plasma that complies with the monograph on *Human plasma for fractionation (0853).*

The potency of the preparation, reconstituted as stated on the label, is not less than 20 IU of factor VIII:C per millilitre.

PRODUCTION

The method of preparation includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for the inactivation of viruses, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and that any residues are such as not to compromise the safety of the preparation for patients.

The specific activity is not less than 1 IU of factor VIII:C per milligram of total protein before the addition of any protein stabiliser.

The factor VIII fraction is dissolved in a suitable liquid. Excipients such as a stabiliser may be added. No antimicrobial preservative is added. The solution is passed through a bacteria-retentive filter, distributed aseptically into the final containers and immediately frozen. It is subsequently freeze-dried and the containers are closed under vacuum or under an inert gas.

VALIDATION STUDIES

Products stated to have von Willebrand factor activity For products intended for treatment of von Willebrand's disease it shall be demonstrated that the manufacturing process yields a product with a consistent composition with respect to von Willebrand factor. This composition may be characterised in a number of ways. For example, the number and the relative amount of the different multimers may be determined by sodium dodecyl sulphate (SDS) agarose gel electrophoresis (about 1 per cent agarose) with or without Western blot analysis, using a normal human plasma pool as reference; visualisation of the multimeric pattern may be performed using an immunoenzymatic technique and quantitative evaluation may be carried out by densitometric analysis or by other suitable methods.

Products that show flakes or particles after reconstitution for use If a few small flakes or particles remain when the preparation is reconstituted, it shall be demonstrated during validation studies that the potency is not significantly affected after passage of the preparation through the filter provided.

CHARACTERS

Appearance

White or pale yellow, hygroscopic powder or friable solid.

Reconstitute the preparation to be examined as stated on the label immediately before carrying out the identification, tests (except those for solubility and water) and assay.

IDENTIFICATION

It complies with the limits of the assay.

TESTS

Solubility

To a container of the preparation to be examined add the volume of the solvent stated on the label at the recommended temperature. The preparation dissolves completely with gentle swirling within 10 min, giving a clear or slightly opalescent, colourless or slightly yellow solution.

Where the label states that the product may show a few small flakes or particles after reconstitution, reconstitute the preparation as described on the label and pass it through the filter provided: the filtered solution is clear or slightly opalescent.

pH (*2.2.3*)

6.5 to 7.5.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Total protein

If necessary, dilute an accurately measured volume of the preparation to be examined with a 9 g/l solution of *sodium chloride R* to obtain a solution containing about 15 mg of protein in 2 ml. Place 2.0 ml of this solution in a round-bottomed centrifuge tube and add 2 ml of a 75 g/l solution of *sodium molybdate R* and 2 ml of a mixture of 1 volume of *nitrogen-free sulphuric acid R* and 30 volumes of *water R*. Shake, centrifuge for 5 min, decant the supernatant liquid and allow the inverted tube to drain on filter paper. Determine the nitrogen in the residue by the method of sulphuric acid digestion (*2.5.9*) and calculate the amount of protein by multiplying the result by 6.25. *For some products, especially those without a protein stabiliser such as albumin, this method may not be applicable and another validated method for protein determination must therefore be performed.*

Anti-A and anti-B haemagglutinins (*2.6.20*)

Dilute the preparation to be examined with a 9 g/l solution of *sodium chloride R* to contain 3 IU of factor VIII:C per millilitre. The 1 to 64 dilutions do not show agglutination.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near infrared spectrophotometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

It complies with the test for sterility.

Pyrogens (*2.6.8*)

It complies with the test for pyrogens. Inject per kilogram of the rabbit's mass a volume of the preparation to be examined equivalent to not less than 50 IU of factor VIII:C.

ASSAY

Factor VIII (*2.7.4*)

The estimated potency is not less than 80 per cent and not more than 120 per cent of the stated potency. The confidence limits (P = 0.95) are not less than 80 per cent and not more than 120 per cent of the estimated potency.

von Willebrand factor (*2.7.21*)

Carry out the assay of human von Willebrand factor for preparations intended for the treatment of von Willebrand's disease.

The estimated potency is not less than 60 per cent and not more than 140 per cent of the stated potency.

Pending the availability of an International Standard for von Willebrand factor concentrate calibrated for use in the collagen-binding assay, only the ristocetin cofactor assay may be used.

STORAGE

In an airtight container , protected from light.

LABELLING

The label states:

— the number of International Units of factor VIII:C and, where applicable, of von Willebrand factor in the container;

— the amount of protein in the container;

— the name and quantity of any added substance;

— the name and volume of the liquid to be used for reconstitution;

— where applicable, that the preparation may show the presence of a few small flakes or particles after reconstitution;

— that the transmission of infectious agents cannot be totally excluded when medicinal products prepared from human blood or plasma are administered.

Ph Eur

Dried Factor XI Fraction

General Notices

(Human Coagulation Factor XI, Ph Eur monograph 1644)

Action and use

Coagulation factor XI substitute.

Ph Eur

DEFINITION

Human coagulation factor XI is a plasma protein fraction containing coagulation factor XI. It is obtained from *Human plasma for fractionation (0853).*

When reconstituted as stated on the label, the potency is not less than 50 units of factor XI per millilitre.

PRODUCTION

The method of preparation includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for inactivation of viruses during production, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and any residues are such as not to compromise the safety of the preparation for patients.

After preparation, the factor XI fraction is dissolved in a suitable liquid. Heparin, C_1-esterase inhibitor and antithrombin III may be added. The solution is distributed into the final containers and immediately frozen. It is subsequently freeze-dried and the containers are closed under vacuum or under nitrogen. No antimicrobial preservative is added.

CHARACTERS

A white or almost white powder or friable solid.

Reconstitute the preparation to be examined as stated on the label immediately before carrying out the identification, tests (except those for solubility and water) and assay.

IDENTIFICATION

The assay serves also to identify the preparation.

TESTS

Solubility

To a container of the preparation to be examined, add the volume of liquid stated on the label at room temperature. The preparation dissolves completely with gentle swirling within 10 min.

pH (*2.2.3*)

6.8 to 7.4.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Total protein

If necessary, dilute an accurately measured volume of the preparation to be examined with a 9 g/l solution of *sodium chloride R*, to obtain a solution that may be expected to contain about 15 mg of protein in 2 ml. To 2.0 ml of that solution, in a round-bottomed centrifuge tube, add 2 ml of a 75 g/l solution of *sodium molybdate R* and 2 ml of a mixture of 1 volume of *nitrogen-free sulphuric acid R* and 30 volumes of *water R.* Shake, centrifuge for 5 min, decant the supernatant liquid and allow the inverted tube to drain on filter paper. Determine the nitrogen in the residue by the method of sulphuric acid digestion (*2.5.9*) and calculate the amount of protein by multiplying the result by 6.25.

Activated coagulation factors (*2.6.22*)

For each of the dilutions, the coagulation time is not less than 150 s.

Heparin (*2.7.12*)

If heparin has been added, the preparation to be examined contains not more than the amount of heparin stated on the label and in any case not more than 0.5 IU of heparin per unit of factor XI.

Antithrombin III (*2.7.17*)

If antithrombin III has been added, the preparation to be examined contains not more than the amount of antithrombin III stated on the label.

C_1-esterase inhibitor

If C_1-esterase inhibitor has been added, the preparation to be examined contains not more than the amount of C_1-esterase inhibitor stated on the label.

The C_1-esterase inhibitor content of the preparation to be examined is determined by comparing its ability to inhibit C_1-esterase with the same ability of a reference preparation consisting of human normal plasma. 1 unit of C_1-esterase is equal to the activity of 1 ml of human normal plasma. Varying quantities of the preparation to be examined are mixed with an excess of C_1-esterase and the remaining C_1-esterase activity is determined using a suitable chromogenic substrate.

Method Reconstitute the preparation as stated on the label. Prepare an appropriate series of 3 or 4 independent dilutions from 1 unit/ml of factor XI, for both the preparation to be examined and the reference preparation, using a solution containing 9 g/l of *sodium chloride R* and either 10 g/l of *human albumin R* or 10 g/l of *bovine albumin R*. Warm all solutions to 37 °C in a water bath for 1-2 min before use. Place a suitable amount of C_1-esterase solution in tubes or in microtitre plate wells and incubate at 37 °C. Add a suitable amount of one of the dilutions of the reference preparation or of the preparation to be examined and incubate at 37 °C for 5 min. Add a suitable amount of a suitable chromogenic substrate such as methoxycarbonyl-L-lysyl(∈-benzyloxycarbonyl)-glycyl-L-arginine 4-nitroanilide. Read the rate of increase of absorbance (ΔA/min) at 405 nm. Carry out a blank test using *tris* *(hydroxymethyl)aminomethane sodium chloride buffer solution pH 7.4 R* instead of the C_1-esterase and the substrate.

Calculate the C_1-esterase inhibitor content using the usual statistical methods (for example, *5.3.*).

Anti-A and anti-B haemagglutinins (*2.6.20*)

The 1 to 64 dilutions do not show agglutination.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near infrared spectrophotometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

The reconstituted preparation complies with the test for sterility.

Pyrogens (*2.6.8*)

The reconstituted preparation complies with the test for pyrogens. Inject per kilogram of the rabbit's mass a volume of the reconstituted preparation equivalent to 100 units of factor XI, calculated from the activity stated on the label.

ASSAY

Carry out the assay of human coagulation factor XI (*2.7.22*).

The estimated potency is not less than 80 per cent and not more than 120 per cent of the stated potency. The confidence limits ($P = 0.95$) are not less than 80 per cent and not more than 125 per cent of the estimated potency.

STORAGE

Protected from light, at a temperature of 2 °C to 8 °C.

LABELLING

The label states:

- — the number of units per container,
- — the maximum amount of protein per container,
- — where applicable, the amount of heparin per container,
- — where applicable, the amount of antithrombin III per container,
- — where applicable, the amount of C_1-esterase inhibitor per container,
- — the name and volume of the liquid to be used for reconstitution.

Ph Eur

Dried Fibrinogen

General Notices

(Human Fibrinogen, Ph Eur monograph 0024)

Ph Eur

DEFINITION

Human fibrinogen contains the soluble constituent of human plasma that is transformed to fibrin on the addition of thrombin. It is obtained from *Human plasma for fractionation (0853)*. The preparation may contain excipients such as salts, buffers and stabilisers.

When dissolved in the volume of the solvent stated on the label, the solution contains not less than 10 g/l of fibrinogen.

PRODUCTION

The method of preparation includes a step or steps that have been shown to remove or to inactivate known agents of infection; if substances are used for inactivation of viruses during production, the subsequent purification procedure must be validated to demonstrate that the concentration of these substances is reduced to a suitable level and any residues are such as not to compromise the safety of the preparation for patients.

No antibiotic is added to the plasma used and no antimicrobial preservative is included in the preparation. The preparation is freeze-dried.

The method of preparation is such as to obtain fibrinogen with a specific activity (fibrinogen content with respect to total protein content) not less than 80 per cent. The fibrinogen content is determined by a suitable method such as that described under Assay, and the total protein content is determined by a suitable method such as that described under Total protein in *Human albumin solution (0255).* If a protein stabiliser (for example, human albumin) is added to the preparation, the requirement for specific activity applies to the fibrinogen before addition of the stabiliser. Albumin may also be obtained with fibrinogen during fractionation, in which case a specific determination of albumin is carried out by a suitable immunochemical method (*2.7.1*) and the quantity of albumin determined is subtracted from the total protein content for the calculation of the specific activity.

CHARACTERS

A white or pale yellow, hygroscopic powder or friable solid.

IDENTIFICATION

It complies with the limits of the assay.

TESTS

pH (*2.2.3*)

6.5 to 7.5.

Osmolality (*2.2.35*)

Minimum 240 mosmol/kg.

Solubility

Add the volume of solvent stated on the label to the contents of one container. The preparation dissolves within 30 min at 20-25 °C, forming an almost colourless, slightly opalescent solution.

Stability of solution

Allow the reconstituted solution to stand at 20-25 °C. No gel formation appears within 60 min of reconstitution.

Water

Determined by a suitable method, such as the semi-micro determination of water (*2.5.12*), loss on drying (*2.2.32*) or near infrared spectrophotometry (*2.2.40*), the water content is within the limits approved by the competent authority.

Sterility (*2.6.1*)

The reconstituted preparation complies with the test for sterility.

Pyrogens (*2.6.8*)

The reconstituted preparation complies with the test for pyrogens. Inject per kilogram of the rabbit's mass a volume of the reconstituted preparation equivalent to not less than 30 mg of fibrinogen, calculated from the quantity stated on the label.

ASSAY

Mix 0.2 ml of the reconstituted preparation with 2 ml of a suitable buffer solution (pH 6.6-6.8) containing sufficient thrombin (approximately 3 IU/ml) and calcium (0.05 mol/l). Maintain at 37 °C for 20 min, separate the precipitate by centrifugation (5000 g, 20 min) and wash thoroughly with a 9 g/l solution of *sodium chloride R*. Determine the nitrogen content by sulphuric acid digestion (*2.5.9*) and calculate the fibrinogen (clottable protein) content by multiplying the result by 6.0. The content is not less than 70 per cent and not more than 130 per cent of the amount of fibrinogen stated on the label.

STORAGE

In an airtight container, protected from light.

LABELLING

The label states:

- — the amount of fibrinogen in the container;
- — the name and volume of the solvent to be used to reconstitute the preparation;
- — where applicable, the name and quantity of protein stabiliser in the preparation.
